On October 16 Mr. Justice Archambault of the Superior Court of Montreal, before the trial of a civil action by the mother of a longshoreman who died as the result of an accident in the course of his employment held that since the defendant's business was subject to the Workmen's Compensation Act, the plaintiff's son was covered by the Act and his mother could therefore not bring an action for damages. The Civil Code and the Workmen's Compensation Act provide that when a case is covered by the Act the right to recover damages from the employer at common law is taken away. *Dame Bouvier v. Canadian Pacific Steamships Limited* (1940) 78 Rapports Judiciaires de Québec, Cour Supérieure, 129.

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME XL] JULY, 1940 [NUMBER 7

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of June showed widespread expansion, according to data tabulated by the Dominion Bureau of Statistics from 12,091 firms, each employing a minimum of 15 persons, the returns being representative of all industries except agriculture, fishing, hunting and highly specialized business. The reporting firms had 1,183,210 employees at June 1, as compared with 1,118,232 in the preceding month. This gain of 5·8 per cent substantially exceeded the average increase recorded from May 1 to June 1 in the period, 1921-1939. The unadjusted index rose from 114·3 at May 1, 1940, to 120·9 at the beginning of June, being then much higher than that of 113·1 at June 1, 1939; the latest figure was higher than in June of any other year for which statistics are available, except 1929. The seasonally-corrected index, also at 120·9 at the date under review, showed a gain of 2·2 points from the preceding month. Improvement was reported in each of the provinces and the major industrial groups.

The indexes for June 1 in recent years of the record are as follows:—1940, 120·9; 1939, 113·1; 1938, 111·9; 1937, 114·3; 1936, 102·0; 1935, 97·6; 1934, 96·6; 1933, 80·7; 1932, 89·1; 1931, 103·6; 1930, 116·5; 1929, 122·2; 1928, 113·8 and 1927, 107·2. The 1926 average is taken as 100 in calculating these index numbers.

Unemployment in Trade Unions.—Reports were forwarded to the Department of Labour at the beginning of June, 1940, by 1,984 local trade unions, involving a membership of 255,653 persons, 20,241 of whom or a percentage of 7·9 were out of work in contrast with percentages of 9·6 at the beginning of May and 11·7 at the beginning of June, 1939.

Employment Office Reports.—Reports received during May, 1940, from the offices of the Employment Service of Canada showed gains over both April, 1940 and May, 1939 in the volume of business transacted, as indicated by the average daily placements effected, construction and maintenance, logging and services being the industrial divisions mainly responsible for the marked improvement noted under both comparisons, supplemented in the second instance by an appreciable increase in manufacturing. Vacancies in May, 1940, numbered 46,274, applications 67,801 and placements in regular and casual employment 41,800.

Prices.—In retail prices the cost per week of a list of certain staple foods, fuel and lighting, and rent entering into a family budget was $17.72 at the beginning of June as compared with $17.85 for May. The decrease was due to a fall in the cost of foods. Comparative figures for certain earlier dates are $16.92 for June, 1939; $17.43 for June, 1938; $17.20 for June, 1937; $15.41 for June, 1933, the low point in recent years; $21.44 for June, 1930; $20.58 for June, 1922; and $26.92 for July, 1920, the post war peak. In wholesale prices the Dominion Bureau of Statistics weekly index number based upon prices in 1926 as 100 changed little week by week during June and was 81·6 for the week ended June 28 as compared with 81·7 for the week ended May 31. Comparative figures on a monthly basis are 82·1 for May, 1940; 73·3 for June, 1939; 80·1 for June, 1938; 84·6 for June, 1937; 63·5 for February, 1933, the low point during recent years; 93·4 for June, 1929; 97·8 for June, 1922; and 164·3 for May, 1920, the post war peak.

Business Statistics.—The table on page 628 gives the latest statistics available reflecting industrial conditions in Canada. The index of the physical volume of business was higher in May, 1940, than for the same month during the last twenty years. The increase over May, 1939, was about 16 per cent. During the month under review mineral production was somewhat lower than in May, 1939, while the other principal groups, manufacturing, construction, distribution, and electric power output were higher. Comparison with March and April, 1940, is affected by a change in the period covered by the export and import statistics certain of which are used in measuring the level of business operations. The index for March was artificially lowered by this change

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended June 28, 1940.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending June 29, 1940, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending June 15, May 18 and April 20, 1940; June 17, May 20 and April 22, 1939.

(7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

(9) Excluding gold.

(10) The index for April, 1940, was artificially raised owing to a change in the period covered by the statistics of imports and exports

(11) Now based on 202 municipalities instead of 58 as formerly

while that for April was raised above the normal level. In the manufacturing group the production of newsprint, iron and steel, automobiles and coke were substantially higher in May than in April. Electric power output also recorded an advance. Information available for June shows employment, the number of cars of revenue freight, the gross earnings of the Canadian National Railways and the value of contracts awarded at higher levels both as compared with May, 1940 and with June, 1939.

Strikes and Lockouts.—The number of strikes and lockouts in June was 14, involving 7,154 workers and resulting in a time loss of 38,937 man working days, as compared with 22 disputes during May, involving 8,565 workers and causing 51,997 days' time loss. Strikes of some 5,000 coal miners in Nova Scotia and of 2,000 textile factory workers at Drummondville, P.Q., accounted for the comparatively small decline in the number of workers affected and caused a relatively large time loss. During May also the strike at Drummondville and disputes of coal miners in Nova Scotia had substantially affected the figures recorded.

In June, 1939, there were 14 disputes on record, involving 2,355 workers and causing a time loss of 8,616 man working days. Strikes affecting 700 rubber factory workers at Kitchener and Toronto, Ont., caused a loss of 5,000 days while a dispute of 800 coal miners at Glace Bay, N.S., resulted in more than 1,000 days' time loss during that month.

All of the fourteen disputes recorded for June, 1940, were recorded as terminated during the month. One resulted in favour of the workers and two in favour of the employers involved. Compromise settlements were reached in two cases and the results of nine disputes were shown as indefinite. At the end of the month, therefore, there were no strikes or lockouts recorded as in progress.

These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month of June reports were presented to the Minister of Labour by seven Boards of Conciliation and Investigation constituted under the provisions of the Industrial Disputes Investigation Act. Eight applications for boards were received and two boards were established.

Particulars of proceedings under the statute and of the findings of the seven boards will be found in the section commencing on page 635.

The National Resources Mobilization Act

On June 18, the Prime Minister, Rt. Hon. W. L. Mackenzie King presented a resolution in the House of Commons, seconded by the Minister of Justice Rt. Hon. Ernest Lapointe, declaring:

> That it is expedient to introduce a measure to confer special emergency powers upon the governor in council to admit of the mobilization of all the effective resources of the nation, both human and material, for the purpose of the defence and security of Canada during the continuation of the state of war now existing.

The preamble to the Bill stated that due to the special emergency which had arisen endangering the national safety of Canada, it had become expedient to confer upon the Governor in Council "special emergency powers to permit of the mobilization of all of the effective resources of the nation, both human and material, for the purpose of the defence and security of Canada" during the continuation of the existing state of war. The special powers conferred on the Governor in Council are defined in Section 2 of the Act as follows:

> Subject to the provisions of section three hereof, the Governor in Council may do and authorize such acts and things, and make from time to time such orders and regulations, requiring persons to place themselves, their services and their property at the disposal of His Majesty in the right of Canada, as may be deemed necessary or expedient for securing the public safety, the defence of Canada, the maintenance of public order, or the efficient prosecution of the war, or for maintaining supplies or services essential to the life of the community.

Section 3 of the Act states that the powers conferred upon the Governor in Council "may not be exercised for the purpose of requiring persons to serve in the military, naval or air forces outside of Canada and the territorial waters thereof."

Provision is also made for the imposition of penalties for the violations of orders and regulations made under the Act which may also prescribe "whether such penalties shall be imposed upon summary conviction or upon indictment, but no such penalty shall exceed a fine of five thousand dollars or imprisonment for any term not exceeding five years, or both fine and imprisonment."

The Bill was given Royal Assent on Friday, June 21.

Provisions of Department of National War Services Act

A measure complementary to the National Resources Mobilization Act was given its first reading on July 10. This Act, cited as the Department of National War Services Act provides for the establishment of a Department of National War Services.

The Bill indicates that the first major duty of the new Department (of which the Minister is the Hon. J. G. Gardiner who also holds the portfolio of Minister of Agriculture) will be to carry out the objects of the National Resources Mobilization Act in regard to registration, viz.:—

(*a*) conduct such national registration and make such survey as may be required for the effective carrying out of the provisions of this Act and of *The National Resources Mobilization Act, 1940;*

(*b*) place the results of such registration and of such survey at the disposal of His Majesty in the right of Canada;

(*c*) promote, organize and co-ordinate different forms of voluntary assistance with a view to the most effective use of personal services or material contributions for the prosecution of the war and the welfare of the nation;

(*d*) co-ordinate the existing public information services of the Government and originate or employ other means in order that the same may be used in the most efficient way for the obtaining of the utmost aid from the people of Canada in the national emergency which has arisen.

It is also provided that:

The Minister may establish national, provincial, or local councils, committees or boards and use existing organizations and agencies to assist him in carrying out the purposes of this Act.

Where a government department or any person or body of persons has, by virtue of any Act or Order in Council, power to obtain, for any purpose, information as to matters with respect to which the Minister is empowered to require information to be given or returns to be made,

(*a*) such department, person or body shall, if so required by the Minister, exercise that power for the purpose of assisting the Minister in obtaining any such information, and

(*b*) any information obtained by such department, person or body, whether upon a requisition of the Minister or otherwise, may, notwithstanding anything in any other enactment or order, be furnished to the Minister.

Establishment of National Labour Supply Council in Canada

Reference was made in the June issue of the LABOUR GAZETTE (page 524) to the establishment of an inter-departmental Labour Supply Committee for the purpose of facilitating the necessary supply of skilled labour for the industrial front of the war effort.

This Committee, after surveying the situation, recommended to the Minister of Labour the appointment, through Government action, of a national advisory body of representatives of employers and workers engaged in the execution of war work. This recommendation resulted in the issuance on June 19 of an Order in Council (P.C. 2686) establishing a National Labour Supply Council. This Order in Council declared:

His Excellency the Administrator in Council, in view of the circumstances set out in the Minute of Council P.C. 2685 of 19th June, 1940, setting out certain principles for the regulation of labour conditions during the war, the acceptance of which by employers and workpeople would make for the avoidance of industrial strife and the utmost acceleration possible in production which is so essential in present circumstances, is pleased, on the recommendation of the Minister of Labour, to establish and doth hereby establish a body, to be known as The National Labour Supply Council, to advise on any matters touching labour supply for industry which may be referred to it by the Minister of Labour, the said Council to be composed of five representatives of Industry and an equal number of representatives of Labour, chosen in consultation with the most representative organizations of Industry and Labour respectively, and an impartial Chairman, to be appointed on recommendation of the Minister of Labour.

It further authorized payment of necessary expenses....chargeable to the appropriations for war measures, and directed "that the National Labour Supply Council report from time to time to the Minister of Labour."

On June 28 the Prime Minister announced the personnel of the National Labour Supply Council. It is composed of five representatives of industry and five of labour with an impartial chairman, all appointed on the recommendation of the Minister of Labour. Each Council member has an alternate to act for him in case of his absence. The complete set-up of the Council with the alternates in brackets is as follows:

REPRESENTATIVES OF LABOUR

R. J. Tallon, Esq., secretary-treasurer, Trades and Labour Congress of Canada, chairman Division No. 4 Railway Shop Crafts (A. D'aoust, Esq., Canadian vice-president Iinternational Brotherhood of Paper Makers); J. W. Bruce, Esq., general organizer for Canada United Association of Journeymen Plumbers, Gas Fitters and Steamfitters Helpers (Fred Molineaux, Esq., Canadian general organizer International Brotherhood of Painters, Decorators and Paper Hangers of America); James Somerville, Esq., Canadian general vice-president International Association of Machinists (Tom Moore, Esq., president Trades and Labour Congress of Canada); A. R. Mosher, Esq., president of All Canadian Congress of Labour (C. R. Millard, Esq., director of Steel Workers Organizing Committee); Alfred Charpentier, Esq., president Confederation of Catholic Workers of Canada (Maurice Doran, Esq., vice-president of Confederation of Catholic Workers of Canada).

REPRESENTATIVES OF INDUSTRY

J. H. Stovel, Esq., incoming president Ontario Mining Association and General Manager of Dome Mines, Ltd. (R. A. Bryce, Esq., past president Ontario Mining Association and president of Macassa Mines, Ltd.); Allan M. Mitchell, Esq., chairman of Board of Robt. Mitchell Co. Ltd., Montreal (D. P. Cruikshank, Esq., president Steel Equipment Co. Ltd.); W. C. Coulter, Esq., past president Canadian Manufacturers' Association and president of Coulter Copper & Brass Co. Ltd. (W. H. McIntyre, Esq., vice-president Ottawa Car & Aircraft Co. Ltd.); C. N. Moisan, Esq., president Standard Paper Box Co. Ltd. (Louis Armstrong, Esq., Consolidated Paper Corporation); J. M. Pigott, Esq., past president Canadian Construction Association (Albert Deschamps, Esq., president Builders Exchange of Montreal).

In addition to the above, Mr. Arthur J. Hills, Chief of Personnel of the Canadian National Railways, and Mr. Humphrey Mitchell, Director of Labour Transference, Department of Labour, were appointed chairman and secretary, respectively, of the Council.

The Council held its first meeting on July 3, being particularly thanked by the Minister of Labour, Hon. Norman A. McLarty, for its contribution to an important phase of war activity. The Minister emphasized the necessity of an adequate supply of efficient labour and the extreme importance of assisting in ensuring such a supply, adding that the situation in Europe made Canada increasingly important as a centre of production of war materials. He also stressed the importance of giving intensive study to those industries definitely connected with prosecution of the war, and suggested that the Government might find it necessary to call on industry to assist in training its own workers. The transference of labour from non-war to war industry might be considered as a matter of great importance. It was also essential to promote a spirit of co-operation between employers and employees so as to ensure the uninterrupted production of essential war supplies.

A broad picture of some Government agencies closely connected with war activities was drawn by Hector McKinnon, Chairman of the Wartime Prices and Trade Board, Dr. W. A. Mackintosh, associated with the Department of Finance, R. A. Rigg, Director of Employment Service, and J. R. Tolmie of the Income Tax Division, National Revenue Department.

Establishment of Wartime Industries Control Board

Further action in the mobilization of Canadian industry in intensified war production was indicated by the issuance on July 2 of an Order in Council (P.C. 2715) establishing a Wartime Industries Control Board and the appointment of "controllers" for the major industries.

This Board has been set up under the provisions of the Department of Munitions and Supply Act and the War Measures Act to organize the sources of supply of munitions and agencies available for the same "and generally to take steps to mobilize, conserve and co-ordinate the economic and industrial facilities of Canada available in respect of munitions and supplies for the effective prosecution of the present war."

To the controllers are delegated some of the wide powers conferred on the Minister of Munitions and Supply to "conserve, co-ordinate, restrict and regulate, certain essential supplies."

It was therefore considered advisable that such controllers should "act in respect to common problems along similar lines and in conjunction with the Foreign Exchange Control Board, and should for such purposes be constituted as a Board."

The Board, with its headquarters in Ottawa, is to select its chairman from among its members, and is to be responsible to the Minister of Munitions and Supply.

Early in July the following appointed by Orders in Council, comprised the personnel of the Board: Hugh D. Scully, Ottawa, Steel Controller; G. C. Bateman, Toronto, Controller of Metals Production; H. R. MacMillan, Vancouver, Timber Controller, and George R. Cottrelle, Toronto, Oil Controller.

Typical of the powers vested in a controller are those delegated to the steel controller, Mr. H. D. Scully. In defining steel the Order in Council states:

"'Steel' shall mean and be deemed to include iron ore of any kind, pig-iron, scrap metal, and any raw materials or metals which go into the making of or are used to modify the qualities of steel....

Some of the powers of the steel controller as designated by the Order in Council, in part include:

To buy, take possession of, or otherwise acquire, manufacture, process, fabricate, machine, finish, store, transport, allocate, distribute, sell, exchange, or otherwise dispose of and generally to deal in steel;

To enter any plant, factory or building for the purpose of inspecting any steel;

To take possession of steel, wherever found;

To enter on and take possession of any land, buildings or premises and to take possession of any plant, used or capable of being used for making, processing, finishing or storing steel;

Subject to the approval of the Minister, to fix maximum prices or maximum mark-ups at which steel may be sold or offered for sale;

Subject to the approval of the Minister, to fix or limit the quantity of steel which may be sold or distributed by or to any person, firm or corporation within specified periods of time and to prohibit the sale or distribution in excess of the quantities so fixed or limited;

To give directions to any person, firm or corporation owning or having possession of or control of or power to dispose of any steel requiring such person, firm or corporation to sell, process, finish, store, transport, or otherwise deal with such steel in such manner as may be specified in such directions, and in priority to any other business of such person, firm or corporation or otherwise as may be specified in such directions; Where directions are given to any person, firm or corporation as herein provided, then the compensation if any, to be paid shall be such as may be agreed upon between such person, firm or corporation and the Minister or, in default of agreement, the claim for compensation shall be referred to the Exchequer Court.

To issue permits or licences to any person, firm or corporation to buy, sell or otherwise deal in steel, and to suspend, cancel or refuse to issue any such permit or licence whenever the Steel Controller deems it in the public interest so to do....

To prohibit any person, firm or corporation from buying, selling, transporting, exporting, importing or otherwise dealing with or in steel unless licensed by the Controller....

Subject to the approval of the Governor in Council, to advance moneys to any person, firm or corporation in the business of processing iron ores into pig-iron, and pig-iron scrap metals or any other raw materials into steel for the purpose of assisting such person, firm or corporation in the carrying on of such business: . .

Similar powers in varying degree according to the nature of the industry have been vested in the controllers of timber, metals, and oil (defined to "include crude oil, petroleum, lubricating oil, fuel oil, gasoline, kerosene, naphtha, asphalt, bitumen and all derivatives therefrom and by-products thereof....").

Prosecution of Alleged Combine of Paper Box Manufacturers

Hearings in the trial of parties to an alleged combine in the manufacture and sale of corrugated and solid fibreboard boxes concluded before Mr. Justice Hope in Toronto on June 28, when submission of argument by counsel for the Crown and for the accused was completed. The trial was adjourned to September 6 for delivery of the judgment of the Court.

Statistics of Relief Recipients for May

The total of all classes of persons on urban and agricultural relief in Canada in May of this year was 680,000, according to preliminary figures from the registration of all direct relief cases, carried out for the Department of Labour by the provinces and municipalities in May. This total for May, 1940, compared with the same month of 1939, showed a decrease of 26·4 per cent, while compared with May, 1938, the reduction was 28·9 per cent. Both urban and agricultural relief showed decreases from a year ago.

Unemployed but fully employable persons on relief in May this year numbered 148,000, a decrease of 10·6 per cent from the revised April total. The figure for May this year showed a decrease of 12·3 per cent from May a year ago, and a decrease of 3·3 per cent from May, 1938.

A total of 559,000 persons were receiving non-agricultural relief in May, a decrease of 10·3 per cent from the corrected figure for the previous month. This category includes all totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a decrease of 10·7 per cent from the figure for May, 1939, and a decrease of 2·9 per cent from the figure for May two years ago.

Following improved crop conditions in 1939 in the Prairie Provinces, the Dominion total on agricultural relief continued to show a major decline from the year before. A total of 24,500 farmers who, together with their dependents, accounted for a farm population of 121,000, were reported as receiving agricultural relief for subsistence in May. The Dominion total on agricultural relief in May decreased by 7·3 per cent from the revised April figure; this total was 59·3 per cent lower than May, 1939, and 68·2 per cent less than in May, 1938. Saskatchewan figures for May showed decreases of 67·8 per cent and 75·5 per cent from May, 1939, and from May, 1938, respectively: the Saskatchewan total of persons on agricultural relief represented 66·5 per cent of the Dominion total in May this year.

The Unemployment and Agricultural Assistance Act, 1940

The Bill respecting the alleviation of unemployment and agricultural distress adopted by the House of Commons on June 25th, 1940, was passed without amendment by the Senate on June 27th. The Bill, when given Royal Assent, will be known as The Unemployment and Agricultural Assistance Act, 1940.

The Bill follows the terms of the statutes enacted during 1936, 1937, 1938, and 1939. The Act will empower the Governor in Council to enter into agreements with any of the provinces for the alleviation of unemployment and agricultural distress therein and to assist those in need, and also to enter into agreements with corporations, partnerships or individuals engaged in industry respecting the expansion of industrial employment.

The Act will expire on March 31st, 1941, but obligations incurred may be discharged after its expiration.

It is provided that a report shall be laid before Parliament within thirty days after the expiration of the Act, or if Parliament is not

then in session shall be published and made available for distribution by the Department of Labour containing a full and correct statement of the monies expended or loaned, guarantees given and obligations contracted under the Act.

Labour conditions in United States Defence program

In connection with the United States Government's Defence Policy certain legislation affecting the Public Contracts Act of 1936 is of special interest. The Act applies to government contracts for supplies in any amount exceeding $10,000. It stipulates that, unless otherwise determined by the Secretary of Labour under certain conditions, the minimum wages payable on such work must be the prevailing rates for similar work as determined by the Secretary of Labour and maximum hours are to be eight a day and 40 a week. Wherever longer hours are permitted by the Secretary of Labour, an overtime rate of not less than one and a half times the hourly rate must be paid. The employment of boys under 16 or girls under 18 is prohibited. The Act also forbids the execution of a government contract under unsanitary or hazardous conditions.

The Army Defence Act, enacted on June 22, declares the Public Contracts Act to apply to all contracts covered by the latter Act which are entered into by the Army during the fiscal year ending June 30, 1941, whether such contracts are let after advertising or by negotiation. The Navy Defence Act, passed on the same date, stipulates that the Public Contracts Act shall apply to naval supplies ordinarily bought in the open market through negotiated contracts. This provision removes an exemption made by the Public Contracts Act while the clause in the Army Defence Act does away with a limitation which had been expressly imposed by regulation under the Public Contracts Act by which the Act applied only to contracts let after advertising. Formerly, all such contracts had been so let pursuant to statute.

On the other hand, by an amendment in the Army Defence Act, the President is permitted to suspend the labour regulations of the Public Contracts Act if the public interest requires such action. Another section of the Army Defence Act suspends during the national emergency declared by the President on September 8 the provisions of the Eight-Hour Law for public works in so far as they prohibit work for more than eight hours in any one day of persons engaged upon buildings covered by Army, Navy and Coast Guard contracts.

Suspension of holidays in Great Britain

As the war crisis intensified with the approaching collapse of France, British industry and labour geared itself to further accelerated effort in meeting the menace of the totalitarian powers.

Reflecting the mood of the country, the Parliamentary Secretary to the Ministry of Labour and National Service, in reply to a question in the House of Commons, made the following statement on June 13:

The Government have asked for a general cancellation or postponement of holidays during this period of crisis in order that there may be no interference with the production of munitions and that transport should be left free as far as possible for the needs of evacuation and civil defence. The response has been magnificent and production has been greatly accelerated. But we must beware of any slackening of momentum. As far as is humanly possible we must, for some time to come, continue at the same high pressure the output of urgent war requirements of every kind. It must be recognized that seven-day working without adequate periods of rest for individuals is not an efficient method of production if continued for any length of time. Periodical rest periods for individuals are necessary even on urgent priority work if output is to be maintained at the highest level. Arrangements should be made to provide such rest periods, and they should include the building up as quickly as possible of a staff which will allow one day's rest periodically for the personnel. The details of the arrangements that may be practicable will vary from industry to industry; the managements of the various plants and the associations of employers and workers should set themselves at once to the immediate solution of this problem.

As regards holidays, the cancellation or suspension of complete stoppages must hold good. This will apply not only to holidays extending over several days but also to day holidays, such as the August Bank Holiday, which it is proposed to cancel by Defence Regulations, and other one-day holidays. When it is the practice for holidays to be taken in rotation by individuals and thus to be spread over a period of months, it should be considered whether they would interfere in any way with urgent war requirements or with other urgent requirements for transport or other essential services. If they would so interfere, they should not be taken now. When this is not so, however, it will in most cases be better that they should be taken as arranged. Those spending holidays in the country who are able to help in work on the land are urged to make inquiries locally whether their services can be used in this way.

In trades covered by the Trade Boards Act, agriculture and the road haulage industry, there is a legal obligation to give an annual holiday in certain cases within specified months of the year. Steps will be taken so far as necessary to extend the period within which such holidays must be given or otherwise to adjust the legal obligation to the needs of the situation. Questions will arise as to the rate of wages for work done on days that would ordinarily be holidays. It is the view of the Government that such questions should be settled in accordance with any provisions in agreements relating to this matter.

Administrative changes in Great Britain respecting factories, industrial safety and health

The British *Ministry of Labour Gazette* reported in its June issue that an Order in Council of June 7, transferred the powers of the Home Secretary under the Factory Acts to the Minister of Labour and National Service for the period of the War.

In order to assist him in giving effect to these powers and in stimulating and developing to the fullest extent the safety, health and welfare arrangements inside the factories, and the billeting, communal feeding and welfare arrangements outside the factories, the Minister of Labour and National Service has established a Factory and Welfare Advisory Board, of which the Minister is Chairman.

The Minister has also established in the Ministry of Labour and National Service a Factory and Welfare Department, of which the Factory Department transferred from the Home Office forms a part, for the purpose of carrying out the new duties imposed upon him. This Department will work in close co-operation with the Industrial Health Research Board, local authorities, trade unions and employers' organizations, and voluntary organizations dealing with the various aspects of the safety, health and welfare of men, women and young persons engaged in industry.

Questions of health and safety at mines and quarries will continue to be dealt with by the Mines Department.

Trend of Personnel Relations Policies in U. S. Banks

Continuing its series on personnel relations policies, the Industrial Relations Section, Department of Economics and Social Institutions, Princeton University, Princeton, N.J., has just issued another report entitled *Current Policies in Personnel Relation in Banks.*

The report covers the development of personnel relations policies in banks during the period 1934-39 and brings up to date information contained in a similar report published in 1935. Commenting on the progress during the five year period, the report states:

"Considering as a whole the personnel developments in banks in the past five years, it appears that they have felt to a lesser degree than industry the impact of labor legislation and other outside influences. The Fair Labor Standards Act and the Social Security Act have caused more immediate readjustments than the National Labor Relations Act or similar state laws. The hours' law has resulted in considerable effort to keep overtime to a minimum through more careful scheduling of work and is also a new incentive for reducing the public banking hours. The Social Security Act seems to have met with approval, and individual companies and bankers' associations are voluntarily adopting pension plans to supplement the protection afforded by law. Banks have been found to be within the scope of the state labor relations acts, and the National Labor Relations Board accepted as within its jurisdiction a charge of discriminatory dismissal in one bank. However, very few financial concerns have been involved in labor board cases. In line with the current interest in insurance against the costs of sickness, many banks have supported community group hospitalization plans."

Referring to the internal administration of personnel relations, the report declares that the most evident progress is in the organization and status of personnel departments and in the more frequent use of job classification. This "is not only an encouraging sign of sounder salary administration" it is stated "but also affords a basis for improvements in other personnel programs."

The report also refers to the progress being made in bank personnel management and in such matters as vacations and employee security comparing favourably with industrial relations policies in progressive industrial companies. However, in certain other policies it is stated that many of them lag considerably behind the standards accepted widely by industry. "In particular," the summary of the report concludes, "bank management may profit from a study of employee and supervisory training, grievance procedures, explicit statement of personnel policies, and methods of securing company-wide uniformity in all personnel practices."

The report is divided into nine sections and a bibliography. The headings of the various sections indicate the extent of the material covered and are as follows: Summary of Developments 1934-1939; The Personnel Organization; Employment Policies and Procedures; Salary Administration; Educational Plans; Plans for Financial Security; The Medical Department and Health Services; Employee Organizations; Hours of Work and Vacation.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

EIGHT applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour recently, as follows:—

(1) From certain hourly and monthly rated employees of the Kingston Elevator Company, including shovellers, deckmen, sweepers, bin-floor and basement assistants, leg operators, weighmen, etc. Seventy men are stated to be directly affected by the dispute, which relates to the employees' request for increased wages.

(2) From 300 freight handlers in the employ of the Canadian National Railways on the Montreal Wharf being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The cause of the dispute is stated to be the employees' request for increased wages.

(3) From 120 office and clerical employees of Tip Top Tailors, Ltd., being members of the Office and Store Employees' Association, Federal Local 93, Trades and Labour Congress of Canada. The dispute relates to the request for reinstatement of certain employees alleged to have been unjustly discharged; also for increased wages and certain changes in working conditions.

(4) From 320 bus chauffeurs in the employ of the Montreal Tramways Company being members of Division 210, Canadian Brotherhood of Railway Employees and Other Transport Workers. The request of these employees for recognition of the union and for a separate wage agreement providing improved wages and working conditions is stated to be the cause of the dispute.

(5) From 150 employees of Canadian Vickers Limited, Montreal, being members of the International Brotherhood of Boiler Makers, Iron Ship Builders, Welders and Helpers of America. The dispute relates to wage rates, hours of labour and working conditions.

(6) From 350 freight handlers in the employ of the Canadian Pacific Railway Company on the Montreal Wharf. The dispute arises out of the employees' request for increased wages.

(7) From 140 employees of the Provincial Transport Company, Montreal, being members of Local 790, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. The request of the employees for union recognition is the main cause of the dispute.

(8) From 52 employees of the Algoma Steel Corporation, Ltd., being members of Lodge 485, International Association of Machinists. The dispute arises out of a proposed agreement presented to the company by the employees, providing for increased wages and certain changes in working conditions. With the consent of the parties concerned this dispute was, on July 6, referred to the Board of Conciliation and Investigation established on December 19, 1939, in respect of a dispute between the same company and its employees being members of the Algoma Steel Workers' Union, Mr. George B. Bagwell, of Toronto, however, being appointed a member thereof in substitution for Mr. Charles Beattie in so far as concerns the dispute involving the machinists.

The Board of Conciliation and Investigation in the case of the Algoma Steel Corporation, Ltd., and its steel workers was also enlarged on June 20 to include the dispute between the same firm and certain of its railway employees engaged in switching service concerning which an application for a board had been received during May (LABOUR GAZETTE, June, 1940, page 533). In this case also Mr. George B. Bagwell, of Toronto, was appointed a member of the board in substitution for Mr. Charles Beattie. The chairman of the board is His Honour Judge A. H. Dowler, of Port Arthur, and the board member nominated by the company is Mr. Lynn B. Spencer, K.C., of Welland.

Boards Established and Other Proceedings

A Board of Conciliation and Investigation was established by the Minister of Labour on June 17 to deal with a dispute between The Consumers' Gas Company of Toronto and its distribution workers being members of the National Union of Domestic and Industrial Gas Workers (LABOUR GAZETTE, June, 1940, page 533). The personnel of the board is as follows: Honourable Mr. Justice C. P. McTague, of the Supreme Court of Ontario, chairman, appointed on the joint recommendation of the other board members; Mr. Victor A. Sinclair, K.C., of Toronto, member nominated by the company; and Mr. J. L. Cohen, K.C., of Toronto, member nominated by the employees.

On June 20 the Minister established a board to deal with differences between the Quebec Power Company and its operators and linemen, members of Local Union "B" 1106, International Brotherhood of Electrical Workers

5566—2½

(LABOUR GAZETTE, March, 1940, page 198). The members of the board are Mr. Wilfrid Edge, Protonotary of the Superior Court of Quebec, chairman, appointed on the joint recommendation of the other board members, Mr. Wilbrod Bherer, nominated by the company, and Mr. Joseph Matte, nominated by the employees. All three members reside in Quebec City.

The chairmanship of the board established to deal with differences between the Acadia Coal Company, Ltd., and Old Sydney Collieries, Ltd., on the one hand, and their employees being members of District 26, United Mine Workers of America, on the other hand (LABOUR GAZETTE, June, 1940, page 533), was filled during June by the appointment of Honourable Mr. Justice W. H. Harrison, of the Supreme Court of New Brunswick, as third member and chairman. The appointment was made by the Minister of Labour in the absence of a joint recommendation from the other board members, Messrs. Lionel A. Forsyth, K.C., and P. G. Muise, nominees of the companies and employees, respectively.

The Minister of Labour also during June appointed the Honourable Mr. Justice M. B. Archibald, of the Supreme Court of Nova Scotia, Halifax, as third member and chairman of the board established to deal with differences between the Canadian Car and Foundry Company, Ltd., and Canadian Vickers Limited, on the one hand, and certain employees in their aeronautical divisions who are members of the International Association of Machinists, on the other hand. The board members nominated by the companies and employees, respectively, Messrs. D. A. Paterson and J. A. McClelland, had failed to agree upon a person for appointment as chairman.

The Department was advised during June that agreements had been entered into between the Burrard Dry Dock Company, Ltd., and the following classes of its employees: (1) machinists, fitters, specialists and helpers, members of Vancouver Lodge No. 692, International Association of Machinists; (2) pipefitters, plumbers and helpers, members of Local Union No. 170, United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada; and (3) sheet metal workers, members of Local Union No. 260, Sheet Metal Workers' International Association. The agreements are in accordance with the recommendations of the Board of Conciliation and Investigation which dealt recently with wages disputes between the company and these employees. The text of the board's report appeared in the June issue of the LABOUR GAZETTE, page 534.

Report of Board in Dispute between The Toronto Terminals Railway Company and the "Red Cap" Messengers Employed at the Toronto Railway Terminal

The findings of the Board of Conciliation and Investigation established to deal with differences between The Toronto Terminals Railway Company and the "red cap" messengers employed at the Toronto Railway Terminal were received by the Minister of Labour on June 8.

The report is signed by the chairman, His Honour Judge John T. Mulcahy, and the member nominated by the employees, Honourable James Murdock. Mr. V. A. Sinclair, K.C., the board member nominated by the company, presented a minority report.

The texts of the two reports follow:—

Report of Board

In the matter of a dispute between the Toronto Terminals Railway Company, Employer; and its "Red Cap" Messengers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Employees.

Application by the Employees for a Board of Conciliation and Investigation under the Statute was made to the Department of Labour on 13th day of September, 1939. The reply thereto by the Employer consists of letter from the Company to the Deputy Minister of Labour dated 10th day of October, 1939, together with copy of letter, dated 18th day of June, 1939, from the "Committee representing Red Cap Messengers" to the Toronto Terminals Railway Company, enclosed therein.

This Board of Conciliation, consisting of His Honour Judge John T. Mulcahy of Pembroke, appointed by the Minister of Labour of Canada, Mr. Victor A. Sinclair, K.C., of Toronto, and Honourable James Murdock of Ottawa, appointees respectively of the Employer and Employees, was duly constituted by Order of the Minister of Labour bearing date 9th day of March, 1940.

Sessions of the Board to take evidence and hear argument on behalf of the parties and for consultation by members of the Board have been held on 19th and 20th days of March, and upon 16th, 17th, and 18th days of April, and upon 13th, 14th, 15th and 16th days of May. On 17th day of May, there being no quorum owing to the sudden illness of a member of the Board, adjournment was

had until this time to agree upon and bring in a Report.

The Toronto Terminals Railway Company is a body corporate which owns and operates the Union Station in the City of Toronto. It is said before this Board that the Canadian Pacific Railway and the Canadian National Railway are the "parent Companies" of the Terminals Company and that they control the latter, presumably by ownership of the capital stock thereof.

It is not contended that the Minister of Labour was not justified in setting up this Conciliation Board—in other words this Board's jurisdiction is not now challenged. The contention of the Railway Company is that the Red Cap Messengers at the Terminals Railway Station at Toronto are not employees of the Company and that the Red Caps application should be refused by this Board upon that ground. If this preliminary objection by the Company be sustained, then it becomes unnecessary to go into the financial aspect of the situation which is put before us by the submissions and in evidence and argument.

The Red Cap force at the Toronto Station numbers between 65 and 70 men of ages apparently varying from about 21 to 45 years or over. Some of the present force have been on the staff for as long as 30 years, being engaged in the business of "Red-Capping" in the Old Union Station west of York Street. Of the total engaged at this class of work, ten are paid by the Railway $33.00 per month each, and the remainder are paid nothing at all. All the Red Caps, whether in the paid class or not, are permitted to retain for their own use whatever amounts come to them as tips or gratuities from the various members of the general travelling public whom they happen to serve from time to time.

The Board is advised by the Company's representatives that there is nothing in the agreement between the Company and the two parent Companies, namely, The Canadian Pacific Railway and The Canadian National Railway, calling for the maintenance of a staff of Red Caps at the Toronto Terminals Railway Station. It is a fair assumption that the establishment and maintenance of the force of Red Caps has come about upon the initiative of the proper officers of the Terminals Railway in the exercise of their administrative discretion as to provision of care and facilities for the travelling public.

It is clear that in building up this body of men (Red Caps) or in adding to their numbers, the Company has required each member and each applicant for membership on the Red Cap force to fill out and sign an application as in Exhibit No. 4 to Submission number 1 filed and argued before this Board on behalf of the Red Caps. We are informed that we may take it for granted that such application for each member of the present Red Cap staff has been "fully approved'" by the proper executive officer of the company. The degree of care with which the Company goes about selection of membership in the Red Caps is shown by the variety and importance of the questions set out in this application (Exhibit 4), and it is a fair assumption that great weight would be attached to the Company's consideration of, and investigation of, the applicant's answers.

The evidence before the Board is that the Red Caps have been considered as eligible for claims under The Workmen's Compensation Act. Five cases since 12th February, 1935, are cited to us where men injured in the course of their work have been paid compensation as set out in the Company's memo filed. There were no such cases in either of the years 1937 or 1939. The injuries sustained included: (1) a sprained ankle owing to fall on ice, (2) a sprained ankle, crossing the tracks, and (3) a hand and leg injury alighting from train. So far as the Board has been advised, no distinction was made by the Company, in treating the applications for Compensation, between the paid and unpaid classes of Red Caps. In this connection the Railway Company circular dated 7th June, 1938, Exhibit 7 to Red Caps Submission, directed be posted in various places in and about the Company's Station, inter alia in the Red Cap Room, gives notice that employees injured in the course of employment are the Company's care as to medical treatment and directs persons so injured to either of two named medical men. A further notice over the signature of Mr. J. R. W. Ambrose, Superintendent of the Company, dated 16th March, 1939, is filed as Exhibit No. 7 to the Red Caps Submission. This notice, dealing with the question of the course to be followed in event of an injury to "employee on duty", was also posted in the Red Cap Locker Room.

It is common ground between the parties that the Company supplies uniforms for the Red Caps which they must wear when on duty, and also that they are and always have been, in fact, subject to certain rules of conduct and discipline prescribed from time to time by the management of the Company. Working hours proposed by the Red Caps are subject to ratification by, and agreement with, the Superintendent of the Company.

It is, further, common ground that the history of Red Cap service in Toronto at the Terminals Railway Station, as well as at the Old Union Station, shows a situation as at present—namely, ten paid Red Caps and the

balance receiving no wages and both classes free to accept "tips". It appears that the "paid men" are senior Red Caps "who assist the Station authorities by being responsible for orderly arrangements in the performance of Red Cap service to the travelling public". This latter definition appears to include the furnishing of wheel-chairs for invalids, acting on the gate or doors upon request, running of elevator upon occasion, taking Company letters to yard cabins. In fairness it should be pointed out that an unrefuted statement was made before us by one of the men, that some of these various "chores" have, upon occasion, been performed by Red Caps of the unpaid class on direction from the Red Cap supervisors.

The above appears to be a concise statement of the salient facts from a consideration of which the Board, having in mind the arguments put forward by both applicants and respondent, is asked to decide whether the Red Caps have the status of "employees", or only that of "concessionaires", of the Company. According to the Oxford Dictionary (1933 Edition) a concessionaire is "one who has obtained a concession" or a right or privilege. The Company says, in effect, "these men have been granted by us the right to be in our station subject to certain rules of conduct which we shall make, in order to sell their services as baggage carriers to such members of the general public as may wish to avail themselves of the services of Red Caps". It must then be the logical contention that in the contract of "carrying" there is privity only between the Red Cap and the assisted passenger. It must logically follow that, no matter what damage to anyone by reason of negligence of a Red Cap in the performance of his work, the injured party has no redress except as against the negligent Red Cap. If this be the true position, publication of a finding by this Board to that effect will come as an eye-opener and as a decided shock to the public, who, notwithstanding the fact that the Railway is not bound to furnish Red Cap service at all, link that service, where supplied, with the Railway or Station Company, and naturally, we think, look to the Company for the smooth working and safety of such service.

Looking solely at the Red Cap staff and service, as it exists, and has existed, at this Company's Station at Toronto, what are the facts? To begin with, the staff has been organized and built up by the Company by the admission of persons found suitable after scrutiny of applications by officials of the Company signed by applicants on forms supplied by the Company (Form 104). This form is standard for applicants for all positions or employment with the Company. This Form is headed "Application for employment as.....". It states that "the applicant will not be deemed to be in the service of this Railway until his application has been fully approved, etc.....". In numerous p'aces Form 104, referring to the applicant, speaks of "employment" and "the service of this Company".

There exists a well-drawn set of regulations to which the Red Cap staff must conform in the carrying out of their duties and in their deportment, when acting officially upon the premises of the Company. These regulations make obligatory the wearing of a certain type of cap and uniform which the Company supplies. The regulations are drawn by the Company and invest in the Company officials the right to take disciplinary measures, by suspension or otherwise, against offending Red Caps. For example, a Red Cap who shows signs of resentment against a patron of the Railway because of the smallness of the "tip" received is subject to discipline, if not indeed actual dismissal, at the hands of Company officials.

Few judicial definitions of "employee" or servant are to be found, but some of these appear in cases cited in any legal text on Master and Servant. Halsbury's Laws of England, Vol. 22, page 112, has this to say: "whether or not, in any given case, the relation of master and servant exists, is a question of fact; but in all cases the relation imports the existence of power in the employer not only to direct what work the servant is to do, but also the manner in which the work is to be done.....a person may be a servant although remunerated otherwise than by wages". Cairns on Domestic Relations, 4th Edition, 1875, sets out, quoting Blackstone: "the relation of Master and Servant is founded in convenience whereby a man is directed to call in the assistance of others where his own skill and labour will not be sufficient to answer the cares incumbent upon him". Again, "a servant is a person who agrees, whether for wages or not, to subject himself at all times during the period of service to the lawful orders and directions of another in respect of certain work to be done".

Macdonnell on Master and Servant quotes from many decisions, *inter alia* the following: "a servant is one who for consideration agrees to work subject to the orders of another"; "the test is very much this, viz., whether the person charged is under the control and bound to obey the orders of his master"; "a servant is a person subject to the command of his master, as to the manner in which he shall do his work"; "the relation of Master and Servant exists only between persons of whom

one has the order and control of the work done by the other"; "the relation of Master and Servant is a certain status, a view which, though true of domestic servants, etc., does not hold good of one act, or a similar set of acts repeatedly".

The problem of the Board is to decide whether the facts regarding Red Caps brought out before us fit their case in under the definition of, and into the incidents of the relationship of, master and servant, of employer and employee, as above briefly outlined. It appears to the signatories of this report that the proper and consistent finding of the Board on the facts is that these Red Caps, both paid and unpaid, do have the status of employees of the Company. It is, it appears to us, no answer to say that the work performed by Red Caps is "personal service not part of the duty of the Railway". When the Railway provides the force of Red Caps to do this work, and establishes rules and regulations as to the manner in which this force shall function, the Railway makes this "service" its service, and the men comprising the force upon entry therein become employees of the Company.

The Board agrees that the ruling of the Interstate Commerce Commission in the United States, and even Court decisions of American Courts, are not of binding authority here and need not be followed by a Tribunal, Judicial or otherwise, in Canada. No case finding its way into the Law Reports of Canada bearing upon the question of Red Cap status has been cited to us. It was, however, stated before the Board that there have been instances where Canadian Railways have paid claims arising out of Red Cap negligence. While the Board does not accept the ruling of the Interstate Commerce Commission as binding, it does feel at liberty to examine and to apply the reasoning which led this very important and strong quasi-judicial body to come to the conclusion that u-paid Red Caps are employees of the Company. For this purpose we quote from the printed Exhibit No. 2 (page 4, 1st. column):

"The receipt of a stated wage is not essential to create the relation of Master and Servant, or of employer and employee, and it may exist although the servant or employee neither expects nor is entitled to any compensation. The test of such relationship is whether the alleged master or employer has the right to hire or discharge the servant or employee or exercise authority with respect to the manner and conduct of the work to be performed .... Red Caps are usually engaged in much the same manner as are the services of respondent's (Railway) employees generally, and Red Caps are under the general and continuing authority of the Station Master .... They are also subject to rules with respect to dress and manner of conduct, and usually to a variety of other rules, for infractions of which they are subject to reprimand and dismissal."

Eight legal decisions of State or Federal Courts are cited in the judgment of the Commission which bear upon this question of status, and in which the reasons for decision in favour of employee status is in line with the above-quoted reasoning.

In Booker v. Pennsylvania R. R. the point is squarely raised in the Superior Court of Pennsylvania, as to the liability of the Railway for loss of baggage through the negligence of a Red Cap in the face of a defence alleging that the Red Cap was not an employee but the plaintiff's personal servant. It was held that employee status was established and that "the fact that a traveller gives a tip to a porter for courteous service in the carriage of his hand luggage does not make the porter his servant for whose negligence he is responsible. . . nor is it material that the R. R. Company has not filed tariffs covering the services of these porters. . . It does not file tariffs for their ushers, or the employees in their Bureau of Information or the many other attendants who furnish aid and assistance to travellers using their line, or are employed in connection with the facilities of transportation which a well managed Railroad in large centres of population furnishes to the travelling public to expedite its own business, as well as for the convenience and accommodation of its patrons." At this point this Board notes that the Schedule of Rates and Regulations of the Canadian Pacific Railway filed with us does not include Red Caps, nor does that of the Canadian National Railway, also filed. The reference in the latter, at page 125, means merely that the persons who framed this "Schedule of Rules governing working conditions and Rates of Pay" have agreed that the Schedule shall not apply to certain named workers or classes, amongst others, Red Cap messengers.

The reasoning set forth by the Interstate Commerce Commission for its finding of "employee status" appears to follow most exactly the cases upon the matter of Master and Servant which are to be found in our own legal texts, reference to some of which are hereinbefore set out. For the reason only that the Commission was dealing with a condition analogous to that with which this Board is faced, do we cite here the Commission's reasoning and its conclusion.

Notwithstanding that the conclusion upon the evidence is that employee status is established by the Red Caps, it is questionable whether any necessity, or advisability, exists for any such elaborate agreement between the parties as is proposed. As to all general regulations as to shifts, working hours, discipline, seniority, etc., the men and the Company officials appear to have been getting along very smoothly under the memo of

understandings dated June 13, 1938, filed as Employees' Exhibit No. 1.

The question of determining and setting out a consistent and proper wage for these Red Caps at Toronto we might find difficult. The evidence shows: (1) the ten senior Red Caps at Toronto are being paid $33 per month; (2) the amount of wages paid to all Red Caps in the joint Terminal at Ottawa; (3) the wages paid to all Red Caps by the C.P.R. at Windsor Street Station, Montreal; and (4) the wages paid to all Red Caps by the C.N.R. at Bonaventure Station, Montreal. It is our view that all Red Caps at Toronto should at once be placed on an equal basis as hereinafter set out.

It is true that the Board has no definite information as to earnings, even average earnings, in regard to individual Red Caps at Toronto, or in regard to them as a body, from tips. It is also true that such earnings are bound to be uncertain and fluctuating from day to day depending upon the extent of travel and upon the generosity of individual travellers.

There can be no thought of recommending for this peculiar class of employees "a living wage," in view of the fact that the tipping system cannot be abolished, unless a fixed charge for carrying luggage and parcels were adopted by the Company. According to the Schedule of Rates (both Railways) filed with us, call boys and messengers, without previous experience, are taken on at $45 per month. Baggagemen receive from $100 to $115 per month. These approximate figures are, of course, their only earnings; they cannot supplement their salary by tips from the public. Apparently it is necessary to have two selected Red Caps act as Captains and these should be paid Five Dollars per month more than the remainder of the ten senior Red Caps. Having in mind the continuance of the present right to receive tips from the public, at least a measure of justice will be done if the Company pays to the force of Red Caps a minimum of $25 per month. We suggest that the regulations governing the Red Caps might be amended so as to make each and all of them in rotation liable for his fair share of work customarily done by the Red Caps for the Company, other than the carrying of hand baggage, but the sphere of such work should not be enlarged, without agreement, merely because of the awarding, by our Report, of this minimum basic wage.

We are fully alive to the importance, from the point of view of industrial peace, which in these strenuous times is vitally important, of finding a solution to the problem submitted to us, so well based in logic and reason that it may receive the support of both parties to the dispute. We see nothing in this dispute, after settlement of the question of status, which ought not to prove capable of solution by negotiation between reasonable-minded representatives of both parties. Our best endeavours and our most sincere convictions upon the matters submitted are set forth in the foregoing Report and Recommendations, which may be summarized as follows:—

1. All Red Caps at Toronto Station have established their status as employees of Toronto Terminals Railway.
2. The existing regulations contained in memo of understandings dated June 13, 1938, with proper amendments which may be devised by agreement, are ample to cover working conditions.
3. All Red Caps at Toronto should be paid a minimum basic wage of not less than $25 per month and their right to take tips or gratuities from the travelling public should remain as heretofore and unaffected by these findings.

All of which is respectfully submitted.

Chairman.

(Sgd.) James Murdock,
Representing Employees.

June 1, 1940.

Minority Report

In the matter of The Industrial Disputes Investigation Act and in the matter of a dispute between The Toronto Terminals Railway Co., Employer, and its Red Cap Messengers, Members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Employees.

To the Hon. the Minister of Labour,
Ottawa, Ontario.

SIR,—The Board of Conciliation and Investigation appointed by you in the above matter to enquire into the dispute between the said employer and certain of their employees commenced its hearings at the City of Toronto on March 19, 1940, continuing on March 20, when the hearings were adjourned until April 16, on which date they again proceeded, as also on April 17, 18 and 19, and adjourned for further consideration until May 13, meeting on the 13th 14th and 15th when the undersigned member of the Board was taken suddenly ill, and the sittings were resumed at the City of Ottawa on May 31 and June 2, when they were finally concluded. Unfortunately, the members of the Board have not been able to agree upon a uniform report and this report is

brought in by the undersigned representative of the employers as a minority report.

At the hearings the Railway Co. was represented as follows:—

> The Toronto Terminals Railway Co. by J. F. Pringle and N. McMillan, General managers, and J. R. W. Ambrose, Superintendent; while the Red Caps were represented by Mr. F. H. Hall, Vice-President, and at the hearings of April 17 and later Mr. W. R. Rowe, General Chairman, also appeared.

The representatives of both sides presented their case with great care and made submissions in answer and rebuttal on both sides and endeavoured to place before the Board the issues with clarity, conciseness and good feeling generally.

Two questions were at issue between the parties. First, as to the status existing between the Toronto Terminals Railway Company and the Red Caps, whether it constituted the relationship of employer and employee or that of concessionaires, and secondly, the rate of wages and working conditions to which the Red Caps would be entitled if the relationship of employer and employee was held to be established.

It would appear that there are about 67 Red Caps involved and that 10 of these receive a salary of $33 per month for services rendered by them to the Toronto Terminals Railway Company involving the handling of wheel-chair cases, delivering bulletins to signal towers, delivering other messages and weather reports, paging and acting as shift captains and crew captains and in a supervisory capacity, all being in addition to their services as Red Caps and for which the stated remuneration was paid but for their Red Capping services they received their tips as do those who are unsalaried. The remaining 57 Red Caps have no duties which they perform for the Company but only the personal service which they render to members of the travelling public who desire to avail themselves of their services and for which the sole remuneration is received from the travelling public who utilize their services.

As to the first question involved, there is a clear-cut distinction between the ten men who are paid by the Railway Company for special services rendered to the Company for which they are paid $33 a month and the service rendered purely as Red Caps for which neither they nor any of the other Red Caps receive any remuneration from the Company. It is admitted by the Red Caps that, up to the present at any rate, the relationship between the Company and the Red Caps has not been that of employer and employee but the Red Caps have been in the position of concessionaires, holding a concession from the Toronto Terminals Railway Co. allowing them to enter on their premises under certain regulations for the purpose of rendering service to the travelling public resorting to the Terminals Railway Company's premises for the purpose of dealing with their hand baggage and similar service which the travelling public might require them to render, and it is now contended that this relationship, instead of being as heretofore the relationship of concessionaire and the grantors of such a concession, has now become the relationship of employer and employee. The existence of such a relationship of employer and employee has been from the first denied and repudiated by the Toronto Terminals Railway Co. and constitutes the main issue between the parties.

It has been contended on behalf of the Red Caps that the fact that a Board of Conciliation and Investigation had been granted by the Department of Labour on the ruling of the Minister of Justice for Canada was a finding in favour of the contention of the Red Caps, but I would certainly find that this is not a fact because, in the first place, the finding was only with reference to the right to grant a Board, and as 10 of the applicants were employees of the Railway Company in respect to the duties which they rendered outside of their concession as Red Caps, there was a right to grant a Board in respect to these employees in any event. But in addition to this it was clearly acknowledged by the representatives of the Red Caps in their letter to the Deputy Minister of Labour dated October 30, 1939, that the employees' status question is one to be passed on by a Board if one was established, so that admittedly the mere granting of a Board in this case is not in any way a finding in favour of the status of the Red Caps as employees and the ruling of the Minister of Justice does not in any way affect the merits of the question.

Fortunately, the question of the classification and standing and rates of pay and other matters relating to the relationship of railroad employees has been dealt with and is now governed by the provisions of the McAdoo Award and its amendments and extensions and this Award and its amendments were all adopted by Order in Council being Privy Council of Canada Number 1768, passed on the 15th day of July, 1918, and which adopted the Award commonly known as the McAdoo Award as the same might be from time to time amended or extended, and from the time of the adoption of this Award and its amendments and extensions it is legally binding upon all railroad employees and has never been in any way repealed and still forms the basis

upon which the whole question must be determined, as the McAdoo Award and this Order in Council and its regulations and interpretations so far as classification of employees, wages and terms of employment has from that time on formed the basis of railroad law, practice and procedure and the whole basis of classification of railroad employees, their rates of pay and the methods of carrying on their work have been fully covered by this Award and as long as the railroads in the United States continued under the administration of the United States Government authorities the practice in connection with the McAdoo Award and its interpretations was uniform in both countries and no amendments by statute or otherwise have since been made which in any way alter the law and practice in this respect so far as Canada is concerned, although in the United States when the United States Government gave up the operation of the railroads the statutory amendments were passed in the nature of the Railway Labour Act, Fair Wage Act, which changed the whole law so far as the United States were concerned, while Canada remained as it had been.

The question of the standing of the Red Caps under the provisions of the McAdoo Award came up squarely for decision and under Interpretation Number 8 to Supplement Number 7 to General Order 27 of the United States Railroad Administration, which General Order had been adopted by Order in Council and by order of the War Board in Canada, the following question was submitted to the Railroad Administration as to the question of the standing of Red Caps in 1919:

"Question 6—Do station employees known as Red Caps come under the provisions of Section "C," Article 17? Decision: The service performed by Red Caps is personal service not a part of the duty of the carrier. Therefore neither General Order Number 27 nor Supplement Number 7 apply to them."

So that it was clearly held that they do not come within any of the classifications which they would otherwise come under and that they were performing a personal service to the travelling public altogether aside from the duty of the carrier and that therefore the McAdoo Award did not apply to them.

While this interpretation was dated after the Order in Council adopting the McAdoo Award, it was an interpretation of the Award as adopted and was recognized as one of the amendments and interpretations of the McAdoo Award as approved of by Canadian Order in Council and has constituted the authority of the Railroad companies to deal with Red Caps as rendering a personal service not part of the duties of a carrier and therefore one for which the railroad companies are not in any way responsible and were thus held not to be employees within the meaning of the McAdoo Award and its amendments. No change has been made in this decision, which has always been observed in Canada and has been recognized by both the railroad companies and the labour organizations as being the law applicable to the case of Red Caps. There was put in an agreement between the Canadian National Railways, Central Region, and the Union then representing the clerks and other classes of station employees as set out. This Union would naturally have been the Union to which the classification of Red Caps would belong had they been within the meaning of the Award, but at page 125 of the Agreement it states that it does not apply to individuals who only devote a portion of their time to the service of the railroads or individuals performing a personal service not part of the duty of the railroads such as Red Caps, travellers' aides, etc, so that this interpretation of the McAdoo Award has been fully recognized by organized labour, and in my opinion this interpretation is law in Canada and binding upon the railroad companies and in my opinion the unpaid Red Cap is excluded from any benefit of the provisions of the McAdoo Award and does not belong to any classification of labour under the McAdoo Award and is held to be performing services of a purely personal nature for the benefit of such members of the travelling public who employ them. It would appear to me that we are bound by the provisions of the McAdoo Award and its interpretations and that this is conclusive on the question of whether the Red Caps are employees or not and any reference to ordinary definitions of employees or law relating to employees other than those who are under the provisions of the McAdoo Award are not at all applicable nor do they have any bearing in my opinion on the question of whether the position of employer and employee exists, as this has been decided by the interpretation placed upon the McAdoo Award and which is in force.

The reason, in my opinion, why the question is now raised is twofold. In the first place, in 1938 there was a change of the Red Caps from one Union to another and while as members of the old Union they made satisfactory settlement of various points of difference, when they joined an entirely new Union it was necessary to show that the new Union was able to do more than the old one for them, but in addition to that the main argument of the Red Caps is founded on a ruling made by the Interstate Commerce Commission of the United States in Ex Parte No. 72, which purports to hold that Red Caps come within the definition of employee as contained in

paragraph 5 of Section 1 of the United States Railway Labour Act. This statute is not in force in the Dominion of Canada and by its terms it gives to the Interstate Commerce Commission the right to decide by order who shall be deemed an employee within the meaning of the Railway Labour Act of the United States and this decision which is cited by the applicants as the main support of their contention is a decision given by the Interstate Commerce Commission in pursuance of the express terms of their Railway Labour Act authorizing them to make such a decision. No such statute is in force in Canada and therefore this decision is a decision under the special United States statute not in force here and in direct contradiction of the rule of the United States Railway Administration under the McAdoo Award, which is in force here. It is admitted in the submission of the Red Caps that this decision has no legal bearing in Canada but they proceed to ask that this Board recognize it as a precedent and as a decision on the principle involved, which is really asking the Board to govern themselves by a decision of the Interstate Commerce Commission of the United States under a statute which is not in force in Canada and has no legal effect, but indirectly they desire to have it applied as a precedent and thus do away with the interpretation of the McAdoo Award, which is in force in Canada to the contrary.

I would hold most strongly that this decision is a decision based upon the express provisions of a United States statute which admittedly has no effect in Canada and that it cannot indirectly be used as a precedent to base upon it a decision of this Board. Otherwise it would be giving effect to a United States law which is not in force here and would be a method of introducing modern United States labour legislation into Canada contrary to the provisions of the Order in Council adopting the McAdoo Award. It would therefore appear to me very clear that the McAdoo Award as adopted by Canadian Order in Council settles the question of the status of the unpaid Red Cap completely and decides that he is performing a personal service to the members of the travelling public employing him altogether aside of any classification of railroad employees.

This ex parte order of the Interstate Commerce Commission is the main contention upon which the applicants founded their contentions, although they set up 26 reasons which they say should be considered by the Board in coming to their conclusion. One of these is that they have to sign the Company's official employment application form and considerable stress is placed upon this feature by the majority report. But I do not think there is anything conclusive in this because admittedly the Red Caps were not recognized as employees and any such status was denied by the Company and therefore it could not have the effect of making them employees where both the railroad companies denied any such relationship as being established and the employees admit no such relationship was established. But in addition I accept the explanation of the Terminal Railways Company that this form was used because there were so few applicants for the position of Red Caps that they had no special form of application for Red Caps and as the ordinary form of application contained the questions and information which they desired to obtain, they simply used it without question. Sometimes there would not be more than one application in a year and really it had no effect one way or the other.

It is quite true that in granting any concession involving dealings with the travelling public rules must be laid down with respect to the dealing of the concessionaires with the public and they must qualify themselves to be able to effectively carry out the requirements of the concession which is given them and for the purpose of assisting the travelling public a uniform was required and supplied. Also at the request of the Red Caps, various regulations have been made with reference to the principle of seniority and the filling of vacancies and various concessions were made such as free medical service, to make the concession more attractive to the Red Caps.

It was said that they were also entitled to workmen's compensation, which indicated that they were workmen. In this connection, of course, in spite of the objections of the railroad companies the Workmen's Compensation Board held that they were entitled to compensation and as there is no appeal from their decision the company simply had to carry it out, an arbitrary decision of the Board from which there is no appeal.

Attendance at class instructions, to give them a knowledge of the movement of trains and so forth, is a reasonable requirement to be demanded from any person who desires to exercise the concession granted and that they can be disciplined for the purpose of seeing that regulations made are carried out is a reasonable requirement after allowing them to become concessionaires and is not at all conclusive as to their being employees. The same provisions apply to employes of the news agencies selling magazines and candy on the trains, who must observe the rules of conduct laid down by the railroad companies and are subject to suspension at the railroad's request

if they do not carry out these regulations and treat the public with courtesy and decency.

I cannot find anything in the 26 reasons given which would establish the relationship of employer and employee between the Terminals Railway Co. and the Red Caps. The Terminals Railway Company simply have to provide the public with the facilities for carrying out the contracts of the various railroad companies using the station and there is no duty undertaken by the railway companies issuing tickets to travellers to take any responsbility in connection with their hand baggage or the carrying of it to and from the trains and therefore this is not one of the obligations which the Terminals Railway Company have any legal obligation to undertake so far as the travelling public is concerned or so far as is necessary to carry out their obligations to the railway companies.

Any suggestion made at the hearing as to the extra costs which would be put upon the general public by a change in the status of the Red Caps by which they would become entitled to a regular wage in addition to their fees which are paid them by the public was rather derided and the employees stated that that was always the cry raised when any increase was asked for but when an order was made the money was always forthcoming. But to my mind it is rather a serious question, as it was stated in evidence, that it would cost an additional forty thousand dollars to place the Red Caps upon an average wage basis in addition to their tips and if any such charge were assumed it would mean that, so far as the Canadian National Railway at least was concerned, it would have to be paid by the general public instead of by the travelling individual who desired to avail himself of the service of the Red Cap and clearly this traveller has no right to demand this service on his contract with the railroad companies, so it would be adding to the deficit of the Canadian National Railroad Company to the extent of their share of this additional $40,000 and would also take from the shareholders of the C.P.R., and ultimately the general public in the same way, their share of the costs and in my opinion there is no justification whatever for asking the general public to pay any costs of rendering a service to such members of the travelling public as desire to avail themselves of the services of a Red Cap who is given the concession to be on the platform of the railway companies and perform such service to any member of the travelling public.

The applicants cite practice at other railroad centres but I would consider that each particular case must be dealt with on its own merits and that without knowing all the facts in connection with the employment of Red Caps at Montreal and Ottawa and Quebec, it would not be proper to apply the experience there to the Red Caps at Toronto, who have for many years continued to carry on their concessions with satisfaction and apparent contentment and I think that our decision should be confined to the conditions existing at the Union Station in the City of Toronto and should not go into conditions existing in other terminals on which we have no definite information as to the different conditions existing.

It would appear to me, therefore, on the first branch of the case that the status of the unpaid Red Caps at Toronto Union Station is clearly governed by the provisions of the McAdoo Award and its interpretations and that these Red Caps are simply performing a personal service to such members of the travelling public as employ them and are not members of any classification of employees of the railroad companies within the meaning of the McAdoo Award and that the relationship of employer and employee does not exist between them and the Toronto Terminals Railway Company. Having come to this conclusion, on the second question as to the rates of wages and working conditions of the Red Caps, there is no necessity to go into the matter as they are not entitled to consideration as employees in my opinion and therefore not entitled to any rate of wages from the Terminals Railway Company but I do want to draw particular attention to the fact that there was an entire suppression by the Red Caps of any information as to their earnings and no evidence whatever was given as to what their earnings were or that they were not drawing a fair living wage and no case whatever was made out for an increased remuneration and any such finding by a majority of this Board is made entirely without any evidence to support it because the applicants did not file one tittle of evidence as to their earnings or as to their not having a fair living wage. And I would not consider that there is any justification whatever for the granting of a monthly wage to these Red Caps in addition to their tips. The allegations made by the Red Caps in their original submission that their status approaches that of peonage and that the employees did not get enough money to maintain themselves and their families in a state of health and decency and that it is truly a disgraceful state of affairs is not in my opinion borne out by the evidence placed before the Board. On the contrary, it would appear that the Red Caps have a very honourable and creditable history. That their relations both with the travelling public and with the Company have been of the best over a long period of years and that the Red Caps

have stayed by their concession and continue to hold their positions, some for over thirty years and the majority for over nine or ten years, and that there are practically no resignitions from the force although the Red Caps are free at any time to give up their concessions and seek other employment but on the contrary there have been practically no resignations from the service for years, any change of employment being for the purpose of advancement in the railway service in other branches and there has been no great desire manifested as shown by the positions open to the Red Caps to tender on to change their position, and through the years the Toronto Terminals Railway have given these concessionaires privileges such as free medical service, seniority standing and other advantages intended to make the concessions which they enjoy as attractive as possible and to enable them to have a definite standing which would be appreciated and valued by them and it appears to me that the applicants should consider very carefully before attempting to change a relationship which has existed so many years and has resulted in receiving sufficient earnings at least to make the concession attractive. Under all the circumstances, it is my opinion that any change in the present status would not be in the best interests of the Red Caps. On the contrary, such a change might necessitate other methods of operating which, as in the United States, would be less satisfactory to the men than is presently the case.

All of which is respectfully submitted.

Dated at Toronto, this 6th day of June, A.D. 1940.

(Signed) V.A. Sinclair.

Report of Board in Dispute between The Teck-Hughes Gold Mines, Limited, and Its Employees

The report of the Board of Conciliation and Investigation established to deal with a dispute between The Teck-Hughes Gold Mines, Ltd., and its underground miners, millmen, etc., at Kirkland Lake, Ont., was received in the Department of Labour on June 8. The report is unanimous, except for a rider by Mr. G. C. Bateman, the member nominated by the company, in which he dissents from the findings of the other members, Honourable Mr. Justice W. M. Martin, chairman, and Mr. J. L. Cohen, K.C., the employees' nominee, on the subject of union recognition.

The text of the report follows:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and re differences between the Teck-Hughes Gold Mines, Limited, Kirkland Lake, Ontario, and its underground miners, millmen, mechanics, surface workers, steel sharpeners, hoistmen, cage tenders.

I

1. On November 28, 1939, an application was made to the Department of Labour by John R. Bland and Ernest Fisher, employees of The Teck-Hughes Gold Mines, Limited, for the establishment of a Board of Conciliation under the Industrial Disputes Investigation Act, R.S.C. 1927, Chapter 112. In the application it is stated that 510 out of 628 employees signed a petition authorizing Kirkland Lake Local 240 of the International Union of Mine, Mill and Smelter Workers, to represent the employees in negotiating with the management of the mine for an increase in wages of at least 15 cents per hour to compensate for an alleged increase in the cost of living; it is also stated in the application that at a meeting of the employees a motion was passed for the taking of a strike vote, that a strike vote was taken, with the result that 332 voted in favour of the strike, 68 against, and there were eighteen spoiled ballots. Following the strike vote a meeting of the employees was convened when J. R. Bland and Ernest Fisher were authorized to apply for a Board of Conciliation.

2. It appears that following the signing of the petition authorizing Kirkland Lake Union No. 240 to negotiate the matter of an increase in wages, a committee of the Union, consisting of T. Church and N. Rozok, interviewed Mr. J. G. McMillan, the Superintendent of The Teck-Hughes Gold Mines Limited, and asked him to arrange for a meeting of the management with a Committee chosen by the employees. Mr. McMillan advised the Committee that he would submit the matter to the Board of Directors and would later inform them of the decision of the Board. Subsequently, Mr. McMillan advised the committee that the Board of Directors declined to negotiate the matter of wages with a committee of the Kirkland Lake Local No. 240.

3. Mr. McMillan, the Superintendent of the mine, on receipt of a copy of the application for the appointment of a Board of Conciliation, wrote the Department of Labour on December 7, 1939, stating that Local 240 represented only a small minority of the employees and that the petition circulated was merely a request for an increase in wages. Mr. Mc-

Millan also stated in the letter of December 7, that on November 11 he received a telegram from the Deputy Minister of Labour in which a telegram from T. Church was quoted as follows:

Teck Hughes Mines refuse to meet Union Committee elected by majority of Teck Hughes Miners. Unless attitude of Company changes strike vote will be taken Sunday 12th.

According to Mr. McMillan, the meeting on Sunday, 12th November, was so poorly attended that it was postponed for a week. At a subsequent meeting a strike vote was decided upon and during two days some of the leaders of the Union stood on the highway crossing the Company's property with a ballot box and solicited the employees to vote as the shifts went on and off work. On Sunday, November 26, a meeting was held to hear the result of the vote, and the result of the vote was announced as 332 for a strike, 68 against, with 18 spoiled ballots. Mr. McMillan complained in the letter of December 7, that during the time of the circulation of the petition and the taking of the vote mistruths were circulated in regard to the earnings of the Company, both verbally and by means of printed posters. He stated his opinion that the ballot was not a proper one and that the Union had, in reality, no majority.

4. Following the receipt of Mr. McMillan's letter it was decided by the Department of Labour to take an independent strike vote, and on January 23, 1940, the Deputy Minister of Labour wrote Mr. McMillan with respect to the application for the Board of Conciliation and asked that a list of the employees be provided the Department. On January 31, 1940, 47 employees, including the said Bland and Fisher, were dismissed by the management of the mine, and on the same day a telegram was dispatched to the Deputy Minister by the Union secretary complaining of the dismissal and alleged discrimination. The Deputy Minister, on February 1, 1940, wired Mr. McMillan pointing out the seriousness of the situation caused by the dismissal of the men at the time, and stated that it might necessitate the establishment of a Board at once without taking a preliminary ballot. The Deputy Minister also made reference to the letter he had addressed to Mr. McMillan on December 23, 1939, and to which apparently no reply had been received on February 1, 1940. On receipt of the telegram Mr. McMillan at once wired the Deputy Minister stating that "lists as requested were mailed to-day," and that tonnage had been reduced and 50 "least efficient men" had been paid off. On February 7, a strike vote was taken by the Chief Conciliation Officer of the Department of Labour. The ballot used was in the following form:

Failing an adjustment of the dispute now existing or a reference thereof by the Minister of Labour to a Board of Conciliation and Investigation I hereby authorize the calling of a strike.	YES NO

5. The result of the vote was that 383 voted to strike failing an adjustment of the dispute or the appointment of a Board, 247 voted "No" and there were two spoiled ballots. Six hundred and thirty-two employees voted out of a total of 657 eligible to vote. The Superintendent of the mine complains that as soon as the ballot was arranged for, a house to house canvass of the employees was conducted by Union leaders and that the employees were told, in some instances, that they were not voting for a strike but for a Conciliation Board and that the Government wanted the employees to vote "Yes" so that an investigation could be held. It is impossible to express an opinion from any information placed before the Board as to what was said by Union leaders in canvassing the employees; indeed the most thorough inquiry would, in all probability, result in doubt as to what was said on the occasion of the canvass of any individual. It was stated, however, that small notices were posted by some person or persons unknown on ladders and other places in the mine. One of these notices written in pencil was filed with the Board. It contained the following statement: "Don't be fooled by this, you are voting for a Conciliation Board not a strike." The representatives of the Union disclaimed any knowledge of these notices. The statement in the notice was, however, misleading and might have influenced employees to vote "Yes" and in favour of a strike by centering their attention on the Board of Conciliation. How far the employees were influenced by the notices or the deceptive propaganda alleged to have been carried on during the canvass cannot be ascertained. The meaning of the question submitted on the ballot is plain; each voter was asked whether he would or would not authorize a strike failing either the adjustment of the dispute or a reference of the dispute by the Minister of Labour to a Board of Conciliation, and as before stated 383 voted "Yes" and 247 voted "No." As a result the Minister of Labour, on February 26, appointed a Board of Conciliation to consider the dispute, and instructions were issued to the Board to deal with the matter of the discharge of 47 employees, along with the subjects in dispute referred to in the application of November 28, 1939, namely:

(1) The recognition of the Union.
(2) The matter of wages.

6. On the arrival of the Board at Kirkland Lake on March 6, it was considered ad-

visable to deal first with the discharge of the employees before proceeding with the other matters in dispute. The employees were represented by T. Church, John R. Bland and Ernest Fisher, and Mr. McMillan was present representing The Teck-Hughes Gold Mines Limited. The representatives of the employees complained that the 47 men were dismissed on January 31, 1940, without notice, and with resulting hardship in many cases, and that in most cases no reason was given; it was, however, admitted that in some cases "reduction in tonnage" was given as the reason for dismissal. Mr. Church stated that in the opinion of the employees the dismissals were for the purpose of getting rid of men who were active in Union organization and with the object of intimidating other employees and preventing them from becoming members of the Union. It was also pointed out that the dismissals were made at a time when they would be likely to influence the employees in connection with the vote which was pending and which was to be taken by the Department of Labour in order to ascertain the will of the employees with respect to a strike. Complaint was also made that in selecting the men for dismissal the principle of seniority was not followed and that in a number of cases the vacancies caused were filled by men who were junior in point of service to these dismissed and who were either non-Union or non-active Union men. The Board was asked to at once arrange for the re-instatement of the men discharged and for proper recompense for the time lost by them by reason of the dismissals.

7. Mr. McMillan, the Superintendent of the Mine, informed the Board that the dismissals were an economic necessity because of certain reductions in tonnage which had been put in effect by the management. He pointed out that in 1934 tonnage was reduced from 1,350 to 1,000 tons per day, and that in July, 1939, it was decided to make a further reduction of 100 tons per day and that such reduction came into effect on September 1, 1939, necessitating a reduction of 48 in the number of employees; that only 16 were laid off at the time because it was thought that enlistment in the Army would take care of the necessary number; that only 6 enlisted but no further reduction was made. A few months later another reduction of 100 tons per day was decided upon, effective February 1, 1940 and 47 men, the normal complement of such reduction, were laid off. Mr. McMillan made the following explanation of the need for the reduction in tonnage—

> "Mining operations were commenced in 1913 but for a number of years were conducted at a loss. In 1921 high grade ore was encountered and from that date the mine was rapidly developed. Indications were for a long and profitable operation but development of the lowest levels was disappointing. The maximum tonnage and profit were reached in 1931 and 1932 but from then on tonnage, profit, ounce production and average value per ton showed steady decline. During the ten years from 1930 to 1939, inclusive, mine profit declined to one-third, ounces of gold per ton treated decreased from ·769 to ·248, and despite an increase of 70 per cent in the price of gold the dollar value per ton of ore treated decreased from $15.90 to $8.75. During this period there was not a corresponding decrease in tonnage of ore treated because of the re-treatment of old tailings in the years 1935 to 1938, inclusive, and also because the increase in the price of gold brought within the realm of profitable production large tonnages of ore which were not profitable at the old price. In many mines, including Teck Hughes, the payable ore was not confined within clearly defined limits but gradually faded into the walls; stopes were therefore worked to economic walls or to the limits of payability. When the stopes were abandoned there was left in the walls ore of too low a grade to mine. Over a period of time this material sluffed from the walls and large tonnages dropped into empty stopes. With the increase in the price of gold substantial parts of this material came within the limits of payability and the stopes were accordingly worked again, and this continued so long as there was hope of profit.
>
> "During 1939 it was realized that some of these sources of ore had become exhausted. The mine as a whole had been on the decline for a number of years and the tonnage lost could not be made up. The only solution was to reduce tonnage and consequently the number of men employed. Reductions in tonnage were accordingly made effective on September 1, 1939, and February 1, 1940, followed by the reduction in employees as before stated. The financial statements of the Company for the quarters ending November 30, 1939, and February 29, 1940, indicated that the action of the Board of Directors in reducing the tonnage of low grade ore treated, if profit is taken as the criterion, has proven to be wise. The dollar value per ton for the quarter ending November 30, 1939, was $10.09 for the quarter ending February 1, 1940, was $10.55, which amounts are considerably in excess of $8.75, the dollar value per ton in the fiscal year ending August 31, 1939."

8. Mr. McMillan also stated that he instructed the mine superintendent in laying off the necessary number of men to select the least efficient for dismissal. Ten of the men dismissed appeared before the Board, including Bland and Fisher who signed the application, and all ten were members of the Union. According to Bland, who is the President of the Union, 34 of those dismissed were Union men, while 13 were not members of the Union. Considering all the circumstances, the method and time of dismissal and the number of Union members dismissed, including Bland and Fisher, it is not surprising that some of the employees were of the

opinion that at least some of those discharged had been dismissed because they were members of and active in the Union. It may well be that in some cases the management was influenced in making the selection by the fact that certain men were active in organization matters because Mr. McMillan stated that Union activities in the plant were interfering with production. In certain cases where it was contended by the representatives of the men that there was nothing in the man's record to warrant his being laid off and that the only reason for dismissal was Union activity, information was presented to the Board which indicated that the man in question was not as efficient as it was claimed; in some instances the management might reasonably have selected the men for dismissal on the grounds of inefficiency or some neglect of duty. As to the great majority of those dismissed, however, no effort was made to show that there was any ground for considering them inefficient. In fairness to the management, however, it should be stated that Mr. McMillan said that he did not desire to go into details with respect to many of the men.

9. The right of the Board of Directors in deciding to reduce tonnage on September 1, 1939, and again on February 1, 1940, cannot be questioned; it was their right to so decide if, in their opinion, such action was necessary for the profitable operation of the mine, and if, as an unfortunate result of such decision it became necessary to reduce the number of employees, the management could not reasonably be expected to do otherwise than to take such action. The representatives of the employees, however, complained that seniority was not respected in selecting the men for dismissal and that senior men were dismissed and replaced by men junior to them. They also complained that there was discrimination on account of Trade Union activity. Seniority is, of course, an important consideration and should apply whenever possible. While, as before stated, the Board of Directors acted within their rights in deciding to reduce tonnage and in making the consequent necessary dismissals, their action in selecting February 1, 1940, for carrying out the plan was ill-advised. At that time a Committee of the Union had asked the management to meet it and negotiate in regard to an increase in wages, and the request had been refused; a strike vote had been taken and carried by a majority of 332 to 68 with 18 spoiled ballots; an application had been made to the Department of Labour for the appointment of a Board of Conciliation and the Department was preparing to take an independent strike vote. It seems obvious that the dismissal of 47 men under these circumstances and the inclusion among them of the two men who signed the application for the appointment of the Board (and in addition a large percentage of Union members) would not tend to bring about a settlement of the matters in dispute; on the contrary it would only tend to increase the tension which already existed.

10. After ascertaining the facts the Board was of the opinion that an effort should be made to obtain the reinstatement of at least some of the men discharged. The Board accordingly then suggested to the representatives of the employees and to the company management that six of the men, including Bland and Fisher, be reinstated at once, the other four to be selected by Mr. McMillan, the superintendent. This proposal was carried out—of the 47 men dismissed, nine, including Bland and Fisher, have since been reinstated and the Board is informed by the Company that others will be re-employed as new men are required. Some of the men, we are informed, have left the locality. Some, it was acknowledged, would be properly included in the lay-off. Having regard to the fact that a reduction in tonnage is a management prerogative and having regard to the fact that it is impossible accurately to ascertain which, or how many, of the remainder were included in the lay-off because of their Trade Union activity, the Board finds it difficult, if not impossible, to make any specific recommendation with respect to any of the 47 not yet reinstated. The Board does, however, recommend that in respect to lay-off or rehiring a plan or basis should be worked out which will give due regard to the principle of seniority.

II

1. Local Union 240 is a local of International Union of Mine, Mill and Smelter Workers, a C.I.O. affiliate, with headquarters at Denver in the State of Colorado. The International Union is the successor of the Western Federation of Miners which was organized in 1893 under the American Federation of Labour and was confined largely to the Western States. In 1916 the name "Western Federation of Miners" was changed to the International Union of Mine, Mill and Smelter Workers. In 1936 the American Federation of Labour suspended, and in 1937 expelled, certain Unions, among them the International Union of Mine, Mill and Smelter Workers, then an affiliate of the Committee now known as the Congress of Industrial Organization. The Board was informed by one, Alec Cashin, an International representative of the Union, who resides in the State of Connecticut, that the Union has 52,000 members in North America. District Number 8 has been formed

for the Province of Ontario and a board member, who must be a bona fide resident of the District is chosen by the Union Members of the District. Mr. T. Church, who was Secretary of Local 240 for several years, is the representative for District 8 on the Board of the International. In addition to Local 240 at Kirkland Lake it appears that Locals 241 and 242 have been organized at Timmins and Sudbury respectively.

2. The management of the Teck Hughes Gold Mines, Limited, presented objections to extending recognition to Local Union 240, which objections are summarized by the Company as follows:

"(*a*) To the best of our knowledge and belief, the local Union, since its inception, has been largely dominated by the Communist Party.

(*b*) Local 240 is a local of the International Union of Mine, Mill and Smelter Workers which, in turn, is part of the American Labour oraganization known as the C.I.O. Our observations of the methods and tactics of the International Union of Mine, Mill and Smelter Workers in Ontario and other provinces leads to the belief that it is an organization in which little confidence can be placed.

(*c*) The tactics of the local Union in its organizing campaign during the past few years leads us to the conclusion that untrue statements have been knowingly and deliberately circulated with a view to creating dissatisfaction among our employees."

3. As to (*a*)—The belief that the Local Union has been largely dominated by the Communist Party and that some of the local leaders in the Union are active in the Communist Party is very largely founded upon the political activities of T. Church, former Secretary of the local and now International Board member for District 8, and upon newspaper editorials. Church was a candidate for the Ontario Legislature in the general elections of 1937. In an editorial which appeared in the Toronto Globe & Mail of September 27, 1937, it was stated that at a district Communist convention at Timmins on September 4-6, 1937, he was endorsed as a party candidate and instructed to stand as a Farmer-Labour candidate, and that Alderman Stewart Smith, of Toronto, was present at the convention, representing the Communist Party Centre; that certain Communists were chosen members of the election Committee, namely—Jack Gillibanks, District Organizer for the Communist Party in Northern Ontario, Wm. Rogers and Wm. Dickey, both Communist organizers, and that $2,000 was allotted to "Comrade Church" by the Communist Party Centre. It was also asserted in the Globe & Mail editorial that subsequently Church was chosen candidate at a Farmer-Labour convention and that this convention consisted of delegates from Unions, Clubs, Language organizations and political organizations, the majority of whom were Communists.

Church was also a candidate for Parliament for the constituency of Temiskaming at the general elections of March 26, 1940. The Timmins *Daily Press*, in its issue of September 19, 1939, stated in reference to a meeting held in Timmins on the preceding Sunday evening, which was called to discuss the "attitude of labour in the War," that the chief speaker, Mr. Church, stated "it is foolish to fight for democracy when we have not democracy at home." The editorial also stated that Church has had the full backing of the Communist Party since he entered public life, that his election to the Teck Council was backed by the Communist Party, and that his proposed candidacy in the next Federal election had been given the blessing of the same body.

If it is assumed that the statements contained in these editorials are true they do not establish that Church is a Communist; all that can be said is that he has had the support of the Communists and the Communist Party Centre and that he has been unfortunate in his associations and careless in some of his remarks. It is not an unusual thing for candidates for election to accept the support of any elector or organization. Church has twice been elected a member of Teck Council, and at the present time is Chairman of the Finance Committee of that Council. In the Provincial election of 1937 he secured 6,500 votes, a number which compared very favourably with the number of votes secured by two other candidates and in the Federal election of March 26, 1940, he received a very substantial vote. All who supported him on these various occasions were not Communists; he must have had the support of many other citizens.

Church himself stated very definitely to the Board that he is not a Communist, and he also said that he did not know whether there were any Communists on the Executive of Local Union 240 or not. John R. Bland, who is now the President of Local No. 240, informed the Board that he was born in the County of Cumberland, England, that he was not a communist and had no sympathy whatever with Communistic doctrine and that before he joined the Union he made careful inquiry about Church and others interested in the Union and was satisfied, as a result of his inquiry, that none of them were Communists. There are eleven members of the Executive of the Union, and Bland stated that it is his belief that there is not a Communist among them.

So far as the personnel of the Local Union is concerned it does not appear that there is sufficient reason for concluding that it is not a proper body to be dealt with by the mine management.

4. As to (*b*)—The management states that the methods and tactics of the International Union of Mine, Mill and Smelter Workers in Ontario and other Provinces leads to the belief that little confidence can be placed in it. It is alleged that the C.I.O. has, on many occasions, been indicated as having direct Communist affiliations, and reference is made to the statement of Ben Gitlow, a former leader of the Communist Party in the United States, before the Dies Commitee investigating Un-American activities, that the Communist Party "was instrumental in a very large degree" in the establishment of the C.I.O. It should be stated, however, that while the Dies Committee in the report made to Congress early in 1940, named three Unions in the United States as having association with Communist activities and the International Union of Mine, Mill and Smelter Workers was not one of them. It is a fact that affiliates of the C.I.O. have won very large support in the United States and have received very wide recognition by industries. Some of the largest employers of labour have made agreements with these Unions; a very recent example is that of the American Brass Co. of Connecticut, which entered into an agreement with Local 423 of the International Union of Mine, Mill and Smelter Workers.

Reference is made by the Company to the policy of the Communist Party in Canada, as evidenced by articles appearing in *The Worker* now replaced by *The Clarion,* which has recently been suppressed. *The Worker* in its issue of July 25, 1935, reported the Canadian delegate to the Third International at Moscow as saying "from a narrow sect the party in Canada has developed since 1930 into the leadership of 90 per cent of all strikes. The strike movement last year by Government figures involved 585,000 workers, four times the number in 1930. The Canadian Party has led and stimulated great hunger marches and local actions of the unemployed including the seizure of trains—". Statements contained in *The Worker,* however, are applicable to all Trade Unions; The Communist Party boasts of its activities in all labour disputes no matter what Trade Union is involved. Such statements are of little value in an inquiry as to the character and policy of a particular Trade Union unless some connection is established between the Union and the Communist Party.

The Board is informed that C.I.O. affiliates in Canada have a considerable number of members extending over many industries. So far as appears, the International Union of Mine, Mill and Smelter Workers has not yet received recognition in Canada. Reference was made to the recent strike in the Pioneer Gold Mine in British Columbia. In that case Local Union 303 of the International Union of Mine, Mill and Smelter Workers went on strike in violation of the provisions of the "Industrial Conciliation and Arbitration Act," a Provincial Statute, and the President of the Local Union and his associates were fined for having declared a strike in contravention of the Statute. The Mine was closed from October 8, 1939, to March 8, 1940, with a loss of five months' production and five months' wages to the employees. While the tactics which appear to have been used in the Pioneer strike deserve criticism, the Board has no knowledge as to whether or not these were carried out with the sanction of the International Union, and as no such methods have appeared in the dispute of the Teck Hughes Gold Mines, Limited, the Board would not be justified in finding that the methods or tactics of the International Union of Mine, Mill and Smelter Workers leads to the belief that it is an organization in which confidence cannot be placed.

5. As to (*c*)—The management of the Teck Hughes Gold Mines, Limited, complained of the circulation of untrue statements by Local Union 240 with the object of creating dissatisfaction among the employees. In support of the complaint the management submitted posters issued by the Union, under the signature of its Secretary. In one of these posters circulated about March 1, 1938, it was asserted that the management was trying to get machine men in drifts to use 8-foot steel and break 8-foot rounds; that no increase in wages was promised; that last year the mine made a profit of about $3,500 on every man employed, and that the aim of the Company was to have the employees drill forty additional feet for the same money. The statements contained in the posters were not true; wages had been increased in the Fall of 1937 and miners on development were paid a bonus according to the footage driven of from $1 to $6 per day in addition to the basic wage rate, and if 8-foot rounds were driven the bonus would have been proportionately larger. The statement that the Teck Hughes mine made $3,500 in 1937 for every man employed was greatly exaggerated.

Complaint was also made of remarks made by Church in addresses over the radio with respect to accidents in the mines, and of statements contained in a poster issued over his signature containing language, from which an inference may be readily drawn, that the proper precautions were not taken by the management to protect the lives of the miners. In a radio address Church is alleged to have said "I am confident that many lives could be saved if more regard was paid to human

life and less to profits." Statements of this kind or misrepresentations of fact are not calculated to create good feeling between employees and management, and the effort to capitalize accidents and to attribute them to neglect on the part of the management when no grounds exist for the imputation are improper. Excessive or untrue statements should be scrupulously avoided. Harmonious relations are certainly impeded if exaggerated or untrue statements are indulged in by anyone.

6. While most of the Provinces of Canada have on their statute books laws guaranteeing workers the right to organize and to bargain collectively, the Province of Ontario has not legislated to this effect. In the Provinces where such legislation has been enacted, Trade Union is defined as any association or organization of employees formed for the purpose of advancing in a lawful manner the interests of such employees in respect of the terms and conditions of their employment and which is free from undue influence, domination or restraint or interference by employers or associations of employers.

The Statutes enact that it is lawful for employees to form themselves into a Trade Union or to join a Trade Union and to bargain collectively with their employers, and to conduct such bargaining through the duly chosen officers of the Union. It is made an offence for an employer to insert any clause in a written contract of employment or to impose a condition in any verbal contract of employment which seeks to restrain the right of free association or collective bargaining.

By Chapter 30 of the Statutes of Canada of 1939, Section 502A was inserted in the Criminal Code of Canada. By this enactment the Parliament of Canada recognizes the right of employees to become members of Trade Unions or associations formed for the purpose of advancing their interest in a lawful manner. The provisions of Section 502A are applicable to the Province of Ontario as well as to all other Provinces. According to a report contained in the Toronto *Globe* and *Mail* of January 18, 1940, Tom Moore, the President of the Trades and Labour Congress of Canada, and a delegation of labour representatives met the Attorney General of Ontario and other Provincial Cabinet Ministers at the Legislative Buildings on January 17, 1940. At this conference during a discussion on "Freedom of Association" Mr. Moore expressed the opinion that the Federal Statute (Section 502A of the Criminal Code) recognizing the right of the workman to join a Union was not effective in Ontario because of the lack of Provincial Legislation on the subject. With this statement the Attorney General, according to the report in the *Globe* and *Mail*, disagreed, stating that there was no question that the law of the land permitted workmen to join the Unions of their choice, and he added that if a complaint were laid under the Criminal Code, and if it appeared justified, the Department of the Attorney General would act.

In British industry, trade unionism and collective bargaining are firmly established. In the United States and Canada some employers of labour still refuse to admit the principle of collective bargaining and are opposed to the organization of their employees in Unions. According to the Honourable Norman Rogers, former Minister of Labour for Canada, half of the strikes which occurred in the United States in 1937 arose over the question of Union recognition and methods of collective bargaining, while in Canada these questions accounted for a large number of strikes during the same year (LABOUR GAZETTE, Vol. 38, 1938). Mr. Rogers also stated that a minimum of strikes had occurred in industries where the practice of collective bargaining is firmly established. In referring to the importance of collective bargaining as a factor in maintaining industrial peace he said in part (LABOUR GAZETTE, Vol. 38, 1938):

> "Whether the recognition of Unions is left to the discretion of employers or made obligatory by legislation there is no doubt that the organization of Unions will continue and their membership increase. . . In voluntary association for mutual benefits and collective bargaining wage earners feel that sense of self-reliance and definite status which only voluntary action can give. These qualities are of great importance in any democratic country. In England it has long been recognized that the Union with established traditions of good faith in meeting its engagements is a bulwark of democratic institutions and a stabilized influence in the economic organization of the state."

7. In view of the general recognition which has been given both by law and practice to the right of workers to organize and to the right of collective bargaining, it does not seem reasonable for any industry to refuse to recognize these rights unless there is some substantial justifying reason. In respect to this dispute, no sufficient justification has been shown to the Board for the refusal of the company to recognize Local Union No. 240 of the International Union of Mine, Mill and Smelter Workers.

III

1. The petition signed by the employees authorized Kirkland Lake Local 240 to represent them in negotiating with the management for an increase in wages of at least 15

cents per hour to cover the increased cost of living. The representatives of the employees, in a brief submitted to the Board, founded their claim for an increase in wages on three main contentions:

(i) That living costs in Northern Ontario make the present wage rates inadequate for the maintenance of decent living standards and that the discrepancy has been growing steadily wider since the outbreak of war.
(ii) That the dangers and hardships of mining justify wage rates well above subsistence level.
(iii) That the period of a miner's peak earning capacity is so short that some opportunity for saving should be provided.

2. In support of the contention that present wage rates are inadequate to maintain a decent standard of living, reference is made to a study on the cost of living in Toronto conducted by the Welfare Council in 1939. The result of the inquiry has been published in a booklet, a copy of which has been furnished the Board. The Welfare Council decided to obtain detailed records of family expenditures as one source of information regarding the cost of living, and for this purpose secured the names of 225 families. These families were visited by members of the Committee and asked if they would keep a year's record of all their expenses. One hundred and sixteen families volunteered to co-operate but for various reasons only 40 completed the 12 months' record. From the records kept by these 40 families the Welfare Council formed its conclusions as to a subsistence wage, but in doing so stated that 40 was too small a number from which to draw general conclusions, although valuable observations could be made from them. The Welfare Council, after an analysis of the information obtained in the survey, concluded that an average family of five, man, wife and three children between 5 and 12 years of age, would require a minimum of $28.35 per week to cover bare essentials, and divided this amount among rent, food, clothing, operation, advancement and recreation, medical services and insurance.

It is claimed that the amount of $28.35 is not sufficient in Kirkland Lake because of the fact that the prices of essentials in Northern Ontario are higher than in Toronto, and also because there has been price inflation since the outbreak of War. The prices of foods at Timmins and Toronto, as listed in the LABOUR GAZETTE, in the issue of April, 1940, are quoted and it is contended that a comparison of these lists warrants the conclusion that prices of food in Northern Ontario are 12½ per cent higher than in the City of Toronto. To support the claim that prices of food have increased materially since the commencement of the war, comparative price lists were presented from several stores in Kirkland Lake, and it was asserted that the prices were 12½ per cent higher than in September, 1939. The Toronto Welfare Council fixed the sum of $8 per week as the amount required for food for a family of five; the representatives of the miners state that this should be increased by 25 per cent, namely, $10.

Information was also furnished as to the increased cost of clothing in recent months, and an advance of one-third was claimed over the amount fixed for clothing by the Toronto Welfare Council. The Welfare Council, in its suggested budget, fixed $4.46 per week as the minimum required by the family for clothing; the miners claim that in Kirkland Lake the amount should be $5.94. In calculating this increase any differential which may exist between prices in Toronto and Northern Ontario is disregarded, and the claim is founded upon the alleged increase in prices since the outbreak of War, and also upon the contention that a miner incurs additional expense for working clothes because of wear and tear, and his family requires more clothes because of the rigorous climate in the North.

The item of rent in the budget of the Welfare Council, namely $5.81 per week, is stated to be not sufficient in Kirkland Lake and the amount suggested is $8.14. The other items in the budget of the Welfare Council require no reference. Making the adjustments referred to in the budget of the Toronto Welfare Council, the miners claim that a subsistence weekly wage for a family of five in Kirkland Lake is $34.16. Compared with this subsistence wage it is stated that the average weekly wage for 676 men in the Teck Hughes Mine is $4.98 per day, and if 19 foremen and shift bosses are excluded, the average is $4.92. It is also pointed out that 94 per cent of the employees receive from $4.50 to $5.50 per day or $27 to $33 per week. In arriving at the average wages no account is taken of contract bonus or zone bonus, to which some reference will later be made.

3. Mr. McMillan and Mr. Harris for the Company presented a brief on the subject of wages in which it is contended that the average earnings of the men who work in the Teck Hughes Mine are higher than the average for any other Ontario industry; that when the cost of living was dropping, base wages at the Teck Hughes were maintained and average earnings were greater; and that the purchasing power of the dollar was greater in 1939 than in 1929.

4. In support of the statement that average weekly wages in the mines are higher than in

any other industry in Ontario, a statement was submitted showing the average weekly wage at the Teck Hughes mine for the years 1930-1939, inclusive, together with statements compiled from the reports of the Workmen's Compensation Board showing the average weekly wage in all mines in Ontario, the average in the next highest industry and the average for all classes of industry for the years 1915-1938, the latest year available. The figures taken from the reports of the Workmen's Compensation Board represent the average weekly earnings of the men in each industry who were, during any year, paid compensation by the Board, and it would perhaps not be accurate to say that the men in any industry who were paid compensation in a particular year represented a true cross-section of the wage-earners in the industry. However, when the average weekly wages given by the Workmen's Compensation Board for the entire mining industry for the past 10 years are compared with the average weekly wage in Teck Hughes in each year for the same period one cannot avoid the conclusion that the men in the mining industry, who were paid compensation, represented a true cross-section of that industry. Assuming then that the men paid compensation in each industry represented at least a fair cross-section in each industry, and that the averages given by the Workmen's Compensation Board at least approximate the actual average wage in each industry, it does appear that the miners in Ontario are paid the highest average wages. According to the report of the Wokmen's Compensation Board the average weekly wage in Ontario mines in 1938 was $31.29 and the average weekly wage in all Ontario industries was $19.84; in the Teck Hughes mine the average weekly wage in 1938 was $31.38 and in 1939 $31.32.

In calculating the average weekly wage of $31.32 the management excluded foremen and shift bosses, but included the contract bonus and the zone bonus, the latter of which is paid to men working below the 2,500-foot level. The Board was furnished with a statement for the years 1938 and 1939 showing the number of men in each month who were in receipt of one or other of the bonuses and the amount by which the total payroll was increased. In 1938 the average number of men in receipt of a bonus each month was 310, and the average monthly sum involved was $4,588, or an average of about $15 per man. In 1939 the average number of men in receipt of a bonus each month was 300 and the monthly average sum involved was $4,472 or nearly $15 per man. The inclusion of the bonuses in calculating the average monthly wage explains the difference between $31.32, the average wage stated by the management, and the average wage given by the representatives of the men, namely $29.52.

5. According to the statement compiled from the reports of the Workmen's Compensation Board, the average weekly wages of men working in Ontario mines increased from $16.69 in 1915 to $31.29 in 1938, or by 87 per cent. On behalf of the mine management it is pointed out that according to the LABOUR GAZETTE the cost of living was 24 per cent higher in 1938 than in 1915; the Teck Hughes average wages prior to 1930 have not been computed but because of the close relationship in the wages for all mines given by the Workmen's Compensation Board and the averages in Teck Hughes for the years 1930-1939, it may be safely assumed that the wages in Teck Hughes prior to 1930 were at least similar to the averages given for all mines. This being so, the present Teck Hughes average wage is 87 per cent higher than in 1915 whereas there has been an increase of only 24 per cent in the cost of living. It is only fair to point out, however, that there has been a general advance in wage standards attributable, at least in part, to an increased standard of living. It should also be added that according to the wage scales contained in the reports of the Workmen's Compensation Board the percentage of increase in miners' wages has been higher than in other industries.

The figures given in the LABOUR GAZETTE as to the cost of living in Canada are compiled from price lists of 29 staple foods for an average family of five, obtained from 69 cities in Canada. The budget used by the Department of Labour is employed for the purpose of determining fluctuations in the cost of living and does not purport to show the minimum cost for an average family. The index is set as 100 in 1913 and according to the LABOUR GAZETTE the cost of living increased only slightly until 1917 when there was an increase from year to year until a peak was reached in 1920. Following 1920 there was a steady decline until June, 1933, when a low point was reached. Following 1933 the trend has been upward but never very marked. In December, 1937, it was 133, in December, 1938, 131 and in December, 1939-135. In January and February, 1940, it was 135 as compared with 131 in September, 1939, an increase since the commencement of War of between 3 per cent and 4 per cent.

The average weekly wage for the period from 1930-1939, according to the figures presented by the mine management has increased during the period by 7 per cent; and it is contended that according to the prices re-

corded in the LABOUR GAZETTE for Kirkland Lake (based on Timmins figures which are assumed to be the same as Kirkland Lake) the cost of living has decreased by 9 per cent since 1930 and therefore the miner's dollar in 1939 was equivalent to $1.16 as compared with 1930. It so happens that according to the Labour Department index for all items including fuel, food, rent, clothing and sundries, the cost of living dropped in Canada from 151 in 1930 to 135 in 1931. Accordingly, if 1931 is compared with 1939, little change in the comparative cost of living took place. On the other hand, if the index given by the LABOUR GAZETTE for all items for any year prior to 1930 as far back as 1917 is taken as a basis for comparison, it will be found that the cost of living in any of these years was greater than in 1939 or in the first months of 1940. In the years 1932-1936, inclusive, the Labour Department index shows a substantially lower cost than at the present time. Throughout the entire history of the Teck Hughes Mine the management states that there has never been a wage decrease.

6. A memorandum was presented by the management setting forth the effect of the increased price of gold upon mining policies. Briefly, it is asserted that by reason of the increase in the price of gold from $20.67 to $35.00 per oz., millions of tons of ore formerly unprofitable came at once into the realm of profitable production, and that the increased price was not used merely to increase profits, but was used primarily to make available large tonnages, to lower the average grade treated, to increase employment, to lengthen the life of the mines and thus of the community dependent upon them. It is stated that as a result of the policy the ounce production per ton in all Ontario gold mines decreased and that the grade at Teck Hughes dropped from .605 oz. in 1932 to .382 oz. in 1934, the first year when the increased price of gold was effective. Moreover, it is stated that the average value per ton treated in Teck Hughes has dropped from $15.90 in 1930 to $8.75 in the fiscal year ending August 31, 1939.

7. Wages paid in the mining industry should be sufficient at least to cover reasonable living needs and costs. The wages at present paid in Teck Hughes are higher than at any time in the history of the mine, and if the figures compiled from the reports of the Workmen's Compensation Board are taken as a guide, wages in the mining industry are higher than in any other Ontario industry subject to the Workmen's Compensation Act. There are, however, two factors which should be taken into account—

(i) Living costs in the Kirkland Lake area are higher than in the City of Toronto, and it may be safely assumed in many other parts of Ontario.

(ii) The character of the industry, the nature of the work and other features of the employment make it appropriate that the wages in the industry should be on a high scale.

8. In dealing with the question of wages a number of factors should be considered, among them the following;

(i) What, in fact, is a proper standard of living? In considering this question due regard must be given to facts relating to the particular employment or area.

(ii) What is the cost of maintaining this standard?

(iii) Comparable earnings for comparable work in other industries.

(iv) What other factors, such as skill, strain, tenure or insecurity of employment should be considered?

(v) The relation of all these matters not only to the Teck Hughes company but to the economy of the mining industry as a whole.

In addition to these general questions there is the specific question of the effect which should be given any recent increase in the cost of living.

In the present case, the Board is of the opinion that it cannot consider the wage question in all its aspects because of the limitation of the inquiry. In the application for the appointment of the Board the request for an increase in wages is expressly based upon the single ground of the alleged increase in the cost of living. The language used in the application is "respecting a demand of the said employees for an increase in wages of at least 15c. per hour to cover the increased cost of living". While we were advised that it was not so intended by the men, the language appears to limit the matter which has been referred to us for investigation and to limit our jurisdiction to the question of whether an increase in living costs has occurred which should be covered by an increase in wages.

Notwithstanding this, both parties submitted considerable material bearing generally upon the wage structure in the mine and in the industry so that any such general information might assist the Board in its deliberations. In the opinion of the Board, however, the general subject of wage structure has not been sufficiently covered to permit a general finding being made at this stage even if the inquiry had not been limited by the terms of

the reference. On the other hand, it would not be fair either to the men or to the industry to limit the inquiry to a consideration of immediate living cost increases unless, at the same time, the question of wages can be comprehensively dealt with in all its aspects.

There has been an increase in the cost of living since the outbreak of the war. According to the Labour Gazette this increase is between 3 per cent and 4 per cent. In the Kirkland Lake area the increase in the cost of food is estimated at 7 per cent and in the case of clothing is perhaps more than 7 per cent.

The Company contends that other features of the prevailing wage structure offset this increase in living costs; the men on the other hand contend that the cost of living increase only aggravates the wage structure, which they claim is inadequate to begin with. Whether or not one or the other contention is correct involves the more general and comprehensive inquiry into the whole wage structure and wage question which, as above indicated, we are not authorized, and perhaps not sufficiently informed at this time, to deal with. We think it appropriate, however, to express the opinion that consideration of the whole wage question, either as to its basic adequacy or in relation to living cost changes should be deferred for the immediate present and considered at a later date—we suggest in six months. During that time the relevant facts may become clearer and there may be further surveys or data on the question of living standards and costs. Perhaps the Department of Labour, either Dominion or Provincial, may during the interval deem it advisable to institute some investigation into the facts involved.

9. It has come to our attention that virtually no feature of employees' welfare, with the exception of an Employees Benefit Fund, exists in the Teck Hughes Mine. It is not within our jurisdiction to deal with this subject but we suggest that it be given some consideration by both parties. Included in the subject is the matter of payment of wages for holidays.

10. In considering the subjects involved in our investigation we have had the benefit of the excellent manner in which both parties have presented their material and made their representations. We feel that they are to be congratulated on the manner in which the proceedings were conducted. We desire to express our hope that the findings and proposals of the Board will be accepted and implemented by the parties. We recommend to them that they do so. In these critical times the fullest co-operation is expected and due from all of us. It is particularly important that this be assured in this industry which is so essential today to the economy of the country.

Dated June 7th, 1940.

(Sgd.) J. L. Cohen—Member.
(Sgd.) G. C. Bateman (subject to my dissenting memorandum as to section 2).

Union Recognition—Statement by Mr G. C. Bateman

During the course of the presentation of this matter there were many charges and countercharges by the representatives of the management and of the Union. The Union claimed discrimination, while the Company claimed that the Union's organizing campaign had been characterized by untrue and misleading statements designed to create friction between the men and the management, and that since its inception the Union leadership had been closely allied with the Communist party. In my opinion all of these statements appear to be well founded.

It is an unfortunate commentary on such a measure as the Industrial Disputes Act that the Act itself creates an atmosphere which practically precludes the possibility of calm and impartial judgment being exercised. In this case the appointment of a Conciliation Board was dependent upon a strike vote being taken. Frequently in order to obtain a majority for a strike it is necessary to inflame the passions and prejudices of the men. Unless an overwhelming majority has voted for a strike there still remains a big element of uncertainty as to what the result would have been under conditions which would have permitted a reasoned appraisal of the whole situation.

Union recognition may come as a result of voluntary action or as a result of pressure. One primary requisite to voluntary recognition is confidence. In the material presented to the Board information was given regarding the methods used by the local Union in its organizing campaign at the Teck-Hughes, and also of the action of Local Union 303 in connection with the strike at the Pioneer Mine in British Columbia. Such methods, together with the fact that the real Union campaign at the Teck-Hughes may be said to have started in October, 1939, or shortly after the outbreak of war, do little to inspire confidence.

It does not seem necessary for me to go into details of all the different charges and the evidence or lack of evidence supporting them. The one thing which stood out most clearly was that at present an almost unbridgable gap exists between the Union and the management. Whatever the wisdom may

be of the ultimate recognition of some form of organization, my opinion is that no good purpose can be served by attempting to force such recognition at this time. There is too little confidence and perhaps too much prejudice on the part of management and too much suspicion, irresponsibility and lack of constructive leadership on the part of the Union to give grounds for the belief that this can be done without further aggravating the situation. The question of recognition or non-recognition is something which should be left for the future when calmer reason and judgment can prevail. In the meantime Canadian citizens have something more important to do.

(Signed) G. C. Bateman.

Report of Board in Dispute between the Davie Shipbuilding & Repairing Company, Ltd., and Its Mechanics, Labourers, etc.

A unanimous report was presented to the Minister of Labour on June 10 by the Board of Conciliation and Investigation established to inquire into differences between the Davie Shipbuilding and Repairing Company, Ltd., and its mechanics, helpers, labourers, etc. Attached to the report was a Schedule of Regulations constituting the Board's recommendations. During the board's sessions both parties bound themselves in writing to accept and act upon the recommendations of the board. In view of this undertaking by each party to the dispute the regulations were drafted by the board in mandatory rather than in suggestive terms. While the basic wage rates remain unchanged, there is provision for a bonus or allowance in accordance with a formula set out in Section 17 thereof.

The board was composed as follows: Honourable Mr. Justice J. G. Gillanders, of the Supreme Court of Ontario, chairman, appointed on the joint recommendation of the other board members; Mr. F. Curzon Dobell, of Montreal, P.Q., member appointed on the company's nomination; and Mr. Tancrède Ethier, K.C., of Hull, P.Q., member appointed on the employees' nomination.

Schedule of Regulations

Following is the text of the Schedule of Regulations recommended by the board and adopted by the company and employees:—

1. These Regulations shall be effective from and including June 3, 1940, and shall remain in effect during the continuance of the present War, thereafter until the completion of any contracts entered into by the Company previous to the suspension of hostilities and thereafter until cancelled by the Company or its employees through their proper representatives on thirty days' written notice to the other party.

2. Forty-eight hours per calendar week, without limitation of hours per day, shall constitute a week's work for each employee, irrespective of the nature of the work performed. Shifts shall be arranged by the Company, which may in its discretion operate with one, two or three shifts.

3. Time and one-half shall be paid for any excess over forty-eight hours in any week, double time for work on Sundays and time and one-quarter for cleaning oil tanks. (It must be recognized that the exigencies of the national service in time of War may require the uninterrupted operation of the Company's plant, but the Company will as much as possible avoid requiring its employees to work on the Sabbath.)

4. If employees, who are required to report for work outside of Lauzon and Levis, are instructed to call for material or equipment at the yard, travelling shall be done in the Company's time.

5. Employees cleaning oil tanks shall be provided with rubber boots and oilskin suits by the Company. Employees working in confined places affected with gas shall wear gas masks, which shall be provided by the Company.

6. If any employee considers that he has a legitimate cause of grievance or complaint he shall be entitled, in his negotiations with the Company's representatives, to the assistance of one or two other employees selected by him. If such grievance or complaint is not settled to mutual satisfaction within ten days, either party shall have the right to refer it to the Minister of Labour, whose decision shall be final and binding. The expression "grievance or complaint" as used in this Regulation does not include petty or insignificant differences, nor the allocation of jobs, nor the hiring of employees, with respect to all of which matters the Company must have uncontrolled discretion of decision.

7. When reductions or increases of staff are made by the Company preference shall be given to the senior qualified employees, subject always to the right of the Company to allocate employees as it sees fit.

8. Employees temporarily assigned to a higher-rated position shall receive the higher rate for the time employed in such position.

9. Employees shall have the right to post, in conspicuous places on the Company's property designated by the superintendent, notices of meetings of employees and such other notices as may be approved by the superintendent.

10. During the period stipulated in Regulation 1 above, there shall be no lockout or strike.

11. An employee called to start work between midnight and 4 a.m., both inclusive, shall be paid a minimum of two hours' wages.

12. Any employee suffering injury while in the employ of the Company shall report as soon as possible to the First Aid Department and shall also report to that Department on returning to work.

13. Any employee discharged for disobeying the rules of the Company shall be paid up to the time of discharge.

14. No employee shall be paid until he produces a receipt for any tools or equipment,

the property of the Company, that have been issued to him.

15. There shall be no discrimination against any employee by reason of his belonging to a Labour or Trades Union or to any similar organization.

16. The rates of wage payable to the employees shall, subject to the provisions of the succeeding Regulation 17, be those which were made effective on or about March 4, 1940, and which are in effect at the date of promulgation of these Regulations.

17. The employees shall be entitled to receive, and the Company shall pay them, an allowance or bonus of two cents per hour on account of each multiple of five per cent by which the costs of living in Canada may at any time rise above those of February, 1940, calculated at the times and in the manner detailed in the following explanatory note.

NOTE.—It is recognized that the employees should be protected against the possibility of increase in living costs, which they have frequently stated that they apprehend will occur during the War. Without in any way subscribing in principle to the view that wages should fluctuate up and down merely because of variations in the cost of living, it is felt that some assurance should be given to the employees of this Company, who have agreed to accept these Regulations for the duration of the War, that they may look forward to receiving consideration, not by increase in wage rates but by bonus or allowance, if their expressed apprehensions as to living costs should be justified by future events during that period. After having carefully considered various means suggested to safeguard the employees in this respect, it has been decided that a comparison shall be made at the end of every four months commencing August 31, 1940 (hereafter referred to as "Check Dates") between the figure known as All Items Index in the statement entitled "Changes in the Cost of Living in Canada" published by the Department of Labour of Canada in the LABOUR GAZETTE and the corresponding figure for February, 1940, and that, whenever at any such Check Date the figure exceeds that for February, 1940, by at least five per cent thereof, each employee shall receive during the four months following such Check Date a sum of two cents for each hour worked with respect to each full multiple of five per cent by which the Figure at such Check Date exceeds the figure for February, 1940. To illustrate:—an All Items Index number for August, 1940, exceeding that for February, 1940, by twelve per cent of the latter would involve the payment of a bonus allowance of four cents per hour to each employee during the last four months of the year 1940; similarly, a figure for December, 1940, exceeding that for February, 1940, by only nine per cent of the latter would in turn reduce the bonus or allowance to two cents per hour for the first four months of 1941; and so on. The basic wage rates will remain constant and the bonus or allowance will fluctuate in accordance with what, on the best evidence obtainable, appears from time to time to be a reasonable proportion of the lessened purchasing power of the employees' wages. The Index figure for February, 1940, is taken as the criterion for the reason that the current wage scale became effective within the first few days of the succeeding month. The flat bonus or allowance of two cents per man per hour is intended to provide all wage-earners with equal indemnity against increased costs of living, without regard to their respective rates of wage, and is therefore preferable to a percentage increase, which would result in the various classes of employees being differently treated.

18. These Regulations and the schedule of basic wage-rates payable hereunder (except to foremen and the like) shall be kept posted in English and in French in a conspicuous place at the Company's plant where they may be seen by all employees.

June 7, 1940.

Report of Board in Dispute between the Canadian General Electric Company, Limited, and Its Pattern Makers

A unanimous report was presented to the Minister of Labour on June 13 by the Board of Conciliation and Investigation which dealt with a dispute between the Canadian General Electric Company, Ltd., and its pattern makers, at Toronto, Ont., being members of the Toronto Association of Pattern Makers. The dispute related to the matter of wages. The board found that the current and prevailing wage rate for pattern makers in the manufacturing shops in the Toronto area on the date the application for a board was made, April 2, 1940, was 77 cents per hour, and by agreement of the parties to the dispute that rate is to be made retroactive.

The board was composed of Professor Norman A. MacKenzie, of the University of Toronto, chairman, Mr. Victor A. Sinclair, K.C., the member nominated by the company, and Mr. John Munro, the member nominated by the employees.

The text of the board's report follows:—

Report of Board

In the matter of a dispute between the Canadian General Electric Company, Employer; and its Pattern Makers at Toronto, Ontario, being Members of the Toronto Association of Pattern Makers League of North America.

To The Honourable N. A. McLARTY,
Minister of Labour,
Ottawa, Canada.

The members of the Board met on May 10, to have themselves sworn in and constituted as a Board, and on May 21st, 22nd, 23rd, 24th 28th, 30th, June 4th, 5th, 6th and 11th. The

matter in dispute arose out of a demand that the rate of pay for pattern makers in the employ of the Canadian General Electric Company should be increased to 80 cents per hour. The number of employees (pattern makers) concerned in this matter as set out in the application of the Association was 11. Their then rate of pay was 70 cents an hour. This particular dispute arose out of a demand of the Pattern Makers' Association of Toronto that wages in the Toronto area should be set at 80 cents minimum per hour in manufacturing shops and 92½ cents per hour in jobbing shops. This aim or demand was decided upon about December 20, 1939. The Canadian General Electric Company refused to accede to this demand of 80 cents per hour on the ground that they made a practice of paying wages equal to or better than the rates paid in the community industries for comparable work requiring equal skill and efficiency and that this community rate was not 80 cents per hour. They cited as evidence of this that they had hired 10 pattern makers after March 15th of this year at the rate of 70 cents per hour. Representatives for the men replied that this 70 cents per hour had been accepted after March 15th on the understanding that this rate would be raised in due course. This understanding was disputed by the representative of the Company and the amount of the increase which the employees stated they expected to receive was also in question. On this particular matter the Board were unable to obtain conclusive evidence. My own impression is that both the men and the management were sincere and honest in their contention about their respective claims in respect of the matter.

A preliminary question as to the representative character of the individuals applying for the arbitration was raised by the employer in his reply but after friendly discussion this point was dropped and the employer agreed that the individuals applying for the Board and representing the men were acting in a representative capacity. Certain evidence, marked Exhibit C, with reference to this point is attached hereto.

After a good deal of discussion it was agreed by the parties and the members of the Board that the matter in issue to be decided by the Board was the current or prevailing rate of wages for pattern makers in the Toronto area. The date agreed upon as a test date for the facts in issue was April 2, 1940, the date on which the application for the Board was made. In order to determine this it was necessary to decide whether all of the pattern makers in the Toronto area, that is, those employed in jobbing shops as well as those employed in manufacturing shops, should be included in estimating the prevailing wage rate. On the evidence submitted I would feel myself bound to find that there was no real distinction between the pattern makers employed in jobbing shops and pattern makers employed in manufacturing shops for they seem to be engaged interchangeably and very few of them seem to be in permanent employment, as witness the fact that on the 2nd of April there were 14 pattern makers employed in the Canadian General Electric plant whereas on May 23rd there were only 4 pattern makers employed in that plant. However, as the Pattern Makers' Association itself, in their letter of December 19th, as set out in the employer's brief (marked Exhibit B) at page 5, differentiated between manufacturing shops and jobbing shops, and as in the evidence submitted and agreed to by the parties, there is a difference in the wages paid, in that the pattern makers in the jobbing shops are in receipt of at least 90 cents an hour whereas those in the manufacturing shops run from 65 cents to 85 cents, I feel that for the purposes of this dispute at least we are bound to distinguish between the two groups and confine our conclusions to the matter of the employees in the Canadian General Electric works, one of the manufacturing shops.

Another matter in issue involved the question of the area or territory included in the "Toronto area" in deciding upon a prevailing rate of wages. The Toronto Association of pattern makers seems to supply the demand for pattern makers in Toronto, Oshawa, Brantford and Kingston, but does not supply pattern makers in Hamilton. The rate of wages in these places varies considerably. In Brantford and Kingston it seems to be lower and in Oshawa higher than the prevailing rate in Toronto itself. In the discussion, representatives of the Association and of the Employer agreed to leave Brantford out of the discussion but they did not agree as to whether or not Oshawa should be included. It seems that most of the pattern makers employed in these places—Toronto, Brantford, Oshawa and Kingston—ordinarily reside in Toronto and the Association supplies the demand for pattern makers from these places out of the members of the Association ordinarily resident in Toronto itself. It was agreed that as of May 23, 1940, there were about 68 pattern makers members of the Toronto branch of the Association and employed in the places supplied by this Association. Of this 68, 27 were employed in jobbing shops and received 90 cents or more. Of the remaining 41, presumably employed in manufacturing shops, 26 received 80 cents or more, 15 less than 80 cents. On April 2nd, the test date decided upon, there were in the manufacturing shops

in Toronto itself 36 men employed, of whom 19 received 80 cents or more, 17 receiving less than 80 cents. On this date there were 12 pattern makers employed in Oshawa, 10 receiving 80 cents or more, 2 receiving less than 80 cents. These figures for April 2nd do not include 14 men in the Canadian General Electric Company who were, on that date, in receipt of 70 cents per hour. From this it will be seen that as of May 23rd there were more pattern makers in Toronto, even in the manufacturing shops, receiving more than 80 cents an hour than there were receiving less than 80 cents an hour, while on April 2nd, excluding the Canadian General Electric employees and excluding Oshawa, Brantford and Kingston, there were slightly more employees receiving more than 80 cents than there were receiving less than 80 cents. Including the Canadian General Electric pattern makers on that date, April 2nd, and again excluding Oshawa, there were more employees in Toronto receiving less than 80 cents than there were receiving more than 80 cents. In all of these later examples, the pattern makers employed in the jobbing shops who receive 90 cents an hour or more are not included.

From the facts set out above which were submitted in evidence and generally agreed to by the parties, it would seem that there are a number of methods by which one could estimate the prevailing rate in the Toronto area. For the reasons set out above I have decided not to include, for the purposes of this dispute, the pattern makers employed in the jobbing shops, although as I have said they seem to be employed interchangeably and if included would make an appreciable difference in the rate arrived at. I also think it wise to rely upon the test date agreed, April 2nd, in coming to our decision and also to confine our investigation to the pattern makers employed in Toronto itself. This would exclude Brantford, Oshawa and Kingston and, while in respect of Oshawa it works to the disadvantage of the employees, in the case of Brantford and Kingston it works to the disadvantage of the employer.

Having disposed of these preliminary questions there remains the question of the prevailing rate on April 2nd in the manufacturing shops in Toronto itself. Because the Canadian General Electric plant is itself in issue I consider it advisable to exclude this plant from our calculations and to reach our conclusions on the basis of the other manufacturing shops in Toronto. Here, as pointed out, there were 19 employees receiving 80 cents or more and 17 receiving less than 80 cents. I gather that this situation in part has arisen out of the determination of the Pattern Makers' Association to have the wages in the Toronto area raised to at least 80 cents an hour in the manufacturing shops, and to a willingness, on the part of certain employers at least, to meet this demand. It is also my opinion that, having made this decision and having persuaded certain employers to accept the rate of 80 cents, it is unlikely that the members of the Pattern Makers' Association will feel themselves able to accept anything less than this amount, particularly in the present state of industry with its increasing demands upon skilled workers due to the wartime emergency. At the same time, I do not feel that in all fairness to the parties involved I could decide that the prevailing rate of April 2nd in the manufacturing shops was 80 cents an hour or better whatever the expectations of the Association may have been and whatever the facts at the present time may be. On that date the average rate of wages for pattern makers in the manufacturing shops in Toronto, excluding the shops in dispute, was about 77 cents. As pointed out by the representatives of the Association, certain of the employees in the shops receiving less than 80 cents are in a special class due to their age or for other reasons, but, on the other hand, the representative of the employer argued that certain of those receiving 80 cents or more were in special positions because of their seniority or because they were in charge of the shop. I feel that these arguments pretty well cancel each other out and that in any event the number involved is so limited that they do not materially affect our decision one way or another. It was brought out in evidence that a few of the men employed in the shops in Toronto, notably two or three men in the Massey-Harris Company, are not members of the Association, but there was no attempt made by the representatives of the Association to insist upon anything in the nature of a closed shop and it appears from the evidence that practically all the pattern makers in Toronto are members of the Association. Again, because of the smallness of the number involved this matter would not vitally affect the result arrived at.

My general conclusion, therefore, is: (1) at the present time there seems to be no real distinction between pattern makers employed in manufacturing shops and pattern makers employed in jobbing shops, but that, by reason of the Association's own action, for the purpose of this dispute we are limited to the pattern makers employed in the manufacturing shops; (2) there were more pattern makers in Toronto on April 2nd employed at 80 cents or more than there were employed

at less than 80 cents—the figures given us were 19 and 17 respectively; this excludes 14 workers in the Canadian General Electric plant who were involved in the dispute before us. Including them there were, of course, more employed at less than 80 cents than there were at more than 80 cents, the figures being 31 and 19 respectively; (3) the average general rate prevailing in Toronto on April 2nd and excluding the employees in the Canadian General Electric was about 77 cents. In view of the developments which have occurred since April 2nd, it would be my opinion the prevailing rate today was higher than it was at the earlier date, and, in view of the apparent determination of the Association to raise the rate to at least 80 cents and of the demand by employers for experienced pattern makers, I would feel that this rate was likely to be paid in the future, but, as this was not the question submitted to the Board for decision, we have limited our findings to the date of the dispute in question, April 2nd.

I therefore find that the current or prevailing wage rate for pattern makers in manufacturing shops in the Toronto area on April 2, 1940, as based on the evidence and conclusions set out above, was 77 cents per hour. By agreement of the parties this rate is to be made retroactive.

Chairman.
(Sgd.) John Munro.
(Sgd.) V. A. Sinclair.

Toronto, June 11, 1940.

Report of Board in Dispute between Canada Veneers, Limited, and Its Employees at Saint John, New Brunswick

A Board of Conciliation and Investigation established in April to deal with a dispute between Canada Veneers, Limited, and its employees being members of Local 2533, United Brotherhood of Carpenters and Joiners of America, presented to the Minister of Labour on June 20 a unanimous report. Attached to the report was a contract which had been drawn up by the board and accepted and executed by both parties to the dispute.

Early in its proceedings the Board drafted a labour classification acceptable to both parties. The Board obtained authority to retain the services of a chartered accountant to audit and inspect the books and records of the company and to make a detailed report on its financial standing. "This action," the Board stated, "was found necessary because of the contention of the company that it had not been able to pay higher wages in the past because of lack of earnings. The company produced balance sheets for several years back showing that it had sustained losses consistently throughout its operations. During the present year, however, by reason of war conditions, the prospect of increased earnings was much improved and it is because of this that the Board has been able to recommend and to have the company agree to a substantially increased wage scale."

Members of the board were as follows: Mr. T. Louis McGloan, chairman, appointed on the joint recommendation of the other board members; Mr. James A. Whitebone, nominated by the employees; and Mr. L. M. Ritchie, nominated by the company. The three members are residents of Saint John, N.B., where all meetings of the board were held. During the course of its proceedings the board made two thorough inspections of the company's plant and held several informal meetings with representatives of the parties to the dispute.

Text of Agreement

Following is the text of the agreement which was signed by representatives of both parties:—

This agreement made this seventeenth day of June, A.D. 1940, BETWEEN CANADA VENEERS, LIMITED, a duly incorporated Company having its head office at the City of Saint John in the Province of New Brunswick (hereinafter called the "Company") of the First Part; and Local No. 2533, UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA (hereinafter called the "Union") of the Second Part.

Witnesseth that it is agreed by and between the Parties hereto as follows:—

1. That the Company hereby recognizes the Union as the sole bargaining agent for the employees of the Company who are members of the Union and recommends that all employes eligible for membership belong to and remain in good standing in the Union.

2. That the Company upon the written request of the Union, signed by the President and Secretary, will provide desk space in the Company's office on any pay day during the time when pay is being regularly distributed for the purpose of facilitating the collection of Union dues from Union employees by an authorized representative of the Union. The Company shall not be obliged to pay for the time of such representative when so engaged.

3. That so far as practicable and all things being equal, employees laid off due to curtailment in operations shall be given preference as opportunities for employment occur.

4. The regular working week shall be six days of not more than eight hours each, namely, from 8 a.m. to 12 noon and 1 p.m., to 5 p.m., excepting the vats and peeling beds where, due to the nature of the operations, the working day shall be nine hours, namely, 7.30 a.m. to 12 noon and 12.30 p.m. to 5 p.m., provided,

however, that temporarily or in times of stress the working day may be extended to nine hours whenever the mill superintendent deems it necessary so to do, but this extra hour shall be a continuation of the working day without interruption and for such extra hour the regular rate of wages shall apply.

5. That the Company may work one, two or three shifts per twenty-four-hour day at the regular rate of wages as set forth in the schedule hereunto annexed. Excepting work on the dryers, in the boiler room and on maintenance, to which this paragraph shall not apply, all overtime work by the same shift except for the extra hour mentioned in the last preceding paragraph hereof shall be paid for at one and one-half times the regular rate. Work performed on Sundays and Dominion statutory holidays (which shall be New Year's Day, Good Friday, Empire Day (May 24), July 1, Labour Day and Christmas Day) shall be paid for at double the regular rates. The working week for employees on the dryers, in the boiler room and on maintenance shall be six days; that is, they shall have one day off in every seven.

6. That the minimum regular wage scale shall be as per Schedule "A" hereunto annexed, which schedule is made a part of this contract.

7. That notwithstanding anything contained in the wage schedule, if any employee is now receiving more than the amount specified in such schedule the Company will continue to pay such employee at his present rate of wages during the period of his employment, and shall not reduce such wages to the level set out in the said schedule; but nothing herein contained shall prevent the Company from adopting the said minimum schedule rate and applying it to any new employee.

8. When female employees are required to do work ordinarily performed by men, they shall be paid the same rate of wages as that paid to male employees for the same class of work, but it shall be in the discretion of the Company, so long as fair judgment is exercised, to determine what is women's work and what is men's work.

9. The authorized representatives of the Company and the Union shall meet to discuss such questions or grievances as may arise from time to time which are of importance to either party or to both.

10. That this agreement shall be subject to the continuance of the present contract between the Company and Saro Laminated Board Products, Limited, of London, England, and to any governmental rules, orders or regulations made under the Defence of Canada Act, the War Measures Act or any statute, proclamation or order made by a lawfully constituted authority and appertaining to industrial production.

11. This agreement shall commence as and from the 1st July, 1940, and shall continue until the 31st March, 1941, and thereafter from year to year unless written notice shall be given by either party to the other at least thirty days prior to the expiration of the then current term. Any notice to be given by the Company under this agreement shall be given by posting the same on the bulletin or notice board in the Company's office in some conspicuous place to which employees have access and any notice to be given by the Union shall be mailed to the Company by registered letter addressed to it at Saint John, N.B.

In witness whereof Canada Veneers, Limited, and Local No. 2533, United Brotherhood of Carpenters and Joiners of America, have caused their respective corporate seals to be hereunto affixed and this Agreement to be subscribed in their respective names by their respective proper officers in that behalf the day and year first hereinabove written.

CANADA VENEERS, LIMITED,
(Sgd.) R. E. McMillan, President,
(Sgd.) P. R. Walsh, Secretary-Treasurer.

Witness as to execution by Company
(Sgd.) L. McC. Ritchie.

LOCAL NO. 2533, UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA,
(Sgd.) R. I. Fortune, President,
(Sgd.) Geo. L. McQueen, Vice President.
Witness as to execution by Union,
(Sgd.) Jas. A. Whitebone.

Report of Board in Dispute between the Dominion Steel and Coal Corporation, Ltd., and Employees in Its Sydney Steel Plant

A unanimous report was received by the Minister of Labour on June 24 from the Board of Conciliation and Investigation established in connection with a dispute between the Dominion Steel and Coal Corporation, Ltd., and the employees in its Sydney steel plant. During its proceedings the board prevailed upon the parties to reopen negotiations, as a result of which agreement was reached on twelve of the points in dispute. On the issues which were not settled by negotiations the board submitted its recommendations.

The members of the board were Honourable Mr. Justice Lucien Cannon, of the Quebec Superior Court, chairman, Dr. Thomas O'Reilley Boyle, of Cheticamp, N.S., the employees' nominee, and Major John S. Roper, K.C., of Halifax, N.S., the company's nominee.

Following is the text of the board's report:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between Dominion Steel and Coal Corporation, Limited, Employer; and The Employees in its Sydney Steel Plant.

To the Hon. NORMAN A. MCLARTY, K.C.,
Minister of Labour,
Ottawa, Ontario.

The Board of Conciliation established by you to investigate this dispute, and composed of the Honourable Mr. Justice Lucien Cannon, Chairman, Major J. S. Roper, K.C., nominee of the employer, and the Reverend T. O'R. Boyle, nominee of the employees, has the honour to report to you as follows:

The Board has held sittings at Sydney, Ottawa, and Montreal. A large amount of evidence was produced before the Board; numerous exhibits were filed by both parties.

The dispute in question may best be described by quoting from a copy of the application for a Conciliation Board, which was signed jointly by the Dominion Steel & Coal Corporation, Limited, and by Lodge 1064 of the Steel Workers' Organizing Committee, under date of March 21, 1940: "Although many conferences between representatives of the union and of the corporation have been held from June, 1938, to this date, the parties have not been able to agree upon the terms of the proposed agreement. The representatives of the union insist upon an increase in wages, and the corporation asserts that it is unable, under present conditions, to grant any increase or concession by which the cost of its products will be increased." It will thus be seen that the dispute concerned an agreement or contract to be entered into by the corporation and the union. The parties were in disagreement on the majority of the points to be settled by the contract.

When this Board commenced its sittings at Sydney on April 10, it found itself faced with a task of unusual magnitude. Unlike other disputes in industries where collective bargaining is well established and where disagreement is on one or two points only, here conciliation was necessary on some sixteen

of the twenty-seven points to be covered by agreement. Collective bargaining had thus far failed to produce a formal agreement; each of the parties had submitted its own conception of how the clauses of the agreement should read and subsequent negotiations had failed to produce a contract satisfactory to both parties.

In the autumn of 1936, the Sydney employees of the corporation had been organized into a local union of the Amalgamated Association of Iron, Steel and Tin Workers of North America, an affiliate of the Steel Workers' Organizing Committee of the Congress of Industrial Organizations. In accordance with the usual practice, the corporation and the union entered into negotiations with a view to signing an agreement on the rates of wages, hours of labour, and working conditions. These negotiations took place in meetings between the parties which were held in June and July, 1938. The terms of an agreement were settled by the negotiating committee, and the then executive of the Union agreed to submit that agreement to the employees for acceptance or rejection. On August 6, 1938, the agreement was rejected upon a ballot of the employees.

In May and June, 1939, the management and the union executive held meetings, when another attempt was made to arrive at a contract. This time the union submitted a draft of an agreement, which was unacceptable to the management. Negotiations were then suspended until February, 1940, when further meetings took place, which continued until March 18, 1940.

Before entering into these negotiations, the union had on February 12, 1940, decided by a vote of 2,263 to 298 to strike, if necessary, for higher wages and better working conditions. After negotiations were finally broken off on March 18, 1940, the Federal Department of Labour intervened, and, as a result, the parties to the dispute agreed, on March 21, 1940, to make a joint application to the Minister of Labour for a Conciliation Board, to be appointed in accordance with the provisions of the Industrial Disputes Investigation Act.

Your Board has listened to briefs containing the general statement of the case, which were submitted by the parties to the dispute. Attached to these briefs were voluminous exhibits and appendices. The Board then directed that one of the proposed agreements —that voted upon in 1938, and which had been submitted in evidence—should be discussed before it, clause by clause, with both sides giving their views on each item. In the course of these discussions, the Board took several occasions to point out that success in negotiating contracts of this sort depended largely upon real willingness to bargain on either side, and that the parties should approach the problem in a frame of mind ready for conciliation and willing to approach the case from each other's point of view. In accordance with Section 24 of the Act, the Board then made an offer to adjourn for a period of twelve days, if the parties to the dispute would consent to re-enter negotiations. This was accepted by both the corporation and the union, and, during the period of recess, agreement was reached on twelve of the sixteen points on which, before, they were deadlocked.

When the Board resumed its sittings on Tuesday, April 23, the parties reported on the points on which they were in agreement. From that time on, the Board is pleased to report that relations between the corporation and the union executive have been marked by friendliness and mutual goodwill. Of the points which remained to be settled, several dealt with minor matters in sections of which there was agreement in principle. The important issues which were not settled by negotiations all dealt with the matter of wages. In the remaining public sessions, therefore, which were held at Sydney, the Board was asked to deal with:—

1. The definition of the word "employee";
2. That part of the section on adjustment of grievances which deals with the umpire;
3. The clause dealing with the expiration of the contract;
4. Apprenticeship in shops;
5. Classification of rates;
6. The eight-hour day;
7. The forty-eight-hour week;
8. Vacations with pay;
9. Rates of pay.

1. *Employee*

The difficulty under this heading arises from the following circumstances: In 1937 the Legislature of Nova Scotia enacted "An Act respecting the right of employees to organize." Section 3 of this Act says, " 'Employee' as used herein, shall not include officers, officials, or persons employed in any confidential capacity." Since only employees may join a labour union in Nova Scotia, and an employee, under the Act, is one whose position is not that of an official, nor one who works in a confidential capacity, there are some men working on the Sydney plant on whose status the corporation and the union could not agree. It is the opinion of the Board that no purpose would be served by our further extending and defining the words and principles involved. However, as the discussion proceeded, we found that the men whose status is in doubt could be conveniently classified, and we, therefore,

make the following recommendations on the groups in question:—

(*a*) The rollers in the various mills should not be eligible for Union membership;

(*b*) The laboratory workers who are classified as chemists, metallurgists and research workers should not be eligible for Union membership;

(*c*) Foremen, working foremen and gang leaders not within the category covered by (*d*) are not eligible for membership. We believe that the section of the Nova Scotia Act referred to includes those who, when their regular departments are not working, are given employment as producers;

(*d*) We recommend that temporary foremen and temporary gang leaders shall be considered as being eligible for Union membership.

2. *Umpire*

The corporation and the union have agreed to set up machinery for the adjustment of grievances. The final step in the adjustment of grievances is the reference of the matter to an impartial umpire, to be appointed by mutual agreement of the parties thereto. The union desires that an umpire be chosen for each matter in dispute. The corporation contends that one man should be chosen to serve as umpire during the life of the contract. The Board agrees that the reasons behind the corporation's contention seem to be weightier than those which the union advances, and recommends that one man be chosen as umpire, to serve during the life of the contract.

3. *Expiration of Contract*

The point in dispute here is the length of time during which the contract is to run. The corporation asked that it shall remain in force and effect for a period of two years. The union is of the opinion that the contract should be subject to reopening after it has run one year.

The Board agrees that in normal times a contract for a two-year period would be most desirable on account of the stabilizing effect such a contract would have on industrial conditions. However, since economic conditions are at this time in a state of flux and subject to rapid change, the Board recommend that a one-year contract is most feasible at this time. Such a contract should go into effect immediately after it has been ratified and signed.

It should contain a provision whereby the contract shall continue in effect from year to year thereafter unless either party notifies the other, not later than 30 days prior to the expiration date, of its desire to reopen negotiations with a view to changing some of the terms of the contract. Then both parties should meet immediately so that all negotiations shall be completed before the then existing contract shall have expired.

It has been brought to our attention that one of the reasons of industrial unrest in some industries is the unnecessary delay between the arriving at an agreement between the officers of the union and the officers of industry and the actual signing and putting into force of such an agreement. Consequently, the Board recommends that in the case of a formal contract, the union should take a vote of its members not later than ten days after negotiations have been completed. Should that vote result favourably to the agreement, then the Board recommends that the contract be signed within five days thereafter.

4. *Apprenticeship in Shops*

The employees in their brief made this request of the Board: "We further ask the Board to investigate the apprentice system in operation at the Sydney plant up to 1938, with a view of making recommendations regarding the systematic training and advancement of young men in different trades." The Board listened to the views of both parties on this important question, and finds that the factors are far too complex for the consideration of a Board set up under the provisions of the Industrial Disputes Act.

5. *Classification of Rates of Wages*

From the evidence submitted the Board finds that the rate structure which has been heretofore in effect in the service shops of the plant is not altogether satisfactory. The system in vogue until recently has grown up over a long number of years under changing management. In some of these shops there are too many rates in existence. On this matter both the corporation and the union are agreed that some change is necessary. The corporation has submitted to the Board (exhibits "G" and "H") schedules of present and proposed rates for the machine shop. The Board recommends that similar schedules be worked out for the other service shops so that eventually the present unsatisfactory system will be eliminated.

6. *Eight-hour day*

We find that the principle of the eight-hour day is already in effect throughout the Sydney Steel Plant; indeed, the corporation has reprensented that it was the first of the basic steel producing plants to introduce the eight-hour day throughout all operations. The Board feels, however, that its application

should be safeguarded. For this purpose we recommend that time and one-half be paid for all hours worked in excess of eight hours in any twenty-four-hour period, this provision to apply only when the time worked in excess of eight hours exceeds fifteen minutes.

The Board finds, however, that it is necessary to make certain exceptions to this provision, as follows:

(*a*) Men Working on Jobs of a Seasonal Nature

There are certain operations carried on which are of a seasonal nature, e.g., the docks, ore and limestone stockpiles, coal banks, coal washer, brick plant, slag crusher. By mutual consent, the practice has been for the men employed on such operations to "double up", that is, work two eight-hour shifts in one day, so that the number of men employed shall be kept to a minimum in order that when work is plentiful they might take advantage of it so as to compensate for those periods in each year when work is scarce. The extra time worked by these men is not to be classed as overtime and should be paid for at straight time rates.

(*b*) Absenteeism

Where a man "doubles up" or works extra time on account of absenteeism such extra time should be done on a straight time basis.

(*c*) Mills

We find it is necessary at times for the mills to work beyond the usual shut-down time. The provision for payment of time and one-half for overtime should not apply where these conditions are outside the control of the management.

7. *The Forty-eight-hour Week*

We recommend that present conditions in respect to the forty-eight-hour week be continued.

8. *Vacations with Pay*

The union asks that two weeks' annual vacation with pay be granted all employees who have spent ten years or more in the service of the corporation. The Board finds that the financial position of Sydney steel plant does not warrant the granting of this request at the present time.

9. *Rates of Wages*

The facts and figures submitted by the company have been carefully examined and considered by the Board with the assistance of an independent auditor, Mr. C. G. Wallace, C.A., appointed, at the Board's request, by the Minister of Labour. It should be noted here that the examination made by Mr. Wallace was conducted both at Sydney and Montreal, requiring a period of some five weeks. The financial position of the company as at December 31st, 1939, does not, in the opinion of the Board, warrant any recommendation that the present scale of wages be increased.

Moreover, since the Board was established an important declaration of policy has been made by the Government of Canada in Order in Council No. 2685, of the 20th June, 1940, Paragraph 2 of which reads as follows:—

> "2. That fair and reasonable standards of wages and working conditions should be recognized and that where any temporary adjustments in remuneration are made due to war conditions they might well be in the form of bonus payments."

In view of the foregoing the Board makes no recommendation with respect to any change in the current wage scales, which, if the parties accept the Board's findings, will be continued without alteration in the contract to be concluded between them.

10. *Conclusions*

The Board, throughout its deliberations, has been faced with the instability of conditions generally due to the war, and the possibility of far-reaching changes taking place in the not too distant future.

Consequently, the Board, giving due weight to the provisions of the Order in Council quoted above, holds the view that the very uncertainties which the future holds are in themselves a justification for some departure from the economic principles which in normal times might form the sole basis for a recommendation, whether affirmative or negative on the union's request.

It is, we think, of utmost importance that, insofar as such objectives can be attained, the apprehension of the employees as to the possible adverse effect of future events be relieved, and the company be reasonably assured of stable and continuous operations, even though some temporary sacrifice and concession on both sides prove necessary.

Being of opinion that the present emergency may well call for some relief against possible increases in living costs, the Board has given consideration to this aspect of the situation and has reached the conclusion that some provision in the nature of insurance against disturbances in the domestic economy should be made. After reviewing the data and evidence available, the Board finds that a bonus payment equivalent to 15 cents per shift of eight hours worked, payable to all employees of the steel plant, should be recommended for a period of six months from the date upon which both parties accept this recommendation, and that should the index number (all items), as published in the LABOUR GAZETTE from time to time, show an increase of ten

per cent as at December 31, 1940, over the figure as at June 30, 1940, then the company and the officials of the union are to re-open and adjust the bonus payment, failing such increase this bonus to continue to be paid during the life of the contract.

The Board recommends that the union and the management sign a contract, based on the findings of this report. This contract should also include all those clauses which were agreed to by both parties and submitted to the Board as follows:—

1. Preamble;
2. Recognition;
4. Management;
5. Discharge Cases;
6. Seniority;
7. Check-off;
8. Re-employment of Officers;
9. Bricklayers;
10. Call Time;
11. Adjustment of Grievances;
13. Safety First and Health;
14. Holidays;
15. Changes in Equipment;
16. Military, Air and Naval Service.

We wish to think Mr. C. W. Wallace, C.A., the auditor appointed by the Minister of Labour to assist and advise us, for the courtesy and fairness with which he explained the financial situation of the corporation. This also applies to his assistant, Mr. Thompson. All parties and persons who appeared before us did their best to help us come to the conclusions which are summarized in this report.

We trust that both parties to this proceeding will recognize that their interests are mutually interlocked and will accept the recommendations herein.

All of which are respectfully submitted,

(Signed) Lucien Cannon,
Chairman.

(Signed) Jno. S. Roper,
Member.

(Signed) T. O'R. Boyle,
Member.

MONTREAL, 22nd June, 1940.

Report of Board in Dispute between the Standard Clay Products, Limited, and Its Employees

The Board of Conciliation and Investigation which dealt with a dispute between the Standard Clay Products, Ltd., and employees in its plant at New Glasgow, N.S., being members of the local union of the Steel Workers Organizing Committee, forwarded its findings to the Minister of Labour on June 25.

The board was able to persuade the parties concerned to negotiate a satisfactory adjustment of all matters in dispute except that of wages, and on this subject the chairman, Mr. George Patterson, and the employees' nominee on the board, Mr. Drummond Wren, presented a majority report. The board member nominated by the company, Mr. George D. Macdougall, in a minority report stated that he found himself unable to go quite as far as his colleagues in respect to the wages recommended for the two lower paid grades.

The texts of the two reports follow:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between The Standard Clay Products, Limited, hereinafter called the "Company", and its employees, being members of Local 1231, *Amalgamated Association of Iron, Steel and Tin Workers of Steel Workers Organizing Committee, hereinafter called the "Employees".*

To the Honourable MINISTER OF LABOUR,
Ottawa, Canada.

The Conciliation Board in above, after being duly constituted, held its first meeting in the Town Hall, New Glasgow, on the morning of Tuesday, June 18th, at 10 a.m. Representatives of both parties to the dispute were present. The chairman, with the concurrence and approval of the other members of the Board, urged the respective parties to go into conference and see if they could not by negotiation arrive at a friendly settlement, pointing out the advantage of such a settlement over any finding the Board could make. Both parties cordially agreed to the suggestion and the Board having adjourned for two hours negotiations were at once begun. When the Board resumed work it was reported to them that all differences or—to use the language of the application for the Board—all "grievances" had been smoothed out and satisfactorily adjusted; but that on the question of wages they had reached an *impasse* and there was no hope or expectation that on this question they could reach agreement. The Board then proceeded to hear evidence.

Though there was now no question of working conditions before us we thought it well to visit the plant of the company, which we did in the afternoon, and were most courteously shown through it by representatives both of the company and the employees.

All the next day was spent in hearing what the employees had to allege in support of their claim for an increased wage. The matter was not dealt with as in a court of law, though the evidence was given under oath, but as the various points or statements were made there would be a general and we are

glad to say a friendly discussion upon them, which to us was most helpful.

On the third day we heard the case of the company, presented in much the same way. On the fourth day we had before us, meeting *in camera,* the auditor of the company to prove and explain to us the financial statement of the company for the past year, which obviously the company did not wish to make public. At the conclusion of this sitting we adjourned until Monday, June 24, at 10 a.m., when we met to draw up our report. The whole day was spent in that work. At the end of it we were able to hand it to the stenographer to be transcribed. We met again on the morning of June 25th to sign report and complete the other details of our work.

The employees based their claim to an increased wage upon the ground that their wages were not sufficient to provide them and their families with the actual necessaries of life, let alone live with any degree of comfort and provide properly for the education of their children. They cited figures from official documents to show that the cost of living at a decent standard was more than the lower paid men in the company's plant were getting. They asked for a general increase of ten cents per hour.

The company's answer was honest and straightforward. It did not claim that the employees were highly paid, but it did say that they were paid as well as the business of the company would permit and as well as other employees in the district were paid for similar labour. It pointed out that of its own motion it had increased wages in 1937 and 1938 and though the market had for eight years been depressed, though no dividend had been paid for seven years nor any contribution made to its sinking fund during same period, and sound business did not warrant its doing so, it had again offered a substantial increase, though much less than the employees had asked for.

After a careful consideration of the evidence and what was alleged by both interests in support of their claims we have reached the conclusion that an increase in wages in all classifications must be given. In the case of the lowest paid men the increase must be substantial. We take the company's counter proposal to request of employees for a general increase of ten cents per hour as a basis; that proposal was as follows:

Old Rate	New Rate
30c. per hour	33c. per hour
33½c. " "	35c. " "
34½c. " "	36c. " "
35½c. " "	37c. " "
36½c. " "	38c. " "
37½c. " "	39c. " "
39c. " "	40c. " "
42c. " "	43c. " "
44c. " "	45c. " "
47½c. " "	48c. " "
49½c. " "	50c. " "

We fix upon the following as the rates hereafter to be paid:—

Old Rate	New Rate
30c. per hour	36c. per hour
33½c. " "	36c. " "
34½c. " "	36c. " "
35½c. " "	37c. " "
36½c. " "	38c. " "
37½c. " "	39c. " "
39c. " "	40c. " "
42c. " "	43c. " "
44c. " "	45c. " "
47½c. " "	48c. " "
49½c. " "	50c. " "

That is to say, except on the first two items we have adopted as the new scale the rates offered by the company. The new rates are not what we would like to give—are not considered as sufficient to maintain the desired standard of living in this community—but are as much as the ability of the company can be expected to provide at this moment.

We do not regard this report as final and conclusive of the matter referred to us. We propose the schedule above go into force as and from July 1st and continue until October 1st, when if difficulties have arisen and either party desires it, the Board will reconvene. We most sincerely hope that no difference nor difficulty will arise that cannot be settled by friendly negotiation.

All of which is respectfully submitted.

Minority Report

I regret I am unable to agree with the report of my colleagues in the matter of wages.

In order that an industry may carry on, it is necessary that there should not be a deficit. In the case of the Standard Clay Products, Limited, there has been a deficit during the last eight years of $170,038.46. The balance sheet for 1939 shows a deficit as of December 31, 1939, of $15,367.58. No dividends have been paid on the common stock for a number of years and no sinking fund for bond redemption has been paid for the same length of time.

In February, 1940, an offer of increase of wages was made to the men as per copy in hands of the Board and transcribed above in this report, suggesting an advance of ten per cent, that is, three cents per hour to the lower paid men and lesser advances to those

then getting higher wages. While the letter does not so state, the company averred at the hearings of the Board that they did so "in order to afford some measure of relief and with full knowledge that we could not afford to do so."

However, in order to further afford some relief I have with many misgivings agreed to advancing the lowest rate from 30 cents to 34 cents and the next above rate from 33½ cents to 35 cents, and also agreed that the other rates shall be as set forth in the letter of February 5, 1940, above referred to.

In doing this I am convinced that I have gone, if not too far, at least far enough to imperil the industry in this town and I sincerely hope I may not have to reproach myself at a later date.

All of which is respectfully submitted.

(Sgd.) Geo. D. Macdougall.

New Glasgow, N.S., June 25, 1940.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM APRIL 1, 1940, TO JUNE 30, 1940

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period April 1, 1940, to June 30, 1940. (An article covering the period January 1, 1940 to March 31, 1940, appeared in the LABOUR GAZETTE, April, 1940, page 328.)

HOIST OPERATORS, ETC., BRITT AND JACK FISH, ONT.—The April issue of the LABOUR GAZETTE, at page 331, referred to a dispute between the Canadian Pacific Railway Company and certain employes at Britt and Jack Fish, Ont., being clam tower operators, riggers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The cause of the dispute was stated to be the employees' request for increased wages and for either an agreement covering the employees at Jack Fish or the inclusion of this group in the agreement at Britt. Through the conciliation service of the Department conferences took place and subsequently a settlement was reached. The agreement, which provided certain wage increases, became effective May 16. The employees at Jack Fish were not included in the agreement as it was learned that operations at that point were to be terminated in the near future. The Board application was accordingly withdrawn. It was stated that 125 employees were directly affected by the dispute.

OPERATORS, LINEMEN, ETC., QUEBEC, P.Q.—In the April, 1940, issue of the LABOUR GAZETTE, at page 330, a reference was made to an application which had been received for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Quebec Power Company, Quebec, P.Q., and its operators, linemen and metermen, members of Local Union "B" 1106, International Brotherhood of Electrical Workers. The union had requested the deletion from the agreement of part of the clause relating to overtime and conferences had failed to bring about any satisfactory arrangement. A conciliator of the Department endeavoured to bring about an adjustment of the dispute but he was not successful and a Board was subsequently established. In this instance it was stated that 34 employees were directly affected by the dispute.

COAL MINERS, COLEMAN, ALTA.—On March 28, 1940, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with differences between the McGillivray Creek Coal and Coke Company, Limited, and the International Coal and Coke Company, Limited, Coleman, Alta., and their

employees. The application, submitted by officials of District 18, United Mine Workers of America, stated that the demands of the men included recognition of District 18 as the sole bargaining agency for all employees, and adjustments and revisions in the general clauses of the wage agreement. Approximately 800 miners were stated to be involved. The statement in reply from both Companies, which are under one management, and representations made by an officer of the Coleman Miners' Association, indicated that a dispute existed between two groups of miners as to whether the majority desired to be represented by the United Mine Workers of America, or the Coleman Miners' Association. It appeared obvious that if a method could be found to solve this question there was every likelihood that Board procedure would be unnecessary. The Department therefore took this question up with the interested parties and it was agreed that the views of the miners would be ascertained through a secret ballot taken by an officer of the Department of Labour. This ballot, taken on April 18 and 19, resulted in a substantial majority in favour of the United Mine Workers of America. Subsequently an agreement was concluded with this organization in terms similar to other agreements with members of the Western Canada Bituminous Coal Operators' Association with the exception that the "closed shop" clause was omitted.

Seamen (Unlicensed Personnel), Great Lakes.—Early in April, 1940, the Department of Labour became aware that a dispute had arisen between certain shipping companies operating on the Great Lakes and their unlicensed personnel, members of the Canadian Seamen's Union, in respect of wages and working conditions to govern employment for the forthcoming season of navigation, and that negotiations had become dead-locked and had been discontinued. Later on press reports indicated that a strike was to be called on the 13th. It is of interest to note that the Department had not been approached by officials of the union for assistance in bringing about a mutually satisfactory agreement. On April 11 the Deputy Minister telegraphed the president of the union reminding him that disputes of this character come directly within the scope of the Industrial Disputes Investigation Act and that it would be illegal for the employees to go on strike or employers to declare a lockout without first having the dispute dealt with by a Board of Conciliation and Investigation. The union president's attention was also directed to Section 58 of the Act which places the responsibility for making a Board application on the party proposing the change in wages or in hours. Despite this intimation a strike occurred at midnight on April 14 and the crews of a number of ships were called out notwithstanding the fact that they had already signed ship's articles. Immediately following the strike conferences were held in Ottawa with representatives of the Canadian Seamen's Union and subsequently between officers of the Department of Labour and representatives of certain shipping companies in an endeavour to find a basis of settlement. These discussions were continued in Toronto with the same parties, and finally, on April 20, the Honourable Mr. McLarty, Minister of Labour, succeeded in terminating the strike, both parties agreeing to refer the various matters in dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. It was estimated that approximately 6,000 workers and more than 200 vessels were affected.

Steel Workers, Montreal, P.Q.—On April 6, 1940, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between Canadian Vickers, Limited, Montreal, P.Q., and certain of its employees in the Marine Division being steel workers, mechanics, helpers and labourers. Demands for wage increases of 15 cents per hour for all classes had been turned down by the Company. This matter was taken up with the employers and representatives of the employees, and a settlement followed which provided for substantial wage increases. The application, which stated that 600 employees were directly affected, was accordingly withdrawn.

Steel Workers, Hamilton, Ont.—On April 17, 1940, a complaint was received in the Department of Labour that six employees of Canada Works, Steel Company of Canada, Hamilton, Ontario, had been discharged, allegedly because of union affiliation. The men in question were members of Lodge No. 1005, Amalgamated Association of Iron, Steel and Tin Workers of North America, a C.I.O. affiliate. On April 22 a conciliation officer of the Department visited Hamilton in this connection. It was learned that in each instance the dismissal had been because of serious infraction of the Company's regulations which, the Management stated, would not permit of reinstatement, and that union affiliation had no bearing on the situation. At a meeting with the union officers and the men involved the cause of the dismissals was admitted by those concerned, but it was maintained that the Company's action had been too severe. However, in view of the Company's definite

attitude there was nothing the officer could do beyond clarifying the situation.

MACHINISTS, MOULDERS AND LABOURERS, TORONTO, ONT.—On April 24, 1940, approximately 174 workers in the foundry and machine shop of the Dominion Wheel and Foundries, Limited, Toronto, ceased work to enforce a demand for wage increases, union recognition and other concessions. The employees were members of Local No. 1089, Amalgamated Iron, Steel and Tin Workers of North America (Steel Workers Organizing Committee). Following the strike it was ascertained that this Company was engaged on war work. The union officials were advised by this Department that in view of this situation the strike was illegal under the Industrial Disputes Investigation Act as extended by Order in Council of November 7, 1939 (P.C. 3495), and that the men should return to work and have the matter dealt with by a Board of Conciliation and Investigation. The union officials stated that they were prepared to follow this course. Subsequently conciliation officers of the Department conferred with both parties and a basis of settlement was found, the men returning to work with the understanding that negotiations would be resumed between the committee of the workers and the management with the object of working out a permanent basis of settlement of all matters in dispute.

GLASS FACTORY WORKERS, MONTREAL, P.Q.—On May 6, 1940, a request was received in the Department of Labour for mediation in a strike of employees of the Consumers' Glass Company, Montreal, P.Q., which had occurred the previous day. The employees, said to number approximately 375, ceased work to enforce their demand for recognition of the Canadian Brotherhood of Glass Workers (All-Canadian Congress of Labour), and a collective labour agreement. A conciliation officer of the Department at once conferred with representatives of the strikers and officials of the company. The Management stated that if work was resumed they would meet a committee of the employees regardless of whether they were union members or not, but definitely refused to meet any committee while the strike continued, or to concede union recognition. The Provincial conciliation service functioned in the matter without success, and was unable to secure the consent of both parties to allow the dispute to be dealt with under Provincial legislation. On May 12 operations were resumed, the arrangement being that all employees who had not been involved in the disorders which had occurred during the strike period returning to work as required.

RAILWAY EMPLOYEES, SYDNEY AND LOUISBURG RAILWAY, GLACE BAY, N.S.—Under date of May 6, 1940, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act covering approximately 150 employees of the Sydney and Louisburg Railway, being roundhouse employees and certain miscellaneous groups, members of District No. 26, United Mine Workers of America. The dispute related to wages and working conditions. A question arose as to what union the employees directly affected desired the Company to recognize as the bargaining agency. With the consent of all parties concerned a secret ballot of the employees was taken on May 28 by an officer of the Department, and the outcome indicated conclusively that a substantial majority desired to be represented by the Joint Committee of the Transportation Brotherhoods. Consequently Board procedure was unnecessary and later an agreement was entered into between the Company and the Joint Committee covering these employees.

ARTIFICIAL SILK FACTORY WORKERS, DRUMMONDVILLE, P.Q.—On May 11, 1940, a strike occurred of approximately 2,000 workers in the plant of the Canadian Celanese, Limited, Drummondville, P.Q., when the Company made effective changed conditions in respect of the weavers. Recognition of the National Catholic Union of Textile Workers of Drummondville was also demanded. Following the strike the Minister of Labour of Quebec and officials of his Department held conferences with the management, following which the Company issued a statement to the press as to the conditions under which the employees could resume work without discrimination. This arrangement was not accepted by the strikers, and a delegation visited the federal Department of Labour requesting assistance. The Deputy Minister of Labour, accompanied by the Chief Conciliation Officer, visited Montreal on June 20 and discussed the matter with the Vice-President of the Company. They succeeded in clarifying to some extent the conditions offered by the Company which had been somewhat misunderstood by the strikers. These conditions were made definitely clear in a letter addressed to the Deputy Minister of Labour at Ottawa, a copy of which was given to the representatives of the union. Shortly after the receipt of this document the employees returned to work.

GAS PRODUCTION WORKERS, TORONTO, ONT.—On May 18, 1940, an application for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour to deal

with a dispute between the Consumers' Gas Company, Toronto, and its employees in the production and distribution departments, members of the National Union of Domestic and Industrial Gas Workers. Wages, conditions of employment, and a request for union recognition were stated to be the causes of the dispute which directly affected 700 employees. The Company was quite willing to confer with the committee in so far as employees in the distribution service were concerned, but refused to discuss matters relating to the production plant on the ground that the committee did not represent the employees in that department, but the committee refused to continue negotiations for the one department only. A conciliator of the Department held several conferences with the disputing parties with a view to reaching a direct settlement, but due to the stand taken by the Company and the committee as above mentioned his efforts were unsuccessful and a Board was subsequently established to deal with the disputes in the distribution plant, with the understanding that if the committee could show that it had authority to negotiate on behalf of the production department employees that phase of the dispute would be referred to the Board as well for consideration.

TELEPHONE OPERATORS, JONQUIERE, P.Q.—On May 31 a request was received in the Department of Labour for the services of a conciliator in connection with a dispute between the Saguenay Telephone Company, Jonquiere, P.Q., and its telephone operators. Early in June a Departmental officer conferred with officials of the Central Council of the National Catholic Syndicates of Jonquiere and the Manager of the Company. It was learned that requests for wage increases and improved working conditions had been refused, also that two employees had been dismissed, allegedly for union activities. The Manager of the Company stated that the dismissals had been because of insubordination, and that the question of union affiliation was not involved. On June 7 the dispute was terminated, both parties making concessions, and an agreement was signed. Thirteen employees were affected in this instance.

FACTORY WORKERS, VANCOUVER, B.C.—Early in June a dispute arose between the Pacific Bolt Manufacturing Company, Limited, Vancouver, and its employees, members of the Vancouver Metal Workers' Union (All-Canadian Congress of Labour), engaged in the manufacture of rivets, bolts, nuts, etc., regarding wages and working conditions. A conciliation officer of the Department maintained close contact with both parties, and conferences have taken place from time to time. Some wage increases have been made effective, but at the end of June a final disposition of the matter had not been made. Approximately 40 men were stated to be involved in this dispute.

GRAIN ELEVATOR EMPLOYEES, KINGSTON, ONT.—Differences between the Kingston Elevator Company (Canada Steamship Lines, Limited), Kingston, Ont., and miscellaneous groups of hourly and monthly rates employees, including shovellers, deckmen, sweepers, etc., resulted in an application being made to the Department of Labour on June 11, for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The dispute related to wage increases and changed working conditions generally. As there were indications that a basis of settlement might be found without the necessity of Board procedure arrangements were made through the conciliation service of the Department for further conferences between the parties concerned in which an officer of the Department would participate, and at the end of June the case was still receiving attention. The employees, stated to number approximately 70, are members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Workmen's Compensation Statistical Manual

Manual on Industrial-Injury Statistics is the title of a bulletin (No. 667) issued by the Bureau of Labor Statistics of the United States Department of Labor. As stated in a preface to the bulletin, the purpose of the manual is to make available to administrators and their statistical staffs simple and practical methods of statistical procedure.

The report states that "Too often statistics have been attacked as 'bulky and ill-arranged tomes' serving no practical function." In the administration of workmen's compensation the manual declares that statistical facts are desirable along three directions: (1) The volume of work handled, the speed with which it is handled, and the difficulties which cause delay, in short, facts concerning the efficiency of administration; (2) the practical functioning of the medical and benefit provisions of the law, i.e. how the law affects injured workers; (3) the incidence and cause of accidents.

The material given in the manual is organized around these three factors. Suggestions are given of the type of statistical tables to be developed, the codes to be utilized for this purpose, and the objectives for which the statistical material can be used. In an appendix specific illustrations are given of significant practices in some States.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1940.

THE following table shows the number of disputes, workers involved and time loss for June, 1940, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time lost in man working days
*June, 1940	14	7,154	38,937
*May, 1940	22	8,565	51,997
June, 1939	13	2,355	8,616

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While the number of strikes and lockouts recorded for June was substantially smaller than in May, the decline was less in the number of workers involved and in the time loss as strikes involving upward of 5,000 coal miners in Nova Scotia and 2,000 textile factory workers at Drummondville, P.Q., caused relatively heavy time loss, in fact nearly all that for the month. During May the strike at Drummondville accounted for a large portion of the numbers involved and time loss recorded for the month and there was also considerable time loss in coal mining strikes. In June, 1939, strikes of rubber factory workers at Kitchener and Toronto, Ont., involved 700 workers in a loss of 5,000 days while a dispute of 800 coal miners at Glace Bay, N.S., resulted in more than 1,000 days' time loss.

Two disputes, involving 2,011 workers, were carried over from May and twelve disputes commenced during the month. All of these fourteen disputes were terminated during the month. One resulted in favour of the workers and two in favour of the employers involved. Compromise settlements were reached in two cases and the results of nine disputes were recorded as indefinite. At the end of the month, therefore, there were no strikes or lockouts recorded as in progress.

A number of strikes against the employment of workers of alien enemy origin occurred in various collieries in Cape Breton Island, Nova Scotia, between June 10 and June 24, following the declaration of war by Italy against Great Britain and France. It is reported that later the employees in some cases objected to the continued employment of any workers of foreign origin. Work was resumed in a short time in each case on the understanding that each worker of alien enemy origin would be investigated by the authorities. In one case the miners ceased work in protest against the action of a minority in refusing to work with a naturalized worker.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to one such dispute, namely: fur factory workers, Toronto, Ont., October 17, 1939—October 31, 1939.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A strike of twenty-three employees in a plating establishment in Toronto, Ont., on May 27 was reported too late for inclusion in the June issue of the LABOUR GAZETTE. The men ceased work in protest against the discharge of one employee but returned after one-half day. Fifteen only were taken back.

A dispute as to the price to be paid to fishermen for blueback salmon by the canning operators caused a delay in the commencement of fishing generally from June 1, when the season opened, until June 8. About 1,000 fishermen were reported to be affected. The representatives of the canning companies met a committee of the representatives of the various unions of fishermen but a price had not been agreed to by June 1. The representatives of both parties stated that the delay in operations was not a strike as negotiations had not been completed or broken off The canners proposed a reduction in the price from that paid last year, owing to the uncertainty of European markets. Most of the fishermen began operations at the prices offered, some expressing the hope that these might be raised later. Negotiations as to prices for the sockeye season were then in progress.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1940*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to June, 1940				
MANUFACTURING—				
Textiles, Clothing, etc.—				
Hat factory workers, Montreal, P.Q.	1	11	40	Commenced Mar. 18, 1940; for recognition of union; terminated June 5, 1940; negotiations; in favour of employer.
Artificial silk factory workers, Drummondville, P.Q.	1	2,000	30,000	Commenced May 11, 1940; for recognition of union and against alleged increase in production without increase in wages; terminated June 25, 1940; conciliation (provincial and federal); compromise.
(b) Strikes and Lockouts commencing during June, 1940				
MINING, ETC.—				
Coal miners, Westville, N.S.	1	500	2,000	Commenced June 5; *re* delay in re-engagement of miner who left to enlist; terminated June 8; return of workers pending negotiations; compromise.
Coal miners, Minto, N.S.	1	325	325	Commenced June 5; against employment of a certain man as foreman; terminated June 6; negotiations; in favour of employer.
Coal miners, Glace Bay District, N.S.	4	1,165	965	Commenced June 10; against employment of miners of alien enemy origin; terminated June 10; negotiations; indefinite.
Coal miners, Glace Bay, N.S.	1	270	270	Commenced June 12; against employment of miners of alien enemy origin; terminated June 12; negotiations; indefinite.
Coal miners, New Waterford, N.S.	1	350	350	Commenced June 13; against employment of miners of alien enemy origin; terminated June 13; negotiations; indefinite.
Coal miners, Florence, N.S.	1	17	100	Commenced June 13; against employment of miners of alien enemy origin; terminated June 19; negotiations; indefinite.
Coal miners, Florence, N.S.	1	16	32	Commenced June 20; against employment of miner of alien enemy origin; terminated June 22; return of workers; indefinite.
Coal miners, Florence, N.S.	1	700	700	Commenced June 21; against refusal of a minority to work with miners of alien enemy origin whose employment had been approved after investigation; terminated June 22; return of workers; indefinite.
Coal miners, Glace Bay, N.S.	1	400	400	Commenced June 24; against employment of miners of alien enemy origin; terminated June 24; return of workers; indefinite.
Shipping pier workers, North Sydney, N.S.	1	65	130	Commenced June 25; *re* misunderstanding as to wage deduction; terminated June 26; return of workers pending negotiations; indefinite.
Coal miners, Sydney Mines, N.S.	1	1,200	3,600	Commenced June 27; *re* contract rates in one section; terminated June 29; negotiations (referred to I.D.I. Board); indefinite.
CONSTRUCTION—				
Buildings and Structures—				
Building trades workers, Halifax, N.S.	1	135	25	Commenced June 11; against employment of workers of alien enemy origin; terminated June 11; negotiations; in favour of workers.

*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

A number of employees, about 27, in an automobile manufacturing establishment at Windsor, Ont., left their work at noon on various collieries in Cape Breton Island, June 5 when notified to take one hour for lunch instead of half an hour, owing to a shortage of materials. Apparently there was a misunderstanding that working hours were being changed and the men returned next day.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to June

HAT FACTORY WORKERS, MONTREAL, P.Q.—This dispute which commenced on March 18, to secure union recognition, was terminated as a result of negotiations and work was resumed on June 6. It was reported that the employer agreed to re-employ those on strike as needed and to withdraw legal proceedings, apparently in connection with picketing and an injunction, instituted in April.

ARTIFICIAL SILK FACTORY WORKERS, DRUMMONDVILLE, P.Q.—As a result of arrangements made at the end of May, negotiations between the management and representatives of the strikers, assisted by provincial and Dominion Department of Labour officials, it was arranged that work would be resumed on June 13 by some departments and by others on the three following days, a committee consisting of two members elected by employees in each of the six departments to be then set up to deal with the management as to all working conditions. Some delay in complete resumption of work occurred as some of the strikers held out for union recognition. As a result of further conciliation by Dominion Department of Labour officials the management announced its willingness to publish for the information of the employees the results of any decisions reached with the new committee when appointed, and stated that the dispute causing the strike would be dealt with by the committee. All employees were re-employed without discrimination by June 26.

Disputes Commencing During June

COAL MINERS, WESTVILLE, N.S.—A number of miners ceased work on June 5 in protest against the refusal of the management to immediately re-engage a miner who had been absent for some days to enlist in the army. It appears that the miner's place had been filled and there was some question as to why he had not been accepted for the army. The matter was taken up with the Federal Minister of Labour who communicated with the management and the union. Work was resumed on June 10 and the miner was re-engaged on June 11. The union and the management made arrangements as to holding open the positions of miners intending to join the forces.

COAL MINERS, MINTO, N.B.—A number of employees in one mine refused on June 5 to work under a new foreman. The management telegraphed the Deputy Minister of the Dominion Department of Labour who replied that the stoppage was in violation of the Industrial Disputes Investigation Act which provided for dealing with disputes in mining and certain other industries. Operations were resumed after one day's work had been lost by all shifts.

COAL MINERS, SYDNEY MINES, N.S.—A number of employees ceased work on June 27, owing to a dispute as to contract rates of pay in one section, and were supported by others. As a result of negotiations it was agreed to refer the dispute to a Board of Conciliation and Investigation already established to deal with a dispute as to the wage scale of the collieries in the renewal of the agreement (LABOUR GAZETTE, June, 1940, page 533). Work was resumed July 2, the first working day after this decision.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month bringing down to date that given in the March, 1940, issue in the review of Strikes and Lockouts in Canada and Other Countries, 1939. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

In Great Britain the *Ministry of Labour Gazette* publishes statistics dealing with all

strikes and gives some details of the more important ones.

The number of disputes which began during May was 92 and 13 were unterminated at the end of April, making a total of 105 in progress during May. The number of workers involved was 35,800 and the resultant time loss was 91,000 man working days.

Of the 92 strikes which began during May, 21 arose out of demands for increased wages and 28 were over other wage questions. Questions regarding working hours led to 5 disputes; 21 were over questions regarding the employment of particular classes or persons; 15 arose out of questions respecting working conditions; and one was over a question of trade union principle. One stoppage of work was in support of workers involved in another dispute.

During May final settlements were reached in the case of 87 disputes. Of these 13 were settled in favour of the workers, 52 were settled in favour of the employers, and 22 resulted in compromises. In nine other disputes work was resumed pending negotiations.

The strike which involved the largest number of workers during May, began on May 7 when 2,090 workers employed by a firm engaged in the manufacture of rubber tires near Birmingham went on strike demanding increased wages; 1,630 workers were indirectly involved. Work was resumed the next day and certain wage increases were subsequently conceded.

On May 1, 2,500 building trades workers employed by one firm in Staffordshire went on strike due to dissatisfaction with amended travelling arrangements and demands for additional allowances and revision of train timings. Work was resumed the same day when revised train timings were put into operation. The question of additional allowances was to be considered.

At Wrexham, Denbighshire, 2,500 labourers employed on a civil engineering contract ceased work on May 7 demanding a subsistence allowance of 3s. 3d. per day and payment of travelling expenses. Work was resumed May 10 when wage rates were raised by 2½d. per hour and it was agreed that travelling expenses would be paid.

On May 8 dissatisfaction with the method of calculating average weights of empty tubs led to a strike of 950 colliery workers near Doncaster, Yorkshire; 1,450 workers were indirectly involved. Work was resumed May 11 on the advice of trade union officials.

At Luton, Bedfordshire, 1,866 workers employed by a firm engaged in the manufacture of ball bearings went on strike on April 25 for increased wages. Work was resumed unconditionally on May 4.

A demand for the dismissal of a foreman to whose conduct the workers objected led to a strike of 1,200 bricklayers near Liverpool on May 8. Work was resumed on May 12 and at a subsequent inquiry a joint committee unanimously found in favour of the foreman.

Strikes and Lockouts in 1939

The May issue of *Ministry of Labour Gazette* contains a statistical review of strikes and lockouts which took place in Great Britain and Northern Ireland during 1939.

The number of disputes resulting in stoppages of work reported as having begun during 1939 was 940 as compared with 875 in 1938. The number of workers directly involved in these disputes was about 246,000 and about 90,600 workers were indirectly involved. In addition, about 700 workers were involved, directly or indirectly, in eight strikes which were unterminated at the end of 1938. The number of workers involved either directly or indirectly in all disputes in progress during 1939 was about 337,300 as compared with 275,300 the previous year, the resultant time loss being 1,356,000 man working days as compared with 1,334,000 in 1938.

The disputes of 1939 were approximately evenly proportioned as between the eight pre-war and the four wartime months.

The industry most affected by industrial disputes was coal mining: the 404 strikes in this industry involved 61·0 per cent of workers involved in all disputes and the resultant time loss was 41·7 per cent of the total for the year. In the building and contracting industry there were 122 strikes which involved 10·5 per cent of the total number of workers and accounted for 9·7 per cent of the total time loss. In the engineering industry there were 61 strikes, which involved 8·9 per cent of the workers and resulted in 12·3 per cent of the total time loss. The 81 strikes in the iron and steel industry involved 6·4 per cent of the total number of workers and resulted in 9·4 per cent of the total time loss.

Wage questions were the cause of 482 or 51·3 per cent of the strikes which were recorded during 1939. Employment of particular classes or persons caused 217 strikes or 23·1 per cent of the total. Disputes over working arrangements, rules and discipline accounted for 124 or 13·2 per cent, and differences on matters of trade unionism were responsible for 74 strikes or 7·9 per cent of the total number.

The statistical analysis of results shows that 47·8 per cent of the number of strikes in which 51·2 per cent of all workers who took part in strikes were involved were settled in favour of the employers. Those strikes which

were settled in favour of the workers and those which resulted in compromises numbered 245 in each case but the percentage of workers involved in the first class was 26·8 while that in the other 22·0.

The most frequent method of settlement of disputes in 1939, as in previous years, was direct negotiation, 64·6 per cent of all strikes and lockouts being settled in this way. Disputes in which work was resumed on the employers' terms without negotiations accounted for 26·7 per cent of the number of strikes.

New Zealand

The Dominion of New Zealand has recently published statistics dealing with industrial disputes which took place during the first three months of 1940. During the quarter there were 24 strikes which involved 4,776 employees of 43 firms and which resulted in a time loss of 13,586 man working days. The estimated loss in wages was approximately £13,900. During the first quarter of 1939 there were 23 strikes which involved 5,710 workers with a resultant time loss of 23,611 man working days.

United States

Preliminary estimates of strikes in April, 1940, which as the Bureau of Labour Statistics points out are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received show 225 strikes as having begun during the month, which with 100 unterminated at the end of March made a total of 325 in progress during the month. The number of workers involved in these disputes was approximately 56,000 with a resultant time loss of 475,000 man working days. The comparable figures for the previous month, which have been partially revised but are not final, show that there were 250 strikes in progress involving about 44,000 workers with a resultant time loss of about 400,000 man working days.

STRIKES IN 1939

The Bureau of Labor Statistics of the United States Department of Labor has recently published in their Monthly Labor Review for May, 1940, an analysis of strikes in 1939. Lockouts are included in the record.

During 1939 there were 2,613 strikes, in which 1,170,962 workers were involved with a resultant time loss of 17,812,219 man working days. About 43 per cent of the workers involved and 51 per cent of the total time loss resulted from three strikes, the bituminous coal stoppage in April and May, the strike of Works Progress Administration workers in July and a strike of employees of the Chrysler Motor Corporation in October and November.

STRIKES IN THE UNITED STATES, 1919 TO 1939

Year	Strikes	Workers involved (a)	Time loss in man working days
1919	3,630	4,160,348	(b)
1920	3,411	1,463,054	(b)
1921	2,385	1,099,247	(b)
1922	1,112	1,612,562	(b)
1923	1,553	756,584	(b)
1924	1,249	654,641	(b)
1925	1,301	428,416	(b)
1926	1,035	329,592	(b)
1927	707	329,939	26,218,628
1928	604	314,210	12,631,863
1929	921	288,572	5,351,540
1930	637	182,975	3,316,808
1931	810	341,817	6,893,244
1932	841	324,210	10,502,033
1933	1,695	1,168,272	16,872,128
1934	1,856	1,466,695	19,591,949
1935	2,014	1,117,213	15,456,337
1936	2,172	788,648	13,901,956
1937	4,740	1,860,621	28,424,857
1938	2,772	688,376	9,148,273
1939	2,613	1,170,962	17,812,219

(a) The number of workers involved in strikes between 1919 and 1926 is known for only a portion of the total. However, the missing information is for the smaller disputes and it is believed that the total here given is fairly accurate.
(b) Figures not compiled.

Strikes in 1939 followed the usual seasonal trend, increasing in number during the spring months, maintaining a fairly high level during the summer and fall and then decreasing in number with the approach of winter. The largest number of strikes beginning in any month was 281 in April while the smallest was 106 in December.

Measured in terms of time loss, the industries most affected by strikes in 1939 were bituminous coal mining with 41·0 per cent of the total and automobile manufacturing with 14·1 per cent. Of the 1,171,000 workers involved in strikes about 33 per cent were in mining, 12 per cent in Works Progress Administration projects, 11 per cent in transportation-equipment manufacturing, 8 per cent in textiles and 7 per cent in transportation and communication. The largest number of strikes occurred in the textile industries, due to a large number of small strikes in the women's clothing industry.

In 1939, 53·5 per cent of the strikes which occurred arose out of various questions of union organization and these disputes involved 54·4 per cent of the strikers and resulted in 74·7 per cent of the time loss. Causes grouped under "wages and hours" accounted for 26·5 per cent of the strikes, 29·9 per cent of the workers and 17·9 per cent of the time loss. "Miscellaneous" causes led to 20·0 per cent of the strikes, involving 15·7

per cent of the workers and causing 7·4 per cent of the time loss.

The method of classifying strikes by results used by the United States Bureau of Labor Statistics differs from that used in Canada. In this country results of strikes are classified as being in favour of workers, in favour of employers, compromise or partially successfull, and indefinite or unterminated. In the United States results are classified where possible according to the degree of success from the workers' standpoint. Strikes arising out of jurisdictional or factional disputes are not classified as to results. The results of strikes which would be shown as indefinite in the Canadian classification are shown in the United States as "not reported" but a footnote states that during 1939 many of the strikes so classified were small disputes in the women's clothing industry, and while the union involved regarded many of them as being satisfactorily settled the exact terms were not reported. Results according to this classification are shown in the accompanying table.

RESULTS OF STRIKES IN THE UNITED STATES, ENDING IN 1939

	Strikes		Workers involved		Man-days idle	
	Number	Per cent of total	Number	Per cent of total	Number	Per cent of total
Substantial gains to workers	1,048	39·7	493,149	41·8	8,874,685	48·0
Partial gains or compromises	852	32·3	397,776	33·8	6,896,797	37·2
Little or no gains to workers	494	18·7	209,478	17·8	1,951,930	10·5
Jurisdiction, rival unions or factions	156	5·9	49,539	4·2	633,634	3·4
Indeterminate	40	1·5	24,805	2·1	143,526	·8
Not reported	49	1·9	3,136	·3	19,931	·1
Total	2,639	100·0	1,177,883	100·0	18,520,503	100·0

Other subjects dealt with in this analysis of strikes are as follows: states and cities affected, number of workers involved, number of establishments involved, duration, sex of workers, labour organizations involved, methods of negotiating settlements and sit down strikes.

Recent Developments of Labour Control in Great Britain

In an editorial headed "Going To It," the *London Times* of June 21 emphasizes the intensification of Labour's effort in the war emergency. Latest manifestations of the impressive contribution of the Labour movement is thus dealt with in the editorial:

"Never before has it been known that organized labour should concede to a Government Department the right to order it about from one job to another and from one part of the country to another. That is what Mr. Bevin's own union has done in respect of dockers by acquiescing in the plan for the regional pooling of port labour with an extending provision that, if the situation so requires, men will be expected to transfer to ports outside a region. . . The Minister of Labour has power to order all labour where it is wanted, but the procedure of gaining the assent of the unions of the men concerned is by no means superfluous. Nevertheless the Minister has compulsory powers and that fact is well known.

"As remarkable as the acquiescence of the dock workers in compulsory transfer is the agreement of the Yorkshire miners and the coalowners to set up joint committees, the equivalent of industrial courts, to try men for absenteeism and to fine them if the accusation is upheld. The fines will not be legally enforceable; and in reserve, with the concurrence of the miners' association, will be the right of the owners to bring delinquents before the ordinary magistrates' courts, claiming damages.

"Rather more nebulous, but perhaps useful, is the arrangement that miners' lodge officials may bring for hearing before the same joint committees, complaints that colliery managements are culpably impeding production. Strikes are, of course, to be forbidden until all the resources of negotiation have been exhausted.

"The extension of the double-shift to more mills engaged on Government orders is no less desirable for expediting work urgently needed and for distributing employment; and the formidable difficulties in the way should be examined with a resolution strong enough to remove them."

DECLARATION OF PRINCIPLES FOR WARTIME REGULATION OF LABOUR CONDITIONS

Terms of Order in Council Governing Industrial Relations in War Effort

PARTICULARS were given in the June issue of the LABOUR GAZETTE (pages 530-532) of an important conference on wartime labour relations, held on June 13, between the Prime Minister and members of the Cabinet and the representatives of Canadian Labour. Featuring that conference was the statement of the Prime Minister that an Order in Council would be issued setting forth the principles which should govern industrial relations in wartime "as an obligation that should be lived up to by all parties concerned."

On June 20, the Prime Minister, in accordance with his statement at the conference, tabled in the House of Commons a copy of the Order in Council (P.C. 2685) containing "a declaration by the Government of Canada of principles for the avoidance of labour unrest and for the regulation of labour conditions during the war."

Wartime Regulation of Labour Conditions

The text of this Order in Council is as follows:

The Committee of the Privy Council have had before them a report, dated June 15, 1940, from the Minister of Labour, representing as follows:—

The Government has received from representative bodies of industry and of labour expressions of their desire to co-operate with the Government in the present crisis to the end that the industrial capacity of Canada requisite to the successful prosecution of the war may be utilized to the fullest possible extent.

The establishment and maintenance of good relations between firms engaged in the execution of war contracts, and the production of necessary materials therefor and their workpeople is of the utmost importance at this time, and the same is true indeed of the operations of distributive agencies and services required to meet the needs of the civil population. In wartime the safety of the nation must be the first consideration of all patriotic citizens and no element in the communitiy can be permitted to benefit from wartime necessities. The best interests of industry and labour are inseparable and since organized society alone makes possible industrial production to the mutual benefit of those engaged therein, the needs of the community at large, especially under war conditions, must be regarded as paramount.

The development of Canada's war effort has not been hampered to date by the occurence of any serious labour troubles, and means have happily been found, through negotiation, conciliation and inquiry, of dealing effectively with any disputes as to wage rates and working hours which have arisen. While the causes of industrial unrest have not thus far arisen from the war they might well be accentuated by it. It is clear that any differences that might arise would extend beyond wage scales or hours of labour and include the right of association in labour bodies and the right of organized workpeople to enter into collective agreements through which they may be expected to exercise a more organic influence on the processes of industrial life; all of them aspirations which, under wise direction, will make for the removal of prejudice and for fuller co-operation between employers and employed. Statutory provisions have been made since the outbreak of hostilities to obviate the making of undue profits on war work, and the operation of the Wartime Prices and Trade Board is designed to safeguard the interests of the consuming public against undue enhancement of the prices of the necessaries of life.

The policy is re-affirmed which was previously announced by the Prime Minister of Canada, that the full weight of the Government's power will be exerted to prevent the exploitation of wartime needs by any form of profiteering.

It would conduce to the removal of misunderstandings and to the extension of common interests and national purpose were a declaration to be made by the Government at this time of certain principles for the regulation of labour conditions during the war, the acceptance of which by employers and workpeople would make for the avoidance of industrial strife and the utmost acceleration possible in the production which is so essential in present circumstances.

The Committee, on the recommendation of the Minister of Labour, advise, with respect

to the foregoing, that the following principles for the avoidance of labour unrest during the war be approved:—

1. That every effort should be made to speed production by war industries;
2. That fair and reasonable standards of wages and working conditions should be recognized and that where any temporary adjustments in remuneration are made, due to war conditions, they might well be in the form of hours payments;
3. That hours of work should not be unduly extended but that where increased output is desired it should be secured as far as practicable by the adoption of additional shifts throughout the week, experience during the last war having shown that an undue lengthening of working hours results in excessive fatigue and in a diminution of output;
4. That established safeguards and regulations for the protection of the health and safety of the workers should not be relaxed, but that every precaution should be taken to ensure safe and healthful conditions of work;
5. That there should be no interruption in productive or distributive operations on account of strikes or lockouts. Where any difference arises which cannot be settled by negotiation between the parties, assistance in effecting a settlement should be sought from the Government conciliation services, and failing settlement of the difference in this manner, it should be dealt with in accordance with the provisions of the Industrial Disputes Investigation Act, which has been extended under the War Measures Act to apply specifically to all war work;
6. That employees should be free to organize in trade unions, free from any control by employers or their agents. In this connection, attention is directed to Section 11 of the provisions of Chapter 30, 3 George VI, an Act to Amend the Criminal Code, under which it is declared to be an offence, subject to prescribed penalties, for any employer or his agent wrongfully and without lawful authority to refuse to employ, or to dismiss from employment, any person because of his membership in a lawful trade union, or to use intimidation to prevent a workman from belonging to a trade union, or to conspire with other employers to do either of such acts;
7. That employees, through the officers of their trade union or through other representatives chosen by them, should be free to negotiate with employers or the representatives of employers' associations concerning rates of pay, hours of labour and other working conditions, with a view to the conclusion of a collective agreement;
8. That every collective agreement should provide machinery for the settlement of disputes arising out of the agreement, and for its renewal or revision, and that, both parties should scrupulously observe the terms and conditions of any agreement into which they have entered;
9. That workers, in the exercise of their right to organize, should use neither coercion nor intimidation of any kind to influence any person to join their organization;
10. That any suspension which may be made of labour conditions established by law, agreement or usage, requisite to the speeding of wartime production, should be brought about by mutual agreement and should be understood as applying only for the period of emergency.

The foregoing declaration by the Government of principles for the regulation of labour conditions during the war is necessarily subject to the provisions of any enactment by the Parliament of Canada or made under its authority for the purpose of meeting any special emergency whereby the national safety of Canada has become endangered.

The Committee further advise that the attention of employers in meeting their requirements as to labour supply be drawn to the available facilities of the local offices of the Employment Service of Canada in all of the provinces, where thousands of skilled and semi-skilled workers whose training and experience qualify them for war work and employment in industry generally have already been registered, and that advantage be taken of this service to the fullest possible extent.

Many employers have established contacts with trade unions in meeting their requirements as to labour supply, and the Minister of Labour is of opinion that the more general adoption of this practice would assist in the avoidance of unnecessary labour shortage.

VOCATIONAL TRAINING IN CANADA FOR WAR PRODUCTION

Dominion-Provincial Co-operation in Establishing Special Summer Courses in Technical Schools

IN order to meet the increasing demands for skilled and semi-skilled operators in industries engaged in war contract work, the Honourable Norman A. McLarty, Minister of Labour, recently requested the co-operation of the Provincial Governments and the Technical School Boards in making available certain of the vocational shops in technical schools or universities during the summer months. This co-operation has been unstintingly given by all the Provincial Governments and the Technical School Boards in making the existing facilities available. Reports so far received would indicate these schools will be available as follows: Nova Scotia, 1; New Brunswick, 6; Quebec (Approx.), 12; Ontario, 24; Manitoba, 2 or 3; Saskatchewan, 3; Alberta, 2; British Columbia, 5 or 6.

The purpose of the project is to provide training for production workers in those industries which are engaged in war contract work, particularly aircraft manufacturing and munitions work. The time factor (the three months summer holiday period) precludes the possibility of turning out trained mechanics, but the purpose is rather to give pre-employment instruction for general production workers or machine operators.

Where necessary facilities are available in the Technical School shops, they have been requested to open classes in the following occupations: Aircraft manufacturing (wood and metal); machine shop; sheet metal work; welding; motor mechanics and, where there is a sufficient demand among local employers, wood-working.

Provincial authorities and heads of schools have been asked to carry on the project in the closest co-operation with employers engaged in war production work, so that the classes opened and the curriculum of instruction followed should meet the requirements of local industries. If these industries desire the establishment of classes in subjects other than those outlined above, such classes can be opened. In addition to training men for war industries, the classes will also be available to train technicians for the armed forces.

The schools have been urged to have representatives of employers inspect the classes, to make suggestions regarding the details of training and also to arrange for the subsequent placement in industry of those who finish their training. Additional arrangements for placement are also being made by the schools with the officers of the Employment Service of Canada.

Wherever possible, the schools have been asked to provide approximately three months intensive training with a minimum of forty-four hours instruction per week. As a general rule the classes will operate from 8 a.m. to 5 p.m., with one hour for lunch. The greater part of the time would be spent in practical work in the shops, but provision is being made where necessary, for technical instruction in related subjects, such as shop arithmetic, drafting and mechanical drawing, blue-print reading, etc.

Where local conditions warrant and where competent instructors can be obtained, two shifts of trainees may be operated at each school. Enrolment is restricted to men, but where employers ask for some specialized training for women, such a class may be established, subject to approval of the Dominion Department of Labour. The minimum age for enrolment is 16 and is not necessarily restricted to unemployed.

In the case of men over 30 years of age, enrolment is restricted to those who have had some previous trade experience. These will be given refresher courses in their former occupations. The great majority of the present course will be drawn from senior students of the Technical Schools. The Department of Labour has suggested that in other cases, preference might be given to those who have been rejected for enlistment on account of medical reasons, including those in the upper age group, because in such cases, the prospective employer has more assurance that such men will be stable in their employment, i.e., they will not be liable to enlistment in the armed forces.

In order to simplify procedure and avoid duplication, the administration of this project is being co-ordinated with the existing administration for youth training and for the rehabilitation of older workers. Services of the regular shop instructors of the technical schools will be used together with any additional instructors who may be needed. These, wherever possible, will be drawn from men with actual trade experience. Reports will be submitted to the Federal Department of Labour covering the operations of each school, giving the number enrolled, the type of training given, the number who have been placed in employment, estimate of costs and other relevant information as required.

Funds will be made available to the Department of Labour from the special war appropriation to finance the project. The following costs will be borne entirely by the Dominion:

(1) Salaries of instructors and teachers.
(2) Materials, supplies and hand tools.
(3) Necessary travelling expenses of trainees to the school and to employment on the completion of their training.
(4) Allowances to trainees to enable them to attend a course away from home.
(5) Breakages to school equipment.
(6) Half the cost of the purchase of necessary machinery for the project subject to approval by the Dominion Department of Labour.

The Province will bear any additional administrative costs entailed by the operation of the project. The Municipality will make the school available without any charge for rental or depreciation. Extra costs for light and power may also be borne by the Dominion where necessary.

The first schools under this project commenced operation about June 20 and it was expected that all would be operating by July 8. Initial reports received indicate that somewhere between six and seven thousand will be enrolled.

Dictionary of Occupational Titles

The Employment Service of the United States Department of Labor has recently completed five years of occupational research and one of the major results emerging therefrom is a "Dictionary of Occupational Titles" which defines 29,744 job titles applied to 17,482 different jobs in farms, mines, factories, businesses and homes in the United States. A summary of the industrial scope contained in the dictionary is given in the June issue of the *Monthly Labor Review,* published by the United States Department of Labor, from which the following paragraphs are taken:

This dictionary of occupations gives an unprecedented amount of data concerning jobs—what they are, where they are, and how they are performed. The material on which the volume is based was gathered from approximately 55,000 job-analysis schedules in 15 States from New England to California. These materials were prepared with the co-operation of 6,500 individual employers and business establishments, and the information was checked for accuracy by numerous labour unions, trade associations, and professional societies.

In addition to the job title or titles each definition includes an "industrial designation," indicating the type of business or industry with which the job is associated, an occupational code number identifying the job for statistical and other uses by public employment offices, and a digest of the duties and responsibilities of the job.

Some of the job titles defined in the dictionary may appear rather odd to those unfamiliar with their use. A *cat skinner,* for example, is the operator of a tractor. A *pulpit man* works in a steel mill charging and discharging a furnace, rather than in a church as might be assumed. A *screen ape* is not necessarily employed in motion pictures, for he works in a coal-mine, screening coal. A *Zoogler* is a real job title—in New England it denotes the job of loading and unloading sleds or drays used to skid logs.

The same title is frequently used on jobs in different industries. In illustration, a *metal man* may take out dents in automobile bodies or remelt printer's type metal to be used again. A *bulldozer operator* may drive a tractor-like grading machine, bend or shape metal on a forging press, or form heads on rivets in structural-steel work. A *modeler* may cut vamps and tops from hides and skins or model plaster-of-paris designs to use in making decorative tile.

An *oven tender* may bake the enamel on painted parts of automobile bodies, dry freshly sprayed hats, assist in loading tobacco-drying ovens, or tend bread- and cake-baking ovens. An *underwriter* may apply premium rates to various types of insurance or glue labels on bundles of roofing material. A *wheelman* may steer a fishing boat, or buff automobile body parts prior to painting, or press residual oleo oil from oleo stock in manufacturing butter substitutes.

The occupational dictionary was prepared mainly for public employment offices to facilitate the classification of applicants and their referral to appropriate openings. It will, however, probably be helpful to workers in industrial-personnel and vocational-guidance fields and other persons interested in labour and occupations.

LEGISLATION PROVIDING FOR UNEMPLOYMENT INSURANCE IN CANADA

British Parliament Enacts Amendment to B.N.A. Act According Dominion Government Exclusive Jurisdiction in National System—Summary of New Bill—Contrast with 1935 Legislation

THE British North America Act was amended in the British Parliament on July 10 by the addition to Section 91 (as Class 2A) of the words "Unemployment Insurance." By such amendment the Dominion Government now is invested with exclusive jurisdiction in this legislation which is now before the Parliament of Canada, the Bill being given its first reading on July 16.

Previous to the presentation of this amendment to the British Parliament, the provinces had consented to such revision enabling the Dominion Government to establish a national system of unemployment insurance, and the Prime Minister, Rt. Hon. W. L. Mackenzie King, had announced in the House of Commons the steps leading up to this agreement on the part of the provinces (LABOUR GAZETTE, pages 527-28). The Prime Minister, in tabling the correspondence with the premiers of the provinces on this subject, referred to the historic nature of these documents.

The amendment to the British North America Act originated as an Address to His Majesty the King in the Canadian House of Commons, on June 25, 1940, moved by the Right Hon. Ernest Lapointe.

The Minister of Justice detailed various methods which could have been adopted to secure provincial co-operation in this legislative field, saying that the first which suggested itself was for the provinces to delegate to parliament the powers in relation to unemployment insurance. He mentioned, however, that it was extremely doubtful that such delegation would be legally effective because by such action parliament cannot acquire jurisdiction. Other recognized methods of co-operation discussed from the legal point of view were legislation by reference, conjoint legislation and conditional legislation.

The Minister proceeded as follows to detail various practical objections to any of these methods of acquiring Dominion jurisdiction:

"1. You would have to get the concurrence of nine legislatures each of which will, quite properly, have its own ideas, influenced by local requirements, as to the proper provisions of an unemployment insurance act.

"2. You must hold this concurrence through the difficult first years of the application of the act, when, by practice and experience, amendments will be found desirable; and then you would have to have in each case the consent of every one of the nine legislatures before proposing these amendments.

3. You must persuade nine provinces to submit to administration by a body which is not responsible to them.

4. The necessary levy to provide insurance benefits must be imposed on the clear understanding that the funds raised thereby and turned over to the commission are to be utilized to pay benefits throughout Canada. The result might be, for example, that Quebec contributions would, in certain circumstances, be utilized to pay benefits outside Quebec.

The final and the most important objection of all is that there is nothing to prevent one or two or three provinces from withdrawing from the scheme and then the whole undertaking would be compromised."

The Leader of the Opposition, the Hon. R. B. Hanson, in mentioning that his party was committed to the principle of unemployment insurance, said that he believed the Minister of Justice had adopted the proper method of attaining the end which the government now have in view.

"As far as we are concerned," stated the Opposition Leader, "I promise the co-operation of this party in passing this address, and when the legislation itself comes down I promise him that we will examine the bill with the greatest care, will endeavour to strengthen it so far as may be necessary or desirable, and will in no way obstruct the principle of what is in my opinion very necessary social legislation for Canada."

Mr. M. J. Coldwell also expressed approval saying that the proper time to put a measure of this kind into effect is when industry is on the upturn and employment is increasing. "It is not unlikely," he observed, "that when the war ends unemployment insurance will be as great a necessity as something of the kind was following the last great war."

Action of British Parliament

As already stated the British Parliament on July 10 completed its action in adopting a Bill to amend the British North America Act, thereby empowering the Parliament of Canada to enact national unemployment insurance.

According to the Canadian Press, there was little debate. Sir William Jowitt, Solicitor General, told the Commons that the British Parliament was merely carrying out the wishes of the Canadian Parliament which sought an extension of its powers to deal comprehensively with unemployment in Canada and with the problem of unemployment insurance.

Sir William said that under the Statute of Westminster Canada had been given full sovereignty over her own affairs, and that "we are morally bound to act on this case on the ground we have here a request from the Dominion Parliament."

C. G. Ammon, Labour, suggested the occasion might be taken to institute reciprocal unemployment insurance arrangements between Britain and Canada. (Such reciprocal arrangements are provided in the draft bill now before the Canadian Parliament).

On July 11 the Prime Minister, Rt. Hon. W. L. Mackenzie King, placed on *Hansard* the record of the action of the British Parliament in amending the British North America Act. He stated:

"The address of the Senate and House of Commons of Canada requesting the introduction of a measure in the parliament of the United Kingdom to amend the British North America Act by adding unemployment insurance to the powers enumerated in section 91 was duly submitted to His Majesty. A bill providing for the amendment was introduced on July 3 and, after passing the House of Lords and the House of Commons, has now received the royal assent."

Resolution Preceding Bill

On July 16 the Dominion Minister of Labour, Hon. Norman A. McLarty, moved the following resolution prior to the introduction of the Bill:

"Resolved that it is expedient to introduce a bill to enact a scheme of national unemployment insurance to be administered by a commission appointed by the Governor-in-Council, and to create an unemployment insurance fund from contributions from specified persons and from moneys provided by Parliament, for the payment of insurance benefits, to be administered by the commission assisted by an advisory committee; with provision also for the organization and maintenance of an employment service administered by the commission with the advice and assistance of a national employment committee; also with power to the Governor-in-Council to establish committees and boards subsidiary to the commission and to enter into agreements with the governments of other countries for reciprocal arrangements relating to unemployment insurance; with provision for the remuneration of the commissioners and the appointment and remuneration of such officers, clerks and employees as may be required for the due carrying out of the provisions of the act and for the costs of administration."

Minister of Labour on Necessity for Adoption

In speaking to the resolution the Minister of Labour emphasized the reasons for the adoption of the Bill at the present time as follows:

"To sum up, this measure is necessary at this time to anticipate and in some degree counteract the probable dislocation which will follow demobilization and the cessation of war work. If it is to be effective in accomplishing this purpose it should be placed in operation at the earliest possible moment. The employment services should be taken over and made to function at maximum efficiency; the personnel to make the plan effective should be set up and given the opportunity to function smoothly. We should begin at once to establish the necessary fund to create a backlog when the readjustments which will inevitably accompany peace require to be made.

"The surest foundation on which to base democratic government is a happy and contented people. Nothing militates more against happiness and contentment than fear. By this measure fear will be removed to some extent from 4,660,000 of the Canadian people.

"Approved in principle as it is by every major labour organization in this country, endorsed by every commission and committee charged with the responsibility of giving it consideration and making recommendations in respect to it, endorsed several times by this chamber, meeting as it does with the unanimous approval of all the provinces, this resolution should be passed by parliament at this time—not six months from now—and, by the legislation to follow, clothed with the force of law.

"This done, it will be recorded of the present generation that at a time when we were bending every effort and endeavour to overcoming the enemy at our gate we were not unconscious of our duty and our obligation to promote the welfare and happiness of our own people."

The Prime Minister also noted another cogent reason for the adoption of the measure at this session and observed:

"There is another reason why it is desirable to proceed with this measure this session. No one can say what matters we may have before us at another session of parliament. To-day the way is sufficiently clear for us to give our thought, time and attention to measures of this kind; but to what matters this parliament may be called upon to give consideration at another session, I think almost any one of us would hesitate even to surmise."

Outline of the Unemployment Insurance Bill, 1940

Principles

Some of the important principles involved in the new unemployment measure (as introduced) are as follows:—

1. First is the fact that insurance benefit is a right established by contributions previously made, and not a form of relief. The benefits will be in proportion to the contributions made, at the same time entitling the low-paid worker to a relatively high percentage of his wages.

2. Weekly insurance benefit should not be as great or greater than normal weekly earnings.

3. The normal standard of living of the wage-earner should be protected.

Administration

The Bill provides for administration by three Commissioners, one of whom shall be appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner is to hold office for ten years and each of the other Commissioners for five years.

Insured Classes and Exceptions

The benefits of the scheme will apply to all persons who are employed under a contract of service or apprenticeship, with certain exceptions. The exceptions include workers in agriculture and forestry, fishing, lumbering and logging, transportation by air or water, stevedoring, private domestic service and workers earning more than $2,000 per annum. Young persons under 16 years of age cannot draw benefits but may accumulate benefit rights at no cost to themselves; the same holds for those who earn less than 90 cents in a normal full day.

It is estimated that the scheme would cover 2,100,000 wage-earners by 1941. Adding to this figure an estimate of 940,000 adult and 1,620,000 child dependants, the cloak of insurance benefits would be spread over 4,660,000 people. The Bill provides for extending the scope on the recommendation of a National Advisory Committee to be set up under the Act.

Contributions

An Unemployment Insurance Fund, with the Bank of Canada as fiscal agent, is to be created. Employers and workmen contribute amounts which would bring approximately equal totals over the country. Parliament adds a grant of one-fifth of the aggregate contributions made by employed persons and employers, and, also assumes the whole cost of administration, which will be provided through annual votes of Parliament.

It is estimated that the income of the Fund in 1941 would be about $58,500,000—being approximately $23,400,000 each from employers and workers, and about $9,700,000 from the Government. The cost of administration will be about $5,250,000 per annum.

Benefits

Insurance benefit is paid as of right on fulfilment of four statutory conditions:—

1. The payment of not less than 30 weekly—or 180 daily—contributions within two years, while in insured employment.

2. Proper presentation of the claim, and proof of unemployment.

3. That the contributor is capable of and available for work.

4. That he has not refused to attend a course of instruction if required.

Disqualifications for benefit include: loss of work due to misconduct or a labour dispute in which he is involved; unwillingness to accept suitable employment; receipt of an old age pension; being an inmate of a public institution, or earning less than ninety cents a day while in employment.

The weekly benefit rates are shown below:—

Class No.	Description of Class	Single Persons	Persons Maintaining Dependents
		$ cts.	$ cts.
0	Under 16 years of age, or earning less than 90c. in a day		
1	Earning $ 5.40 and less than $7.50 in a week	4 08	4 80
2	" 7.50 " " 9.60 "	5 10	6 00
3	" 9.60 " " 12.00 "	6 12	7 20
4	" 12.00 " " 15.00 "	7 14	8 40
5	" 15.00 " " 20.00 "	8 16	9 60
6	" 20.00 " " 26.00 "	10 20	12 00
7	" 26.00 " " 38.50 " and certain other cases	12 24	14 40

Daily rates are one-sixth the weekly rate. The amount of daily or weekly benefit is 34 times the average daily or weekly workman's contribution for insured persons without dependents, and 40 times the average contribution for married persons mainly or wholly maintaining one or more dependents. It will be seen that the benefits are adjusted with regard for the normal wage, i.e., the normal standard of living of the employed person.

The Benefit Formula

No benefit is payable during the first nine days of unemployment in a benefit year. After that a worker may draw one payment for every five contributions made in the previous five years, less one payment for every three benefit payments received in the previous three years. Under the Bill the whole of the benefit is related to the employment history of the insured individual. In so far as a man's future benefits are reduced by his past claims, he might be likely to proceed more cautiously in applying for benefit. Moreover, he is made aware that the more he works the greater his benefits in any period of unemployment, through regular contributions.

Umpires and Court of Referees

The Commission is to set up regional divisions under insurance officers, and create a court of referees, representative of the interested parties, to handle claims. Umpires and deputy umpires appointed by the Governor in Council from among the judges of the Exchequer court and the Superior Courts of the provinces, are to be the final adjudicators of claims through procedure clearly outlined.

Provision is made for the appointment of inspectors with power to make examinations concerning compliance.

Unemployment Insurance Advisory Committee

The Advisory Committee, appointed by the Governor in Council, will advise and assist the Commission, report on the condition of the fund, and make recommendations if the fund is, or is likely to become, insufficient to discharge its liabilities. The committee is to consist of a chairman and from four to six members, some of the latter being representative of the employers and organizations of workers respectively.

Employment Service

The Commission is to organize a Dominion Employment Service with regional divisions and local offices. The central office of each division is to be used as a clearing house for vacancies and applications for employment, making the information available through local offices and elsewhere. Loans may be granted to workers travelling to places where work has been found.

National, regional and local committees, representative of workers and employers, are to be set up to advise and assist the Commission on employment problems.

Contribution Rates

Ref. No. for class	Class of Employed Persons	Weekly Rate	
		Employer	Employed Person
0	While earning less than 90 cents a day (Sec. 19 (3)) or While under 16 years of age (Sec. 19 (4))	18 cents	9 cents paid by the employer
1	Earning $ 5.40 but less than $ 7.50 in a week	21	12
2	Earning $ 7.50 but less than $ 9.60 in a week	25	15
3	Earning $ 9.60 but less than $12.00 in a week	25	18
4	Earning $12.00 but less than $15.00 in a week	25	21
5	Earning $15.00 but less than $20.00 in a week	27	24
6	Earning $20.00 but less than $26.00 in a week	27	30
7	Earning $26.00 but less than $38.50 in a week or $2,000 a year (First Schedule (m))	27	36

Daily Rate: in respect of each class, the daily rate of contribution shall be one-sixth of the weekly rate (Section 17 (4)).

Contrast Between the Unemployment Insurance Bill 1940, and the Employment and Social Insurance Act, 1935

The new Bill differs from the Employment and Social Insurance Act of 1935 in a number of respects:—

1. It embodies the principle of graded rather than flat contributions and benefits. A flat-rate scheme of benefits must be geared to the lowest wages received in the country, or else benefits may easily exceed normal wages. A system which gives benefits as a proportion of normal wages avoids this anomaly; benefits are given under a graded system with regard for the normal standard of living of the insured worker. The special rates for women, for persons between 18 and 21 years, between

16 and 17, and between 17 and 18 become superfluous under a graded system, and are omitted.

II. The qualifying number of contributions is reduced from 40 weeks in the two years preceding a claim for benefit, to 30 weeks, or more properly 180 days. Thus many persons would be insured under the new Bill who would, under the 1935 Act, have been paying contributions without ever qualifying to receive benefits.

III. Provision is made for daily rates of contributions as well as for weekly rates. Thus persons partially unemployed are dealt with automatically; a contribution is payable for every day worked. Under the 1935 Act a formula was provided to deal with cases of partial unemployment; the words "continuous unemployment" were given an extended meaning—

> 1935 Act, Section 20 (4)—"Any three days of unemployment, whether consecutive or not, within a period of six consecutive days shall be treated as a continuous period of unemployment, and any two such continuous periods separated by a period of not more than six weeks shall be treated as one continuous period of unemployment."

Under the 1935 Act, if an insured person was unemployed during part of a week, contributions would be payable in respect of him in the first instance for the whole week, but he would (on his claim for benefit) be entitled to a refund of contributions paid for such days of unemployment.

The new Bill, by allowing for the payment of contributions on a daily basis in those cases, makes automatic provision for periods of partial employment.

IV. The provision for dependency is simplified. The 1935 Act provided a low-flat rate of benefit with additions of 15 cents a day for a dependent child and 45 cents a day for a wife—but in practice these benefits were given only if the wages had been 125 per cent of the theoretical amount of benefits. These provisions imply investigation and administrative detail, and would have prevented benefits from being related closely to contributions. The 1940 Bill grades contributions and benefits with regard for the normal standard of living; insured persons maintaining one or more dependent persons are automatically entitled to a higher rate of benefit than single persons with no dependents. There is no danger of over-insurance, and the burden upon the administration is minimized, under the new system.

V. A new benefit formula,—the "ratio rule,"—is introduced. The 1935 Act allowed a period of 13 weeks' benefit to all persons who had paid forty weekly contributions during the two years preceding a claim for benefit; and "additional days" were allowed in accordance with a ratio rule, up to a maximum of fifty-two weeks. The new Bill dispenses with the "flat-duration plus additional days," and substitutes therefor a period of benefit directly related to the employment record of the insured person. He is permitted to draw one payment (either daily or weekly) for every five contributions made in the previous five years, less one payment for every three benefit payments received in the previous three years.

The ratio rule is simple and automatic; it protects the fund against bad risks; it prevents anomalies from persistent claims from casual, intermittent and seasonal workers; and it gives a workman the incentive to draw on his own resources for short periods of unemployment, thus keeping his rights intact for more serious times.

VI. The purely permissive sections, in the 1935 Act, dealing with Health Insurance, with training of the unemployed, and with the provision of aid to employable persons, have been omitted. Education is a provincial responsibility, and therefore it seems likely that no direct provision could be made by the Federal Government for training. The Sirois Commission recommended that Health Insurance should be a provincial responsibility, and it is not yet certain whether aid to employable persons is a responsibility of the Federal Government.

VII. The Governor in Council is enabled to establish reciprocal arrangements on unemployment insurance with another country. This provision would apply in particular to a worker living in Canada and working in the United States, or vice versa.

On June 24, it was announced by the Wartime Prices and Trade Board that an Order in Council had been passed prohibiting except under licence, the export from Canada of fish livers, fish oils, fish liver oils, and fish visceral oils. This action follows similar steps taken some months ago by the Board when the export of cod liver oil and cod livers was prohibited except under licence.

This action has been taken in order to conserve the Canadian supply of fish oils having a vitamin content. The unrestricted export from Canada of fish oils and livers might endanger the supply available for Canadian consumers.

As with cod livers and cod liver oil, licences for export will be issued and regulated by the Wartime Prices and Trade Board.

LABOUR LEGISLATION IN ALBERTA AND ONTARIO

Alberta

IN Alberta the legislature, during its session from February 8 to 16, enacted statutes to continue the unemployment relief measures which had been in effect during the past year and to provide for building associations to construct low-cost houses. Amendments were made in Acts dealing with the recovery of wages, teachers' superannuation and the hours of work in barber schools in Calgary.

Recovery of Wages

An amendment in the Masters and Servants Act provides that a worker may bring an action for a maximum of six months' wages instead of two as before, while the limitation upon the time during which proceedings may be instituted has been extended from three to six months from the termination of employment.

Early Closing of Shops

The Calgary Charter was amended to permit the extension by by-law to barber schools and similar institutions of the provisions relating to the closing of beauty parlours and barber shops in which case they will be deemed to employ barbers. Should such a by-law be passed it will require the establishments to close at 6 p.m. except on Saturday when they will be permitted to remain open until 7 p.m., and on Wednesday when the closing hour will be 1 p.m. Such a by-law is not to become operative so long as the barber schools are required by some other law or regulation to be closed on a half-day during the week other than the one specified.

Unemployment Relief

The provisions of the Unemployment Relief Act, 1933, which enables the Lieutenant-Governor in Council to make arrangements instituting and carrying out relief measures either alone or in conjunction with the Dominion and local governments within the province and to contribute to the cost of these measures, and authorizes local governments to borrow money for relief purposes, have been extended as in previous years until March 31, 1941.

Superannuation

The School Act was amended to make possible the participation of any school board in schemes for insuring teachers and other employees without, as formerly, submitting the by-law to the proprietory electors of the district concerned for their approval.

Building Associations Act

This Act, which is to come into force on proclamation, provides for the setting up of building associations for the purpose of building and selling low-cost houses, the value of which, including land, must not exceed $3,500. These houses may be sold either for cash or on credit terms which require that at least 20 per cent of the purchase price be paid in cash at the time of sale and the remaining amount over a period of less than 20 years, in instalments at intervals not exceeding three months, the rate of interest chargeable being limited to four per cent per annum of the unpaid purchase price and arrears of interest.

The administration of the Act is to be vested in a Buildings Advisory Board under the Minister of Trade and Industry, the Board having power to examine and pass on applications for incorporation, to make inquiries into the affairs of associations and to report to the Minister who is to instruct the registrar under the Act to take suitable action in regard to applications and other matters. The Lieutenant-Governor in Council may make regulations, especially with reference to the terms and conditions of contracts and agreements for sale, the maximum margins of price over cost, the forms to be used by the building associations, and authorizations of the Board to administer and liquidate defaulting associations.

The building associations are incorporated and have powers similar to a limited liability company, their capital structure being made up of common shares of either par or no-par value, preferred shares and, if necessary, debentures. They differ from ordinary corporations in the control over their activities by the Government which in return may guarantee their debentures up to a sum total for the province of one million dollars. The Act prescribes that interest on preferred stock must not exceed five per cent and that on debentures three per cent. A reserve fund must be established after a sinking fund has been set up and the interest on debentures and preferred stock has been paid, and from this fund may be paid dividend on common stock provided that the fund is not required for capital purposes and the dividend declaration is approved by the Board.

In return for the guarantee of debenture issues the Government requires that Alberta labour be used exclusively and, wherever

suitable, materials made in the province; that the total amount of debentures may not exceed a volume four times as great as the capital stock of the association; that the debentures must be a first charge on the assets of the association and limited in term to 20 years; and that the sinking fund for repayments of debentures be satisfactory to the Provincial Treasurer through whose office the guaranteed issues must be handled.

The appointment of an auditor for an association is subject to the approval of the Minister and an annal certified return giving details of operation and financial status must be supplied to the Board in addition to other information which it requires.

Ontario

The Ontario Legislature which sat from January 10 to February 24 facilitated the making of lump sum payments by employers to employees' pension funds by permitting for a fixed term a part of the sum to be deducted yearly from income calculated for income tax purposes. The Act providing pensions for teachers and school inspectors was tightened so as to conserve the fund and public library boards were given wider discretion in fixing the amount of employees' retiring allowances. The penalties for selling trade school courses not approved under the Act regulating such schools were increased. Bus drivers were given the privilege of voting at advance polls.

Conciliation in Public Utility Disputes

Among amendments in the Ontario Municipal Board Act was repeal of a section providing that whenever a strike or lockout of the employees of any railway or public utility company occurred or was threatened the Board was to endeavour to effect an amicable settlement; also that where such strike or lockout existed and the general public was thereby likely to suffer injury or inconvenience and the Board had failed in conciliation it had power to investigate and make public its findings in regard to the dispute. The section was first inserted in the Railway and Municipal Board Act, 1906. Another section enacted at the same time and unrepealed permits the Board to arbitrate in the case of a dispute if both parties agree in writing to abide by the award.

Unemployment Relief

The approval of the Minister of Public Welfare must now be obtained before removal from office of an unemployment relief administrator or his assistant appointed by the local municipal council.

Trade Schools

The penalty section of the Trade Schools Regulation Act, 1938, is extended to provide penalties for persons who sell or offer for sale courses of instruction which have not been approved under the Act. The penalties that may be imposed for violation of the Act are increased. The fine was formerly a minimum of $100 with imprisonment in default of payment up to six months. Now there is a maximum penalty of $1,000 for a first offence and $2,000 for a second or subsequent offence. The amendment allows a prison term up to six months either in default of payment of a penalty or in addition to it. In the case of companies the magistrate may increase the money penalty to a sum not exceeding $25,000. Penalties may be recovered in the manner provided by the Summary Convictions Act.

Advance Polls

An amendment in the Muncipal Act extends to bus and transport drivers who, by the nature of their employment are required to be absent from the municipality on election day, the right to vote at the advance poll.

Superannuation and Pensions

Employers who make a lump sum payment on account of an employees' pension fund are permitted, under an amendment to the Income Tax Act, to deduct from income in each of 10 successive years commencing in the year in which the payment is made, one-tenth of the lump sum payment but where the employer has already paid the lump sum, he may deduct one-tenth in 1939 and a similar proportion in each succeeding year until 10 years have elapsed from the year of the lump sum payment.

An amendment in the Teachers' and Inspectors' Superannuation Act which is effective September 1, 1940, raises the payments into the fund to be made by teachers and inspectors from three to three and one-half per cent of salaries. In order to conserve the fund and to reduce the deficit some of the provisions have been tightened. The annual allowance formerly payable after 39 years' service is now to be paid after 40 years. In line with this a teacher or inspector retiring on account of disability after 30 years' service is entitled to an allowance actuarially equivalent to that provided on retirement after 40 years' service instead

of 39. Further, the benefits have been reduced in certain cases. Instead of limiting the amount of the annual payment to three-fifths of the average salary it is now stipulated that where the average salary is $660 or less the maximum annual payment is $330. Where the salary exceeds $660 annual payments are limited to three-fifths of the average salary or one-half of the average for the last 10 years during which contribution has been made to the fund. The rate of interest on the total amount contributed by a teacher or inspector which is payable on his death to his personal representative is fixed at three per cent instead of being governed by the current rate paid by the Province of Ontario Savings Office. Special provision retroactive to September 1, 1939, is made for persons found on medical examination at the time of their application to the Ontario College of Education, the Ontario Training College for Technical Teachers or a normal school to have a physical condition which may subsequently incapacitate them.

An amendment in the Public Libraries Act leaves it to the discretion of the library board to fix, subject to approval by the municipal council, the gratuity or retiring allowance that may be paid to any employee retiring by reason of advanced age, ill health or other disability. The stipulation that limited the sum to the aggregate of the employee's salary for the last three years of service is removed.

Credit Unions and Co-operative Societies

The Credit Unions Act, 1940, consolidates the former legislation (LABOUR GAZETTE, 1939, p. 575) and makes minor changes to bring its provisions and the terms used into line with those of similar Acts in other provinces. During passage of the Bill through the legislature the number of persons capable of contracting who may be incorporated as a credit union was raised from 10 to 20. Membership is limited to persons having a common bond of occupation or association or to those within a well-defined neighbourhood or community. It is open to persons under 21 with certain restrictions. The Bill as introduced limited to $5,000 the annual value of the land which could be held by a credit union but this provision was dropped. Instead of providing that the amount of each share was not to be less than $1 there is now a maximum of $10.

The guarantee fund of 10 per cent of the yearly net profits is replaced by a reserve against uncollectible loans and losses of 20 per cent. A credit union is empowered, after providing for this guarantee fund and before declaring a dividend to set aside up to five per cent of the net earning for educational purposes.

The clause dealing with objects of incorporation is amended to allow incorporation for the purpose of receiving money as payment for shares as well as on deposit from members and making loans to members with or without security. The last named power is now limited to "provident and productive purposes." Loans to any officer or board member in excess of the aggregate of his paid up shares and deposits may be made by a two-thirds majority of the board of directors and credit committee. No credit union may borrow more than 50 per cent of its capital, deposits and surplus. The clause prohibiting appeal to the courts in case of disputes involving $100 or less has been omitted.

The board of supervision, now called the supervisory committee, is to consist of three members instead of two, and is to hold office as long as the by-laws prescribe instead of being limited to one year. The Lieutenant-Governor in Council may appoint a registrar of credit unions to whom are granted certain powers formerly given to the Minister. There may also be appointed an inspector of credit unions and such other officers, clerks and employees as are necessary. The use of the words "credit union" is forbidden in the name of any business not under the Act. The by-laws of a credit union may, among other things, prescribe the purposes for which the profits may be appropriated, the number of shares a member may hold, place a maximum on deposits and loans to members and provide for their expulsion and withdrawal. The Minister is now required to give two months' notice of dissolution instead of three.

An amendment in the Securities Act exempts shares of credit unions from the registration provision.

Workmen's Compensation

A Bill which failed to pass second reading would have amended the Workmen's Compensation Act to allow an appeal to be taken from a decision of the Board to a judge of the Supreme Court of Ontario.

RECENT REGULATIONS UNDER PROVINCIAL LABOUR LAWS

REVISED minimum wage orders have been issued in Alberta, British Columbia and Nova Scotia. In Alberta the new regulations apply to women working in restaurants, in British Columbia to women in hotels in summer resorts and to bus drivers on Vancouver Island. In Nova Scotia the revised regulation has to do with women employed in shops. In Quebec several orders of the Fair Wage Board have been extended and rules for the interpretation of Order 4 have been made. Minimum wages have also been fixed in Quebec for lumber workers for the 1940-41 season.

Regulations relating to trade schools have been made in Alberta, British Columbia, Nova Scotia and Saskatchewan. In the latter province, too, restrictions have been imposed for the protection of persons employed in the fumigation of premises.

Alberta Minimum Wage Act, 1925.

Minimum wages and other conditions of employment for female employees in restaurants have been varied by an order of the Board of Industrial Relations which came into force on June 30, repealing former Order 3 (LABOUR GAZETTE, 1938, pp. 36, 62). The minimum rate for experienced employees remains unchanged at $12.50 per week, but the learning period has been reduced from six to three months, increases from the initial $9 wage for inexperienced employees to $10, $11 and $12.50 being made monthly instead of bi-monthly as under the former order. The number of inexperienced workers is again limited to 25 per cent of the total number.

Employees who work for less than the ordinary week are to be paid not less than 30 cents an hour with a minimum of $1.20 each time they are called for duty. This provision formerly applied only to those employed for less than 40 hours in a week. The clause of the superseded order allowing employers to pay a weekly wage bearing the same proportion to the minimum wage as the hours worked bore to 48, with the proviso that such wage was not to be based on a smaller number of hours than 40, has not been continued. This has the effect of increasing the minimum wage for some employees working in an establishment in which the hours are less than 48 per week.

Overtime rates remain the same as in the previous order, time and one-half being paid for work in excess of nine hours a day and 48 a week, and the ordinary rate being paid for the ninth hour of a day if the weekly hours do not exceed 48.

The provision of the old order authorizing the employer to deduct payment for board at not more than $5 per week or 75 cents per day has not been continued. No deductions may now be made by the employer in respect of furnishing, repairing or laundering such special uniforms or other clothing as he requires his employees to wear.

Alberta Trade Schools Regulation Act

The above Act, which requires that schools in which persons receive vocational training in designated trades be licensed, inspected and generally regulated, has been extended to cover numerous business colleges by an Order in Council of May 22 naming as trades within the meaning of the Act the occupations of stenographer, typist and comptometrist.

British Columbia Female Minimum Wage Act

The usual summer order varying for resort hotels in rural districts Order 52 covering the hotel and catering industry has been declared effective from June 17 to September 14. Instead of the maximum 48-hour week and eight-hour day fixed by Order 52 women employed in these establishments may, as last year, work up to 54 hours a week and 10 a day. The time and a half overtime rate is payable as usual for time worked after 48 hours a week but not after eight hours a day. The provision for 24 hours' consecutive rest in a week must be observed.

British Columbia Male Minimum Wage Act

A variation in the recent order relating to bus drivers on Vancouver and Saltspring Islands (LABOUR GAZETTE, April, 1940, p. 343) clarifies its intention regarding payment for time during which a driver is at the disposal of his employer but not actually engaged in driving, and became effective on June 27. It is made clear that the driver must be paid not only for all time from his reporting at the garage or headquarters of his employer to his return to this place but also for the time spent travelling as a non-paying passenger to the station where he is to take charge of a bus. The overtime rate is not to apply to waiting time when the driver is engaged on special trips, charter trips, excursions and overloads.

British Columbia Trade Schools Regulation Act

An Order in Council gazetted June 20 makes regulations governing hours, fees and other

operating conditions for hairdressing schools to replace those of March, 1937.

Some of principal provisions assure that such establishments operate as schools and not as shops and limit the hours of instruction to 41 per week, a complete course of study to comprise 1,000 hours of instruction. Before a student may begin such a course the Minister of Labour must approve the contract between the student and the trade school operator. The sale of services is restricted to those persons acting as models for the students who may be charged only prescribed nominal prices. Misleading advertising and the use of Help Wanted columns to attract students is prohibited. Specific requirements are laid down concerning the qualifications and registration of teachers.

Nova Scotia Minimum Wage for Women Act

Order 7 of the Minimum Wage Board which fixes minimum wages for females in shops in cities and incorporated towns (LABOUR GAZETTE, 1934, p. 532, 1936, p. 1002) has been revised and became effective July 16.

Some changes in the order relate to hours of work and payment for part and overtime work, while the provision of the earlier order permitting a three months' probationary period during which wages were unregulated has been omitted. Two other discontinued provisions are those requiring seats to be furnished for employees in the proportion of one to four and forbidding employers to discriminate in any way against employees who made complaints to the Board. Both these conditions are, however, required by statute, the Children's Protection Act stipulating that a seat shall be provided for every woman employed in a shop and the Minimum Wage Act prohibiting discrimination in any way against an employee who testifies or may testify in any inquiry by the Board.

The main wage provisions remain as before with separate scales of rates for female workers in cities and towns of below and above 17,000 population, the higher rates thus applying only to Halifax, Sydney and Glace Bay. For experienced workers the higher rate is $11 a week and the lower $10, for inexperienced workers over 18, the higher rate ranges from $8 to $9 to $10 at six-monthly periods and the lower from $7 to $8 to $9. Inexperienced females under 18 must receive over the same period in the three large centres from $7 to $8.50 to $10 and in the other towns $6 to $7.50 to $9.

The minimum rates are now to apply to a maximum of 48 hours a week or the number of hours usually worked in an establishment if less than 48, instead of to a work-week of from 44 to 50 hours with special provision for a 60-hour week from December 15 to 31. Work in excess of 48 must be paid for at the usual hourly rate of the establishment as fixed by the order, and payment on a part-time basis may be made if the number of hours worked is less than 48 or less than the usual working time, the same hourly rate being applicable. The former order provided overtime pay for all hours worked over 50, and part-time payment was permitted for all hours under 44.

Nova Scotia Motor Carrier Act

Amendments in the regulations under this Act tighten the requirements for obtaining licences to drive public vehicles. Although the former regulations called for the submission of medical and optical certificates, they were in general terms, while the new orders require the certificates to report on specified details and to be renewed annually. In addition, the applicant must now have had at least one continuous year's driving experience and must be competent by reason of experience and training to operate the type of vehicle he is required to drive.

Nova Scotia Trade Schools Regulation Act

An Order in Council gazetted July 3 designates as trades to which the Act and the general regulations (LABOUR GAZETTE, 1939, p. 1000) apply the following vocations: accounting, advertising, barbering, chemical analysis, clerical work, civil service occupations, commercial art, cosmetology, drafting and design, hairdressing, household arts, industrial and business management, pharmacy, printing, radio construction and service, showcard writing, sign painting, surveying and transportation occupations.

Quebec Fair Wage Act

Order 16, governing employees in establishments in the City and Island of Montreal engaged in wholesaling and exporting butter and cheese, which was to expire on May 15, has been continued in force for a further period of 12 months.

Orders 9, 17 and 19 of the Board have been continued in force for a further year from their expiration dates in June, 1940, and Order 23 has been extended for six months from January 21, 1940, unless the Board or the Lieutenant-Governor in Council decides otherwise. These orders govern teachers in Verdun, employees in laundries and allied establishments, full-fashioned hosiery manufacturing establishments, and taverns, respectively.

An amendment in Order 5 applying to silk textile industries extends the provisions of the

order to the manufacture of silk velvet which was formerly specifically excluded.

Notices gazetted on June 1 require employers to post, in a place accessible to the employees, all permits of the Fair Wage Board granting exemptions from its orders including any extension of hours of work without wage increases and allow employers under Order 4 to retain from the wages of their employees with their written consent sums for subscriptions to the war savings certificates of the Government of Canada.

Several amendments or rules for the interpretation of Order 4 were gazetted on June 1 and June 15. In the provision of the order limiting to 10 per cent of the total number of employees of a given employer in any one zone those that may be classed as apprentices "the total number of employees" is not to be interpreted as including apprentices.

Employees in the mining industry in Abitibi and Temiscamingue Electoral Districts are authorized to deduct $1.17 per day for board and room and the prevailing rates for house rent, provided that in each case the employee is free to live elsewhere. Where tools are bought from the employer, he may deduct the current prices and providing the workman is free to buy elsewhere the price of supplies bought at the Mine Dry House may be withheld. For medical services $1 per month and for athletic associations not over $1 per month are deductible.

Another rule, approved by the Board on March 28, lays down that the levy on employers of one-third of one per cent to aid in meeting the cost of administering the Act is payable quarterly, each payment relating to the previous quarter, subject to adjustment by the Board if necessary. A final rule makes it clear that the levy applies to wages for holidays which are part of the engagement contract, sick leave, wages in lieu of notice of dismissal and living allowances as well as wages paid to employees temporarily engaged within the province. No levy is payable on the cost of meals supplied gratuitously by the employer during overtime work or payments in the nature of pensions to employees no longer working for the employer.

Banks and insurance companies are declared to be commercial establishments and, except for those especially covered by other articles, their employees are governed by the provisions relating to office employees or employees of commercial establishments. The minimum rate in their case applies to a 48-hour week except for bank messengers engaged by the year at a minimum of $600.

Among the rules of interpretation of Order 4 which were gazetted on June 15 is a provision that the weekly limitations of hours to 55 a week for women and boys under 18 and 72 for men do not apply to employees for whom a longer regular week is fixed by the Board.

A resolution gazetted on June 15 again renews for three months from August 1 the resolution adopted by the Board on September 13, 1939 (LABOUR GAZETTE, 1939, p. 1112), suspending the hours provision of Order 4 due to the war time emergency.

It is also pointed out that firms under contract with the Federal Government for war supplies or other materials are subject to the orders of the Board including the order requiring payment of an assessment of one-third of one per cent of payroll.

Quebec Forest Operations Act

An order gazetted on June 15 and amended by an order gazetted July 6 fixes minimum wages for the 1940-41 season for different classes of workmen employed in cutting spruce and balsam, the woods principally used in the manufacture of cellulose pastes and paper. The order must be posted in each shanty or camp in a conspicuous place along with a price list of goods to be sold or rented to employees. These prices must be reasonable. The order applies also to women employed in any kind of forest work but not to contractors or sub-contractors. The employer must have all employees sign a form giving the date of hiring and a detailed statement of his account is to be given to each worker on completion of his work.

The rates are for a 26-day month. A $52 minimum with board and lodging is fixed for those engaged in felling, removing stumps, branches or bark, piling, hauling, loading, transporting and unloading timber. For inexperienced or handicapped workers or those over 60, which classes may not make up more than 20 per cent or less than 10 per cent of the total number of workers in any operation, the minimum rate is $35 a month. The Minister of Lands and Forests may increase the percentage to 30 in the case of small businesses employing workmen at a time rate. For them the timber licence fee may also be reduced to insure the payment of wages.

Joiners, carpenters, blacksmiths, saw-filers, dynamiters, mechanics, employed as such, must be paid $60 a month. Woodcutters who do the work of one of these classes for 15 days or less can only claim $52 for a month of 26 days.

Stablemen are to receive $55, handymen and watchmen $52, truck and tractor drivers,

enginemen and motormen $60, teamsters and "portageurs" $55 with an additional $17 a month for horse and harness and $20 for horse, harness and wagon.

Depending on the number in the camp, special rates for cooks vary from $52 to $80 a month and assistant cooks must be paid $50 or $60. The minimum for choreboys is $35.

Contracts by the job and monthly contracts are not interchangeable without the mutual consent of the employer and the employee. Time workers are to be supplied with proper tools. When obliged to walk more than a mile from the camp to work, a man must be paid for the time it takes. A time worker who quits work without a reasonable or lawful motive less than 15 days from the date on which he commenced work can claim neither travelling expenses nor lodging and board in the course of his trip but is to receive the minimum of an apprentice for the time worked. Piecework contracts must be given to apprentices up to 15 per cent except in the case where the apprentices will, with the passage of time, have become skilled workers.

As to hours, except for cooks, assistant cooks, choreboys, stablemen and teamsters, "portageurs" and guards, the maximum working hours are 60 a week. Time and a quarter is paid for overtime on week days and time and a half on Sunday.

The employer may make no deduction from wages due to a time-worker for medical assistance, hospital fees, first-aid assistance, board, lodging, bedding, insurance premiums, nor the cost of tools broken or depreciated by use.

The rate for piece-workers is to be calculated by taking as a basis the unit price of $2 per cord. Wood of four and five feet is to be measured by the cord of 128 cubic feet. For men employed by the job, a maximum of 60 cents a day may be deducted for board. Those who cut and trim timber up to six feet in length are entitled to a monthly minimum net wage of $35 or $58 depending on the fixed average daily production. Above the fixed daily averages in the case of logs over six feet in length, the minimum rate is one cent per cubic foot. For preparing pulpwood the rate for peeling is $1 per cord for logs four to six feet long and $1 per hundred cubic feet for logs over six feet long. In camps where contracts by the job are in force, the contractor or sub-contractor cannot employ in forest operations more than 20 per cent of workmen at monthly rates. Men producing 1·3 cords of wood and less in a day are not to make up more than 15 per cent of workmen employed by the job.

Saskatchewan Public Health Act

Among regulations gazetted on June 15 for the protection of persons exposed to hydrocyanic acid gas used in fumigation are those protecting workers employed in the process. The penalty fixed for breach of the regulation is from $5 to $100.

Fumigation may only be performed by a person holding a permit, renewable annually, from the Minister of Public Health. An applicant for a permit must produce a certificate of physical fitness from his municipal health officer and an insurance policy in an approved form against liability arising out of the death of any employee or the injury to or death of any other person resulting from negligence in fumigating. The amount of the insurance must not be less than $3,500 in the case of an employe and $10,000 in the case of any other person. A factory or shop employee who fumigates only the establishment where he is employed is not required to carry insurance.

Persons engaged in fumigating are to use an approved type of gas mask and refills for the masks must be available. Accurate records are to be kept of the period during which the gas mask canister has been used in order that it may be replaced as required.

Saskatchewan Trade Schools Regulation Act

The general regulations under this Act (Labour Gazette, 1940, p. 125) were amended by an order in council gazetted on June 15 to allow admission to trade school courses of children under 16 with the consent of the Commissioner of the Bureau of Labour and Public Welfare.

There were 6,206 accidents reported to the Workmen's Compensation Board of Ontario during the month of June, as compared with 5,945 during May, and 5,207 during June a year ago. The benefits awarded amounted to $550,009.71, of which $443,402.46 was for compensation and $106,607.25 was for medical aid.

The total of benefits awarded during the half year ending June 30 amounted to $3,457,257.20, as compared with $3,039,136.85 during the corresponding period of 1939.

The accidents reported during the first six months numbered 33,396, as compared with 26,664 during the same period last year.

LABOUR AND INDUSTRY IN ONTARIO IN 1939

Twentieth Report of the Provincial Department of Labour

EMPLOYMENT in Ontario was at a lower level in the fiscal year ending March 31, 1939 than in 1938, but was higher than in 1937 according to statistical information presented in the twentieth report of the Ontario Department of Labour. The decline in employment is reflected in eleven of the thirteen divisions, the index numbers being lower than in the preceding year. The decline was particularly marked in the logging and construction divisions in which the decrease was 77·9 and 22·3 points respectively. In mining the index number of employment advanced 6 points to 265·5, the highest level since 1926, while the services index advanced 5·1 points.

The decline in employment was also indicated in the reports on unemployment among trade union members in Ontario. The percentage of unemployment was reported as 12·9 for 1939 compared with 8·4 in 1938. A decline in the volume of employment in the building industry was indicated by a decrease of $644,661 in the value of building permits issued in Ontario during 1939. The total value in the period reviewed by the report amounted to $24,889,967 compared with $25,531,628 in 1938.

Industrial Disputes.—During the fiscal year there was a decided decrease in the amount of time loss due to strikes and lockouts. There was a total of 54 strikes in 1939, a decrease of 73 compared with the total of 127 in 1938. Time lost amounted to 86,997 man-working days, a decrease of 207,909 when compared with the 294,906 man-working days lost in 1938. A corresponding decrease in the number of workers involved is recorded, 5,795 workers being involved in strikes during 1939, a decline of 16,954 compared with the 22,749 so involved in 1938.

The saving in time-loss, amounting to 207,909 man-working days, is the equivalent of a full year's work for approximately 700 men.

The rubber industry suffered the greatest loss in the year reviewed, with a total of 23,120 working days. This total, however, was less than last year when the rubber industry was third on the list with 29,405 days lost. The miscellaneous wood products came second with a total of 17,761 days, mostly among sawmill workers, as compared with 13,129 in 1938. The metal products industry was third with a total of 12,668 working days lost, or less than one-fifth of the total in 1938, when the total was 71,904. The textile and clothing industry stood fourth with a total of 10,434 working days lost. In 1938 it stood first with almost ten times this loss, or 102,812 days. A decided decrease in time-loss in the logging industry was reported for 1938. In 1939 there were no strikes in this industry.

The settlement of 22 strikes, involving 3,423 workers in a loss of 39,752 days, was effected through compromise; 15, involving 474 workers in a loss of 19,422 days, were settled in favour of employers; 12 strikes, involving 713 workers in a loss of 4,217 days, were settled in favour of the workers; and the remaining 5 were indefinite as to outcome.

Conciliation and Negotiation.—The report states that the Chief Conciliation Officer and other officials of the Provincial Department of Labour assisted in the settlement of strikes which involved approximately 86 per cent of the total number of workers involved in strikes in the province.

The Chief Conciliation Officer also acted as arbitrator in many cases at the request of both employers and employees and in all instances, the report states, his decision was accepted by both parties concerned. Such cases affected approximately 7,500 employees in various industries.

Youth-Training.—During the eight months of the fiscal year reviewed in the report, in which the Dominion-Provincial Youth Training plan was in operation, 1,733 young persons were given training or assisted under the programme, and 1,424 were placed in permanent employment. The courses of instruction and training were planned with a view to meeting existing needs for skilled workers, and as a result of this policy 82 per cent of those trained or assisted obtained jobs on the completion of their training period without causing any displacement of workers already employed.

Employment Service.—During the fiscal year, 315,116 applications for employment were made and 126,142 vacancies were registered at the Ontario Government Offices of the Employment Service of Canada. The placements numbered 123,307, and of this total 1,787 were handicapped ex-service men. As in the preceding year, the Employment Offices took an active part in the selection of trainees under the Youth Training Programme, in the work involved in their transportation to training centres and their placement in jobs on the completion of the training period. Approximately 97 per cent of the vacancies were filled, which figure is five points higher than that of last year.

Factory Inspection.—The report of the Factory Inspection Branch indicates an increase in the volume of work accomplished by that Branch during the fiscal year 1939. The number of inspections totalled 32,605, an increase of 5,180 as compared with 1938, and

the number of orders issued relating to various requirements of the Factory, Shop and Office Building Act totalled 6,057, an increase of 181. Fewer permits were required to be issued and they covered such matters as overtime, double shift, homework and fruit camps, the number being 4,088, or 482 fewer than last year. The number of complaints received, most of which concerned long hours, dropped 75 to 106 this year. There was also a decrease in the number of accidents reported to the Branch, and in the number of these which were fatal, the figures being 2,805 with 36 fatal, as compared with 3,646 and 40 fatal in 1938.

Boiler Inspection.—The scope of the work of the Boiler Inspection Branch was extended during the fiscal year by the assignment to the branch, under authority of an Order in Council approved December 30, 1938, the responsibility for the annual inspection of uninsured boilers and pressure vessels in the province. Inspectors for this purpose and for the enforcement of the Steam Boiler Act will be located in eight centres of Ontario, as well as in Toronto. The change resulted in a decided increase in the volume of work being accomplished by the branch, and in the first three months under the new arrangement, ending with the close of the fiscal year, 116 of these inspections were made and 80 certificates issued.

The regular work of the branch was carried on in the usual manner. Totals of 334 drawings and specifications of boilers and pressure vessels to be constructed for use in the province were surveyed and registered; 801 first, 543 second and 787 final inspections were made of new pressure vessels; 1,352 inspections were made of used pressure vessels, being extensively repaired, sold or exchanged, and 2,778 certificates were issued, in addition to the 80 certificates of annual inspections. As a result of these inspections and other activities there was transmitted by the branch to the Treasurer of Ontario an amount of $18,407.80, compared with $19,599.87 in 1938.

Industry and Labour Board

Industrial Standards Act.—During the fiscal year there were 54 official conferences held pursuant to the Industrial Standards Act, 37 of which submitted schedules for approval. Of this number, 30 were approved and 7 were being held for further consideration. At the end of the year 85 schedules were in effect in the province.

A total of $5,092.15 was collected from 109 employers on behalf of 286 employees as arrears of wages. This is an increase of $672.32 compared with the previous year. There were 198 prosecutions under the Act, resulting in 157 convictions, with fines amounting to $1,440.

Apprenticeship.—The report states that at the close of the fiscal year 1939 there were 1,421 apprentices registered, being the largest number in any year. The increases were mostly in the hairdressing and motor vehicle repair trades. Efforts were made to have evening classes established in vocational schools for apprentices in these two industries, and in the motor vehicle repair trade examinations for apprentices and for those making application for certificates of qualification were held in a number of centres throughout the province. Considerable progress was made it is stated in improving the standard of instruction in licensed hairdressing schools, and in eliminating the practice of fee-charging by establishments not licensed to teach. A total of $341.82 was collected as fees wrongfully charged by such establishments and refunded to students.

Minimum Wages.—A special feature of the work of the Minimum Wage Branch during the fiscal year 1939 was the collection, for the first time, of wage returns for male, as well as female employees. Returns were received from 15,059 firms reporting on 358,068 employees, of whom 251,257 were male and 106,811 female workers. The returns were grouped under 35 classifications and analysed, and the fact that the returns this year covered almost two and a half times the number of employees, as compared with last year, is indicative of the increase in the volume of work undertaken by the branch. These figures do not include the returns from over 200 primary textile mills subject to the provisions of Special Order No. 1, nor those received from firms subject to the provisions of the wage schedules pursuant to the Industrial Standards Act.

Analysis of the wage returns revealed the underpayment of a considerable number of female employees and adjustments were made by 884 employers on behalf of 1,446 such employees. The number of complaints received totalled 462, all of which were investigated but not all were justified, and arrears of wages amounting to $13,544.98 were collected from 309 firms for 453 employees.

During the year it was found necessary to prosecute 22 employers in connection with 28 breaches of the law. Nine convictions were registered, with fines amounting to $195.

At the end of the fiscal year permits were in force authorizing 116 employers to pay to 259 employees, who were handicapped or learners, rates lower than those established by orders of the Board, and in addition, 165 employers, whose piecework rates had been approved by the Board, held homework permits.

INDUSTRIAL RELATIONS POLICIES IN UNITED STATES DEFENCE INDUSTRIES

Results of Survey by Industrial Relations Section of Princeton University

OF particular interest at this time in view of the intensification and expansion of industrial war work in Canada, and the resultant problems in industrial relations, is a report entitled *Outline of Industrial Relations Policies in Defence Industries* issued last month by the Industrial Relations Section, Department of Economics and Social Institutions, Princeton University, Princeton, New Jersey.

Dealing with the situation in the United States, the report states that the material requirements for war and defence have made "production" synonymous with "patriotism" in a large part of American industry. Resulting from the impetus of war production, "new concepts of organization, management techniques, standardization of products, streamlining of procurement, and expansion of labour forces will be necessary." Pointing out that while the problems of engineering and finance involved will be complex, the report declares that these will be over-shadowed in difficulty by those of developing greatly expanded staffs of supervisors, technicians, foremen and employees capable of converting raw material and blueprints at top speed into tens of thousands of airplanes, tanks, guns and shells.

Referring to the necessity for large volume production the report observes:

> In moving into large volume production, defence industries will find no ready-trained group of supervisors, technicians, and skilled labour at hand. Rather than obtaining personnel to fill in an existing pattern of plant organization and lay-out, organization and processes will have to be adapted to the personnel available. But meanwhile, the volume of production necessary is making mass production possible. Instead of one man completing ten steps in fabricating a product, ten men will need be put to work on one step. This change involves mental and physical adjustments of heroic proportions. But such adjustments are already being made. Once consummated, the possibilities of intensive training of thousands of new employees on single steps in production open up vast supplies of usable labour. With this change in many industries, the bottleneck becomes not skilled labour, but the availability of competent supervisory and technical personnel at all levels.

Machine Tool Industry

Among the industries studied, the machine tool industry apparently offers the greatest obstacles to a shift from job-shop to any large degrees of mass production organization. In its own protection, the industry has maintained a considerable degree of diversification. Orders for particular products have usually been small. The niceties of machine-tool fabrication have required the use of many highly skilled mechanics who, like custom tailors, possessed a "feel" for the finished product as a whole. To raise production to the levels now necessary, much less skilled labour will need be absorbed. The adjustment of shop lay-out and operations to make the most of such labour will require the highest degree of ingenuity and vision. At the same time the industry will face, along with other defence industries, the accumulation of industrial relations problems which comes with rapid expansion of forces. In many ways, the attainment of large-scale production in the machine tool industry will be the test of American engineering and American industrial relations in the face of a national emergency. . . .

Labour Relations

Many industrial relations policies and techniques that have evolved over the years take an added importance in industry's adjustment to rapid expansion. The development of effective, harmonious labour relations is vital in defence production. Collective bargaining procedures, including mediation or arbitration where necessary, will need be smoothed and stream-lined to avoid any danger of interruptions. Grievances, instead of being allowed to accumulate under the surface, with adverse effects on morale and efficiency, will need to be cleared justly and quickly through established, functioning machinery. Where such machinery does not already exist, experience shows that its early development is of fundamental importance. In all matters of joint concern, the active participation of both labour and management in determining policy is from all evidence imperative to the highest level of efficiency.

Seniority Protection

The problem of seniority protection has already taken on added significance. Skilled workers in non-essential industries will frequently face the loss of valuable rights in moving to defence industries. Protection of these workers by furlough privileges will release many otherwise willing employees and reduce turnover in the companies in which their services are for the time most valuable to the nation. Such furloughs with preservation of seniority rights are already contemplated in many instances in regard to absence for military service. It now appears in the public interest to encourage their use where employees can be spared for defence production.

Other problems of an increasingly acute importance include:

The development of continuous and effective wage and salary administration.

The maintenance of ratings upon which to base promotions in expanding forces.

Supervisory training in industrial relations techniques.

Expanded health services for executives, supervisors, and employees.

Re-study of work schedules and strains to obviate fatigue.

Examination of the special problems in the employment of women.

In more isolated locations, the planning of adequate housing and transportation facilities.

Industrial Recruitment

Dealing with the recruitment of production workers it is stated that in spite of the large volume of unemployment, machine tool and aircraft industries report "a serious shortage of qualified skilled labour, particularly tool and die makers". The problem in this regard is stated as follows:

Although there are thousands of unemployed workers who are classified as skilled labour, company executives have indicated that a very small proportion of those applying for skilled work possess the experience and qualifications required in those industries which have already had sharp expansion of production. Another difficulty is that the demand for skilled workers has been concentrated to date in specific areas rather than evenly distributed throughout the country. Thus the shortage is much more serious in some communities than in others.

In some cases, skilled workers have been laid off by companies that have reduced forces. Such workers, however, are not anxious to jeopardize their seniority standing with their regular employers by accepting permanent employment in such lines as the machine tool, aircraft, or shipbuilding industries. A company expanding its operations in response to defense requirements may be forced to hire certain skilled workers with the knowledge that they will return to their original employment when needed. If related industries are called upon to expand operations in the near future, the skilled labour shortage will become increasingly serious.

The problem of securing semi-skilled help and workers who can be trained quickly for single operations was of less concern to the employers interviewed. In some communities, however, nearly all available graduates of vocational and trade schools have been absorbed. Selection from among general applicants favours those with some technical training or previous mechanical experience. Women have not yet been hired extensively for unskilled work as they were in 1918, because the supply of male unskilled labour is more than sufficient to meet the demand.

Because of the shortage of skilled workers relative to semi-skilled, some of the companies studied are being forced to develop, as best they can, skilled personnel by intensive training of helpers and other semi-skilled workers who show capacity for promotion.

Industrial Training

The training of skilled and semi-skilled workers is divided into four parts viz.: (1) apprentices; (2) short-period, intensive training in the plant; (3) vocational and technical school training; and (4) co-ordination and supervision of training.

Apprentices.—The report refers to the fact that during the depression years many companies suspended apprentice training programs with the result that there is now a shortage of apprentice graduates. Faced with a sudden increase in operations only a few companies in the United States are expanding their apprentice groups while in many cases it has been found more practical to transfer apprentices with one or two years' training to regular production jobs. It is further stated that most company executives interviewed regarded apprentice training more as a long-range program for developing supervisory material rather than as a means of training skilled productive labour needed in the immediate future. In the development of skilled or semi-skilled labour it appears that more emphasis has been placed on short-period intensive training for specific jobs or operations.

Short-Period, Intensive Training in the Plant.—Commenting on this means of meeting the problem the report states:

As production expands, it is often possible to break down skilled operations through the division of labour. In a relatively short period, new or unskilled workers with the proper mechanical aptitude can be trained to perform one or two operations normally part of a skilled job. By intensive training on the job, supplemented in some cases by limited class-room instruction, unskilled workers may become qualified to perform particular types of work on a single machine. Such short-period intensive training programs are not usually introduced until after the jobs have been broken down. A definite knowledge of anticipated production schedules and the types of operations to be performed is usually pre-requisite to any program of specific job training of this kind.

An emergency training program has two objectives. The first is to qualify new or unskilled employees for specific semi-skilled jobs; the second is to continue the training of promising semi-skilled workers or learners to enable them to qualify for more skilled and more responsible jobs such as set-up men or group leaders. In both cases individual workers are trained step by step as they demonstrate ability. In many companies, training of this nature is a responsibility of the foreman, but the expense involved is charged to a separate training account rather than directly to the department. Some companies have their own "vestibule" training schools; others rely mainly on local educational institutions.

Vocational and Technical Schools.—Dealing with vocational and technical training school facilities, the report continues:

From the standpoint of defense industries, the training given in trade and vocational schools is important. Many aircraft companies now give preference in hiring to young persons who have completed the full-time day courses in vocational schools. There is an increasing need for the expansion of evening training courses to equip adult employed workers for promotion to higher positions. Finally, some vocational schools, which have the proper equipment, have recently set up short, intensive-training courses for out-of-school youth and adults. Such courses, conducted with the co-operation and active assistance of defense industries, are designed to equip trainees in from three to six weeks' time for single, specific operations . . .

Co-ordination and Supervision of Training.—Referring to the question of responsibility

for training the opinion is expressed in the report that training would be neglected unless it is carefully organized and that decentralized training was often more efficient and most flexible, "but central co-ordination is essential in developing a program adequate to production requirements and in maintaining training schedules and standards."

Wages and Hours of Work

The report indicates that an attempt is being made, by the employers interviewed, to avoid "the distortion of wage rates prevalent at the time of the World War." To this end, it is stated, the established job classification and improved rate-setting methods are factors which would help companies foresee and forestall great variation in accepted differentials.

Organization of two and three shift operations.—In determining shift schedules the report states that employee habits and attitudes, as well as the number of available supervisors and skilled workmen must be considered. "A rotation of shifts is customary in continuous-operation companies, but is not practised where employees have formerly been used to one shift only. New employees may be assigned to a second or third shift more easily than old employees can be transferred. It is found necessary, however, to have enough experienced workers on the extra shifts to instruct and assist the new workers. In some plants there is insufficient skilled personnel to operate three full shifts. In such cases, two shifts of ten or twelve hours may be required."

Wage Differential for Night Work and Overtime Rates.—Summarizing the situation in regard to wage differentials for night work and overtime rates, the report observes:

> Most companies which have normally worked on one-shift schedules pay a bonus for the additional second and third shifts, ranging from five to ten per cent, to overcome the objection to night work. In order to induce older workers to accept night work one company was considering paying a basic differential of five per cent to men of three years' service plus one-half per cent for each additional six months' service. In continuous process industries where shifts are commonly rotated, differential pay for night work is not so common.
>
> Overtime beyond eight hours per day and forty hours per week is commonly paid at the rate of time-and-a-half. Such a practice, of course, is very costly, but is necessitated by shortages of available skilled personnel.

In the foregoing the most important sections of the report from the viewpoint of labour have been summarized. Other sections of the report deal with the expansion of management organization and employee-management co-operation in accelerated production.

Copies of the report (price 75 cents) may be obtained on application to the Industrial Relations Section, Department of Economics and Social Institutions, Princeton University, Princeton, New Jersey.

Price Regulation of Goods in Great Britain

The British *Ministry of Labour Gazette* for June reports additional Orders governing the prices of goods.

The *Prices of Goods (Price Regulated Goods)* Order, 1940, made by the Board of Trade on May 10, under the provisions of Section 2 of the Prices of Goods Act, 1939, came into force on June 10, 1940, and brings under the price regulation machinery of the Act an extensive list of articles in common use in daily life.

The Order revokes an earlier Order, made on December 18, 1939, and covers not only the goods specified in the revoked Order (mainly the cheaper grades of clothing and household goods and textile and leather materials used in their manufacture), but also all kinds of clothing, boots and shoes, domestic ironmongery and hardware, cutlery and household textiles. Among other goods covered are domestic furniture, wireless sets, and gramophones, cycles, perambulators, clocks and watches, drugs, soap, candles and matches. The more important classes of materials needed for the manufacture of most of the above-mentioned goods are also covered, unless their prices are otherwise controlled. Goods intended for export are exempted.

The *Prices of Goods (Permitted Prices)* (No. 1) Order, 1940, also made on May 10, under the provisions of Section 5 of the Prices of Goods Act, specifies permitted wholesale and retail prices for a number of branded and price-maintained goods, in respect of which applications had been made by the Central Price Regulation Committee, at the instance of the manufacturers. This Order came into force on May 11, 1940, and the goods covered by it include underwear, men's shirts and pyjamas, half hose, rayon and cotton dress materials and knitting yarn, manufactured or in one instance marketed by certain named firms.

Any trader charging not more than the specified prices for these goods will be regarded as having complied with the provisions of the Act, and no complaint against him will be entertained. Applications for permitted prices for a considerable number of other goods are still under consideration.

The *Prices of Goods (Permitted Prices)* (No. 2) Order, 1940, made on June 4, also under the provisions of Section 5 of the Prices of Goods Act, specifies permitted retail buying prices and selling prices for a number of branded goods. The Order came into force on June 5 and the goods covered by it include certain brands of knitting yarn, hose, silk and other stockings, foundation garments and raincoats.

WARTIME REGULATION OF LABOUR SUPPLY IN GREAT BRITAIN

Action Taken Under Emergency Powers Defence Act—Composition of Labour Supply Organization

REFERENCE was made in the June issue of the LABOUR GAZETTE (page 528) to the adoption of a measure—the Emergency Powers (Defence) Act, 1940—by the British Parliament on May 22, which extended powers conferred by the Emergency Powers (Defence) Act of 1939 to include "power by Order in Council to make such Defence Regulations making provision for requiring persons to place themselves, their services, and their property at the disposal of His Majesty, as appear to him to be necessary or expedient for securing the public safety, the defence of the Realm, the maintenance of public order, or the efficient prosecution of any war in which His Majesty may be engaged, or for maintaining supplies or services essential to the life of the community."

Regulations made under the Acts on the same day vest in the Minister of Labour and National Service the control and use of all labour by giving him power to direct any person in the United Kingdom to perform such services as may be specified by directions issued by or on behalf of the Minister, to require persons of any class or description to register particulars about themselves, and to enter and inspect premises and require employers to keep and produce such books, accounts and records as may be necessary.

Labour Supply Organization

The British *Ministry of Labour Gazette* for June states that in order to give effect to the powers under the 1940 Act and to ensure the fullest use of the man-power and woman-power in the country, the Minister of Labour and National Service has established under his own Chairmanship a Labour Supply Board.

The following sections from the *Ministry of Labour Gazette* indicate the composition of the labour supply organization, the action taken in regard to certain key industries, and the provisions respecting transference of workers:

"The Minister intends that the new organization which is being created to carry out the additional duties and responsibilities imposed on him should work in the closest possible co-operation with the trade unions and employers' organizations, both nationally and locally.

"It is necessary that detailed questions of labour supply should be dealt with area by area, and the Minister of Labour and National Service has accordingly established a provincial organization for the purpose. The main machinery will be the Employment Exchange service directed by the Divisional Controllers, who will be the Minister's principal representatives in each area. These Controllers will in future be Chairmen of the Area Boards which were previously appointed by the Minister of Supply and have now been placed under the general control of the Minister of Labour and National Service.

"In each important area a Local Labour Supply Committee is being established by the Minister of Labour and National Service. This will work in close conjunction with the Employment Exchange and will consist of a Chief Labour Supply Officer, the Exchange Manager and two other Labour Supply Officers specially appointed for the purpose. These will be drawn from persons who have practical working knowledge of industry and industrial conditions. Local panels for particular industries will also be appointed for work in association with these Local Labour Supply Committees.

"The duty of inspecting firms with a view to ensuring that skilled labour is used to the best advantage and that all necessary training facilities are provided will be entrusted to officers to be known as 'Inspectors of Labour Supply,' who will work in close association with the Area Boards and the Labour Supply Committees.

"In carrying out his duties under the Emergency Powers (Defence) Act, 1940, the Minister will operate through Officers to be known as 'National Service Officers,' who will be empowered on the Minister's behalf to require persons where necessary to undertake work of national importance."

Undertakings (Restriction on Engagement) Order, 1940

"By virtue of the powers conferred upon him by Regulation 58A of the Defence (General) Regulations referred to above, the Minister of Labour and National Service has made the *Undertakings (Restriction on Engagement) Order*, 1940. This Order, which came into force on Monday, June 10, regulates the engagement of workers in engineering, building, and civil engineering and of male workers in agriculture and coal mining.

"Under the Order no employer in the building industry, the civil engineering contracting industry or the general engineering industry may engage a worker or seek to engage one, except by notifying particulars of the vacancy

to the Local Office of the Ministry and engaging for that vacancy a worker submitted to him by such a Local Office. Similarly, workers may obtain work in those industries only by applying at a Local Office of the Ministry. It follows that advertisements for workers and unregulated transfer from one employer to another in these industries will be illegal.

"The Order also provides that a man who is normally, or who has recently been, a coal mine worker or an agricultural worker may not be engaged by an employer in any other industry unless sent to it by an Employment Exchange.

"Employers are, however, permitted, without reference to a Local Office, to re-engage workers who were last employed by them at some date not more than fourteen days before the date of the re-engagement, or after a period of sickness or on resumption of work after cessation of employment due to a trade dispute.

"The industries are defined in the Order and the definition of general engineering is widely drawn. All workers in the industries are concerned except managers, salesmen, clerks (other than costing clerks, progress clerks, and draughtsmen) and domestic workers. All who are concerned are advised to make themselves acquainted with the Order and in any case of doubt to consult the Employment Exchange service.

"There are severe penalties for infringements of the Order, which is necessary in order to secure the best use of the country's labour supply for war purposes."

Payment of Lodging Allowances and Travelling Expenses

"Workers who, in future, are transferred by the Ministry of Labour and National Service to a new area to undertake work of national importance may, in certain circumstances, be entitled to receive lodging and travelling allowances.

"Lodging allowances will be paid by the Ministry to a married worker (or an unmarried worker with similar responsibilities) who continues to maintain a home in the town from which he has been transferred, provided that the employer to whom he is transferred does not pay lodging or similar allowances under customary practice or industrial agreement. The lodging allowance will be at the rate of 3s. 6d. a night (including Sunday) and will be payable only in those cases where the new place of work is beyond reasonable daily travelling distance from the worker's home.

"It will be a condition of payment of lodging allowances that the employer will be responsible for providing certain free fares and for payment of travelling time at the beginning and end of the job."

Licensing of Exports of Hides and Leather

The Wartime Prices and Trade Board announced on July 9 that exports from Canada of hides and skins (other than fur skins and leather will be subject to licence by the Board. This action, which brings all export shipments under the scrutiny of Mr. Maurice Samson, Hides and Leather Aministrator, is to ensure that adequate supplies of both raw materials and finished products will be available when required for military and civilian needs.

Roughly one-third of the hides tanned in Canada are imported, but this proportion varies greatly for different branches of the tanning industry. On the other hand, about one-third of the hides taken off in Canada are exported in normal times. The control now established over exports will mean that domestic requirements will first be met but that those hides which are not required by Canadian tanners will continue to find a market elsewhere.

Expenditures for Home Furnishings in United States

Among the moderate-income city families in the United States about one-twelfth of the total expenditure is absorbed by household expenses, other than rent, heat, and light. This approximation is made in a survey of expenditures for home furnishings which appears in the June issue of the *Monthly Labor Review*, published by the United States Department of Labor.

These expenditures are for furnishings and household equipment, cleaning supplies, laundry and domestic service, telephone, water rent, insurance on furniture, and other items connected with the running of the home. The average annual expenditure of all families for furnishings and equipment was $60 and for household operation, $58. Expenditures for furnishings and equipment were severely restricted at the lowest income level where they amounted to only 2 per cent of total expenditure but rose to about 4 per cent at about the $2,000 income level after which they tended to decline, while expenditures for household operation increased from about 3 per cent at the lowest income level to almost 4½ per cent at the highest. The increase in the amount paid for household operation was due principally to greater use of laundry service and paid help. The total amount spent for operating the family home, including fuel, light, and refrigeration, averaged for all the families covered in the Bureau of Labor Statistics survey $528 or about $44 per month, ranging from about $20 per month for families with incomes of $500 to $600 a year to over $50 for those with incomes over $2,000.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, MAY, 1940

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on June 1 was 12,091, the employees on their pay-rolls numbering 1,183,210 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May was 1,984 having an aggregate membership of 255,653 persons, 7.9 per cent of whom were without employment on June 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of June, 1940, as Reported by Employers

There was further important expansion in industrial activity at June 1, according to returns received by the Dominion Bureau of Statistics from 12,091 establishments whose staffs aggregated 1,183,210, compared with 1,118,232 at May 1. This increase of almost 65,000 employees, or 5.8 per cent, resulted in a generally higher level of employment than at June 1 in any other year for which statistics are available, with the exception of 1929.

Based on the 1926 average as 100, the latest index stood at 120.9, compared with 114.3 at the first of May, 1940, and 113.1 at June 1, 1939; the figure for June 1, 1929, had been 122.2. After correction for seasonal influences, the index rose from 118.7 in the preceding month to 120.9 at the date under review; this adjusted figure (which coincided with the crude index) was higher than in any other month since September, 1929.

While the increase at June 1, 1940, substantially exceeded the average indicated at that date in the years since 1920, it was rather smaller than the advance reported at the beginning of June in 1939. The unusually large gain then indicated had been partly due to an exceptionally late spring which had delayed the resumption of work in a number of industries at the normal season, with the result that the expansion at May 1, 1939, had been considerably below the average and that at June 1, considerably above normal. The latest increase was also smaller than that recorded at June 1, 1937, but the index was then lower by 5.8 per cent.

There was very general improvement in industrial employment at the beginning of June, increased activity, on the whole, being recorded by establishments in all provinces, in each of the eight cities for which statistics are segregated, and in most industries. The largest gains reported in the various industrial groups were those of 26,768 employees in construction and maintenance and 17,999 employees in manufacturing. Within the latter, there was widespread activity; the additions to the staffs were most pronounced in the food, lumber and iron and steel divisions, but the movement was also very decidedly upward in the pulp and paper, clay, glass and stone, electrical apparatus, non-ferrous metal and petroleum and other non-metallic mineral products divisions.

The increase in iron and steel (in which the co-operating establishments absorbed over 5,400 additional workers) raised the index for that group to a level which, in this record of some twenty years, was only exceeded by that reported in the first half of 1929. A slight slowing-up in textiles was due to seasonal influences; however, the decline was substantially below normal for June 1 in the experience of the period since 1920, and employment in those industries continued at an exceptionally high level. In addition, leather, rubber and tobacco factories were quieter.

The non-manufacturing groups also reported substantial gains; these were mainly of a seasonal character but in most cases they exceeded the increase indicated as normal at

June 1 in the period, 1921-1939. As already stated, construction provided work for a large number of additional employees, while logging, mining, transportation, communications, services and trade were also much more active.

A review of the situation in the various industries is given in greater detail following the analysis for the provinces and the leading cities.

Important improvement had been indicated at June 1, 1939. The 11,718 employers then making returns had employed 1,098,908 men and women, compared with 1,032,068 at May 1; the unusually large increase had partly resulted from the tardy resumption of spring-time activities following a prolonged winter, particularly affecting transportation, while the visit of the King and Queen had also then caused heightened employment in a number of industries.

The indexes for June 1 in recent years of the record, based on the 1926 average as 100, are as follows:— 1940, 120.9; 1939, 113.1; 1938, 111.9; 1937, 114.3; 1936, 102.0; 1935, 97.6; 1934, 96.6; 1933, 80.7; 1932, 89.1; 1931, 103; 1930, 116.5; 1929, 122.2; 1928, 113.8; and 1927, 107.2.

Employment in Financial Institutions

For some months, statistics of their employment have been collected from banks, trust companies and stock market operators. For June 1, 408 firms and branches in these lines of business reported staffs aggregating 33,614 persons, compared with 33,493 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, service and trade industries brings the total number of employees included in the June 1 survey of employment to 1,216,824 in 12,499 establishments, and slightly lowers the index of 120.9 in the industries above enumerated, to 120.6; the May 1 index of 114.3 was lowered by the inclusion of the data from financial institutions to 114.2, while that for June, 1939, stood at 112.9 when such returns were included, as compared with

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

113.1 for the industries enumerated in the third sentence of this paragraph.

Employment by Economic Areas

The trend was upward in each of the provinces, with firms in Quebec and Ontario showing the greatest expansion; the workers added to the staffs of the co-operating establishments numbered 25,926 in the former and 22,385 in the latter, while the percentage gains over the preceding month ranged from 3·4 in New Brunswick to 9·3 in Saskatchewan. Employment generally was at a very high level as compared with earlier years. The indexes in Quebec and Ontario were at the peak for June 1 in the twenty years during which the monthly surveys have been made; that in the Prairie Provinces was the highest since 1930, while employment in the Maritime Provinces and British Columbia was brisker than at the first of June in other years since 1930 execpt 1937.

Maritime Provinces.—Considerable increases were reported in Prince Edward Island, Nova Scotia and New Brunswick, according to statistics received from 851 employers in the Maritime Provinces with a combined working force of 86,809 persons, as compared with 83,701 at May 1. This gain was rather smaller than the average indicated at June 1 in the years since 1920, and was substantially less than that which took place at June 1, 1939; the index of employment then, however, was much lower than that of 117·0 at the latest date. Manufacturing reported decided expansion, particularly in the iron and steel, lumber, pulp and paper and animal food divisions, logging, mining, trade and construction also afforded more employment, the advance in the last-named being greatest. On the other hand, transportation was seasonally slacker.

The 833 firms reporting for June 1, 1939, had employed 79,998 workers, or 6,061 more than at the beginning of May of last year.

Quebec.—Improvement was indicated in most industrial groups in Quebec; construction recorded especially pronounced increases in personnel, but there were also important additions to staffs in logging, manufacturing and transportation, with smaller advances in mining, communications, services and trade. Within the manufacturing division, pulp and paper, iron and steel, lumber, food and clay, glass and stone plants reported the greatest expansion, but the trend was also upward in the tobacco, chemical, electrical apparatus, non-ferrous metal, non-metallic mineral and other industries. On the other hand, curtailment was shown in the leather and rubber groups. Statements were tabulated from 3,015 firms employing 351,911 workers at June 1, 1940, or 25,926 more than in their last monthly report. The general gain indicated by the employers making returns greatly exceeded the average at June 1 in the years 1921-1939, but was rather smaller than that noted at the same date of last year, when the co-operating establishments, numbering

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

——	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

[1]The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

2,897, had reported 344,477 employees, as compared with 317,521 in the preceding month.

Ontario.—There was considerable expansion in operations in manufacturing, logging, transportation and construction and maintenance at June 1, 1940, together with smaller increases in employment in mining, services, communications and trade. Within the manufacturing division, the lumber, iron and steel and food divisions showed the largest additions to the forces, but there was also improvement in the pulp and paper, clay, glass and stone, electrical appliance, non-ferrous metal, non-metallic mineral product and other groups; on the other hand, textile, leather and tobacco works were slacker; the comparatively small loss in textiles follows a succession of important gains, and leaves employment in that group at an unusually high level for the season. The staffs of the 5,250 co-operating establishments in Ontario aggregated 505,126 at the latest date; as compared with 482,737 at May 1,

this was an increase of 22,389 employees, an advance that was much greater than average in the experience of past years. The general index of employment, at 126·6 at June 1, 1940, was higher than at that date in any preceding year of the record. A combined staff of 450,932 had been reported by the 5,115 concerns furnishing data for the same date last spring.

Prairie Provinces.—Construction (especially highway and railroad construction and maintenance), transportation, communications, manufacturing, services and trade showed important improvement in the Prairie Provinces, while there was little general change in mining, and logging was seasonally slacker. In the group of factory employment, there was an upward movement in food, lumber and clay, glass and stone. The expansion resulted in a generally higher level of activity than at June 1 in any other year since 1930. The 1,716 firms whose statistics were tabulated reported 140,331 employees, as against 130,901 in the preceding month; the situation greatly improved at June 1 in each of the provinces in the Prairie Area. Smaller increases on the whole had been indicated at June 1, 1939, when the 1,672 establishments making returns had employed 130,576 workers, compared with 122,152 at May 1; employment was then at a lower level.

British Columbia.—An aggregate working force of 99,033 was reported by the 1,260 co-operating employers, who had 94,908 persons on their payrolls at the beginning of May. This increase greatly exceeded the average gain at June 1 in the years since 1920, and was also larger than that noted at the same date in 1939; however, it was not equal to the expansion shown at the beginning of June in 1937 and a few earlier years of the record. The latest index of employment was higher than at the first of June in 1939 or 1938, and was practically the same as at that date in 1937. Manufacturing recorded marked improvement, that in lumber, food and iron and steel factories being most pronounced. Among the non-manufacturing groups, logging, mining, communications, construction and maintenance and trade showed heightened activity. For June 1, 1939, statements had been received from 1,201 employers of 92,925 persons.

Table 1 gives monthly index numbers for the five economic areas since 1936, together with figures for June 1 in the years 1927-1936.

Employment by Cities

The trend was favourable in each of the eight cities for which separate compilations are made, Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor and Winnipeg and Vancouver showing improvement. The largest additions to the staffs were reported in Montreal and Toronto, while the most pronounced percentage gains were in Quebec City and Ottawa, being 8·6 per cent and 6·2 per cent respectively. The index numbers of employment in those two cities were higher than in any other June since that of 1931; in Montreal and Winnipeg, the favourable comparison goes back to 1930, in Toronto, Hamilton and Windsor to 1929, while the index in Vancouver was at its maximum for the beginning of June in the years for which statistics are available.

Montreal.—Further marked improvement was recorded in Montreal, where the 1,779 co-operating firms employed 176,777 persons, or 3,529 more than at May 1. Manufacturing showed a large increase, most of which took place in the iron and steel, while there were also gains in textile, food, tobacco, clay, glass and stone and electrical apparatus factories; on the other hand, the leather division was quieter. Among the non-manufacturing divisions, transportation, building, services and trade afforded more employment. The index, at 113·5, was nearly five points higher than in June, 1939, although a greater advance had then been recorded in the 1,685 establishments from which information was received, whose employees had numbered 168,215.

Quebec.—There was an exceptionally large gain in industrial activity in Quebec City, manufacturing, transportation and construction reporting greatly heightened activity. Statements were tabulated from 214 employers having 17,427 workers, as against 16,044 in the preceding month. Expansion on a smaller scale had been indicated at the beginning of June of a year ago, when the index was slightly lower.

Toronto.—Returns were furnished by 1,800 business houses in Toronto with 154,752 employees, compared with 152,208 at May 1. Manufacturing as a whole was decidedly brisker, there being gains in many of its branches, notably in iron and steel, electrical apparatus and clay, glass and stone products. Transportation, construction and trade also afforded more employment. The general index in Toronto was nearly eleven points higher than at June 1, 1939, when statistics from 1,740 establishments indicated a combined staff of 140,075, or 1,953 more than at the beginning of May of last year.

Ottawa.—Heightened activity was noted in manufacturing, especially in the lumber and iron and steel divisions; construction and trade also showed improvement. A total working force of 15,993 men and women was recorded at June 1, 1940, by the 237 co-operat-

ing firms, who had 15,062 on their payrolls in the preceding month. At the same date of last year, 228 establishments had reported 15,048 workers, a gain of 466 from their May 1, 1939, forces, while the index was then 8·1 points lower than that of 117·9 at June 1, 1940.

Hamilton.—There was a further increase in Hamilton, where data were furnished by 333 employers who had 39,902 persons on their paylists, or 719 more than at the beginning of May. This advance was of almost the same size as that indicated at June 1, 1939, when employment was, however, at a much lower level. Improvement was noted at the date under review in manufacturing, mainly in iron and steel products, while transportation and construction reported smaller gains. The 328 concerns reporting for June 1, 1939, had employed 34,049 workers; the index then stood at 104·6, compared with 122·3 at June 1, 1940.

Windsor.—Employment in Windsor showed an advance at June 1, for which statistics were received from 194 firms with 22,122 employees, an increase of 658 since the beginning of May. There was a gain in the food and the iron and steel industries; construction and trade also reported moderate improvement, while other groups showed little general change. At the corresponding date of last summer, a decline had been indicated by the 198 co-operating establishments, whose staffs aggregated 18,864; employment then was not so active as at the latest date, when the index stood at 160·0, the highest June 1 figure in the record except that of 1929.

Winnipeg.—A personnel of 43,516 men and women was reported by the 537 Winnipeg employers whose statistics were compiled, and who had 42,339 employees at May 1. Most of the gain took place in manufacturing and trade, but communications, transportation and construction also afforded more employment. The general increase was rather larger than that noted at the beginning of June of last year, when 521 returns had been tabulated, showing a combined working force of 40,116 persons, as against 39,064 in the preceding month. The index then stood at 92·4, compared with 99·4 at June 1, 1940.

Vancouver.—Manufacturing was decidedly more active, especially in the production of food, lumber and iron and steel goods; communications, construction, services and trade also recorded moderate gains in Vancouver, while shipping was quieter. Statements were tabulated from 550 firms with 40,184 workers, as compared with 39,227 at May 1, 1940. A small decrease had taken place at June 1 of a year ago, according to statistics from 521 establishments with 36,547 persons on their staffs. Employment then was generally quieter, the index being 8·7 points lower than that of 118·6 indicated at the beginning of June of this year.

Employment by Industries

Manufacturing.—Employment in manufacturing showed further, general improvement at the beginning of June, when the number of workers reported in such industries was substantially greater than in any other month for which statistics are available. Data were received from 6,662 establishments which had enlarged their staffs from 646,080 at May 1, to 664,079 at June 1, 1940; this gain of 17,999, or 2·8 per cent, raised the index from 125·7 at the former date to an all-time peak of 129·2 at the latter. The maximum figures in the pre-war period were those of 121·7 at Oct. 1, 1937, and 121·6 at Aug. 1, 1929.

The movement in manufacturing at June 1 in the last twenty years has almost invariably been upward; while the latest increase substantially exceeded the average, it was rather smaller than that reported at June 1, 1939, and was also smaller than the expansion indicated at the same date in 1937. However, employment was then at a much lower level than at June 1, 1940. After correction for seasonal influences, the index advanced from 124·8 at May 1, 1940, to 126·7 at the date under review; the latter was the highest seasonally-adjusted figure on record.

The gains at June 1 were widely distributed, there being advances in all provinces, and in most of the industries in the manufacturing classification. The general exceptions were leather, textiles, rubber and tobacco and in some cases, the downward trends were seasonal. The most marked expansion was in lumber, food, pulp and paper, clay, glass and stone and iron and steel, but considerably heightened activity was also indicated in fur, electrical apparatus, non-ferrous metal and non-metallic mineral products. The contra-seasonal advance in iron and steel provided work for over 5,400 men and women, and resulted in the highest level of activity in that industry in any month since the summer of 1929.

The unadjusted indexes at June 1 in recent years (based on the 1926 average as 100) are as follows: 1940, 129·2; 1939, 111·4; 1938, 112·3; 1937, 117·9; 1936, 103·4; 1935, 98·4; 1934, 93·2; 1933, 80·0; 1932, 86·0; 1931, 99·4; 1930, 113·6; 1929, 121·2; 1928, 112·6 and 1927, 106·9.

A brief review of the situation at June 1, 1939, shows that the 6,386 manufacturers then

co-operating had reported 569,881 employees, as compared with 554,072 in the preceding month. The food, lumber, pulp and paper, clay, glass and stone and other industries had shown improvement over May 1 of last year.

Animal Products, Edible.—There were further pronounced increases in employment in this group; the improvement extended generally to the dairying, meat and fish preserving divisions, and to all provinces. Statistics were tabulated from 338 firms having 29,018 workers, as compared with 26,933 in the preceding month. While this advance was not quite so marked as that reported at June 1, 1939, the index then was nine points lower.

Fur and Fur Products.—There was an upward trend in fur factories, 81 of which enlarged their payrolls from 2,799 persons at the beginning of May to 2,914 at June 1. A larger gain had been made at the same date last summer, but activity was then at a lower level.

Leather and Products.—Employment in this group was further curtailed, the seasonal loss greatly exceeding that indicated in June of last year; the index then, however, stood at 110·1, compared with 116·8 at the date under review. The working forces of the 341 co-operating employers comprised 23,906 men and women, as against 25,075 in the preceding month. The declines were mainly in Quebec and Ontario.

Lumber and Products.—Continued, seasonal improvement on a large scale took place in lumber mills, and there were also gains in furniture, container and other wood-using plants. Returns were compiled from 977 plants in the lumber group having 52,488 workers, compared with 46,116 at the beginning of May. All five economic areas shared in the favourable movement at June 1, that in Quebec, Ontario and British Columbia being especially pronounced. On the whole, smaller additions to staffs had been made at the same date last year, and the index then was over nine points lower.

Plant Products, Edible.—Expansion was noted in this group at the beginning of June, when 1,737 persons were added to the forces of the 540 co-operating manufacturers, who had 37,196 employees. Fruit and vegetable canning, bakery and other vegetable food establishments reported marked improvement. The general increase registered at June 1, 1939, did not provide work for so many persons, and the employment index was then decidedly lower than that of 121·1 at the date under review.

Pulp and Paper Products.—Pulp and paper mills showed important increases in personnel, and paper product factories were also busier. The index number in the pulp and paper group as a whole stood at 117·6, compared with 108·2 at the beginning of June of last year, when the gains recorded were much smaller. An aggregate payroll of 73,009 workers was reported by the 721 firms whose statistics were compiled, who had employed 70,091 at May 1, 1940.

Rubber Products.—Fifty-four rubber factories recorded a combined working force of 13,429 persons, or 113 fewer than in their last return. Employment was in much the same volume as at the beginning of June a year ago, when an advance over the preceding month had been indicated.

Textile Products.—There was a moderate, seasonal decline in textiles at the date under review; this took place chiefly in knitting, headwear and cotton factories. On the other hand, garment manufacturing was busier. Data were received from 1,241 firms employing 125,790 men and women, as against 126,033 in the preceding month. A greater decrease had been reported at June 1, 1939, and employment was then at a decidedly lower level than at the date under review, when it was at its maximum for June 1 in the years of the record.

Beverages.—Activity in this group slightly advanced, according to 147 employers whose staffs were enlarged from 9,451 in the preceding month to 9,523 at the beginning of June in the present year. Improvement had also been noted at the same date of last year, when the index was much the same as at June 1, 1940.

Tobacco.—There was a large decrease in employment in tobacco; 48 establishments reported 8,276 workers at June 1, compared with 11,094 in their last report. Activity in this industry was at a higher level than at June 1 of last summer, although the tendency had then been favourable.

Chemical and Allied Products.—Statistics were tabulated from 322 chemical factories, which provided work for 22,818 employees, as against 22,737 at the first of May. There were considerable gains in Quebec, while the tendency was downward in the Maritime Provinces. Employment in these industries was in greater volume than in any other month for which statistics are available.

Clay, Glass and Stone Products.—Further marked improvement was noted in building material plants, 222 of which employed an aggregate working force of 11,988 persons, or 1,183 more than at May 1. The index stood

at 106·0; this was the highest figure recorded since the summer of 1931. Quebec and Ontario reported the bulk of the gain in this group, to which factories turning out clay, glass and stone products contributed.

Electric Light and Power.—A considerable advance as compared with May 1 was shown in electric light and power plants, in which employment was brisker than at the same date a year ago. The 102 co-operating companies enlarged their staffs by 450 workers to 17,444 at the beginning of June, 1940.

Electrical Apparatus.—Further expansion was shown in electrical appliance factories, 128 of which reported a combined payroll of 20,104 at the date under review, or 478 more than in the preceding month. A similar gain had been recorded at June 1, 1939. Employment at the latest date was more active than in any month since the end of 1937.

Iron and Steel Products.—There was an important contra-seasonal increase in iron and steel at June 1, 1940; the largest additions to staffs were in the crude, rolled and forged, boiler, engine and tank, vehicle (land, water and air), and structural iron and steel divisions. Returns were tabulated from 946 manufacturers employing 166,011 persons, compared with 160,587 at May 1. Considerable improvement was noted in the Maritime Provinces, Quebec, Ontario and British Columbia, while the change in the Prairie Provinces was slight. A smaller advance had been made at June 1, 1939, and the index was then many points lower than at June 1, 1940, when it was higher than in any other month since the summer of 1929.

Non-ferrous Metal Products.—These industries reported heightened employment, according to 199 firms employing 28,423 men and women, compared with 27,701 in the preceding month. The increase took place mainly in Quebec and Ontario, although the tendency was generally favourable. Improvement on a smaller scale had been recorded at the beginning of June a year ago, when employment was at a much lower level.

Mineral Products.—Continued, seasonal expansion was noted generally in the manufacture of oil, coke and other mineral products; this was on a scale similar to that which was reported at June 1, 1939, and employment was then in decidedly smaller volume. An aggregate payroll of 13,704 persons was employed at June 1, 1940, by the 100 co-operating employers, who had 13,142 workers at May 1.

Miscellaneous Manufacturing Industries.—Production in the manufacturing establishments listed under this heading showed an increase, 125 employees having been added to the forces of the 120 firms whose returns were tabulated, and who employed 6,266 at the beginning of June.

Logging

Employment in logging camps substantially increased at the beginning of June, partly as a result of river-driving operations and partly reflecting greater activity in pulpwood cutting; there was marked expansion in New Brunswick, Quebec, Ontario and British Columbia, while curtailment was indicated in the Prairies. Returns were received from 399 firms employing 31,031 workers, or 13,192 more than in the preceding month. This gain was exceptionelly large for the time of year. Pronounced improvement had also been indicated at the same date in 1939, but the index, at 97·1, was then lower than at the beginning of June in the present summer, when it stood at 105·2.

Mining

Coal-Mining.—Employment in the eastern and British Columbian coal-fields showed some improvement, but there was seasonal curtailment in Alberta. Statements were compiled from a total of 107 operators with 23,732 employees, or 61 more than at the beginning of May. The index was four points higher than at June 1, 1939, when a small gain had also been recorded.

Metallic Ores.—Further expansion was shown in metallic ore mines, mainly in Quebec and British Columbia; 210 employers enlarged their staffs from 43,981 workers at May 1, to 44,212 at the date under review. A much greater increase had taken place at the beginning of June of last year, but the index then was lower than at June 1, 1940.

Non-metallic Minerals (other than coal).—According to data received from 101 firms in this group, they employed 9,765 persons, or 730 more than in the preceding month. Employment was brisker than at the same date of last summer, although larger additions to the personnel had then been reported by the co-operating firms.

Transportation

Street Railways and Cartage.—An increase was registered in local transportation at June 1, 1940, when 312 companies added 1,161 employees to their payrolls, bringing them to 30,839. Employment had shown expansion on a smaller scale at the beginning of June, 1939, and the index was then lower than at the date under review.

Steam Railways.—Improvement was indicated in steam railway operation, in which the 101 co-operating companies and branches

enlarged their personnel from 61,557 in the preceding month to 61,839 at June 1. The Maritime Provinces reported a seasonal contraction, while there were increases in Ontario and the Western Provinces. Activity generally was at a higher level than at June 1 of last year, although much more extensive gains had then been shown in the statistics tabulated.

Shipping and Stevedoring.—There were pronounced seasonal losses in employment in the Maritime Provinces, and the trend was also downward in British Columbia; however, the declines there were more than offset by the additions to staffs elsewhere indicated. Information was received from 123 firms with 16,905 employees, as compared with 16,532 in the preceding month. Following a delay in the opening of navigation as a result of prolonged winter conditions last year, there had been an increase on a very large scale at June 1, 1939; the index then stood at 91·9, compared with 91·1 at the date under review.

Communications

Improvement was indicated on telegraphs and telephones. The 86 companies and branches reporting had 23,260 men and women on their paylists at the beginning of June, or 881 more than at May 1. Employment was at a rather higher level than at the same date a year ago, when a smaller gain had been indicated.

Construction and Maintenance

Building.—An aggregate staff of 29,284 was reported by the 861 contractors furnishing statistics, who had had 23,108 workers at May 1. Activity generally advanced, but the largest increases were in Quebec and Ontario. The expansion, which was seasonal, was on a greater scale than that noted in other Junes of the record; employment in building operations was more active than in that month in any other year since 1931.

Highway.—The 391 highway and road contractors furnishing returns had 48,369 persons in their employ, or 13,209 more than at the beginning of May. Most provinces shared in the seasonally upward movement, Quebec reporting the greatest gains. The number engaged in road work was much smaller than at the beginning of June, 1939, when more pronounced improvement had been indicated.

Railway.—Important advances were again registered by the track departments of the railways; the working forces of the 29 co-operating employers included 31,924 workers, as against 24,541 in the preceding month. This increase exceeded that noted at June 1 of last year, and the index of employment was then nearly seven points lower. The most noteworthy gains at the date under review were in Ontario and the Prairie Provinces, but all five economic areas reported heightened activity.

Services

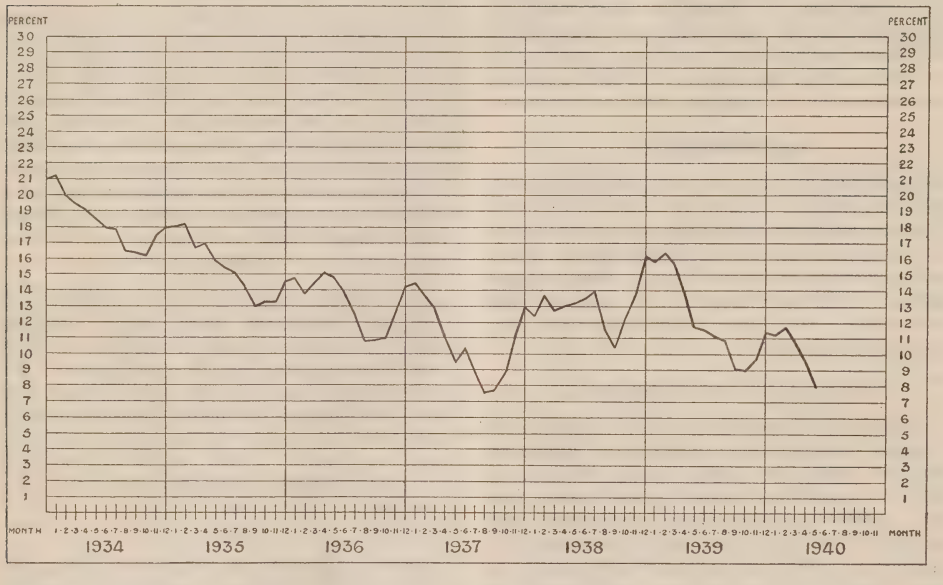
Hotels and restaurants showed a seasonal increase, and laundries and dry-cleaning establishments also recorded improvement. Statements were compiled from 600 firms employing 31,515 men and women, as compared with 30,560 at May 1. The index, at 142·5, was slightly higher than at the same date in 1939, when much larger advances had been made to a considerable extent as a result of the Royal Visit.

Trade

An upward movement was indicated in retail and wholesale trade; 2,109 establishments employed 136,456 persons, or 2,345 more than in their last return. Most of the improvement was in retail trade, while that in the wholesale division was also pronounced. Rather smaller gains, on the whole, had been noted at June 1, 1939, when employment in the distributive industries was not quite so active.

Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada at the date under review.



(2) Unemployment in Trade Unions at the Close of May, 1940

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The outstanding feature in the trade union situation at the close of May was that the percentage of 7·9 in unemployment recorded was smaller than that indicated in the corresponding month in any previous year since

1929 and also below that registered in any month since September, 1937. At the end of April this year 9·6 per cent of the members reported were without work, while in May, 1939, unemployment stood at 11·7 per cent. Reporting for the month under review were 1,984 labour organizations, with 255,653 members, 20,241 of whom or 7·9 per cent were idle on the last day of the month. A general upward employment tendency was noted in a large number of trades and industries, partly due to seasonal influences, and in substantial measure to activities consequent upon the struggle in which we are now engaged. Quebec, Ontario and Saskatchewan unions reflected moderate advancement in work afforded from

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

April, and in Nova Scotia and Alberta fractional gains occurred. Activity for Manitoba and British Columbia members eased off very slightly. In New Brunswick the percentage of unemployment remained identical with that of April. The trend of employment in every province was more favourable during May than in the corresponding month of 1939, New Brunswick unions particularly showing large gains while in Ontario also, the expansion evident was quite noteworthy. Improvement on a more moderate scale was apparent among Quebec, Nova Scotia, Saskatchewan and Alberta members, and in Manitoba and British Columbia activity increased by less than one per cent.

Statistics of unemployment affecting trade union members in the largest city in each province with the exception of Prince Edward Island are tabulated separately each month. Of these, Montreal unions during May registered a gain in available work of over 3 per cent from April, and in Toronto advances of 2 per cent were shown. Employment for Halifax members, on the contrary, was retarded by over 4 per cent, while declines on a smaller scale occurred among Winnipeg and Vancouver unions. In Saint John, Edmonton and Regina the tendency was toward reduced activity, though the variations from April were but fractional. Contrasted with the returns for May a year ago Toronto, Halifax, Saint John and Montreal unions all reflected a considerably better level of employment during the period under survey, and lesser increases were apparent among Edmonton, Regina and Vancouver members. In Winnipeg the variation from May last year was so slight as to be almost negligible.

The chart which appears with this article illustrates the trend of unemployment by months from January, 1934, to date. The curve during May showed a moderate decline in level from both the previous month and May a year ago, the divergence being greater in the latter comparison and indicative in both instances of a more marked employment prevalence during the month under survey.

A fractional rise in employment was evident in the manufacturing industries as a whole during May from the preceding month, but the advancement registered over May last

year was of rather noteworthy degree. Reports for May were tabulated from 602 organizations of workers engaged in the manufacturing industries, embracing a total of 103,934 members, 7,079 or 6·8 per cent of whom were idle on the last day of the month, contrasted with percentages of 7·3 in April and 11·6 in May last year. Fur workers and metal polishers were decidedly busier during May than in the previous month, but as their membership was small they did not materially affect the situation in the manufacturing industries as a whole. Heightened activity in substantial measure was reported by general labourers and rubbers workers, and a favourable employment movement was indicated by jewellery, glass, iron and steel, wood, brewery, and textile and carpet workers, bakers and confectioners, printing tradesmen, electric current employees and paper makers, though the changes from April were quite slight. Hat, cap and glove workers, on the other hand, showed noteworthy recessions in work afforded, and moderate declines were apparent among leather and garment workers. Activity for meat cutters and butchers subsided slightly. In comparing with the returns for May, 1939, the iron and steel trades showed the greatest improvement considering the number of members involved, though viewed from a percentage basis the gains recorded by textile and carpet and leather workers and metal polishers were more pronounced. Increased activity, on a pronounced scale, was also evident among meat cutters and butchers, papermakers, jewellery, and hat, cap and glove workers. Employment expansion of more moderate degree was reflected by wood and fur workers, general labourers, and bakers and confectioners. The situation also tended favourably for brewery workers and printing tradesmen. Rubber workers, on the contrary, were much quieter than in May last year, and among garment and glass workers noteworthy recessions in activity occurred. Nominal contractions only were recorded by electric current employees.

Little variation was apparent in conditions for coal miners during May from the previous month, though the tendency was favourable according to the returns compiled from 57 local unions covering a membership of 21,178 persons. Of these, 2,373 were out of work on the last day of the month, a percentage of 11·2 in contrast with 11·4 per cent of inactivity in April. Moderate gains in work afforded, however, were manifest from May last year when 15·1 per cent of idleness was reported. Nova Scotia and British Columbia unions during May were somewhat more active than in April but this improvement was largely offset by the moderate drop in employment evident from Alberta and the slight recessions in activity noted in New Brunswick. Nova Scotia, Alberta and British Columbia miners all shared in the better employment movement shown from May last year, the improvement recorded by Nova Scotia members being the most noteworthy. In New Brunswick, however, the tendency was in a slightly unfavourable direction. In addition to the members reported as wholly unemployed a number were shown as working at reduced time.

The building and construction trades during May indicated a sharp upward turn in employment from both the preceding month and May a year ago as manifest by the reports furnished by 225 associations including a membership of 24,914 persons. Of these 4,959 or 19·9 per cent were without employment at the end of the month in contrast with percentages of 30·2 in April and 30·4 in May, 1939. Carpenters and joiners especially were decidedly better engaged during May than in the preceding month and important gains were apparent among tile layers, lathers and roofers, painters, decorators and paperhangers, plumbers and steamfitters, bricklayers, masons and plasterers, and steam shovelmen. Bridge and structural iron workers showed but a slightly better employment tendency. Activity for granite and

stonecutters, on the other hand, was somewhat curtailed and declines on a small scale were recorded by electrical workers, and hod carriers and building labourers. As in the previous comparison employment for carpenters and joiners was at a much higher level during May than in the corresponding month of last year. Pronounced improvement was also manifest by hod carriers and building labourers, bridge and structural iron workers, tile layers, lathers and roofers, and steam shovelmen. Gains in activity of much lesser degree were recorded by painters, decorators and paperhangers, and slight advancement was evident among plumbers and steamfitters. The situation for electrical workers remained approximately unchanged from May, 1939. Granite and stonecutters, however, suffered heavy losses in activity during the month reviewed and noteworthy recessions were evident among bricklayers, masons and plasterers.

The transportation industries with 830 organizations reporting at the close of May a total of 70,508 members indicated that 3,324 or 4·7 per cent were without employment, contrasted with percentages of 6·5 in April and 6·6 in May last year. Steam railway employees, whose returns constituted nearly 81 per cent of the entire group membership reported, navigation workers and teamsters and chauffeurs were all afforded a better volume of employment, both when compared with the April returns and those of May a year ago. An unchanged situation from April was reflected by street and electric railway employees, but the tendency from May last year was toward increased activity.

Retail shop clerks, with 5 associations at the close of May reporting an aggregate of 1,878 members indicated that all were busily employed compared with 0·1 per cent of inactivity in April and with a percentage of 0·2 in May last year.

The 82 unions of civic employees making returns for May with a membership numbering 9,601 persons showed that 156, or 1·6 per cent, were unemployed on the last day of the month in contrast with percentages of 2·0 in April and 1·1 in May, 1939.

A nominally upward employment movement was evident in the miscellaneous group of trades during May from the preceding month, unemployment standing at 3·9 per cent as compared with a percentage of 4·7 in April. Gains on a somewhat larger scale were manifest from May last year when 6·7 per cent of the members reported were out of work. The percentage for the month under review was based on the returns tabulated from 143 labour organizations, including 10,587 members, 409 of whom were idle on the last day of the month. Theatre and stage employees reflected moderate increases in activity from April, and the situation was slightly improved for hotel and restaurant employees, barbers, stationary engineers and firemen, and unclassified workers. In contrasting with the returns for May, 1939, theatre and stage employees, and unclassified workers showed noteworthy increases in work available during the month under review, and advances of lesser degree were apparent among barbers and stationary engineers and firemen. Hotel and restaurant employees alone indicated a slight tendency toward retarded activity.

Fishermen with 5 local unions at the close of May reporting a membership total of 2,710 persons, showed that 529 or a percentage of 19·5 were idle, compared with 18·2 per cent of inactivity in April. Heavy increases in unemployment, however, were recorded from May last year when 4·0 per cent of the members reported were out of work.

The 6 unions of lumber workers and loggers from which reports were received at the end of May, with 2,525 members, showed that 369 or a percentage of 14·6 were unemployed as contrasted with percentages of 11·8 in April and 9·0 in May last year.

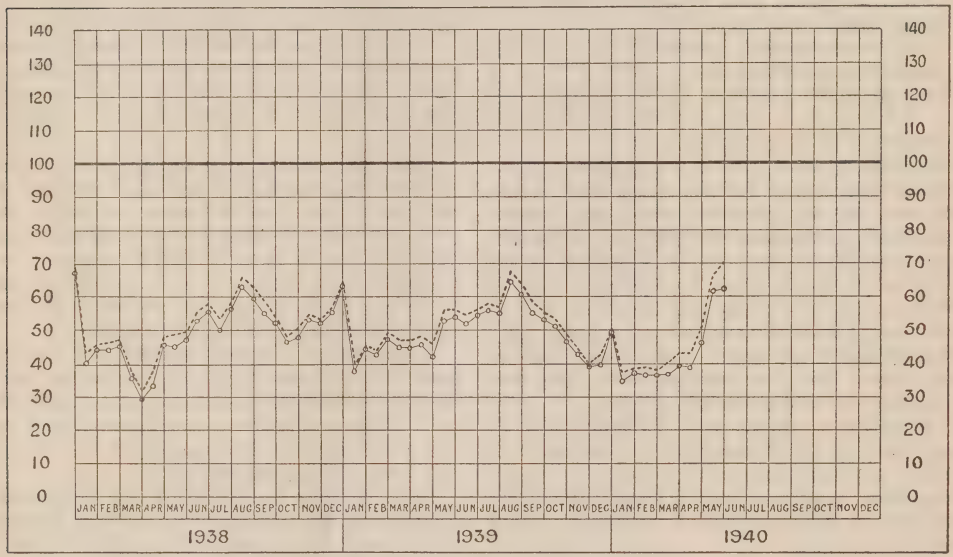
Table I shows by provinces the percentage of members who were on an average unemployed, each year, from 1929 to 1939 inclusive, and also the percentages of unemployment for May of each year from 1929 to 1938 inclusive, and for each month from May, 1939, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for May, 1940

The volume of business transacted by the offices of the Employment Service of Canada during May, 1940, as indicated by the average daily placements effected, showed gains of 37 per cent and 24 per cent, respectively, over that of the previous month and also that of the corresponding period of a year ago. Substantial gains under the first comparison in construction and maintenance, logging and services, followed by others of smaller proportions in manufacturing, transportation, trade and mining, accounted for the marked improvement shown in this instance, while under the second comparison the largest increases in placements were registered in construction and maintenance, manufacturing, services and logging, with moderate gains also being reported in transportation, farming and trade. The only industrial divisions to show declines were farming, in which a moderate loss was

recorded from April, 1940, and mining, which reported a very minor decrease from May a year ago.

The accompanying chart shows the trend of employment from January, 1938, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada computations being made semi-monthly. It will be seen from the graph that the trend of the curves of both vacancies and placements in relation to applications was decidedly upward during the first half of the month and although that of vacancies continued that marked upward course during the entire period under review, that of placements remained practically stationary during the latter half of the month. At the close of May both levels were considerably higher than those attained at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 65·8 and 70·3 during the first and the second half of May, 1940, respectively, in contrast with the ratio of 56·1 throughout the same periods of 1939. The ratios of placements to each 100 applications during the month under review were 61·4 and 61·9, as compared with 52·6 and 53·9 during May last year.



The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during May, 1940, was 1,780, as compared with 1,304 in the previous month and with 1,367 in May, 1939.

The average number of applications for employment received daily by the offices during the month under review was 2,608, in comparison with 2,759 in April, 1940, and with 2,436 in May last year.

The average number of placements made daily by the offices of the Service during May, 1940, was 1,608, of which 1,018 were in regular employment and 590 in work of one week's duration or less, as compared with the total daily average of 1,173 in the previous month. Placements during May last year averaged 1,296 daily, consisting of 734 in regular and 562 in casual employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

During the month of May, 1940, the offices of the Service referred 43,020 persons to vacancies and effected a total of 41,800 placements. Of these, the placements in regular employment were 26,458, of which 21,171 were of men and 5,287 of women, while placements in casual work numbered 15,342. The number of vacancies reported by employers was 30,901 for men and 15,373 for women, a total of 46,274, while applications for work numbered 67,801, of which 48,917 were from men and 18,884 from women workers. Reports for April, 1940, showed 33,892 positions available, 71,729 applications made and 30,497 placements effected, while in May, 1939, there were recorded 35,539 vacancies, 63,320 applications

for work and 33,694 placements in regular and casual employment.

The following table gives the placements effected by the officers of the Employment Service of Canada, each year, from January, 1930, to date:

Year	Placements		
	Regular	Casual	Totals
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802

Nova Scotia

During the month of May, positions offered through Employment Offices in Nova Scotia were 34 per cent more than in the preceding month and over 75 per cent above the corresponding month of last year. There was an increase also in placements of over 40 per cent when compared with April and of nearly 74 per cent in comparison with May, 1939. The large increase in placements over May of last year was due to substantial gains in construction and maintenance and services, as, although there was a moderate decline in logging, all other industrial groups showed minor changes only. Industrial divisions in which most of the placements were effected during the month were manufacturing 40; logging 73; farming 39; construction and maintenance 1,068; trade 48 and services 1,246, of which 836 were of household workers. There were 1,007 men and 171 women placed in regular employment.

New Brunswick

Orders received at Employment Offices in New Brunswick during May, called for nearly 13 per cent more workers than in the preceding month and over 23 per cent more than during the corresponding month of last year. Increases were also reported in placements of over 13 per cent when compared with April and of over 22 per cent in comparison with May, 1939. Except for a nominal decline in mining, all industrial groups showed gains in placements over May of last year, the most important being in services and construction and maintenance. Placements under construction and maintenance numbered 504 and in services 979, of the latter, 715 were of household workers. There were 167 men and 139 women placed in regular employment during the month.

Quebec

There was an increase of nearly 22 per cent in the number of positions offered through Employment Offices in the Province of Quebec during May, when compared with the preceding month and a gain of over 30 per cent in comparison with the corresponding month of last year. Placements were nearly 26 per cent higher than in April and over 17 per cent above May, 1939. With the exception of a fairly substantial loss under construction and maintenance, increased placements were reported in all industrial divisions over May of last year, the most important gains being in logging, manufacturing, services and transportation. Placements by industrial divisions were manufacturing 569; logging 1,609; farming 169; transportation 254; construction and maintenance 1,946; trade 179 and services 4,091, of which 3,577 were of household workers. During the month 4,583 men and 1,812 women were placed in regular employment.

Ontario

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during May, were nearly 67 per cent better than in the preceding month and nearly 47 per cent above the corresponding month of last year. There was an increase also in placements of nearly 61 per cent when compared with April and of nearly 40 per cent in comparison with May, 1939. Farm placements were fewer than during May of last year and there was a nominal decline in mining, but gains were reported in all other groups. The increase under construction and maintenance was quite large, and there were fairly substantial advances in manufacturing, logging and services. Placements by industrial divisions included manufacturing 1,588; logging 2,256; farming 1,081; transportation 255; construction and maintenance 7,264; trade 426 and services 5,871, of which 3,248 were of household workers. Placements in regular employment numbered 10,694 of men and 1,625 of women.

Manitoba

Employment opportunities, as indicated by orders received at Employment Offices in Manitoba during May, were over 19 per cent better than in the preceding month, but over 10 per cent less favourable than during the corresponding month of last year. There was an increase of over 24 per cent in placements when compared with April, but a decline of 8 per cent in comparison with May, 1939. A reduction in farm placements accounted for the decrease for the province as a whole from May of last year. Of the changes in other

* 83 Placements effected by offices now closed.

groups, none of which was large, the most important were gains in construction and maintenance and manufacturing and a loss in services. Industrial divisions in which most of the placements were effected during the month were manufacturing 108; logging 254; farming 337; construction and maintenance 661 and services 1,073, of which 814 were of household workers. There were 1,384 men and 336 women placed in regular employment.

Saskatchewan

During May, orders received at Employment Offices in Saskatchewan, called for nearly 12 per cent fewer workers than in the preceding month, but nearly 19 per cent more than during the corresponding month of last year. There was a decrease of nearly 8 per cent in placements when compared with April, but an increase of nearly 16 per cent in comparison with May, 1939. The most important change in placements by industrial groups from May of last year was a decline in construction and maintenance, but all other groups showed improvement. The largest gains were in logging, farming and services. Placements by industrial divisions were manufacturing 59; logging 126; farming 469; transportation 73; construction and maintenance 186 and services 839, of which 600 were of household workers. During the month 605 men and 367 women were placed in regular employment.

Alberta

Employment Offices in Alberta during the month of May listed orders for nearly 56 per cent more workers than in the preceding month and nearly 36 per cent more than during the corresponding month of last year. Gains were also reported in placements of over 56 per cent in comparison with April and of nearly 34 per cent when compared with May, 1939. A large increase in farm placements was responsible for the increase over May of last year, although placements in services and manufacturing were also higher. These gains were partly offset by declines in construction and maintenance and logging. Placements by industrial divisions included manufacturing 77; farming 1,102; transportation 100; construction and maintenance 298 and services 736, of which 500 were of household workers. Placements in regular employment numbered 1,531 of men and 424 of women.

British Columbia

The demand for workers, as indicated by orders received at Employment Offices in British Columbia during May, was over 9 per cent higher than in the preceding month, but 14 per cent below the corresponding month of last year. There was an increase of nearly 9 per cent in placements when compared with April, but a decrease of nearly 15 per cent in comparison with May, 1939. Placements under construction and maintenance were considerably fewer than during May of last year and there were minor losses in mining and logging. These decreases, however, were partly offset by gains in all other groups, the largest of which were in manufacturing, services, farming and trade. Placements by industrial divisions were manufacturing 239; farming 192; mining 55; construction and maintenance 1,501; trade 83 and services 1,084, of which 683 were of household workers. During the month 1,200 men and 413 women were placed in regular employment.

Movement of Labour

During the month of May, 1940, the offices of the Employment Service of Canada made 26,458 placements in regular employment, 14,792 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,990 were granted the Employment Service reduced transportation rate, 1,839 travelling to centres within the same province as the despatching office and 151 to other provinces. The reduced transportation rate, which is 2·5 cents per mile, with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

In Quebec during May 28 certificates for reduced transportation were issued at the Hull office to bushmen bound for employment in the Pembroke zone. Persons securing certificates from offices in Ontario during May were 1,701 in number, all of whom were destined to provincial employment. For centres within their respective zones the Port Arthur office despatched 1,087 bush workers, 7 airport construction workers, 3 cookees, one carpenter, one labourer, one hotel waitress, one mine worker and one sawmill foreman; the Fort William office 513 bush workers and the Sudbury office 32 bush workers. In addition, from Sudbury 45 bushmen were conveyed to Port Arthur. Travelling from North Bay 3 carpenters went to Barrie and 2 mill hands and one trucker to Sudbury. The Windsor office was responsible for the despatch of 2 tool and die makers to Brantford and of one moulder to Galt. Manitoba transfers at the reduced rate during May numbered 125, of which 3 were provincial and 122 interprovincial. Provincially the movement was from Winnipeg to points within the same zone and included

2 labourers and one farm hand. Proceeding outside the province 99 bush workers, 10 mine employees, 3 sawmill labourers, 3 hotel employees, 3 cooks, one carpenter, one boilermaker, and one highway construction worker were transported to Port Arthur and one tractor operator to Prince Albert, all of these travelling on certificates secured at the Winnipeg office. Business transacted by Alberta offices during May involved the issue of 130 certificates, 129 of which were to provincial centres and one outside the province. The latter was granted at the Edmonton office to a farm hand going to Saskatoon. Within the province the Edmonton office assisted in the despatch of one farm hand to Lethbridge and of 68 water transportation employees, 22 fish company employees, 11 mine workers, 6 carpenters, 5 farm hands, 3 hotel employees, 2 cooks, 2 oil refinery workers and one bushman to employment at various centres within the Edmonton zone. Receiving certificates at Calgary 6 farm hands went to Drumheller and 2 farm hands to points within the territory administered by the Calgary office. Profiting by the Employment Service reduced rate in British Columbia during May 6 persons travelled to provincial employment. These were despatched by the Vancouver office, among whom were 3 mine workers going to Kamloops and one farm hand, one hotel cook and one mine cook destined to points within the Vancouver zone.

Of the 1,990 workers who took advantage of the Employment Service reduced rate during May 645 travelled by the Canadian National Railways, 1,341 by the Canadian Pacific Railway, 2 by the Northern Alberta Railway and 2 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During May, 1940.

The Dominion Bureau of Statistics in its May report of building permits includes returns from 171 of the 202 municipalities in Canada which have systems of issuing such permits and of this number 167 reported detailed operations. The remaining 4 advised

* Indicates a municipality whose records are available back to 1910.

that no permits had been issued during the month of May while 31 municipalities failed to report by June 10.

The total value of permits reported as having been issued in the month of May is $13,137,281. Revised values for the month of April include returns from all municipalities and aggregate $10,927,440. Reports were received from 54 of the original 58 municipalities and show a value of $9,623,112 for May. The corresponding revised value for April, including all returns, is $7,102,897 and the May, 1939 value was $6,722,431.

The total value of permits issued by all municipalities during the first five months of

the current year is $36,904,765. The value for the 58 municipalities for the same period is $26,750,138, while their corresponding value in 1939 was $19,676,036.

During the month of May new construction of all types amounted to 80 per cent of the total value, while the percentage of new residential construction was 59·1.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JUNE, 1940

Reports of the Superintendents of the Employment Service

THE employment situation at the end of June was reported by the Superintendents of the Employment Service to be as follows:—

Farmers in the Maritimes were busily attending their growing crops and farm produce at the market was abundant, with prices good. Activity in logging consisted chiefly in the cutting of pit props, pulpwood and mill work. Poor weather conditions and a heavy run of dog fish had somewhat hampered fishing; however, there was a salmon catch and plentiful supplies of cod, haddock and mackerel. Lobster traps had been lifted and canning factories closed as that season was over. Coal mines in the New Glasgow area operated 6 days per week, while those in Cape Breton and vicinity worked from 3¾ to 6 days. Nearly all manufacturing plants were busy, especially those handling ice cream and mineral waters, July and August being the peak months when considerable extra help is hired in these factories. No idleness was reported by the iron and steel companies. Very little new building construction was started, but all work under way was progressing satisfactorily and road construction showed marked improvement. Transportation, both passenger and freight, by rail and motor, was heavy. Passenger traffic by boat was not made known, but a number of freighters were in port loading and unloading cargoes. Trade, as well as collections, was fair. A lively demand also existed for household help in the Women's Division.

Although rain and cold weather had delayed seeding operations in parts of Quebec Province, a fairly good call was reported for farm hands. Activity in bush work was pronounced in all logging districts, but particularly so at LaTuque, where more than 2,000 men had been hired. Manufacturing plants for the most part were working to capacity, the chief centres to report increased production being Chicoutimi, Hull, LaTuque, Montreal, Quebec and Sherbrooke. Unfavourable weather had hampered road work, but building construction was very brisk, especially at Arvida, where many thousands of men were employed. Enlargement of ammunition plants in Montreal and work on a dam at Rouyn had also created additional employment. Trade was sluggish, but services were active.

Continued rains retarded haying in Ontario and reduced the early fruit crops, but the demand for farm hands was steady, with capable men still scarce, for enlistments had seriously affected the regular supply of agricultural workers. Some young men, however, had been placed under the D.P.Y.T.P.; experienced boys had found work at $20 per month with room and board, while wages for older and more competent hands ranged from $25 to $40 per month. Woods operations were slacker, the few orders listed being chiefly for hooksmen, pulpwood cutters and peelers and river drivers. Reports from Timmins and North Bay stated that sawmill activity was at its peak. In the latter locality a few small portable units had closed down due to exhaustion of available logs, but despite developments in other fields and increasing military requirements, labour remained stable, with sufficient bush workers to fill satisfactorily the local demand. At Timmins, mining was normal, but first class drift and raise miners were becoming difficult to secure. Elsewhere, slackness prevailed. No marked change appeared in the industrial situation, a number of factories, particularly where war contracts were handled, were absorbing skilled workers very quickly, most noticeably in the iron and steel trades, abrasive plants and silver plating factories. Textiles also were very busy and fruit canning operations were getting under way. Some slackness, however, was reported by shoe and hosiery firms, but this was mostly of a seasonal nature and would not likely be prolonged. Building continued active and highway construction was progressing, although somewhat curtailed in volume. Conditions among skilled and semi-skilled tradesmen were much better than in former years and few carpenters, plumbers, electricians and bricklayers were unemployed. National Defence projects at Petawawa and elsewhere also absorbed many workers. Trade was better and transportation fair. A few extra gang labourers had also been placed with the railways. The demand for experienced domestic help continued to exceed the supply and while factory employment for women showed an increase, there was a surplus of registrations for this class of work.

Normal conditions prevailed throughout the farming districts of the Prairie Provinces. In Manitoba, large numbers of beet workers had been placed daily, while in Saskatchewan and Alberta there was less activity. Crop prospects showed improvement, although rain was needed in some districts where grasshoppers proved a menace. Logging was steady, but mining quiet. Stimulation of industry occasioned by war orders was evident in manufacturing, as well as in the building construction, where military projects of importance were under way and in Winnipeg it was becoming increasingly difficult to obtain all the skilled carpenters required. Trade was fair and calls for domestic workers in the Women's Division numerous.

Lack of suitable farm applicants was reported from British Columbia, although wages for competent hands had increased considerably. At Penticton, large crews were handling cherries in the packing houses and canneries. Logging and sawmills were still restricted in operation and were likely to stay so until shipping facilities showed improvement in the sending of lumber to Great Britain. Exports to the United States, however, had been maintained. At Nanaimo, practically all lumber camps were closed down. Some of these would re-open later, while work in others would remain suspended until the existing fire hazard was reduced. Mining was quiet, with no calls for additional help. At Prince Rupert some few men secured employment on the fishery patrol, with the opening of the sockeye fishing season. Halibut landings were fairly high and prices steady. Building construction was very active and shipyards and waterfronts at Vancouver and Victoria were busy. Trade was better and calls for domestic workers in the Women's Division were favourable, although the usual shortage of experienced help proved a handicap.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, June, 1940, summarized the employment situation as follows:—

There was a further reduction in unemployment between April 15 and May 20. Between these two dates the number of unemployed persons on the registers of Employment Exchanges in Great Britain fell by 91,873.

As compared with May 15, 1939, the number unemployed at May 20, 1940, in Great Britain was lower by 611,460.

The industries in which the reductions in unemployment between April 15 and May 20 were most marked included building and public works contracting, the distributive trades, hotel and boarding house service, agriculture and horticulture, local government service, coal mining, the motor vehicle, cycle and aircraft industry, metal goods manufacture, engineering, and road transport. On the other hand, unemployment increased in dock and harbour service, paper manufacture, the linen industry, and the textile bleaching, printing, dyeing, etc., industry. In the cotton industry, a slight increase in the numbers on the register was due to temporary stoppages in some districts on the day when the count of the unemployed was taken.

It is to be noted that in addition to unemployed persons absorbed into the industries engaged on war work, there is also a steady flow of transfer into those industries from less essential industries which is not reflected by the reduction in the total numbers unemployed. The recorded reductions in unemployment, therefore, are not an adequate measure of the changes in employment in the industries engaged upon war work.

There was a reduction in the numbers registered as unemployed in every division. The decreases were numerically greatest in the London Division and in Scotland and Wales; there were also large decreases in the Eastern, Midlands and Northern Divisions.

The number of insured persons, aged 16 to 64, recorded as unemployed in Great Britain and Northern Ireland at May 20, 1940, represented 6·1 per cent of the total number of insured persons aged 16 to 64, at July, 1939, as compared with 6·7 at April 15, 1940. At May 15, 1939, the percentage unemployed was 10·2.

United States

An increase of approximately 240,000 in employment in non-agricultural industries between April and May brought the level of employment in these industries to approximately 1,000,000 above the corresponding period of last year, according to an official report issued on June 26 by Miss Frances Perkins, United States Secretary of Labour.

The following, taken from the official report indicates the employment situation in the United States to be as follows:

In general, the changes in employment from April to May were about usual for the season. A comparatively small net decline of 50,000

employees in factories reflected seasonal slackening in textile, apparel, and automobile plants, which more than counterbalanced gains in war-materials industries and in the seasonally active food and building materials industries. Substantial gains were reported in both public and private construction, with approximately 130,000 more workers employed in May by construction contractors.

Wholesale and retail stores took on nearly 60,000 workers and more employees were engaged in transportation and public utilities, as well as in the maintenance of State highways and in the service industries. In coal mining, employment was about the same as in April, but 180,000 greater than last year at this time, when some coal mines were still shut down following the delay in the signing of new wage agreements.

In manufacturing there was a decline of 0·6 per cent in employment and a slight expansion of 0·1 per cent in pay rolls. The most important development was the continued rapid expansion in the war-materials industries, particularly airplane and engine manufactures (including aero-engines), private shipyards, machine tool factories, steel mills and certain other industries affected directly or indirectly by war orders, such as woollen mills, explosive manufactures, and metal working plants.

Currently the level of employment in the majority of manufacturing industries, is still below the recent peak levels of 1937. It is only in the war-materials industries that there has been a great expansion, as shown in the table which follows:

ESTIMATED NUMBER OF WAGE EARNERS IN WAR-MATERIALS INDUSTRIES

Industry	May 1940	April 1940	Average 1937	Gain or loss between May 1940 and— April 1940	Average 1937
Shipbuilding	85,800	83,100	62,300	+2,700	+23,500
Aircraft	65,200	60,600	24,000	+4,600	+41,200
Machine tools	62,400	61,200	47,200	+1,200	+15,200
Engines	47,700	44,700	32,900	+3,000	+14,800
Aluminum mfrs.	26,500	26,200	23,700	+ 300	+ 2,800
Explosives	7,000	6,700	5,400	+ 300	+ 1,600

In aircraft manufacture, for example, employment in May was nearly triple that in the year 1937. In the engine industry there has been an increase of 50 per cent. It is almost entirely in these industries, some of them highly localized, that the current tightness in the labour market is centered.

Outside of manufacturing, the principal increase in employment in May was in retail stores where there was a gain of 1·6 per cent, particularly in shops selling general merchandise, in limited price variety stores, and by dealers in lumber and building materials. In wholesale trade, there was a slight decline of 0·7 per cent, almost entirely of a seasonal character, centering in reduced employment by farm supply dealers of all kinds, and by dry goods and apparel stores. There was some increase, however, in employment by wholesalers dealing in lumber and building materials, hardware, and so forth.

Anthracite mines reported an employment increase of 1·0 per cent, while bituminous mines laid off 1·4 per cent of their men. In both industries, increased production in May resulted in substantial gains in pay rolls. Employment in metal mines increased 2·3 per cent, reflecting increased activity due to the war situation. In quarries, there was the usual seasonal expansion.

In addition to the nation-wide seasonal increase in employment in private building of 12·3 per cent, public construction projects employed more men than in April, particularly on regular Federal construction, on residences for the United States Housing Authority, and on State financed road projects. The Work Projects Administration had a smaller force, of 1,838,000 persons, at work in May, after a reduction of 173,000 from the April level.

In public utilities there was little change in employment during the month. Increased stock market activity resulted in a slight expansion of employment in brokerage firms (0·4 per cent). Insurance companies took on a small additional number of employees. In the other service industries, notably dyeing and cleaning and laundries, there was the customary seasonal expansion.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Couuncil of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages Scales of the respective provinces.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935", which came into force on May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by Federal grant in the form of contribution, subsidy, loan, advance or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreement with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reason-

able hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage rate of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

As complete lists of the contracts awarded by the Department of Munitions and Supply are being issued weekly through the office of the Director of Public Information, and are being published in the press, this information will not be duplicated here. Particulars of the contracts which have been awarded recently by various other departments of the Govern-

ment of Canada, however, appear hereunder:—

GROUP "A' CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work, and also specify that the rates of wages set out therein are *minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

DEPARTMENT OF TRANSPORT

Development of aerodrome at Hagersville, Ont. Name of contractors, Dufferin Paving and Crushed Stone Ltd., Toronto, Ont. Date of contract, June 1, 1940. Amount of contract, $114,364.50 estimated. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 55
Tsphalt tampers, smoothers, spreaders	0 45
Blacksmiths	0 60
Blacksmiths' helpers	0 45
Cement finishers	0 60
Concrete mixer operators (gas. or elec.)	0 50
Drivers	0 40
Driver, team and wagon	0 75
Labourers	0 40
Motor truck driver	0 45
Motor truck driver and truck	1 45
Road grader operators (gas.)	0 50
Road roller operators (gas. or steam)	0 65
Rodmen, reinforced steel	0 50
Shovel operators (gas)	0 90
Steam shovel engineers	0 90
Steam shovel cranemen	0 70
Steam shovel firemen	0 55
Steam shovel oilers	0 50
Tractor operators	0 50
Watchmen	0 35

Development of an aerodrome at Penhold, Alta. Name of contractor, Mr. Fred Mannix, Vancouver, B.C. Date of contract, June 1, 1940. Amount of contract, estimated $10,930. A fair wages schedule was included in the contract as follows:—

	Per hour
Drivers	$0 40
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Labourers	0 40
Motor truck driver	0.40
Motor truck driver and truck	1 40
Road grader operator:	
Horsedrawn	0 40
Including team	0 70
Gasoline	0 50
Tractor operator	0 45
Watchmen	0 35

Development of airport at Saskatoon, Sask. Name of contractors, Bird Construction Co., Ltd., Regina, Sask. Date of contract, June 12, 1940. Amount of contract, $232,707.50 (estimated). A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 55
Asphalt tampers, smoothers and spreaders	0 45
Blacksmiths	0 65
Blacksmiths' helpers	0 45
Carpenters and joiners	0 75
Concrete mixer operators (gas.)	0 50
Drivers	0 40
Driver, horse and cart	0 55
Drivers, team and wagon	0 75
Labourers	0 40
Motor truck driver	0 45
Motor truck driver and truck	1 45
Road grader operators (gas.)	0 55
Road roller operators (gas. or steam)	0 70
Shovel operators (gas.)	1 00
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Tractor operators	0 60
Watchmen	0 35

Development of an airport at Vanscoy, Sask. Name of contractors, Western Canada Construction Ltd., Edmonton, Alta. Date of contract, June 13, 1940. Amount of contract, $79,757. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 55
Asphalt tampers, smoothers and finishers	0 45
Blacksmiths	0 65
Blacksmiths' helpers	0 45
Concrete mixer operators (gas. or elec.)	0 50
Carpenters and joiners	0 75
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Labourers	0 40
Motor truck	0 45
Motor truck driver and truck	1 45
Road grader operators (gas.)	0 55
Road roller operators (gas. and steam)	0 70
Shovel operators (gas.)	1 00
Steam shovel engineers	1 00
Steam shovel firemen	0 60
Steam shovel cranemen	0 75
Steam shovel oilers	0 50
Tractor operators	0 60
Watchmen	0 35

Development of airport at Osler, Sask. Name of contractors, Saskatoon Contracting Co., Ltd., Saskatoon, Sask. Date of contract, June 17, 1940. Amount of contract (estimated), $8,259. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 65
Blacksmiths' helpers	0 45
Carpenters and joiners	0 75
Drivers	0 40

	Per hour
Driver, horse and cart	$0 55
Driver, team and wagon	0 75
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Road grader operators:	
Horsedrawn	0 45
Including team	0 80
Gasoline	0 55
Tractor operators	0 60
Watchmen	0 35

Development of the aerodrome at Alliston, Ont. Name of contractors, Armstrong Brothers, Construction, Brampton, Ont. Date of contract, June 21, 1940. Amount of contract, estimated, $15,640. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 60
Blacksmiths' helpers	0 45
Drivers	0 40
Driver, team and wagon	0 75
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Road grader operators:	
Horse-drawn	0 45
Including team	0 80
Gasoline	0 50
Tractor operators	0 50
Watchmen	0 35

Additional development of airport—R.C.A.F. —Moncton, N.B. Name of contractors, Rayner Construction Ltd., Toronto, Ont. Date of contract, June 21, 1940. Amount of contract, estimated, $287,565.62. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 50
Asphalt tampers, smoothers and spreaders	0 40
Axemen	0 40
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 60
Gas. or elec.	0 45
Driver	0 35
Driver, team and wagon	0 65
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck	1 40
Road grader operators (horse drawn)	0 40
Road grader operators (incl. team)	0 70
Road grader operators (gas.)	0 45
Road roller operator (steam or gas.)	0 60
Rodmen—reinforced steel	0 45
Tractor operators	0 45
Watchmen	0 30

Additional development of airport—civil aviation—Moncton, N.B. Name of contractors, Rayner Construction Ltd., Toronto, Ont. Date of contract, June 26, 1940. Amount of contract, $186,552.15. The preceding fair wages schedule was also included in this contract.

Erection of airport control tower at the airport at Winnipeg, Man. Name of contractors, Dominion Bridge Co., Ltd., Winnipeg, Man. Date of contract, June 24, 1940. Amount of contract, $6,152. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 85
Cement finishers	0 60
Cement and concrete mixer operators (gas. or elec.)	0 55
Engineers on steel erection	0 90
Firemen, stationary	0 55
Labourers	0 40
Linoleum layers	0 60
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 85
Painters and glaziers	0 70
Roofers—felt and gravel: patent	0 45
Rodmen, reinforced steel	0 50
Riggers	0 55
Sheet metal workers	0 70
Structural steel workers	0 85
Waxers and polishers: floor	0 45
Welders and burners on steel erection	0 85

Development of an aerodrome at Kohler, Ont. Date of contract, June 25, 1940. Name of contractors, Law Construction Co., Ltd., Toronto, Ont. Amount of contract, $123,806 (estimated). A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 55
Asphalt tampers, smoothers, spreaders	0 45
Blacksmiths	0 60
Blacksmiths' helpers	0 45
Concrete mixer operators (gas or elec.)	0 50
Cement finishers	0 60
Drivers	0 40
Driver, team and wagon	0 75
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Road grader operators (gas.)	0 50
Road roller operators (gas. and steam)	0 65
Rodmen, reinforced steel	0 50

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Manufacturing: Metal Products

ST. JOHN, N.B.—A CERTAIN DRYDOCK AND SHIPBUILDING COMPANY AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 482.

See below under "Construction: Shipbuilding".

VANCOUVER, B.C.—A CERTAIN SHIPBUILDING COMPANY AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 692.

See below under "Construction: Shipbuilding".

VANCOUVER, B.C.—A CERTAIN SHIPBUILDING COMPANY AND THE INTERNATIONAL ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL 170.

See below under "Construction: Shipbuilding".

VANCOUVER, B.C.—A CERTAIN SHIPBUILDING COMPANY AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL 280.

See below under "Construction: Shipbuilding".

Construction: Shipbuilding

ST. JOHN, N.B.—A CERTAIN DRYDOCK AND SHIPBUILDING COMPANY AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 482.

Agreement to be in effect from April 8, 1940 until September 7, 1940, in so far as wages are concerned, and to March 7, 1940, and thereafter from year to year, subject to notice, in so far as conditions are concerned.

Hours: 8 per day, 4 on Saturday, a 44 hour week. When three shifts are worked, in each 8 hour shift, 30 minutes for lunch to be allowed, and for those on the second and third shifts, time and one eighth to be paid.

Overtime: time and one half to midnight; thereafter and work on Sundays and nine specified holidays, double time.

Minimum hourly wage rates for machinists and fitters: 70 cents (an increase of 5 cents over the previous rate); helpers 43 cents (an increase of 3 cents over the previous rate).

Apprentices to serve four years and to be paid 20 cents per hour during first six months, with 5 cents per hour increase each six months.

Any employee who feels he is unjustly dealt with may have the matter taken up by the employees' committee and the management, and if a satisfactory settlement is not reached, it will be referred to arbitration, as provided for by the Industrial Disputes Investigation Act.

VANCOUVER, B.C.—A CERTAIN SHIPBUILDING FIRM AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 692.

Agreement to be in effect from May 1, 1940 for the duration of the war and thereafter until completion of any contracts entered into previous to the cessation of hostilities.

Only union members to be employed, if available.

Hours: 8 per day, a 44 hour week for the day shift; 7⅓ hours, a 40 hour week, second shift, with 8 hours' pay allowed for 7⅓ hours' work; 7⅓ hours, a 40 hour week for third shift, with 9 hours' pay for 7⅓ hours' work.

Overtime: time and one half for first four hours and double time thereafter; double time for work on Sundays and nine specified holidays.

Minimum hourly wage rates: machinists and fitters 90 cents; specialists (those who do a particular line of work recognized as being connected with the trade) 65 cents; helpers 50 cents during first six months, 55 cents during second six months and 60 cents after one year. "The above rates to be subject to adjustment quarterly in accordance with the cost of living, and wages to be increased or decreased in an equal percentage to the increase or decrease in cost of living, as ascertained by the Department of the Provincial Government of British Columbia, it being understood that the cost of living figures as at December 1, 1939, be the basis of this arrangement. It is also understood that the above rates are to be the minimum rates to be paid during the life of the agreement."

Time and a quarter to be allowed for all dirty work.

Every man to be paid for at least four hours if hired after starting time.

In case of any dispute arising the representative of the Union to meet the company representative to seek an adjustment, and if they cannot agree it will be referred to arbitration.

VANCOUVER, B.C.—A CERTAIN SHIPBUILDING FIRM AND THE INTERNATIONAL ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL 170.

Agreement to be in effect from June 20, 1940 for the duration of the war and thereafter until completition of any contracts entered into previous to the cessation of hostilities.

This agreement is similar to the one summarized above for machinists employed by this company, with these exceptions:

Wages per hour: plumbers and pipefitters 90 cents, helpers from 50 cents during first six months to 60 cents after one year's employment. Wages to be adjusted according to changes in the cost of living as in the machinists' agreement.

Time and a quarter to be paid for all dirty work and to men working in confined spaces full of gas or wet paint fumes.

No mention is made of means to be used for settling disputes.

Vancouver, B.C.—A Certain Shipbuilding Firm and the Sheet Metal Workers' International Association, Local 280.

Agreement to be in effect from June 1, 1940, for the duration of the war and thereafter until the completion of contracts then in effect.

This agreement is similar to the one summarized above for machinists employed by this company, with these exceptions:

Minimum wage rate for journeymen sheet metal workers: 90 cents per hour. The wage rate to be adjusted according to changes in the cost of living as in the machinists' agreement.

No mention is made of means to be used for settling disputes.

Transportation and Public Utilities: Water Transportation

Saint John, N.B.—Certain Steamship Companies and the International Longshoremen's Association, Local 1571 (Checkers and Coopers).

Agreement to be in effect from February 10, 1940, to November 30, 1940, and thereafter from year to year, subject to notice. It may also be terminated on any date after the termination of the war, after sixty days' notice is given.

Hours for checkers and coopers (cargo repairmen): 9 per day or per night. Saturday half holiday between June 1 and September 30.

Double time for work on Sundays and six specified holidays and for work on Saturday afternoons in June to September.

Wages: checkers $3 per half day (or half night) plus a war bonus of 30 cents, or a total of $3.30 per half period; coopers (cargo repairmen) $2.75 per half day (or half night), plus a war bonus of 27½ cents per half period, or a total of $3.02½ per half period.

Where checkers or coopers are put to work they shall be paid for at least two hours (67 cents per hour plus a war bonus of 7 cents per hour, a total of 74 cents per hour for checkers, and 61 cents per hour plus a war bonus of 6 cents per hour, a total of 67 cents per hour for coopers). If employed for more than two hours they shall be paid for the full half period.

In case of any grievance, employees to continue to work and their representative will take the matter up with the employer concerned or the Steamship Committee.

Quebec, P.Q.—Certain Steamship Companies (Ocean Navigation) and the Quebec Ship Labourers' Benevolent Society (Longshoremen).

Agreement to be in effect from May 17, 1940, to December 31, 1940, and thereafter from year to year, subject to notice.

Wages: the basic wage rate for day work, that is between 7 a.m. and 12 noon and between 1 p.m. and 5 p.m. is 70 cents per hour; and from 5 p.m. to 7 a.m. the rate is $1.05 per hour. In addition, a war bonus of 7 cents per hour is added, making the rates 77 cents per hour for day work and $1.12 per hour for night work; this war bonus under changing war conditions is subject to revision upon 60 days' notice.

Double time to be paid for work during meal hours, except that on Sundays the rate for working meal hours shall be the same as the rate paid for Sunday work, that is double the basic rate of 70 cents per hour.

Montreal P.Q.—Certain Steamship Companies (Ocean Navigation) and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Locals 233 and 566 (Checkers and Coopers).

Agreement to be in effect from April 24, 1940, to December 31, 1940, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, August, 1939, page 859 and July, 1938, page 795, with this exception:

The basic wages for checkers of 64 cents per hour and for coopers of 63 cents per hour for day work with 10 cents per hour extra for both classes for night work is unchanged, but there is now added to the basic rates, a war bonus of 6 cents per hour, making the rates 70 cents per hour for checkers and 69 cents for coopers for day work, with 10 cents per hour extra for night work. This 6 cents per hour bonus under changing war conditions to be subject to revision upon 60 days' notice.

Collective Labour Agreements Act, Quebec

The following agreements, amendments and correction to agreements have recently been made obligatory by Orders in Council and are summarized in the next article:—

Can, Container and Metal Utensil Manufacturing, Province of Quebec (amendment).

Building Materials Industry, Province of Quebec.

Building Trades, Three Rivers (correction).

Building Trades, Sherbrooke and Eastern Townships (amendment).

Building Trades, Montreal.

Grocers and Butchers, Sherbrooke.

Garages and Service Station Employees, Quebec (amendment).

Barbers and Hairdressers, St. Hyacinthe (amendment).

Barbers and Hairdressers, Valleyfield (amendment).

Industrial Standards Acts

The following schedules have recently been made binding by Orders in Council and are summarized in a special article below:

Nova Scotia

Electrical Workers, Halifax and Dartmouth.

Plumbers, Halifax and Dartmouth.

Ontario

Barbers, Gananoque.

Barbers, Newmarket and Aurora.

Saskatchewan

Bakers, Regina.

Plumbers, Regina.

Gravel Hauling Industry, Regina (amendment).

Alberta

Taxi Drivers, Calgary (correction).

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC

Recent Proceedings under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May, 1938, issue of the LABOUR GAZETTE, page 503. Amendments to the Act are noted in the LABOUR GAZETTE, June, 1939, page 576. Agreements and regulations under the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette,* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette.* Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette,* the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in cities and towns of 5,000 or more and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette.* Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issue beginning May, 1938.

Recent proceedings under the Act include the extension of three new agreements, the correction of one agreement and the amendment of five others, all of which are noted below. Requests for the extension of new agreements were published in the *Quebec Official Gazette,* as follows: an agreement affecting the fur industry in Montreal, in the issue of June 15; agreements affecting checkers and coopers (ocean navigation) at Montreal and longshoremen (ocean navigation) at Quebec, in the issue of June 22, an agreement affecting retail stores at Quebec and one for sash and door factories at Jonquière, Kenogami, etc. in the issue of June 29. In addition, Orders in Council were published in the *Quebec Official Gazette* during June, correcting the by-laws of one joint committee and others approving the levying of assessments by other joint committees, as listed below.

Mining: Non-ferrous Smelting and Quarrying

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC.—See below under "Manufacturing: Non-metallic Minerals, Chemicals, etc.".

Manufacturing: Metal Products

CAN, CONTAINER AND METAL UTENSIL MANUFACTURING, PROVINCE OF QUEBEC.—An Order in Council, approved June 1, and published in the *Quebec Official Gazette,* June 8, amends the previous Orders in Council for the industry (LABOUR GAZETTE, May, 1940, page 496, and June, page 608) by replacing the clause which stated there shall be no reduction in wages while the agreement is in effect by one reading: "There shall be no reduction in wages, except when an employee

is transferred from one classification to another, in which case he shall be paid the rate of wages specified for the classification in which he is actually working."

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL.—See below under "Manufacturing: Non-metallic Minerals, Chemicals, etc." in the Building Materials Industry agreement.

Manufacturing: Non-Metallic Minerals, Chemicals, etc.

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved June 25, and published in the *Quebec Official Gazette*, June 29, makes obligatory the terms of an agreement between: (1) certain owners and operators of granite quarries and granite cutting plants, (2) certain owners of quarries of limestone, sandstone, artificial stone and all other kind of stone except granite and marble (3) certain owners of marble ad terrazzo plants, (4) certain manufacturers and contractors in ornamental iron and bronze, and the following unions: La Fédération Nationale Catholique des Métiers du Bâtiment (The National Catholic Federation of Building Trades) and its branches comprising Le Syndicat National des Tailleurs de Pierre de Montréal (The National Union of Stonecutters of Montreal), Le Syndicat National Catholique des Briqueteurs-Maçons et Tailleurs de Pierre du Canada, Section No. 1, Quebec (The National Catholic Union of Bricklayers, Masons and Stonecutters of Canada, Section No. 1, Quebec), L'Union Nationale Catholique des Tailleurs de Pierre des Trois-Rivières (The National Catholic Union of Stone Cutters of Three Rivers), Le Syndicat Catholique des Travailleurs aux Carrières de St-Marc (The Catholic Union of Quarry Workers of St. Marc), and The Canadian Ornamental Iron and Bronze Workers Union of Montreal.

The Order in Council to be in effect from April 1, 1940 to June 30, 1941, except for the part affecting the ornamental iron and bronze industry for which it will be in effect from April 30, 1940 to April 30, 1941. It shall remain in effect from year to year, subject to notice. As under the previous Orders in Council, the conditions in the granite industry, marble industry and stone industry are effective throughout the province, while those for the ornamental iron and bronze industry are effective in Montreal and district only.

This Order in Council is similar to the one previously in effect and summarized in the (LABOUR GAZETTE, June, 1939, page 628, September, page 951, and February, 1940, page 172) with these exceptions:

Granite Industry

Wage rates: in addition to classes in the previous agreement, journeymen granite cutters on surfacing or sandblasting machines are added at the same rate as other granite cutters, that is 70 cents in the city of Quebec, the Island of Montreal, the cities of Sherbrooke and Three Rivers and 60 cents in the rest of the province; surfacing machine operators and stationary enginemen are added, at 50 cents per hour; watchmen at $15 per week, with no limitation in hours of watchmen.

The clause in the previous agreement allowing the joint committee to issue piecework permits in small establishments is not in this agreement.

Marble Industry

Wages: watchmen are added to the wage scale at $15 per week, with no limitation in their hours.

Stone Industry

Wages: watchmen are added to the wage scale at $15 per week with no limitation in hours.

Ornamental Iron and Bronze Industry

Wage rates in this industry are increased 4 cents per hour for those previously receiving 66 cents and 5 cents per hour for others, making the rates: 70 cents per hour for mechanics and erectors, 60 cents for fitters and 50 cents for helpers (shop or field).

In the establishments governed by this part of the agreement, 17 per cent of the employees to receive 70 cents, 33 per cent 60 cents and the remaining 50 per cent, 50 cents. For erection works, apprentices to be considered as helpers after a 6 month probation period during which they shall receive 50 cents per hour.

Construction: Buildings and Structures

BUILDING TRADES, THREE RIVERS.—A correction was published in the *Quebec Official Gazette*, June 15 in the wording of one sentence in this agreement (LABOUR GAZETTE, May, 1940, page 497) which does not affect the summary as given in the LABOUR GAZETTE.

BUILDING TRADES, SHERBROOKE AND EASTERN TOWNSHIPS.—An Order in Council, approved June 5, and published in the *Quebec Official Gazette*, June 8, amends the previous Orders in Council for these trades (LABOUR GAZETTE, June, 1938, page 693, October, page 1173, November, page 1299, July, 1939, page 729, November, page 1183, April, 1940, page 390, June, page 609).

The wage scale as summarized in the April, 1940 LABOUR GAZETTE is amended as follows. The rate for contractor painters and paperhangers (personal services) is now 65 cents in zone I instead of 60 cents. The rate for journeymen carpenters and joiners in Magog, and within 5 miles of it is 55 cents per hour.

Special conditions are now specified for Granby and within 5 miles of it. Hours are 48 per week: 8 per day, 6 days per week between October 1 and March 1; 9 per day Monday to Thursday, 8 on Friday and 4 on Saturday between March 1 and September 30.

Minimum hourly wage rates in Granby and within 5 miles of it are:

Trades	Hourly rates
Bricklayers:	
Contractors (personal services)	$0 85
Journeymen	0 75
Plasterers and masons:	
Contractors (personal services)	0 70
Journeymen	0 60
Cement finishers:	
Journeymen	0 50

Trades	Hourly rates
Carpenter-joiners:	
Contractors (personal services)	$0 65
Journeymen	0 55
Painters and paper hangers:	
Contractors (personal services)	0 50
Journeymen	0 40
Pipe mechanics:	
Contractors (personal services)	0 75
Journeymen	0 45
Junior journeymen:	
1st six months	0 35
2nd six months	0 40
Tinsmith-roofers:	
Contractors (personal services)	0 75

The wage rates for apprentices in Granby and in Arthabasca County are fixed in this amendment.

In the county of Arthabasca, maintenance men employed by churches, colleges, convents, hospitals and charitable institutions to be paid the following minimum rates: for journeymen $17.50 in zone I; $15.50 in zone II; for common labourers $11.45 in zone I and $10.25 in zone II. Maintenance men employed in the county of Arthabasca in office or public buildings, apartment buildings or residences of any kind, hotels, factories, manufacturing establishments and stores to be paid the following minimum rates: for journeymen, $18.75 in zone I, $16.80 in zone II; for common labourers $14.40 in zone I, $12 in zone II.

BUILDING TRADES, MONTREAL.—An Order in Council, approved June 28, and published in the *Quebec Official Gazette*, June 29, makes obligatory the terms of an agreement between on the one part; the Builders' Exchange, Inc. of Montreal, the Canadian Automatic Sprinkler Association, l'Association des Maîtres-plombiers de la province de Québec section de l'Association des Marchands détaillants du Canada, Inc., (the Association of Master Plumbers of the Province of Quebec, section of the Retail Merchants Association of Canada, Inc.), the Master Plumbers' Association of Montreal and Vicinity, the Insulation Contractors, the Sheet Metal and Roofing Contractors; and on the other part Le Conseil des Syndicats des Métiers de la Construction de Montréal (the council of building trades union of Montreal), La Section des compagnons plombiers et mécaniciens en tuyauterie du Conseil des Syndicats des Métiers de la Construction de Montréal, inc. (the journeymen plumbers and pipefitters' section of the building trades council of Montreal), The Building and Construction Trades Council of Montreal and Vicinity, the Heat and Frost Insulators and Asbestos Workers of Canada, the United Association of Sprinkler Fitters of the Province of Quebec, Local 319, the United Association of Plumbers and Steamfitters of Montreal and Vicinity, local 144, the Sheet Metal Workers International Association of Montreal and Vicinity, Local 116.

The Order in Council to be in effect from June 24, 1940 to April 30, 1941, and if necessary for a further 30 days pending adoption of an Order in Council to replace it. Repair work not exceeding $500 (wages and materials included) on residences estimated by municipal authority to be not more than $15,000 value, is exempt.

General

The territorial jurisdiction comprises Montreal and Bizard islands with the exception of work on permanent dwellings of less than $5,000 done in the rural parish municipalities under the county council of Jacques Cartier. For the structural steel trade and for steam generating mechanics and boiler makers, the agreement covers the whole province of Quebec except in any district in which these trades are already covered by a collective labour agreement.

The industrial jurisdiction applies to "all constructional engineering and building operations, including all the operations of skilled tradesmen employed in public buildings, landscape work (with the exception of maintenance landscape work), road work, and covering erection, repair and demolishing work." It shall not apply to agricultural concerns nor work performed in cemeteries.

Hours: 8 per day, 4 on Saturdays, a 44-hour week, with these exceptions: landscape workmen, shovel operators and pile driver men and their crews, team drivers and general trucking, cartage and hauling employees may operate on a 55-hour week basis without any daily limitation of hours; mastic floor workmen, cement finishers and terrazzo workmen may be employed one hour extra per day at regular rates, when the employer considers same necessary; common labourers may work 9 hours per day, a 50-hour week; watchmen, material checkers and yardmen not to be subject to any limitation or regulation as to hours; tile layers and linoleum layers, etc., to be on a 48-hour week with no daily limitation of hours.

Overtime: time and one-half; work on Sundays and eight specified holidays, double time.

Minimum wage rates:

Trades	Hourly rates
Asbestos coverers	$0 66
Bricklayers and Cement block layers	0 88
Caulkers (construction)	0 50
Carpenters, joiners and millwrights in construction (including the erection of concrete forms, shop or job, screens, wooden or metal sashes, windows, steel partitions, weatherstrips, restaurant equipment and counters and shelving whether moveable or immoveable)	0 77
Cement finishers	0 61

Trades	Hourly rates
Cork insulation setters	$0 66
Electricians	0 83
Enginemen (hoisting)	0 72
Enginemen (steam mixers)	0 61
Enginemen (gas mixers)	0 55
Enginemen (compressor)	0 55
Firemen (construction)	0 55
Hod carriers	0 50
Labourers (common)	0 44
Landscape foremen	0 50
Landscape workmen (common)	0 33
Lathers (metal)	0 83
Lathers (wood and all other material)	0 61
Lathers (wood per thousand)	3 50
Linoleum tile layers, waxers and polishers	0 60
Helpers and apprentices in linoleum tile laying	0 40
Marble setters	0 88
Masons (stone), including cutters on the job	0 88
Painters, spraymen, decorators and glaziers	0 70
Painters (structural iron)	0 70
Plasterers (plain or ornamental)	0 88
Tile setters	0 77
Shingle layers (composition)	0 55
Asphalt shingle layers	0 72
Mastic floor layers	0 72
Mastic floor finishers	0 55
Kettlemen (flooring only)	0 61
Concrete reinforcing steel erectors	0 61
Sheet metal erectors	0 75
	Per week
Shovel operators (steam, gas, electricity)	44 00
	Hourly rates
When employed less than 44 hours during the week	0 99
Structural iron erectors (all categories)*	0 83
Rubber and asphalt tile layers	0 60
Riggers	0 55
Boiler makers, erectors and including steam generator mechanics	0 83
Helpers	0 61
Terrazzo layers	0 66
Terrazzo polishing machine operators (dry)	0 55
Terrazzo polishing machine operators (water polishing)	0 50
General trucking, cartage and hauling	0 33
Carters, teamdrivers	0 33
	Per Week
Material checkers and timekeepers (without daily limitation as to hours of work)	$19 80
Watchmen (without daily limitation as to hours of work)	16 50
Yardmen (without daily limitation as to hours of work)	19 80
Watchmen employed also as firemen, requiring certificate of competency	25 00

*All operations performed on the site of any proposed or existing structure involving the erection (or fabrication) of structural steel, tank and other plate work and the installation of portable boilers and tanks to be paid at 83 cents per hour. The installation of portable tanks and boilers under two tons in weight is to be considered in the "rigging" class and paid at 50 cents per hour.

Workmen hired in the city of Montreal to be employed elsewhere to be paid the above minimum rates.

Contractors who do not employ skilled tradesmen but who do the work themselves must be paid at least 25 per cent more than the above minimum rates.

Elevator Erection Trade

The territorial jurisdiction includes the territory bounded on the east by a line running due north from a point 25 miles west of Quebec city, on the south by the American border, and on the west by the boundary line between Ontario and Quebec and a line running north from the western limits of Hawkesbury (Ontario). The work includes the erection, assembling and repair of elevator machinery and also contract service for the regular examination or care of the apparatus.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. Where necessary to have two shifts on contract work, shifts to be 8 hours, one shift on holidays; 52 hours' pay for 48 hours' work.

Overtime: work on Sundays and holidays, double time; call backs on contract service, time and one-half.

Minimum wage rates in elevator erection and maintenance trades from May 1, 1940 to December 31, 1940: on construction, repair and modernization work—mechanic 91 cents, helpers 64 cents; on contract service and contract inspections—mechanic 82 cents, helper 58 cents. Minimum wage rates in elevator erection and maintenance from January 1, 1941 to April 30, 1941; on construction, repair and modernization work—mechanic 98 cents, helper 69 cents; on contract service and contract inspections, mechanic 88 cents, helper 62 cents.

Maintenance Men

Maintenance men permanently employed in churches, colleges, hospitals, charitable institutions, etc. to be paid $24.20 if journeymen, $17 if common labourers, for a week of 48 hours. Maintenance men permanently employed in public or office buildings, porters, lodges or dwellings of any kind, hotels, manufacturing establishments and stores to be paid $26.60 if journeymen, $19.40 if common labourers, for a 48 hour week. Overtime work performed by maintenance men to be paid at the hourly rates for the trades concerned as established in the schedule of trades given above, except for emergency work in the case of maintenance men receiving an annual salary of at least $1,560. The annual salary for maintenance men in the plumbing and sheet metal trades is $1,560 per year.

Employers may deduct $3 per month per room if the workman lodges in the establishment and 25 cents per meal if he is boarded in the establishment.

Apprentices

Conditions are specified for the age, registration and conditions of apprenticeship. The period for most trades is four years, but for asbestos coverers, cement finishers, wood lathers, insulation system workers it is three years and for structural steel workers two years. The wages for apprentices are fixed: for trades requiring four years apprenticeship, 30 per cent to be paid the first year increasing each year to 75 per cent of journeymen's rate for all trades in their fourth year of apprenticeship, except apprentice electricians and plumbers, for whom wages are 25 cents per hour during first year and 30 cents during the other three years.

Plumbers and Sheet Metal Workers

The conditions for these trades form a separate part of this agreement. The territorial jurisdiction includes St. Lambert and Longueuil, as well as the Island of Montreal and Isle Bizard. For the insulating, refrigera-

tion and sprinkler fitting trades, the territorial jurisdiction comprises the whole province of Quebec.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one-half; work on Sundays and on ten specified holidays, double time.

Minimum wage rates: journeymen plumbers and steamfitters and sprinkler fitters 85 cents, junior journeymen 60 cents; refrigeration mechanics (low pressure) 75 cents, refrigerator mechanics (high pressure) 85 cents; oil burning system mechanics, blower fitters and pipe welders 85 cents; labourers 44 cents; insulation and asbestos mechanics 75 cents; sheet metal workers, tile, slate, asphalt shingle layers 75 cents; roofers (composition and gravel) 55 cents.

Trade

GROCERS AND BUTCHERS, SHERBROOKE.—An Order in Council, approved June 17, and published in the *Quebec Official Gazette*, June 22, makes obligatory the terms of an agreement between L'Association des épiciers-bouchers des Cantons de l'Est (The association of grocers and butchers of the Eastern Townships) and Le Syndicat des employés de magasins de Sherbrooke, Inc. (the union of employees of stores of Sherbrooke, Inc.).

Order in Council to be in effect from June 1, 1940 to May 31, 1941, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1938, page 1045, October page 1174 and November, page 1300, with these exceptions:

Hours: the regular hours not to be more than 63 per week except that in restaurant-grocery establishment hours to be as required by the business, but groceries may not be sold except during the regular hours established for grocery stores.

Overtime; time and one-half.

Vacation: one week's vacation with pay each year after one year's service.

Service: Custom and Repair

GARAGE AND SERVICE STATION EMPLOYEES, QUEBEC.—An Order in Council, approved May 27, and published in the *Quebec Official Gazette*, June 1, amends the previous Orders in Council for these workers (LABOUR GAZETTE, June, 1938, page 696, December, page 1174, February, 1939, page 218, April page 435, May, page 529 and June, page 630).

For skilled employers, artisans or wage earners who hire their services or contract to do the work under this jurisdiction are to charge for their services at least $1 per hour between 7 a.m. and 6 p.m., $1.10 between 6 p.m. and 11 p.m., $1.50 between 11 p.m. and 7 a.m., $1 for greasing a vehicle, $1 for washing a vehicle, 50 cents for the repair of an inner tube.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, ST. HYACINTHE.—An Order in Council, approved June 5, and published in the *Quebec Official Gazette*, June 8, amends the previous Orders in Council for these trades (LABOUR GAZETTE, October, 1938, page 1174, November, page 1300, January, 1940, page 70 and February, page 173), by making minor changes in conditions.

BARBERS AND HAIRDRESSERS, VALLEYFIELD.—An Order in Council, approved June 4, and published in the *Quebec Official Gazette*, June 8, amends the previous Order in Council for these trades (LABOUR GAZETTE, July, 1938, page 801) by providing that the agreement be extended from June 4, 1940 to June 3, 1942, and by making certain changes in the schedule of rates to be charged customers.

Joint Committees

The constitution and by-laws of the joint committee set up under the following agreement were corrected and the correction approved by Order in Council and published in the *Quebec Official Gazette*, June 8:

Building trades, Sherbrooke (correction).

Notices were published in the *Quebec Official Gazette*, June 1, 8 and 29 that authorization was given by Orders in Council to levy assessments under the following agreements:

Longshoremen (inland), Montreal.

Barbers, Missisquoi County.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia, Ontario, Saskatchewan and Alberta

IN five provinces—Ontario, Alberta, Nova Scotia, Saskatchewan and New Brunswick—legislation provides that, following a petition from representatives of employers or employees in any industry, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to

assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour; in Saskatchewan under the Commissioner of Labour and Public Welfare; in New Brunswick under the Minister of Health and Labour. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, May, 1938, page 501, and June, 1939, page 574; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, June, 1938, page 633, and June, 1939, page 567; Nova Scotia, in June, 1936, page 604, and July, 1939, page 671; Saskatchewan, in the issue of June, 1937, page 635, May, 1938, page 507, and June, 1939, page 581; New Brunswick, in the issue of October, 1939, page 996. Similar legislation is in effect in Part II of the Fair Wages Act of Manitoba for certain industries (LABOUR GAZETTE, May, 1938, page 499, and June, 1939, page 570). Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Nova Scotia

Construction: Buildings and Structures

ELECTRICAL WORKERS, HALIFAX AND DARTMOUTH.—An Order in Council, dated May 31, 1940, and published in *The Royal Gazette*, June 5 and 12, makes binding the terms of a schedule of wages and hours for electrical workers in the city of Halifax and the town of Dartmouth.

The schedule is to be in effect from May 1, 1940 to April 30, 1941, and thereafter from year to year, subject to notice.

The schedule is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1938, page 1176, with these exceptions:

The minimum wage rate for journeymen electricians is 95 cents per hour (an increase of 10 cents per hour). The wages for apprentices in their first, second and third year are increased 5 cents per hour to 30, 40 and 50 cents per hour respectively. No mention is made of a fourth year of apprenticeship.

PLUMBERS, HALIFAX AND DARTMOUTH.—An Order in Council dated May 31, 1940, and published in *The Royal Gazette*, June 5 and 12, makes binding the terms of a schedule of wages and hours for plumbers and steamfitters in the city of Halifax and town of Dartmouth.

The schedule is to be in effect from May 20, 1940 to April 30, 1942, and thereafter from year to year, subject to notice.

The employers agree to employ union members, if skilled members available.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one half to 10 p.m. All other overtime and work on Sundays and nine specified holidays, double time.

Minimum hourly wage rate for journeymen plumbers and steamfitters: 95 cents (an increase of 10 cents per hour over the previous rate).

One apprentice allowed to each three journeymen. Apprentices to serve five years.

A joint conference board to be formed for the settlement of any disputes.

Ontario

Service: Business and Personal

BARBERS, GANANOQUE.—An Order in Council, dated June 11 and published in *The Ontario Gazette*, June 22, makes binding the terms of a schedule governing the barbering industry in the town of Gananoque, to be effective from July 2, 1940, "during pleasure".

Hours are those allowed by municipal bylaw, with no work on eight specified holidays nor on any Monday afternoon except Monday of the week in which one of these holidays occurs.

Minimum wages: those employed full time on a straight salary basis, $18 per week; those employed full time on a percentage basis, $12.50 per week plus 60 per cent of the proceeds in excess of $19 from the work of the employee; those employed evenings and Saturdays $7.50 per week plus 60 per cent of proceeds in excess of $12.50 from the work of the employee; those employed Saturdays or the day before a holiday and on the previous evening only, $5 per week, plus 60 per cent of the proceeds in excess of $7.50 from the work of the employee; those employed Saturday or the day before a holiday only, $4 per day or part thereof plus 60 per cent of the proceeds in excess of $6 from the work of the employee; those employed on days other than Saturdays or the day before a holiday, $2.50 per day or part thereof, plus 60 per cent of the proceeds in excess of $4 from the work of the employee.

A schedule of minimum prices which must be charged customers is included.

BARBERS, NEWMARKET AND AURORA.—An Order in Council, dated June 11, and pub-

lished in *The Ontario Gazette,* June 22, makes binding the terms of a schedule for the barbering industry in the towns of Newmarket and Aurora, to be effective from July 2, 1940 "during pleasure".

Hours are those permitted by municipal by-law, with no work on eight specified holidays: nor on any Wednesday afternoon except Wednesday of the week in which one of these holidays occurs.

Minimum wage rates: for those employed full time on a salary basis, $17 per week; for those employed full time on a commission basis, $10 per week plus 50 per cent of proceeds in excess of $16 from the work of the employee; for those employed 4 hours or less on Mondays to Fridays and all day on Saturdays, $7.50 per week, plus 50 per cent of proceeds in excess of $12.50 from the work of the employee; for those employed Saturdays or the day before a holiday and on the previous evening only, $5 per week plus 50 per cent of proceeds in excess of $7.50 from the work of the employee; those employed only for Saturday or the day before a holiday, $3.50 per day or part thereof, plus 50 per cent of the proceeds in excess of $6 from the work of the employee; those employed on days other than Saturdays or the day before a holiday, $2.50 per day or part thereof plus 50 per cent of the proceeds in excess of $4 from the work of the employee.

A schedule of minimum prices which must be charged customers is included.

Saskatchewan

Manufacturing: Vegetable Foods

BAKERS, REGINA.—An Order in Council, approved June 5, and published in *The Saskatchewan Gazette,* June 15, makes binding the terms of a schedule governing the baking industry in the city of Regina and within five miles of it, from June 25, 1940, "during pleasure".

Hours: 54 per week.

Overtime: time and one quarter except in case of a week-end holiday, when overtime rates need be paid only when more than 99 hours have been worked in the two weeks which includes the holiday. Nine holidays are specified, and any employees working on any of these days to be granted another day in its place.

Minimum weekly wage rates: foreman $27.50, doughman or ovenman $25.50, bench hand $23.50, shipper $18.50, apprentices from $10 during first six months to $18 during sixth six months; truck drivers and relief outside salesmen or special delivery men and male bread wrappers $18; inside sales persons and female finishers, wrappers or packers of cake or bakery products other than bread $10 per week of 48 hours during first six months and $14 per week of 48 hours thereafter; stablemen $20 with no limitation of hours; outside salesmen $18 during first three months and $20 thereafter; delivery salesmen furnishing their vehicles $35. Temporary and part time to be paid pro rata, but not less than $3 for each day's work, such day not to exceed 9 hours. Any employee receiving higher than the above minimum wages may not have his wage rate reduced.

Employees now employed and not in one of the above classes are to be classed as improvers and paid $18 per week.

One apprentice or improver per shift may be employed for every three journeymen bakers or fraction thereof.

Construction: Buildings and Structures

PLUMBERS, REGINA.—An Order in Council approved June 5, and published in *The Saskatchewan Gazette,* June 15, makes binding the terms of a schedule for the plumbing and steamfitting industry in the city of Regina and within 5 miles of it.

This schedule is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1939, page 733, the minimum wage rate for journeymen remaining at 90 cents per hour with a 44 hour week, but with these changes:

Minimum wage rate for helpers is fixed at 40 cents per hour. A rate for fifth year apprentices at 75 cents per hour is added.

Transportation and Public Utilities: Local Transportation

GRAVEL HAULING INDUSTRY, REGINA.—An Order in Council, approved May 3, and published in *The Saskatchewan Gazette,* May 15, amends the previous Order in Council for this industry (LABOUR GAZETTE, May, 1940, page 502) by providing that the schedule does not apply to a contract entered into by the Government of Saskatchewan or the Government of Canada.

Alberta

Transportation and Public Utilities: Local Transportation

TAXI DRIVERS, CALGARY.—Corrections published in *The Alberta Gazette* of May 15 and May 31, do not alter the summary of this schedule as given in the LABOUR GAZETTE, May, 1940, page 503 and February, 1939, page 220.

Profit-Sharing Savings Plan of International Harvester Company

EFFECTIVE May 1, the International Harvester Company of Canada and the United States inaugurated a plan to reduce the hazard of unemployment and provide for old age. Approximately 3,000 employees in Canada and 50,000 in the United States will benefit from the operation of the plan. Managerial groups of employees are not included but it was announced that such groups would be provided for in another way.

Contributions and Participation.—Under the scheme, an individual account will be created for every participating employee. Employees who have more than one and less than three years of service, whose participation will therefore be limited, may deposit up to 10 per cent of their salary or wages and receive interest from the company.

Employees with three or more years of service will receive the full benefits of the plan. Into their accounts will go money derived from three sources:

1. The employee voluntarily may save up to ten per cent of his salary or wages.

2. If he does save, the company will match his savings on a 50 per cent basis up to a maximum of five per cent of his salary or wages. That is, the company will give him special matching credits up to a maximum of two and a half per cent of his income. It will also pay him interest on both his savings and the matching credits.

3. The company will distribute to employees 25 per cent of all earnings in excess of $3 per share on the common stock. The individual employee's share in this extra compensation will be determined in proportion to his salary or wages. Every eligible employee will receive extra compensation when it is paid, regardless of whether or not he takes part in the savings features of the plan.

It was estimated that the savings features of the plan will cost the company more than $1,000,000 annually, and it was stated that it was not possible to predict the amounts resulting from profit-sharing, since they would be dependent upon company earnings in the future.

Withdrawal of Savings Accounts.—The rules governing the withdrawal of money from employees' accounts are, briefly:

1. An employee may withdraw his own unmatched savings deposits at any time for any purpose.

2. He may also withdraw at any time the savings deposits on which he has received matching credits from the company. But, if he withdraws these deposits for any reason except unemployment or retirement, he forfeits the matching credits on the amount withdrawn.

3. As to extra compensation from profit-sharing, the employee may withdraw one-half at any time for any reason. The other half may not be withdrawn for any reason except unemployment, retirement, or termination of service with the company.

4. In any week during which an employee receives less than 60 per cent of his normal full-time earnings, including any government unemployment benefits or income from outside employment, he may apply for and receive from his account enough to bring his income for that week up to 60 per cent of normal. Such withdrawals involve no forfeiture of matching credits.

5. When an employee retires he receives the entire amount standing to his credit in his account, usually in the form of annuities. Other forms of settlement may be made if the employee and the company agree that they are more suited to his needs.

6. If an employee resigns or is discharged for cause before retirement age, he will receive all his savings and all extra compensation credits, but will forfeit matching credits on his savings. However, if his employment is terminated before retirement because of lack of work or a physical disability, there is no forfeiture and he receives the entire amount in his account. In the event of death before retirement, his entire account is payable to his estate.

This plan is in addition to the company's already comprehensive program of employee welfare activities which include a pension plan, a vacation plan and under the Employees' Benefit Association provisions, a plan for sickness, accident, hospitalization and death benefits.

It was stated that funds arising from the operation of the profit-sharing savings plan would be invested in bonds of the Dominion Government.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1940

Cost of living, prices of staple articles and index numbers

THE movement in prices during the month was slight. The cost per week of a list of certain staple foods, fuel and lighting, and rent, entering into a family budget was down somewhat at the beginning of June from the level of the preceding month due to a fall in the cost of foods. The Dominion Bureau of Statistics weekly index number of wholesale prices also recorded a minor decline during June.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.62 at the beginning of June as compared with $8.76 at the beginning of April. Seventeen items in this list were lower in cost than in the preceding month, four were higher and eight were unchanged. Except for a substantial fall in the cost of butter changes were slight the most important being decreases in bacon, cheese, flour and rolled oats and advances in sirloin steak, lamb and sugar. Comparative figures for the cost of the list at certain other dates are $8.05 at the beginning of June, 1939; $8.56 for June, 1938; $8.52 for June, 1937; $6.67 for March, 1933, the low point in recent years; $11.10 for June, 1930; $10.18 for June, 1922; and $16.92 for June, 1920, the post war peak. Including the cost of fuel and rent with that of foods the total cost was $17.72 at the beginning of June as compared with $17.85 for May; $16.92 for June, 1939; $17.43 for June, 1938; $17.20 for June, 1937; $15.41 for June, 1933, the low point in recent years; $21.44 for June, 1930; $20.58 for June, 1922; and $26.92 for July, 1920, the post war peak. Both fuel and rent were unchanged from the level of the previous month.

The movement of wholesale prices during June, as indicated by the Dominion Bureau of Statistics weekly index number, was again slightly downward. The figures for the week ended June 28 were 81·6 as compared with 81·9 for the week ended June 7 and 83·0 for the week ended May 3. The Vegetable Products group declined during the month from 71·8 in the first week to 70·6 for the week ended June 28 influenced mainly by lower prices for grains, hay and flour. Changes in other groups were fractional, increase being recorded in four and declines in two. Comparative figures for the index on a monthly basis are 73·3 for June, 1939; 80·1 for June, 1938; 84·6 for June, 1937; 63·5 for February, 1933 the low point in recent years; 93·4 for June, 1929; 97·8 for June, 1922; and 164·3 for May, 1920; the post war peak.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of June of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in some of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received, and includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market

(Continued on page 746)

COST PER WEEK (IN TERMS OF THE AVERAGE RETAIL PRICES IN SIXTY-NINE CITIES IN CANADA) OF CERTAIN STAPLE FOODS, FUEL AND LIGHTING, IN THE QUANTITIES STATED, AND RENT ENTERING INTO A FAMILY BUDGET.

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended June 28, 1940, monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 738)

conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of food tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the list of foods entering into the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to popula-

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

tion in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data complied by the Dominion Bureau of Statistics.

Retail Prices

Beef prices in the main moved slightly higher while pork and bacon declined. Sirloin steak averaged 29 cents per pound for June, 28·5 cents for May and 28·4 cents for June, 1939. Fresh pork was down from 23·2 cents in May to 22·8 cents in June while bacon averaged about one cent per pound lower at 29 cents per pound. The price of fresh eggs declined from an average of 26·8 cents per pound in May to 26·5 cents in June. Prices were considerably lower in the prairie provinces than elsewhere in the Dominion. Creamery butter declined nearly 3 cents per pound during the month, decreases being general but the average, 27·6 cents per pound was about 5 cents higher than in June, 1939. The price of cheese averaged 24·5 cents per pound for June, 25·4 cents for May and 21·4 cents for June, 1939. Flour was fractionally lower at 3·5 cents per pound. Onions advanced nearly one and one-half cents per pound to an average of 5·5 cents. The price of granulated sugar increased in the average from 7·1 cents per pound to 7·4 cents. Increases in the price of anthracite coal were reported from several cities and the Dominion average for United States anthracite was up from $15 per ton in May to $15.11 for June.

The following are the prices reported for Welsh coal "cobbles" and "French nut" at the beginning of June, 1940: Halifax $17.75; Charlottetown $17.40; Saint John $16; Quebec $15.50; Three Rivers $16; Sherbrooke $16.75; St. Hyacinthe $15; Thetford Mines $17.50; Montreal $16 and $16.50; Ottawa $18; Kingston $17; Belleville $16.50; Peterborough $17.50; Oshawa $16.50 and $15.50; Toronto $15 and $15.50; St. Catharines $15.75; Hamilton $15.50 and $15; Galt $16.50; St. Thomas $16.50; Sudbury $18.50; Cobalt $21; Timmins $19.75; Port Arthur $18; Fort William $18; Winnipeg $20.50.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables which appear quarterly give the official and certain other index numbers of the cost of living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries.

The following notes afford information as to recent changes in prices in several of these countries. Since these monthly notes are all compiled from British and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

In most of the continental European countries some measure of control over prices and distribution has been put in force with consequent effect upon prices. In some of these countries the publication of price data has been suspended and in the case of Germany direct information will henceforth be unobtainable although information contained in the official publications of neutral countries and in the press will be noted.

Great Britain and Northern Ireland

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930 = 100, was 133·7 for May as compared to 132·2 for April, an increase of 1·1 per cent for the month. The index of food and tobacco prices increased 1·9 per cent to 128·1 during the month while the index for industrial materials and manufactures increased 0·7 per cent to 136·4. As compared to the figure for the corresponding month of 1939 the all commodities index number for May showed an increase of 36·7 per cent.

COST OF LIVING.—The Ministry of Labour index number on the base July, 1914 = 100, was 181 at the beginning of June as compared to 180 at the beginning of May, an increase of 0·6 per cent for the month. The index of food prices decreased 0·6 per cent to 158 during the month, the decrease being due to declines in the price of milk and cheese. The index of clothing prices rose 1·8 per cent to 285 while that for fuel and lighting materials rose 1·9 per cent to 212. The indexes for rent and sundries were unchanged at 164 and 210 respectively. As compared with the corresponding figure for 1939 the cost of living index number for June 1, 1940, showed an increase of 18·3 per cent.

India

WHOLESALE PRICES.—The index number of the Labour Office Government of Bombay, on the base July, 1914 = 100, was 124 for February, as compared to 128 for January, a decrease of 3·1 per cent for the month. The index of food prices decreased from 124 to 121 or 2·4 per cent while that for non-foods decreased from 130 to 124 or 4·6 per cent.

COST OF LIVING.—The official index number of the working class cost of living at Bombay, on the base July, 1933, to June, 1934 = 100, was 110 for March as compared to 112 for February, a decrease of 1·8 per cent. Food prices declined 2·4 per cent to 121 while sundries dropped 1·0 per cent to 97. The indexes of fuel and lighting materials, rent and clothing were unchanged at 101, 100 and 94 respectively.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics on the base 1926 = 100, was 78·4 for May as compared with 78·6 for April a decline of 0·3 per cent for the month. Of the ten groups which make up this index only one, housefurnishing goods which was up 0·1 per cent, showed an increase, four groups were unchanged, and five groups recorded decreases. The only change of more than half of one per cent was in the farm products group which decreased 2·2 per cent during the month. The all commodities index number for May, 1940, was 2·9 per cent higher than the corresponding index in 1939.

COST OF LIVING.—The index of the United States Bureau of Labour Statistics which is now published on the base 1935-1939 = 100, was 99·9 on March 15, 1940, as compared to 99·6 on December 15, 1939. During the quarter the index of food prices rose 0·7 per cent to 95·6, that for clothing rose 1·9 per cent to 102·2, that for fuel and lighting materials rose 0·7 per cent to 100·6 and that for rent rose 1·9 per cent to 104·6. The index of furniture prices declined 1·8 per cent to 100·9 and that for sundries declined 0·1 per cent to 100·8. The index for all items for March 15, 1940, was 0·8 per cent higher than the corresponding figure for last year.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Manitoba Court of King's Bench holds former Members of Local Units of One Big Union not qualified to Sue Central Council

On the trial of preliminary issues ordered by the Manitoba Court of Appeal on May 19, 1937, as to the right of the plaintiffs, originally Sykes and Moore, members of local units of the One Big Union, to bring an action, pending since 1933 which arose from an internal quarrel in the Winnipeg Central Labour Council of the Union, Mr. Justice Dysart of the Court of King's Bench gave judgment for the defendants with costs on April 23, 1940.

The action was for (1) a declaration that the property under the control of the Winnipeg Central Labour Council was the property of the plaintiffs; (2) an accounting and inquiry together with refund of moneys alleged to have been improperly paid out; (3) receivership and winding-up of the Winnipeg Central Labour Council; (4) distribution of the properties in question "among such members as are entitled thereto". The defendants are five persons who are sued as individuals and as representatives of all other members of the Winnipeg Central Labour Council for whom they are authorized to act. The general question before the Court was the qualifications of the plaintiffs to begin or continue the action. Their right must be founded on membership in the One Big Union in the Winnipeg district.

The One Big Union is a voluntary, unincorporated and unregistered labour organization of "wage workers" divided into (1) local units; (2) regional Central Labour Councils; and (3) a General Executive Board. If membership falls below seven a unit ceases to exist but members may on presenting evidence of good standing transfer to another unit. The plaintiff, Sykes, had been a member of the Building Trades Unit of Winnipeg for some years prior to 1933 when it went out of existence for want of the minimum number of members. He transferred to the General Workers Unit, though his right to membership was challenged by the Council and the Board and while he was a member of that unit instituted this action. While the action was still pending that unit ceased to exist. He has not since been a member of any unit of the One Big Union. Crisp succeeded Moore as plaintiff and as representative of the class can have no greater qualifications than Moore had. No attempt was made to prove Moore's right to sue in a representative capacity. As for his personal capacity, there was no evidence to show that Crisp was or had been while a plaintiff a member in good standing in any unit in affiliation with the Winnipeg Central Labour Council. He therefore had no qualification based on membership to bring the action.

The Court found that one of the plaintiffs was not shown to have been a member at any time and the other, although a member when the action was commenced in 1933, ceased to be so when in 1936 the unit to which he belonged no longer existed. Neither was qualified to maintain or prosecute the action.

As regards the assets of the Central Labour Council, the Court held that should the Council be dissolved the assets would go to the units since the members of the Council are merely delegates of their units. No one but the units could sue for them. No member could sue the Council; his remedy would be to compel his unit to sue. If the assets were distributed now it would have to be to the existing units and no benefit would be derived by persons who were formerly members of some unit whether that unit is still affiliated or not. Neither plaintiff was, at the date of this trial, a member of any unit composing the Winnipeg Central Labour Council. As the represented plaintiffs stand or fall by their representatives they also were without status to maintain the action. *Sykes v. McCallum* (1940) 2 Western Weekly Reports 229.

New Brunswick Supreme Court declares employee's injuries due to accident but appeal to Supreme Court of Canada allowed

On February 13 the Appeal Division of the New Brunswick Supreme Court unanimously allowed the appeal of a woman against the decision of the Workmen's Compensation Board that an injury which she sustained in December, 1938, while working at an embossing machine for the Irving Oil Company at St. John was not caused by accident but by disease. The New Brunswick Workmen's Compensation Act permits an appeal to the Supreme Court from any decision of the Board on a question of jurisdiction or law. In this case the question was whether the injury was caused by an accident within the meaning of the Act. The respondent company claimed that the injury should be classified as an industrial disease and such disease was not compensatable under the Act. The Board had agreed with the respondent.

The appellant swore that the first night after she had operated the machine she noticed a sore spot in the middle of her back which, however, did not seem to get any worse and from time to time she continued to operate

the machine. An operation performed on July 25 showed thickening of the fibrous tissue of the region which condition the doctor stated could only result from injury.

Reference was made to English cases distinguishing between an accident and a disease and the New Brunswick Court held that since over-exertion on the part of the appellant caused tearing of the ligaments this was an accident, not a disease.

Following this judgment, the Workmen's Compensation Board applied for leave to appeal to the Supreme Court of Canada and leave was granted by the New Brunswick Court on February 23 on condition that the Board first pay to the claimant $300 to cover costs and expenses of her counsel before the Supreme Court of Canada. Chief Justice Baxter dissented from this judgment on the ground that the question was one of fact and the House of Lords had said that sprains or strains are "accidents". He deprecated an appeal on a question of fact involving a sum of not more than $200 or $300. *Re Theed* (1940) 3 Dominion Law Reports 35.

Nova Scotia Supreme Court refuses to reverse Workmen's Compensation Board decision on fact

While expressing the opinion that they would have arrived at a different decision as to the facts, the Workmen's Compensation Board having decided that the accident did not arise out of employment, the Supreme Court of Nova Scotia on May 4 unanimously dismissed the appeal of the widow of an automobile mechanic from the Board's decision disallowing her claim for compensation for the death of her husband. The latter was killed while being driven by the agent of his employer to the scene of work he was required to do, a distance of less than half a mile.

At the time of the accident which resulted from a collision with another automobile there was a cow in the truck and two employees in the cab. The deceased rode on the mudguard.

The Workmen's Compensation Act provides that when a workman is killed or seriously and permanently disabled by accident arising out of and in the course of employment, compensation shall be paid even when the accident is attributable solely to his own serious and wilful misconduct. Whether an injury arises out of or in the course of an employment is stated by the Act to be a question of fact and such questions are subject to the decision of the Board, appeal from its decisions being allowed only on questions of law.

The facts as found by the Board were that the deceased took an improper means of travel and it could not be concluded that he rode on the mudguard to protect his masters' property. The Board's decision was further based on the fact that the Motor Vehicle Act forbids persons to ride on any portion of a vehicle not designed or intended for the use of passengers when the vehicle is in motion except in the case of employees engaged in the necessary discharge of a duty.

While remarking that he would not have held that what the deceased did was so reckless and unnecessary as to take him outside the sphere of his employment, Mr. Justice Graham, with whom other members of the Court agreed, held that the Court had no jurisdiction since the question was not one of law. *Re Amiro* (1940) 2 Dominion Law Reports 766.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME XL] AUGUST, 1940 [NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of July showed further important improvement, according to the Dominion Bureau of Statistics, which tabulated returns from 12,159 firms (each employing ordinarily a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 1,220,791 workers, or 36,508 more than they had employed at June 1. The index (based upon the average for the calendar year 1926 as 100), stood at 124·7, compared with 120·9 in the preceding month, and 115·8 at July 1 of last summer, when a smaller advance had been made. The latest index was the same as that for July 1, 1929, and was otherwise the highest for that date in the twenty years for which data are available. The general increase at July 1, 1940, exceeded the average gain between June and July in the experience of the last nineteen years; accordingly, the seasonally-adjusted index also rose, standing at 122·3, compared with 120·9 at June 1.

At July 1 in the period since 1926, the crude indexes have been as follows: 1939, 115·8; 1938, 113·5; 1937, 119·1; 1936, 104·6; 1935, 99·5; 1934, 101·0; 1933, 84·5; 1932, 88·7; 1931, 103·8; 1930, 118·9; 1929, 124·7; 1928, 117·7 and 1927, 109·7.

Unemployment in Trade Unions.—At the beginning of July, 1940, the unemployment percentage registered by local trade unions throughout Canada was 7·6, in contrast with percentages of 7·9 at the beginning of June and 11·6 at the beginning of July, 1939. The percentage for July was based on the returns compiled by the Department from 1,973 labour organizations including a membership of 258,369 persons.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in June, 1940, from that of the previous month, but a gain over June last year, these computations being based on the average daily placements effected during the periods under review. All industrial divisions, except farming, manufacturing and transportation, recorded declines from May, while substantial gains in manufacturing and services, although offset in part by a marked loss in construction and maintenance, and smaller reductions in other groups, chiefly accounted for the gain over June a year ago. Vacancies in June, 1940, numbered 39,078, applications 67,188, and placements in regular and casual employment 36,482.

Prices.—In retail prices the cost per week of a list of certain staple foods, fuel and lighting, and rent entering into a family budget was $17.84 at the beginning of July as compared with $17.72 for June. The increase was due mainly to an advance in the cost of foods. Comparative figures for certain earlier dates are $16.93 for July, 1939; $17.45 for July, 1938; $17.24 for July, 1937; $15.41 for June, 1933, the low point in recent years; and $21.26 for July, 1930. In wholesale prices the Dominion Bureau of Statistics weekly index number based upon prices in 1926 as 100 changed little during July and was 82·0 for the week ended July 26 as compared with 81·6 for that ended June 28 and 81·9 for that ended June 7. Comparative figures for certain dates on a monthly basis are 81·6 for June; 72·6 for July, 1939; 78·6 for July, 1938; 87·6 for July, 1937; 63·5 for February, 1933, the low point in recent years; and 97·2 for July, 1929.

Business Statistics.—The latest statistics available reflecting industrial conditions in Canada are given in the table on page 754. The index of the physical volume of business at 141·3 for June was only slightly higher than in May but was about 17 per cent higher than in June, 1939. Considerable change occurred, however, in June as compared with May in several of the principal groups. The index of mineral production rose about 13 per cent while that for manufacturing declined about 5 per cent. In the former group most of the factors were higher except those indicating the production of coal and asbestos. In manufacturing considerably lower volume was indicated for foodstuffs, tobacco, and textiles

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended July 26, 1940.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending July 27, 1940, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending July 13, June 15, and May 18, 1940; July 16, June 17 and May 20, 1939.

(7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

(9) Excluding gold.

(10) Now based on 202 municipalities instead of 58 as formerly.

while forestry operations, the production of iron and steel, and automobiles recorded advances after adjustment for seasonal variation. The other principal groups, construction, output of electric power, and distribution were higher. In the latter, trade employment and exports recorded increases while carloadings and imports were lower. All of the above mentioned principal groups recorded substantial advances in the month under review as compared with June, 1939. Information available for July shows employment, and gross earnings of the Canadian National and the Canadian Pacific Railways at higher levels both as compared with the preceding month and with July, 1939. The number of cars of revenue freight, the value of construction contracts awarded, and the amount of sugar manufactured were somewhat lower than in June but substantially greater than in July, 1939.

Strikes and Lockouts.—The number of strikes and lockouts recorded for July was 15, involving 7,191 workers and resulting in time loss of 18,612 man working days, as compared with 14 disputes during June, involving 7,154 workers and causing 38,937 days' time loss. Most of the time loss during July was due to a strike of salmon fishermen on the British Columbia coast, a strike of rubber factory workers at Guelph, Ont., and to seven strikes of coal miners in Nova Scotia. These disputes also accounted for the majority of the workers involved. During June a strike of textile factory workers at Drummondville had involved 2,000 workers in a time loss of 30,000 days while eleven strikes of coal miners in Nova Scotia had caused approximately 8,000 days' time loss.

In July, 1939, there were 10 disputes on record, involving 4,420 workers and causing a time loss of 12,445 man working days. Three-quarters of the workers involved and time loss incurred during that month were due to three strikes of coal miners in Nova Scotia.

Of the fifteen disputes in July, 1940, fourteen were recorded as terminated during the month. Two resulted in favour of the employers and five in favour of the workers involved. Compromise settlements were reached in two cases and in five cases the results were indefinite. One dispute, involving approximately thirteen workers, was recorded as unterminated at the end of the month.

These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the past month Boards of Conciliation and Investigation presented their reports to the Minister of Labour in connection with four disputes. Seven applications for Boards were received and three Boards were established.

Particulars of proceedings under the Industrial Disputes Investigation Act and the texts of the four Board reports will be found in the section commencing on page 762.

National Registration

In the July issue of the Labour Gazette (pp. 629-30) reference was made to the establishment of the Department of National War Services and the charging of that department with the duty of carrying out one of the objects of the National Resources Mobilization Act, namely that of a national registration.

The National Registration took place on August 19, 20 and 21. As stated in the House of Commons by Hon. J. G. Gardiner, Minister of the Department of National War Services, the registrars in each constituency (the geographical basis on which the registration was carried out) will classify the cards of all single men into age groups 19 to 45 and will forward these to the district registrar who will direct the tabulation and indexing of these cards thereby making available in his office a complete record of all single men classified into age groups.

The military authorities will indicate the number of men it is proposed to train within a year in Canada, and the Department of National Defence will advise the Department of National War Services of the number it wishes to call up for training at any one time.

As soon as possible after it is ascertained what year classes will have to be called to meet the first demand of the Department of National Defence, a proclamation will be issued, warning all persons within such classes, commencing with the 21 year old class, that they will be called for service within a certain designated time. Mr. Gardiner stated that this will be done in order to give them an opportunity to arrange their own affairs before having to report. Mr. Gardiner also declared that every single person—male—who is medically fit and between the ages of 21 and 45 may be compelled to take military training within one year, however he stated that it is possible that the requirements of the Department of National Defence would be satisfied by the calling up of single men from 21-35 and that it might not be necessary to go beyond this age group during the first year. The Minister intimated that there would

likely be eight calls within a year and that the age classes would be called up in consecutive order.

Employers are required to furnish their district Registration Board with a list of all single male employees between the ages of 21 and 45.

Any industry is entitled to submit a plan to the District Registrar for the calling up for military training, within the stipulated period of one year, of its single male employees. The plan so submitted must provide for the training of all their employees within the year but can be adjusted by the industries in such a way as to enable all to be trained within the year in a manner which will interfere in the least possible way with the conduct of the business of the industry. The men subject to call from any industry shall be divided into equal groups so that the same number of men will come up for training on each call. The District Registration Board will approve or reject plans submitted.

To facilitate the smooth operation of seasonal industries, the Department of National War Services will submit to the Board in each Military District, a list of the main seasonal industries within the jurisdiction of such Board, and the periods during which it is inadvisable to call men for training from such industries, and it shall be the duty of the Board to so adjust the call of men within its jurisdiction as to interfere as little as possible with the conduct of such seasonal industry.

It has also been provided that all employers of labour will be required, under penalty, to place the employee back in his job at the conclusion of his period of training or into a job the equivalent to the one held prior to the training period.

Penalties for undue price increases under War Exchange Tax

Under the War Exchange Tax which is 10 per cent on all imports (other than those under the British preferential tariff) the Wartime Prices and Trade Board is given the responsibility of seeing that no person takes advantage of this measure to increase prices unduly.

The Special War Revenue Act, as amended by Parliament, provides for this action by the addition of the following clause, viz., Section 88A (3):

"No person shall take advantage of the tax imposed by this section to increase the price of goods by an amount greater than is justified by any increase in cost properly arising from such tax or to maintain prices at levels higher than are so justified and, where the Wartime Prices and Trade Board reports to the Governor in Council that, in its opinion, any person has so taken advantage, the Governor in Council may, upon the recommendation of the said Board, for such period of time as he may determine, impose upon all or any of the goods produced, sold or dealt in by such person an excise tax at a rate not to exceed ten per cent of the selling price of such goods, remove or reduce customs duties applicable thereto, fix the prices thereof and take or authorize the said Board to take such other measures under the Wartime Prices and Trade Board Regulations as the said Board may recommend; and, for the purpose of investigation and any recommendation by the said Board and for the purpose of preventing any such advantage from being taken by any person, the said Board shall have in respect of any such person and goods the powers conferred on it from time to time by such Regulations as if such goods were necessaries of life as therein defined, and the taking of any such advantage shall be deemed to be an offense against this Act and such Regulations, and the penalties prescribed in such Regulations shall extend and apply to such offense."

Maximum prices of bread and flour fixed by order of Wartime Prices and Trade Board

Pursuant to the authority conferred upon it by virtue of an Order in Council (P.C. 3722) dated August 5, the Wartime Prices and Trade Board on August 6 ordered that the maximum prices of flour and bread would be in the case of bread the prices prevailing on July 23, prior to the imposition of the wheat processing tax, and in the case of flour the prices of that date plus 35 cents a barrel. This action was taken to prevent the exploitation of consumers of bread and flour while the implications of recent legislation are being studied. The order became effective on and after August 7.

In respect of flour, millers were ordered to share with bakers the levy of 70 cents per barrel resulting from the 15 cent tax on wheat milled for domestic consumption.

In making public its first formal price-fixing of a necessary of life, the Board emphasized that it would have preferred to pursue the more logical course of gathering complete information before taking such a step, but that the concerted action of bakers in a western city in increasing bread prices immediately had left the Board with no other alternative. The order of the Board is therefore in the nature of a "standstill" ruling and is to apply throughout Canada until the Board has had an opportunity to inquire fully into the facts and determine more precisely the effects of the wheat processing tax on the milling and baking industries.

Adoption of unemployment insurance by Parliament of Canada

The Unemployment Insurance Act, 1940, was given Royal Assent on August 7, and the scheme now becomes an integral part of Canada's social legislation. The Bill was adopted in both the House of Commons and the Senate with very little amendment, the only change being the exclusion of employment in hospitals and charitable institutions from coverage under the Act. A comprehensive account of its passage through parliamentary committees is given in an article entitled "Unemployment Insurance in Canada," to be found elsewhere in this issue.

Training for war industries in Canadian technical schools

In the July issue of the Labour Gazette (page 680), an announcement was made concerning the inauguration of a project to train production workers for industries engaged in war contract work by using the vocational shops of the Technical Schools. Reports received to the end of July indicate that the project has met with the greatest co-operation from Provincial Governments, local School Boards and employers. Sixty-two schools are in operation with an enrolment of 6,820 trainees. These are distributed by provinces as follows:

	Schools	Trainees
British Columbia	5	260
Alberta	4	521
Saskatchewan	3	101
Manitoba	2	282
Ontario	27	4,131
Quebec	13	1,154
New Brunswick	6	247
Nova Scotia	2	120

The registration by classes has been reported as follows:

Machine shop including bench fitting	2,353
Welding	836
Sheet metal	296
Aircraft manufacturing	1,255
Wood-working	417
Pattern making	260
Foundry work	161
Electrical	276
Motor mechanics	420
Drafting	184
Aero engines	104
Air riggers	35
Instrument makers	22
Women's projects	201

In most of the classes devoted to woodworking, sheet metal and welding, the instruction is designed to train workers for the aircraft manufacturing industry either on metal or wood planes.

In many of the schools groups of men are being trained for specific occupations with local employers through arrangements made by the employers with the schools. Steps have been taken to secure the placement in industry of those trained by the project by co-operation between employers, staffs of schools, the Employment Service of Canada, and the special Youth Training Placement Officers.

A very small percentage of the initial enrolment consisted of men in the older age groups who have applied for refresher courses in their former occupations. The length of training given varies from 44 to 48 hours per week with the course lasting from 8 to 12 weeks.

In addition to training for war industries special classes have been provided for members in the technical branches of the armed forces. Over 100 such were enrolled for instruction in diesel engines, electricity, marine engineering, motor mechanics, and machine shop. These classes were started at the request of the local military authorities.

Review of Youth Training in Canada, March, 1940

The review of the Dominion-provincial youth training program for the fiscal year ending March 31, 1940, recently published by the Department of Labour, indicates that during that period 49,845 young people were given training. Of these, about 20,000 were in physical training courses, over 13,000 were in rural classes and nearly 16,000 were in projects designed to train them for wage earning employment. There were 7,379 placed in employment during the fiscal year. This includes a certain number who finished their training in March, 1939, but were not placed in employment until subsequent months of 1940. On the other hand, this total does not include an unknown number who, after the completion of their training, either found wage earning employment through their own efforts or became gainfully employed on their own behalf.

Among the new projects put into operation during the fiscal year was that of training for air mechanics. The co-operation of the provinces in starting classes to train young men in the ground trades for aircraft work was sought in April, 1939. Classes were established in all four western provinces, Ontario and New Brunswick, with training given for wireless operators, aero engine fitters, mechanical transport workers, air frame mechanics (wood and metal), electricians. All trainees for these classes were selected from young men with Grade 11 or 12 education, after medical examination and the instruction given followed the syllabi drawn up by the Royal Canadian Air Force who loaned necessary equipment. Close co-operation was maintained with the R.C.A.F. in the conduct of these classes

and following the outbreak of war the number of trainees was materially increased. All the trainees who have completed this course have enlisted as mechanics in the R.C.A.F.

As already indicated, greater emphasis was placed on aircraft mechanic classes and on physical training centres.

Following the outbreak of war, careful consideration was given to the projects which should be carried on, so that the program might best assist Canada's war effort. Certain adaptations of projects were made to meet the greater demand for technicians, not only in industry, but in the armed forces and to make sure that industrial production would not be held up by a lack of skilled workers.

Annual conventions of labour organizations

Three labour organizations are scheduled to hold their annual conventions during September.

The Trades and Labour Congress of Canada will hold its fifty-sixth annual convention in Vancouver, B.C., beginning September 23. Announcing the meeting, the "Convention Call" declares: "The determination of the totalitarian states to suppress by brute force the liberties and freedom which are only possible in a democracy calls for united action against the aggressor nations. The solemn pledges given at our last year's Convention to support to the full Canada's war efforts have been faithfully carried out and every opportunity sought whereby Labour could make its greatest contribution to the common cause.

"On the 'Home Front' progress has been made in both the Federal and Provincial legislative fields and vigilance constantly exercised to prevent wartime needs being exploited for the purpose of unnecessarily breaking down conditions that have been secured through long years of struggle and sacrifice.

"It cannot be foretold what new problems may face us by the time the Convention meets and upon the delegates assembled will rest the responsibility of not only reviewing the happenings of the past year but also of deciding policies that will govern the conduct of the Congress during next year."

The tenth convention of the All-Canadian Congress of Labour will be held in Toronto, Ontario, commencing Monday, September 9.

According to the "Convention Notice", one of the most important items on the agenda of the convention will be "the extension of the scope of the Congress for the purpose of embracing other large groups of organized workers, and establishing a broader basis for the unification of organized Labour in Canada. A constitution will be proposed for consideration by the delegates giving effect to the new basis of organization."

The Confederation of Catholic Workers, Inc., will convene for its nineteenth annual meeting on September 8-11 at Victoriaville, Quebec. Delegates will study various labour and social measures to be submitted to public authorities, particular attention being given to war industries and the training of industrial personnel.

The convention will be preceded during the month of August by the annual meetings of affiliated bodies.

Summaries of the convention proceedings of these three labour organizations will be given in subsequent issues of the LABOUR GAZETTE.

Statistics of Relief Recipients for June

The total of all classes of persons on urban and agricultural relief in Canada in June of this year was 546,000, according to preliminary figures from the registration of all direct relief cases, carried out for the Department of Labour by the provinces and municipalities in June. This total for June, 1940, compared with the same month of 1939, showed a decrease of 34·9 per cent, while compared with May, 1940, the reduction was 17·3 per cent. Both urban and agricultural relief showed decreases from a year ago.

Unemployed but fully employable persons on relief in June this year numbered 120,000, a decrease of 17·6 per cent from the revised May total. The figure for June this year showed a decrease of 19·2 per cent from June a year ago, and a decrease of 13·2 per cent from June, 1938.

A total of 460,000 persons were receiving non-agricultural relief in June, a decrease of 16·4 per cent from the corrected figure for the previous month. This category includes all totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a decrease of 17·5 per cent from the figure for June, 1939, and a decrease of 11·7 per cent from the figure for June two years ago.

Following improved crop conditions in 1939 in the Prairie Provinces, the Dominion total on agricultural relief continued to show a major decline from the year before. A total of 17,500 farmers who, together with their dependents, accounted for a farm population of 86,000, were reported as receiving agricultural relief for subsistence in June. The Dominion total on agricultural relief in June decreased by 22 per cent from the revised May figure; this total was 69·5 per cent lower than June, 1939, and 76·4 per cent less than in June, 1938. Saskatchewan figures for June showed decreases of 76·3 per cent and 82 per cent from June, 1939, and from June,

1938, respectively: the Saskatchewan total of 57,000 persons on agricultural relief represented 66·3 per cent of the Dominion total in June this year.

Acceleration in awarding of war contracts in Canada

During the first three months of its existence—from April 9 to July 9—the Department of Munitions and Supply awarded more contracts than were let during the preceding nine months by the two predecessor purchasing bodies, according to an announcement made on July 26 by Hon. C. D. Howe.

From July 14, 1939, to March 31, 1940, the Defence Purchasing Board and the War Supply Board placed a total of 11,170 contracts, whilst during the last three months the Department of Munitions and Supply contracts totalled 12,336. The number of contracts awarded during the first quarter of 1940 averaged approximately 1,900 per month, while the number in the second quarter exceeded more than 4,000 per month. During the month of May contracts were awarded to the average of 170 daily.

Contracts placed by the Department during the last three months amount to approximately $65,800,000. This figure does not include the commitments made for new plant construction or extensions to plant facilities amounting in all to approximately $50,000,000. Many of these commitments were on behalf of the United Kingdom for whom the contracts placed for war materials at the end of June amounted to $54,000,000

Aid pledged by President of American Federation of Labor

Approximately 700 delegates who attended the 27th regular convention of the Brotherhood of Maintenance-of-Way Employees at Quebec (July 15-22) heard Mr. William Green, president of the American Federation of Labor, declare that that organization favours all aid to Great Britain "short of war."

As reported by the Canadian Press the president of the American Federation of Labor stated in part:

"If any dictator attacks the North American continent, be it Canada or the United States, 'we declare it part of our philosophy . . . that we will stand together to fight'.

"We have established democracy here. We are living in peace. In fact, nobody can find the line which divides Canada and the United States and we are determined to preserve liberty and fraternity on this continent even if it means the giving of our lives."

Other prominent leaders to address the convention were Sir Edward Beatty, president of the Canadian Pacific Railway; Mr. Tom Moore, president of the Trades and Labour Congress of Canada; and Mr. A. J. Hills, of Montreal, representing Mr. S. J. Hungerford, president of the Canadian National Railways.

New powers for control of employment in Great Britain

During the debate on the new Unemployment Insurance Bill in Great Britain, the Minister of Labour, Mr. Bevin, mentioned new powers which he was going to take by Regulation. These powers make certain changes in the principles on which the Employment Exchanges have hitherto operated, and entail the temporary breaking of many trade union agreements. The Minister of Labour's own statement on the matter is as follows:

> This House carried a Bill imposing a duty on me to carry out certain orders directing people to employment. While I am averse to introducing anything of a penal character in association with any of our social services, I would point out that we are placed in a difficulty when a person is convicted of not carrying out an order, and we have then to continue paying him unemployment benefit. I propose to remedy that by limiting any right of receiving unemployment benefit on conviction by a court of summary jurisdiction. The man will have the right of appeal, however, to the court of referees. The benefit which will be lost will not exceed six weeks. . . .
>
> The other change proposed is in regard to a person following his occupation in his own district, who is offered a job at the standard rate although he is receiving a rate above the standard . . . The House has imposed on me powers to send people to work on work of national importance. Therefore I propose to take this power—that if I can offer a man a job at the normal trade union rate, notwithstanding the fact that he may have a higher rate on the job he left, I shall be entitled to put him on work of national importance in conformity with the Orders passed by the House the other day.

Under this Regulation a worker will no longer be able to claim that a situation offered him by the Exchange is not suitable because its rates or conditions are not so good as those of his usual employment. He can now be ordered to accept a job and, if he refuses, he is liable to conviction in a court of summary jurisdiction, resulting in the disallowance of as much as six weeks' unemployment insurance benefit. He has the right of appeal, but only after he has been already convicted.

Secondly the Regulation provides that the local rate for the job must prevail. This means that a London man sent to the provinces will have to take the provincial rate. This provision cuts directly across many national agreements.

National Arbitration Tribunal established in Great Britain

Under the Defence Regulations, an order effective July 25, was made by the Minister of Labour and National Service in Great Britain establishing a National Arbitration Tribunal to which trade disputes reported to the Minister and not otherwise settled will be referred.

The order, which is entitled the "Conditions of Employment and National Arbitration Order" which was promulgated after consultation with the National Joint Advisory Council representative of the British Employers' Confederation and the Trades Union Congress, provides for the settlement of trade disputes, the prevention of strikes and lockouts, the observance of recognized terms and conditions of employment and the recording of departures from trade practices.

The order provides that any trade dispute existing or feared may be reported to the Minister of Labour by or on behalf of either party to the dispute. The procedure accordingly does not operate until a dispute is reported.

The Minister is required in the first instance to refer the dispute for settlement by any suitable machinery set up by organizations representative of employers and workers. If, however, there is a failure to reach a settlement or if a settlement is unduly delayed the Minister may refer the matter to the National Arbitration Tribunal.

Where no such suitable machinery exists the Minister is required to take any other expedient steps to promote a voluntary settlement. Such steps would include conciliation or voluntary submission to arbitration under a standing arrangement or under an arrangement specially made to deal with a particular dispute.

Where this procedure has not resulted in a prompt settlement the Minister is required to refer the dispute for settlement to the tribunal. The reference must be made by the Minister within twenty-one days of the date on which the dispute was reported unless in his opinion the special circumstances of the case make it necessary or desirable to postpone such a reference.

Where practicable the National Arbitration Tribunal is required to make its award within fourteen days from the date of reference. Any settlement of a reported dispute, whether by agreement or award, is binding on the employers and workers concerned, and the terms of the settlement become an implied term of the contract between the employers and workers concerned.

The order also requires the observance by all employers of terms and conditions of employment not less favourable than "recognized terms and conditions" which are defined as "terms and conditions of employment which have been settled by machinery of negotiation or arbitration to which the parties are organizations of employers and trade unions representative respectively of substantial proportions of the employers and workers" engaged in the trade or industry in the district concerned.

The order outlines procedure under which memoranda recording particulars of trade practices and departures therefrom may be made by employers, employers' organizations and trade unions, and duly authorized officers of the Ministry of Labour and National Service and deposited at a local office of the Ministry, where the memoranda may be consulted by those interested.

The National Arbitration Tribunal consists of five persons. Three will be appointed members, of whom one will be chairman. The other two members will be selected for each sitting of the tribunal from panels of employers' and workers' representatives constituted after consultation with the British Employers' Confederation and the Trades Union Congress.

Increased unemployment insurance benefits in Great Britain

Provisions for increases in unemployment insurance benefits featured a new measure given third reading in the British House of Commons on July 10.

Under the terms of the Bill as introduced by the Minister of Labour, non-manual workers up to a level of £420 a year, instead of up to £250 a year as at present, are brought into the scheme and benefits under the general and agricultural schemes are increased. Contributions are also to be increased. In addition to this, under the new Bill the continuity rule is to be altered, and benefit will be paid if a worker is unemployed at least two consecutive days out of six, instead of at least three as at present.

Under the General Scheme contributions are to be increased by 1d. a week from workers, employers and the State. Instead of 17 shillings benefit a week, a man will get 20 shillings; and instead of 15 shillings a woman will get 18 shillings. Men between 18 and 20 will get 16 shillings benefit instead of 14 shillings and women between 18 and 20 will get 14 shillings in place of 12 shillings.

Under the Agricultural Scheme contributions are to be increased by ½d. a week. Men will get 18 shillings benefit a week, instead of 15 shillings and women 15 shillings instead of 13 shillings. Men between 18 and 20 will

get 15 shillings instead of 13 shillings and women 12 shillings instead of 10 shillings. The limit of benefit under the Agricultural Scheme for a man with a family is raised from 35 shillings to 41 shillings.

According to the provisions of the Bill the increased benefits were to come into force from August 1, and the increased contributions were to be payable from August 5.

The non-manual workers are to pay 10d. a week from September 2. They will be able to draw unemployment assistance only 12 months after the passing of the Bill. They have first to acquire 30 weeks' contribution qualification, on which they become eligible for 180 days' insurance benefit.

The additional contributions are estimated to amount to about £9½ million a year. As unemployment is decreasing, the Unemployment Insurance Fund is expected to benefit considerably. Benefits are being increased, but at the same time the fund itself is being built up by increased contributions in preparation for an expected post-war slump.

New Workmen's Compensation Bill in Great Britain

A new Workmen's Compensation Bill was formally introduced in the British House of Commons on July 11. It proposes to give supplementary allowances on a rather more generous scale than was the case in the previous Bill, which was withdrawn because of the great dissatisfaction shown in the debate.

The new Bill provides that in cases of total incapacity a supplementary allowance of 5 shillings a week shall be paid to any injured person entitled to workmen's compensation, whether man or woman. Under the previous Bill this allowance was payable only to married men. A married workman is to be entitled to supplementary allowances of 4 shillings a week for the first two children and 3 shillings a week for every other child under 15.

Compensation and the new allowances together must not exceed seven-eighths of the injured person's average weekly earnings before the accident. The allowances will be reduced proportionately in cases of partial incapacity.

A new provision is that supplementary allowances may be paid in respect of an illegitimate child (born not later than nine months after the accident for which compensation is due), a stepchild, and an adopted child. The provisions of the former Bill were to have operated from July 1. Benefits under the new Bill will not become payable until August 19.

Progress report of U.S. National Advisory Commission

In a progress report divided into seven sections, each part contributed by a commission member, the United States National Advisory Commission reported to the President on July 16.

The report covers all phases of the extensive preparedness program being conducted in the United States. Of particular interest to labour is the report of the Division of Labour Supply.

The Division of Labour Supply has formulated plans for the training of skilled workers in industry, 30,000 to 40,000 enrollees being already in active training. Vocational schools are being utilized, training being made available to workers on W.P.A. and N.Y.A. rolls and others interested in securing such courses, particularly those who feel the need for refresher training to retrieve their earlier skill.

The combined facilities of the N.Y.A., C.C.C., and Office of Education are being co-ordinated to assure the maximum use of existing facilities and agencies of the Government. All training is in anticipation of meeting such demands for labour as may arise in connection with the defence program. The first and major consideration, the report declares, is to provide employment to those who are employable and now without jobs. The unemployed, in the opinion of this Division, constitute the greatest labour resource which can be used most expeditiously in this connection.

The Division reports that up to the present there have been no specific requests for skilled labour made to the Defence Commission and that thus far the needs of private industry for skilled and other labour are being met.

The Division has organized a labour advisory board consisting of representatives of the American Federation of Labour and the Congress of Industrial Organizations, together with the Railroad Brotherhoods. It meets each week with Mr. Sidney Hillman, Chief of the Division of Labour Supply, and has pledged complete co-operation of its combined membership to the national defence program.

Through the intervention of the Labour Supply Division acting with the Conciliation Service of the United States Department of Labour, several serious production stoppages of work have been averted in a large automobile plant, in Pacific coast shipping, in shipbuilding on the Gulf coast, in the copper industry in Utah, and in the aluminum industry.

7050—2½

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

BOARDS of Conciliation and Investigation submitted their reports to the Minister of Labour during the past month in respect of disputes affecting: (1) The Canadian Car and Foundry Company, Ltd., and Canadian Vickers, Ltd., and certain employees in their Aeronautical Divisions; (2) Acadia Coal Company, Ltd., and its coal miners; (3) Old Sydney Collieries, Ltd., and its coal miners; and (4) Algoma Steel Corporation, Ltd., and three groups of its employees, members respectively of (*a*) Algoma Steel Workers' Union, (*b*) Brotherhood of Locomotive Firemen and Enginemen and Brotherhood of Railroad Trainmen, and (*c*) Lodge 485, International Association of Machinists. The texts of these four reports are given in the pages following.

Applications Received

Seven applications for the establishment of Boards of Conciliation and Investigation were received in the Department of Labour recently, as follows:—

(1) From employees of J. L. Morton and Company, Ltd., at Winnipeg, Man., members of Local 90, International Glove Workers' Union. From 55 to 57 employees are stated to be directly affected by the dispute, which arises out of the request of the union for an agreement with the company and for increased wages for the employees.

(2) From 330 employees of the Northern Rubber Company, at Guelph, Ontario, engaged in the manufacture of rubber footwear and being members of Rubber Workers' Federal Union No. 22081, American Federation of Labour. The dispute arose on the expiration of a working agreement, the company proposing a reduction in base rates in its various departments, while the employees demanded wage increases. At the end of a regular seasonal shut-down of two weeks, the company served an ultimatum on the employees that the plant would not be re-opened as scheduled on July 15 unless they agreed to the reduced rates of pay. The employees then applied to the Dominion Department of Labour for the establishment of a Conciliation Board, but action thereon was withheld pending the result of mediation which had been undertaken by the Ontario Labour Department. The plant remained idle until July 19, when work was resumed on the old basis, with the understanding that the provincial authorities would supervise negotiations on all points in dispute.

(3) From 250 employees of Collingwood Shipyards, Ltd., being members of Local 343, International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers; Local 632, International Association of Machinists; and Local 559, International Brotherhood of Blacksmiths, Dropforgers and Helpers. The dispute relates to a proposed agreement covering increased wages, shorter hours, and certain changes in working conditions, submitted to the company jointly by the three local unions.

(4) From 162 employees of the Chromium Mining and Smelting Corporation, Ltd., being members of Federal Labour Union No. 22200, American Federation of Labour. The employees request higher rates of pay and certain changes in working conditions.

(5) From employees of the Canadian Broadcasting Corporation, being members of the Association of Technical Employees. The dispute arises out of the dismissal of an employee.

(6) From 255 employees of Smith Transport, Ltd., Toronto, Ontario, being members of the Truck Drivers' Local Union No. 670, International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America. Refusal of the company to enter into an agreement with the union relative to working conditions, hours of labour and wages is stated to be the cause of the dispute.

(7) From 79 machinists, moulders, shipjoiners and electricians in the employ of the Victoria Machinery Depot Co., Ltd., at Victoria, B.C. The dispute relates to increased wages and changed working conditions requested by the Victoria and District Metal Trades Council on behalf of these crafts.

Boards Established

A Board of Conciliation and Investigation was established by the Minister of Labour on July 17 to deal with differences between the John Inglis Company, Ltd., and its boilermakers, iron shipbuilders, welders, machine hands and helpers, members of Local 637, International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers of America (LABOUR GAZETTE, June, 1940, p. 533). The Board is composed as follows:— His Honour Judge G. F. Mahon, of Windsor, Ontario, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members; Mr. Fred J. Neale, of Toronto, Ontario, member nominated by the company; and Mr. Edgar William Sinfield, also of Toronto, member nominated by the men.

On July 15 the Minister established a Board to enquire into disputes involving the Canadian Pacific Railway Company and the Canadian National Railways, on the one hand, and their

freight handlers on the Montreal Wharf, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on the other hand. Two applications had been received in this case, one from the employees of each company (Labour Gazette, July, 1940, p. 635). The chairman of the Board is His Honour Judge J. J. Coughlin, of Windsor, Ontario, who was appointed by the Minister in the absence of a joint recommendation from the other two members. The member nominated by the companies is Mr. Frederick T. Collins, K.C., of Montreal, and the employees' nominee on the Board is Mr. J. L. Cohen, K.C., of Toronto.

A dispute between Canadian Vickers, Ltd., Montreal, and the boilermakers, welders and boilermakers' helpers, employed in its boiler shop in Montreal, concerning which an application was received last month (Labour Gazette, July, 1940, p. 635), was referred to a Board on July 24. The members of the Board nominated by the company and employees, respectively, are Messrs. D. A. Paterson, of Montreal, and John McClelland, of Valois, P.Q. These two members will confer looking to a joint recommendation for the chairmanship.

Agreements

In the May issue of the Labour Gazette, p. 426, the unanimous report of a Board which dealt with a dispute between various steamship companies and their longshoremen at the Port of Montreal was printed in full. The companies were represented by the Shipping Federation of Canada, and the employees by Local 375, International Longshoremen's Association. The Board's recommendations respecting wages, hours and working conditions have been accepted by the parties concerned, and an agreement has been signed which stipulates that the wage increase provided shall be paid as a war bonus, in accordance with the Board's recommendations. The agreement is summarized elsewhere in this issue.

The department has also been advised that a satisfactory settlement has been reached between the Canadian National Railways and the Canadian Brotherhood of Railway Employees in regard to the disputes involving (1) sleeping car porters operating from Winnipeg, and (2) sleeping car conductors and porters in Ontario and Quebec. These disputes had been dealt with by a Board of Conciliation and Investigation, the report of which appeared in the May, 1940, issue of the Labour Gazette, p. 417.

Report of Board in Disputes between the Canadian Car and Foundry Company, Ltd., and Canadian Vickers, Ltd., and Employees in their Aeronautical Divisions

A unanimous report was received on July 15 from the Board of Conciliation and Investigation which dealt with differences between the Canadian Car and Foundry Co., Ltd., and Canadian Vickers, Ltd., on the one hand, and certain employees in their aeronautical divisions, being members of Lodge No. 712, International Association of Machinists, on the other hand.

In the case involving the Canadian Car and Foundry Co., Ltd., and its employees, an agreement was reached which disposed of all matters in dispute.

Agreement was reached between Canadian Vickers, Ltd., and its employees on all points save that of wages, and on this subject the Board submits recommendations.

The text of the Board's report follows:

Report of Board

Re Industrial Disputes Investigation Act and re differences between the Canadian Car & Foundry Company, Limited, and Canadian Vickers, Limited, on the one hand, and certain employees in their aeronautical divisions, on the other hand, being members of Lodge No. 712, International Association of Machinists.

To the Honourable Norman A. McLarty, K.C., M.P.,
Minister of Labour,
Ottawa.

Sir,—The Board of Conciliation and Investigation established in the above matter has the honour to report that it convened in Montreal on the 26th day of June, 1940, and, in accordance with suggestions in your letter of the 19th June, 1940, dealt separately with the cases of the two companies concerned. This report is, therefore, divided into two parts, namely: Part 1 respecting the Canadian Car & Foundry Company, Limited, and Part 2 with respect to Canadian Vickers, Limited.

PART I

The parties concerned appeared before the Board at the Court House, Montreal, on the 2nd, 3rd and 5th days of July, 1940. A written brief was submitted on behalf of the employees. This brief was discussed by representatives of the company and, at an early stage in the proceedings, it became evident that the differences between the parties were not great and were of a nature which merited further negotiations between them, with a view to bringing about an amicable settlement.

Representatives of both the employees and the company readily agreed to undertake such negotiations, and conferred together after the sittings of the Board on July 3. These negotiations were continued on July 5 in the presence of the Board and, as a result, an agreement was reached which was subsequently approved by the employees at a meeting called for the purpose of considering such agreement. On July 6, 1940, this agreement was formally signed by representatives of both parties. An original copy of this agreement, marked as Schedule "A" and identified by the signature of the members of the Board, is affixed to and forms part of this report.

The members of the Board, in reporting this happy result, take this occasion to commend the representatives of the employees for the careful and thorough presentation of their arguments, and to commend, as well, the equally careful and thorough statement of the company's position and attitude by its representatives. The Board is pleased, also, to acknowledge the spirit of moderation, fairness and conciliation which animated all representatives of both parties and which made this agreement possible.

PART II

The parties concerned appeared before the Board at the Court House, Montreal, on the 2nd, 4th and 8th days of July, 1940, and again at the Windsor Hotel, Montreal, on the 10th and 11th days of July, 1940. A written brief was submitted on behalf of the employees and, subsequently, a brief in reply was submitted by the company. The Board endeavoured to secure further negotiation between the parties, with a view to reaching an amicable settlement; but the Company, while prepared to continue discussions with the representatives of the employees respecting working conditions and classifications of the employees, took the position (and the Board believes very sincerely) that it was unable to negotiate on the question of wage increases because of the minimum wage scale attached to its contracts with the Department of Munitions and Supply. Discussions, however, proceeded on the other clauses of the contract requested by the employees from the Company, and representatives of the employees and the Company reached an agreement on all matters referred to in the proposed contract, excepting the question of minimum rates of pay. Annexed to this report and forming part of it, marked Schedule "B" and identified by the signatures of the members of this Board, is a copy of this agreement.

It will be noted from examination of Schedule "B" that Clause 4 (*a*) entitled "Minimum Rates of Pay" is not completed. The Board, after having given consideration to the representations and arguments made by the parties concerned, and after having examined the "Minimum Wage Schedules" as published by the Department of Labour, Canada—effective April 1, 1940—together with the "correction sheet" dated May 20, 1940; and after having examined the minimum rates of pay applicable to comparable classifications set forth in the *Quebec Official Gazette,* dated June 29, 1940, "concerning collective labour agreements relating to the building trades in Montreal district"; and after having given consideration to the minimum rates of pay agreed upon by the Canadian Car & Foundry Company, Limited, with its employees—as set forth in the agreement dated July 6, 1940, (Schedule "A" to this report)—is of opinion and recommends that Clause 4 (*a*) of Schedule "B" be completed to read as follows:—

	Cents Per hour
"Clause 4—Minimum Rates of Pay:	
(*a*) Jig, Tool and Gauge Makers....	80
(*b*) Journeymen	75
(*c*) Production Workers, Class "A"..	60
(*d*) Production Workers, Class "B"..	45
(*e*) Helpers	40
(*f*) Apprentices:	
(I) First Year.....	25
(II) Second Year.....	35
(III) Third Year.....	45
(IV) Fourth Year.....	55
(V) Fifth Year	65

It will be noted, also, that the date on and from which the agreement exhibited as Schedule "B" is to be effective, is not stated in the first paragraph of that document. Having regard to the date appearing in paragraph 4 (*d*) of Schedule "B", the Board is of opinion and recommends that Schedule "B" with Clause 4 (*a*) completed in manner hereinbefore stated, be effective as and from the 1st day of July, 1940.

As in the case of the Canadian Car & Foundry Company, Limited, the Board expresses its appreciation of the capable and thorough manner in which the arguments on behalf of the employees and the company were presented, and of the moderate and conciliatory attitude manifested by all parties concerned. The Board is also indeed grateful to those representing Canadian Car & Foundry Company, Limited, and Canadian Vickers, Limited, and the representatives of their employees for the courtesy and assistance they at all times gave the Board.

Respectfully submitted,

(Signed) M. B. Archibald,
Chairman.

(Signed) D. A. Paterson,
Member.

(Signed) J. A. McClelland,
Member.

Dated at Montreal, P.Q., the 12th day of July, 1940.

Texts of Agreements

Agreement between

CANADIAN CAR AND FOUNDRY COMPANY LIMITED, AERONAUTICAL DIVISION, POINT ST. CHARLES,

and

LOCAL LODGE NO. 712, INTERNATIONAL ASSOCIATION OF MACHINISTS

1. *Parties to this Agreement*

Parties to this Agreement shall be Canadian Car and Foundry Company, Limited, Aeronautical Division, Point St. Charles Works, Montreal, Quebec, hereinafter referred to as The Company, and Local Lodge No. 712 of the International Association of Machinists, hereinafter referred to as the Local Lodge.

2. *Hours of Work*

a. The working day shall be one of nine hours, and the working week shall consist of five and a half working days; the half day shall normally be Saturday in each week.

b. The standard hours of work of a single day shift shall be from 7 a.m. to 12 noon, and from 12.30 p.m. to 4.30 p.m., Monday to Friday inclusive, and from 7 a.m. to 11 a.m. on Saturday.

c. A schedule shall be arranged by the Company to allow employees to return tools to the Tool Crib before the end of each shift.

d. When two shifts are worked the standard hours of work shall be as follows:
First Shift 7 a.m. to 12 noon, and 12.30 p.m. to 4.30 p.m. Monday to Friday inclusive. 7 a.m. to 11 a.m. on Saturday.
Second Shift 7 p.m. to 12 midnight, and 12.30 a.m. to 4.30 a.m. Monday to Friday inclusive. 12.01 a.m. to 4 a.m. on Monday.

e. When three shifts are worked the standard hours of work shall be as follows:
First Shift 7 a.m. to 3 p.m. Monday to Saturday inclusive.
Second Shift 3 p.m. to 11 p.m. Monday to Saturday inclusive.
Third Shift 11 p.m. to 7 a.m. Monday to Friday inclusive.
12.01 a.m. to 7 a.m. on Monday.

f. When three shifts of eight hours each are worked in any twenty-four hour period, a lunch period of twenty minutes shall be allowed on each shift, and shall be paid for.

3. *Overtime*

a. Time worked in excess of the standard hours of work stated in Clauses 2 (*b*), 2 (*d*), and 2 (*e*) shall be considered as overtime.

b. Overtime shall be paid for at the rate of time and one half.

c. Late starting up to one half hour shall not be taken into account in calculating overtime. Any employee starting more than one half hour late shall be required to work the standard number of hours for that shift before his overtime rate becomes effective.

d. Any time worked on the following days shall be paid for at double time; New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day, and all Sundays; except that where the arrangement of working hours in Clause 2 (*d*) or 2 (*e*) requires a night shift to work between 12 Midnight and 7 a.m. on any of the said holidays, such time shall be considered as standard working hours and not as overtime.

e. Any day declared by statute or decree to be observed as one of the above holidays, in the event of any of them falling on Sunday, shall be paid for at the rate of double time, except as provided for in Clause 3 (*d*) in respect of shift work.

4. *Classification of Shop Employees*

a. Foremen, Clerical Employees, Maintenance Department Workers, Watchmen, and Draughtsmen are excluded from this Agreement.

b. Tool, Die and Gauge Makers.
This classification shall include all employees, generally recognized as such, engaged in the machining, fitting and assembly of all Jigs, Fixtures, Tools, Dies and Gauges produced by the Company. They shall also have all the qualifications required of Journeymen, as defined in section (*c*) of this Clause.

c. Journeymen.
A journeyman shall be competent to work directly from drawings and carry out any operation in his craft without direction from others. Journeymen shall include all employees rated as Machinists and Heat Treat Operators.

d. Specialists.
A Specialist is one who has not served a regular Machinist apprenticeship, and is not qualified as an all round journeyman, but who has acquired proficiency in some branch of the trade, and is now doing work recognized as belonging to the Machinist's trade. He shall have not less than four years' experience at his branch of the trade, shall be able to read detail drawings and carry out detail operations without direction from others.

e. Production Worker Class "A".
Class "A" Production workers shall be competent to carry out detail operations after instruction and shall be able to read detail drawings. They shall include Lathe hands, Shaper hands, Milling-machine hands, and Bench hands.

f. Production Worker Class "B".
Class "B" Production workers comprise workmen engaged in repetitive machine, assembly or bench work requiring less training, experience, and skill than that necessary for Class "A" Production workers.

g. Helper.
A Helper shall be an employee whose proficiency or knowledge of tools is insufficient to qualify him as a Production Worker Class "B". Helpers shall under no circumstances do any mechanical work or assume responsibility for such work.

h. Learner.
A Learner shall be an employee who has completed three months employment as a Beginner as defined in Clause 4 (*i*). A Learner shall be so classified for a period of three (3) months from the date of his transfer from the classification of Beginner, and at the end of that time shall either be classified as a Production Worker Class "B", or discharged. The Company may, at its discretion, promote or discharge a Learner at any time prior to the expiration of the said period of three (3) months.

i. Beginner.
A Beginner shall be an employee who has no previous workshop experience in the kind of work on which he is engaged. An employee hired as a Beginner shall be so classified for a period of three (3) months from the date of his employment and at the end of that time shall either be classified as a

Learner or shall be discharged. The Company may, at its discretion, promote or discharge a Beginner at any time prior to the expiration of the said period of three (3) months.

j. The rating of employees in accordance with the foregoing classification shall be done by the Company. In case of disagreement over any rating, the employee concerned shall be given an opportunity to show whether or not he can qualify for the classification which he believes he deserves.

5. *Minimum Rates of Pay*

	Cents Per hour
a. Tool, Die and Gauge Makers.....	80
Journeymen	75
Specialists	70
Class "A" Production Workers.....	60
Class "B" Production Workers.....	45
Helpers, Learners and Labourers..	40
Beginners	35

b. The Company, at its discretion, may pay any employee at a rate of wages higher than the minimum for his classification provided for in Clause 5 (a).

c. The schedule of wages set forth in Clause 5 (*a*) shall be adjusted proportionately to increases or decreases in the cost of living as reported in the table of "Changes in the cost of living in Canada" issued by the Dominion Bureau of Statistics and published monthly in the LABOUR GAZETTE. No adjustment shall be made unless the percentage of change is at least 5 per cent from the published figures for July, 1940, and adjustments for this cause shall not exceed in the aggregate an increase or decrease of 20 per cent from the schedule of wages provided for in Clause 5 (*a*). Adjustment, if any, shall be determined on the first day of the months of December, March, June and September.

6. *Apprentices*

a. From the effective date of this Agreement, Apprentices may be indentured. The number of Apprentices shall not exceed one to each five Journeymen.

b. Apprentices shall be paid according to the following schedule:

	Cents Per hour
First Year	25
Second Year	35
Third Year	45
Fourth Year	55
Fifth Year	65

7. *Payment of Wages*

Payment of wages shall be made during the Company's time.

8. *Deductions from Wages*

Deduction from wages, except those required by law, shall be made only upon authorization signed by the employee.

9. *Disputes*

Disputes governed by this Agreement shall be negotiated by the Company and the Shop Committee after regular working hours.

10. *Seniority*

a. Seniority shall be established after a period of probation of three months and shall be effective from date of employment.

b. Seniority shall be taken into consideration by the Company on all occasions when a lay-off is necessary due to lack of work.

c. The Company shall discuss, with accredited representatives of the Local Lodge who are employees of the Company, any case of injustice or hardship arising from such lay-off.

11. *Recognition*

The Company agrees to bargain with no labour organization other than the Local Lodge in respect to employees employed in the Aeronautical Division, Point St. Charles Works, as long as this Lodge represents a majority of such employees as are covered by this Agreement.

12. *Arbitration*

In the event of an apparent deadlock over the observance of this Agreement, or of the interpretation of its clauses, such dispute shall be submitted to the Minister of Labour in the Dominion Government who may establish the necessary Conciliation Committee upon which Committee both the Local Lodge and Company shall be represented. The decision of such Conciliation Committee shall be binding on both parties to this Agreement.

13. *Renewal and Termination*

a. This Agreement shall become effective on July 1, 1940, and shall remain in full force and effect for a period of one year unless changed by mutual consent of the parties signatory hereto; and thereafter shall remain binding for a further period of one year unless either party hereto shall on or before the first day of June, 1941 have given the other signatory notice in writing of the termination of this Agreement.

b. In the absence of Notice of Termination under similar conditions to those provided for in Clause 12 (*a*), this Agreement shall continue to remain in effect at the end of each year subsequent to the second year.

c. In the event of Notice of Termination being given by either party to this Agreement as provided for in Clause 12 (*a*), negotiations shall be carried on during the period of Notice of Termination with a view to arranging a further Agreement.

14. *Strikes and Lockouts*

During the life of this Agreement, or while negotiations for a further Agreement are in progress, there shall be no strike on the part of the members of the Local Lodge nor any lockout on the part of the Company.

Signed at Montreal, Quebec, on the Sixth Day of July, 1940.

AGREEMENT BETWEEN THE CANADIAN VICKERS, LIMITED, AIRCRAFT DIVISION AND LOCAL LODGE No. 712 OF THE INTERNATIONAL ASSOCIATION OF MACHINISTS.

This Agreement shall be effective as from the day of , 1940, and shall continue from year to year thereafter, subject to thirty days' notice in writing from either party desiring to make a change in any of its provisions.

The purpose of the agreement is to establish and maintain harmonious relations between the management and the employees, to stabilize conditions of employment, and to ensure the smooth and efficient running of the plant without interruption.

Clause 1.—Working Hours:

Regular working hours shall be as follows:
Monday to Friday, inclusive

Day shift.. .. ..{7.30 a.m. to 12 noon.
{1 p.m. to 5 p.m.

Day shift Saturdays.. 7.30 a.m. to 12 noon.
Monday to Thursday, inclusive

Night shift.. .. {7.30 p.m. to 12 noon.
{1 a.m. to 6 a.m.

Night shift Fridays{8 p.m. to 12 p.m.
{1 a.m. to 6 a.m.

Night shift hours will be subject to change by agreement, to suit special circumstances. Also provision should be made to operate three (3) eight-hour shifts if, as and when men are available.

Clause 2.—Overtime:

(*a*) All time worked in excess of regular working hours on any one shift shall be considered as overtime, and shall be paid for at the rate of time and one-half;

(*b*) All work performed on Sundays and Statutory Holidays shall be paid for at the rate of double time. When any Statutory Holiday falls on a Sunday, the day proclaimed by the Government shall be observed; these holidays are specifically as follows: Christmas, New Years, Dominion Day, Labour Day, Good Friday, Victoria Day and Thanksgiving;

(*c*) All shifts, other than the regular day shift, shall receive five cents (5c.) per hour over the regular day rate.

Clause 3.—Classification of Employees:

(*a*) Jig, tool, die and gauge makers shall be all those generally recognized as such engaged in the machining, fitting, assembling and inspection of all jigs, fixtures, tools and dies. They shall have all the qualifications, as defined in Clause 3, paragraph (*b*), as required of journeymen. Due to the fact there are very few of such men at Canadian Vickers, men holding down these jobs will be specifically named;

(*b*) Journeymen: A journeyman shall be competent to work from drawings and carry out any operation in his trade. They shall include:
Pattern makers, tool and die maker, aircraft fitter, machinist, joiner, coppersmith, hammer operator, welder, electrician, painter, erector, sheet metal worker, cable splicer.

(*c*) Production Workers, Class "A": (comprising work people engaged under supervision, in repetitive machine, assembly or benchwork, requiring less training, experience and skill than that necessary to qualify as a journeyman); also, first-class riveters, upholsterers, sandblasters, fabric workers (male) and heat treat operators on automatic furnaces, platers and dopers;

(*d*) Production Workers, Class "B": Shall comprise those workers having less training and experience than is necessary to qualify them for Class "A" classification and second-class riveters;

(*e*) Helper: Shall be those employees whose proficiency or knowledge of tools is insufficient to qualify them for Class "B" Production Workers' Classification;

(*f*) Apprentices: (Indentured, between the ages of 16 and 21 years) may be employed in the proportion of one apprentice to each five journeymen in the following trades: fitters, machinists, and sheet metal workers—First year, second year, third year, fourth year, fifth year.

Clause 4.—Minimum Rates of Pay:

(*a*) Jig, Tool, and Gauge Makers.
Journeymen.
Production Worker, Class "A".
Production Worker, Class "B".
Helpers.

(*b*) It shall be understood that all men regularly in charge of groups of four or more employees, and responsible for the work of such groups, shall be paid a rate of five cents (5c.) per hour over the minimum rate for their classification;

(*c*) Nothing in this agreement shall prevent the Company paying any employees a higher rate of wages, at its discretion;

(*d*) Any man receiving the minimum rate of forty-five cents (45c.) per hour on the date of signing this agreement, shall receive an increase of five cents (5c.) per hour, effective July 1.

Clause 5.

The rating of all employees shall be done by the Company, in collaboration with the Shop Committee. Any employee protesting his classification shall be given an opportunity to demonstrate his qualification for the classification to which he believes he is entitled. This clause is to be given a three months' trial.

Clause 6.—Seniority:

(*a*) Seniority of employees shall be established after sixty days' continuous employment, and shall date from the time of entering the service. When reduction of staff is necessary, senior employees, where possible, shall be given the preference;

(*b*) In case of any hardship or injustice arising out of staff reductions, the Company agrees to discuss such cases with the Shop Committee.

Clause 7.—Recognition:

(*a*) The Company agrees that the Shop Committee of Lodge No. 712 of the I.A. of M., being employees of the Company, shall be the sole bargaining agency in respect to its employees, so long as this Lodge represents a majority of the employees covered by this agreement;

(*b*) No employee shall be discriminated against, nor jeopardized in seniority standing, nor suffer any loss of employment

because of membership in, or activity in, the Union so long as such activities are not carried on during working hours;

(*c*) Nothing in this agreement shall be construed as binding the Company to operate a closed shop.

Clause 8.—Disputes and Grievances:

(*a*) The settlement of all minor disputes or grievances arising out of the application of this agreement, shall be negotiated between the management and the Shop Committee of the Local Lodge, who are employees of the Company, during regular working hours;

(*b*) In the event of a deadlock over the carrying out of the terms of this agreement, or the interpretation of any of its clauses, the matter in question shall be submitted to the Dominion Minister of Labour, who may set up a Conciliation Committee upon which the Company and the Shop Committee shall be represented. The decision of the Conciliation Committee shall be binding upon both parties to this agreement;

(*c*) During the life of this agreement there shall be no stoppage of work due to strikes on the part of the employees, or lockout on the part of the Company.

Report of Board in Dispute between the Acadia Coal Company, Limited, and its Employees

The report of the Board of Conciliation and Investigation in the case of the dispute between the Acadia Coal Company, Limited, and its employees being members of District 26, United Mine Workers of America, was received in the Department of Labour on July 17.

The personnel of the Board which dealt with this dispute was as follows: Honourable Mr. Justice W. H. Harrison, of the Supreme Court of Nova Scotia, chairman; Mr. Lionel A. Forsyth, K.C., of Montreal, P.Q., nominated by the company; and Mr. P. G. Muise, of New Waterford, N.S., nominated by the men.

The report is signed by all three members, Mr. Muise dissenting, however, from the Board's recommendation in regard to the wage scale.

The text of the report follows:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between the Acadia Coal Company, Limited, (Employer); and its employees being members of the U.M.W. of America District No. 26.

To:
The Hon. Norman A. McLarty, K.C.,
Minister of Labour,
Ottawa.

The Board of Conciliation appointed by you and composed of the Honourable Mr. Justice W. H. Harrison, Chairman, Mr. L. A. Forsyth, K.C., nominee of employer, and Mr. P. G. Muise, nominee of employees, beg leave to report to you as follows:

The Board commenced its sittings in Stellarton on Friday, June 28, and, excepting Sunday and Dominion Day, sat continuously up to and including July 3. On the morning of July 3, with a view to becoming familiar with actual operations in a coal mine, the Board as a body, accompanied by Company and Union officials, visited a long wall in actual operation in the McGregor Mine of the Acadia Coal Company at Stellarton.

Briefs were submitted on behalf of both parties and the Board had the advantage of consulting the exhaustive report made upon the Acadia Coal Company by a Royal Commission appointed by the Government of the Province of Nova Scotia. This Commission was headed by the Honourable Mr. Justice W. F. Carroll, of the Supreme Court of Nova Scotia, and made its report to the Government on the 19th day of January, 1939. The Commission's report will be referred to later as the Carroll Commission Report.

The employees were represented by Mr. D. W. Morrison, President, District No. 26, United Mine Workers of America, Alex A. McKay, Secretary-Treasurer, District No. 26, United Mine Workers of America, and Dominic Nearing, Board Member, Sub-district No. 5, United Mine Workers of America, and the company was represented by Mr. Michael Dwyer, President of Acadia Coal Company, Limited, Mr. R. C. McDonald, Assistant

Secretary-Treasurer of Acadia Coal Company, Limited, and Mr. William J. Graham, Superintendent of Acadia Coal Company, Limited.

The Brief on behalf of the employees stated that the principal dispute was on the matter of wages and asked that the wage rates be increased so as to make the wages paid by Acadia Coal Company, Limited, uniform with wages requested from Dominion Coal Company, Limited; that minimum datal rate be $4, and the datal pay from minimum to $5.01 be increased by 25 cents per day; also that a percentage increase be given to all wage earners equivalent to percentage increase in cost of living since August, 1939. Secondly the employees asked that arrears for rent and coal owing by employees to the company be written off and cancelled. (These debts on May 31, 1940, amounted to $62,838.05). In connection with the request for increased wages the Board was asked to make the fullest possible inquiry into any financial aspects now affecting the payment of wages and in this connection to consider whether the management and control of Acadia is so connected with Dominion Steel & Coal Corporation, Limited, and other affiliated companies that the wages of employees are detrimentally affected thereby.

All the above matters were carefully inquired into by the Board. Full information was supplied by the company officials and by representatives of the employees upon all the matters considered. The hearings were conducted with a genuine desire on both sides to give the Board the actual facts bearing on the company's situation and on the other hand the need of the lower paid classes of miners for an increase of their earnings.

It was not considered necessary to call in any accountants to check the company's figures. These were furnished under oath by the Assistant Secretary-Treasurer, Mr. R. C. McDonald, who was most helpful to the Board by his readiness to produce all figures asked for, involving much extra work for himself and his staff.

The Board finds that the earnings of the lower paid datal men employed by this company are inadequate, due to the lack of opportunity to work and to the lower wage scale at the company's collieries as compared with the scale of wages prevailing at other collieries in the Province of Nova Scotia. The Board would therefore unanimously and unhesitatingly recommend that if and when funds are available these rates should be increased.

Respecting the financial position of the company. Capital stock outstanding is $1,900,000 6 per cent Cumulative 1st Preferred stock; $1,000,000 6 per cent Cumulative 2nd Preferred stock, and $1,846,100 common stock. No dividends of any kind have been paid to any of the shareholders since 1931, and the deficit as shown August 1, 1938, when reorganization took place, was $1,831,000, which meant that the equity represented by the common stock was wiped out.

The company's debts at August 1, 1938, amounted to $930,775.60, and these were extinguished on the reorganization as explained in the Carroll Commission Report. The Acadia Coal Company was also put in funds after reorganization to the extent of $362,890.22 of working capital.

The company's accounts since August 1, 1938, show that on their operation for 5 months in 1938 they lost $141,000, including $50,000 for depreciation. In 1939 they lost $132,000, including $120,000 for depreciation. In the only full calendar year of operation, therefore, of which we have evidence, the company actually paid out $12,000 more than the total amount received from sales of coal or otherwise in that year.

The prospects for 1940 are uncertain. While the price of coal has increased, the expense of shipment has increased to an even greater degree, due to the difficulty in securing any ships to transport coal to the St. Lawrence markets, in which 30 per cent of the coal was marketed last year.

It is impossible to calculate results unless a whole calendar year is taken, but down to May 31 this year the company just broke even, that is to say, their actual cash receipts were just equal to their expenditures.

Difficulties of operation in certain workings of the Acadia Coal Company, combined with other factors, have, the Board was told by officials of the company, reduced its effective daily output from approximately 2,000 tons to about 1,600 tons and this reduction has taken place within the last few months. The company contends and the Board agrees that unless the tonnage so lost can be regained it will be a most serious matter both for the company and its employees in the district. Indeed, it is problematical whether operations can continue even for a comparatively short period of time at the present rate without exhaustion of the company's resources and the consequent compulsory cessation of all its operations, or certainly of those which are unprofitable. Such a result would bring about a most serious unemployment situation. The Board feels that this state of affairs calls for grave and serious consideration by all concerned and that neither company, employees nor public bodies interested should fail to give the very best effort possible to its solution.

The representatives of the employees, while making no specific charge in this connection,

requested the Board to investigate the corporate relationship of this company to other companies in the Dominion group, so called, and to determine whether the relationship presently existing is affecting the Acadia Company to its detriment.

The Board finds that the Acadia Coal Company is one of four operating companies owned or controlled by the Nova Scotia Steel & Coal Company, Limited, the functions of the latter having since its reorganization, been confined to those of a holding company. Dealings of Acadia Coal Company with the parent company and with the other affiliated operating companies have been subjected to close scrutiny by the Board, with the result that the Board finds that in no instance has it been shown that the transactions have been effected so as to operate to the disadvantage of the Acadia Company or its employees.

The Nova Scotia Steel & Coal Company, Limited, has now a capital structure consisting of First Mortgage Bonds in a principal amount of $3,775,000, Debentures in a principal amount of $6,917,500, and common shares of a total par value of $3,000,000.

The common shares, save for directors' qualifying shares and the Debentures, are owned entirely by Dominion Steel & Coal Corporation, Limited; the First Mortgage Bonds are a public issue and are widely held.

The Dominion Steel & Coal Corporation, Limited, also holds the entire Common share issue of Dominion Coal Company, Limited, the largest operator of coal mining properties in Nova Scotia. This latter company has outstanding Bond and Preferred Stock issues totalling $12,158,725. It has not been shown, nor does the Board find, that the affiliation or association of Acadia Coal Company with the other companies referred to is of detrimental or prejudicial effect to the Acadia Company.

Inquiry was made as to whether the company's coal is sold to the best advantage. Dominion Coal Company sells all the company's product, except the sales to the local market in Stellarton and district surrounding it, and the suggestion was made that Acadia might suffer by reason of Dominion Coal pushing sales of their own coal to the detriment of Acadia; also that charges of Dominion Steel & Coal Corporation for their services in selling and other services rendered were excessive.

Our inquiry showed that Acadia Company received its full share of the markets where coal was sold by both companies and at fair prices in comparison with prices obtained for Dominion Coal—the price received for Acadia coal never being less and in some cases more than that received for Dominion coal. As regards the local market, Acadia coal brings a higher price than Dominion coal. In 1939 Dominion coal brought an average net price on all sales of $4.13, while Acadia received an average net price on all its sales of $4.44.

As regards the amount charged by Dominion Steel & Coal Corporation for its services, namely, $15,633 per year, your Board finds that for this charge the Acadia Company received the benefit of the sales organization of Dominion Coal Company, including its transportation Department; also the services of their mining, electrical and mechanical experts, and their Purchasing Department, Workmen's Compensation Department, etc. The amount of this charge is less than 4 cents per ton of coal sold, and, as stated by the Carroll Commission, we believe the amount is "much less than would result if Acadia Coal Company attempted to provide itself with a staff competent to carry out these services."

Evidence was also given before the Board that in order to continue the Acadia mine in operation it would be necessary to expend some $215,000 over the next three years for repairs to hoisting engines, recovery of Foord Pit, development of Acadia No. 1 Seam, and other works properly chargeable to operation.

The result of the whole enquiry into the financial situation is that there is no money out of which any increased wages can be paid.

To put the matter shortly, if the shareholders of the Acadia Company were to give the mine to the employees so that they would own everything the mine produced, they would have to pay out as much as the company now pays for administration and sales and there would be no money left to increase wages by One dollar.

Under these circumstances one member of the Board, Mr. Muise, considers that a fund sufficient to pay increased wages to at least the scale recently recommended by the McTague Conciliation Board for the employees of Dominion Coal Company, should be provided by the Province of Nova Scotia and the municipalities concerned foregoing some of their charges against the company, as was done at the time of reorganization in 1938, on the ground that the company is administering part of the public domain of the Province and that the public are, therefore, directly concerned in maintaining this industry and seeing that an adequate wage is paid to those engaged in it.

The majority of the Board consider that the only hope of raising wages in this company is by increasing the output per man. How is this to be done? The answer is by co-operation between the management and the employees with a view to eliminating absenteeism and tie-ups of the mine, matters

largely within the control of the employees, and also by the most careful planning for production and the exercise of every proper economy in administration, matters in the control of the management, and on the part of both employer and employees a really sympathetic consideration of the other fellow's problems and difficulties.

We note with satisfaction that the settled policy of the U.M.W. of America is to avoid and eliminate absenteeism (by which we mean absence from work without good and sufficient cause) and tie-ups of the mine.

Regarding absenteeism it is a direct cause of reduced earnings. This year there has been a notable increase in the demand for the company's coal. Already in the first six months of the year the company has had 144 working days. If this continues, and there is every reason to expect such continuance, providing that operating difficulties previously referred to can be overcome, there will be an opportunity for every man to get 288 working days as against 220 last year. This should mean increased output, increased earnings for the mine workers as well as for the company, and thus make a definite contribution to the upbuilding of the company's resources, out of which, so far as the company is concerned, any increase of wages must come.

Obviously all workers in the mine will be benefited if full output can be reached. But unfortunately, although the opportunity is there to work, an opportunity anxiously awaited during the last few lean years, it is a fact that since the beginning of 1940 absenteeism in the Acadia collieries has increased to an alarming extent. Men who claimed they could not earn a living wage are throwing away the opportunity to earn that wage by absenteeism. More than that, not only do they and their families, wives and children, lose the extra money, but their fellow workers suffer because the company loses money on account of reduced output and thus is prevented from earning the extra money which could be paid out and which we recommend should be paid out in increased wages.

Similarly with tie-ups. A tie-up benefits nobody. The management cannot submit to compulsion applied in this way and the employees lose money directly and indirectly.

It is said that tie-ups occur because the decisions of the management are always against the employees and only by quitting work can grievances be forcibly brought to attention of the management.

There have been instances brought to our attention of small groups of men without authority from their District Board, or even their own Local, agitating for a tie-up of the mine because of some petty grievance and succeeding in causing such a tie-up in defiance of their own Union Constitution and the wishes and directions of their own Union officials. In cases like this we are of the opinion that the District Board should take disciplinary measures and that in the enforcement of such discipline the Union should have the entire co-operation of the company management.

Upon this whole subject the remarks of Judge McArthur, a judge of the County Court for the Cape Breton District, in his report of November, 1939, upon certain disputes in Old Sydney Collieries, are most pertinent and timely. Judge McArthur has been for thirty years in close association with the coal industry and its mines in the Province of Nova Scotia and for many years solicitor for the U.M.W. of America. He therefore speaks with authority. He said in part:

> "The United Mine Workers of America, through its International and District Constitutions, and under its well established policy, stands for the orderly adjustment of wages, disputes and differences through the process of negotiations and conciliation, resorting to the weapon of strike only as a last resort, and then after the most careful consideration has been given to it by both the District Board and the International Executive.
>
> "It also declares, as its unalterable policy, that once a contract is negotiated and entered into, its terms, its conditions, and its procedure for the adjustment of such disputes as may arise during its existence, shall be honoured and observed.
>
> "During the past two years and a half, in the face of agreements to the contrary, and in every case without any authorization from the District Board, there have been two hundred and eleven illegal strikes or stoppages of work in certain sections of the mines of District 26, resulting in the loss of earnings to employees of approximately $400,000; a loss in the production of some 300,000 tons of coal, with a correspondingly enormous loss to the Company.
>
> "The only reason or justification that I have heard advanced in support of these tie-ups, is that it serves as an effective lever to compel the Company to speed up favourable decisions for the men.
>
> "May I suggest that those who advocate this system and remain members of the United Mine Workers of America are not consistent. The advocacy of illegal strikes and tie-ups is contrary to the established policy of the union. Strikes and tie-ups, without the approval of the District Board, are in contravention of the Union Constitution, and from what I have learned during this inquiry, against the wishes and best judgment of more than eighty per cent of the Union's entire membership. It is not only constitutionally illegal, but, in this District, it is clearly the case of a very small minority imposing conditions upon a large majority, conditions clearly inconsistent with every principle of the organization to which they belong.

"Although that vast majority of the miners are anxious and desirous that the Union should function in accordance with the principles of its Constitution and joint contracts, this investigation has disclosed that considerably less than ten per cent of the membership of the respective Locals are primarily responsible for the conditions above referred to. A very large percentage of the membership, for one reason or another, fail to actively interest themselves in its work, with the result that, in some cases at least, Local Unions find themselves in the hands of a group who, for one reason or another, deliberately ignore their officers, the Constitutional principles and mutual agreements of their organization, and regard with no sense of responsibility the resultant loss in earnings occasioned to their fellow workmen. It also appears that in and about some of the collieries an even smaller percentage than ten seems to have conceived the idea that it is their right, without reference to the District Officers, and without giving their Local Union or fellow employees an opportunity to express a considered opinion, to tie up the mine, thus throwing out of employment for one shift or more hundreds of men.

.....

"'Pit action,' as it is sometimes called, and collective bargaining through the avenue of negotiation, cannot both survive side by side. One is an orderly system, the other in the end destructive. One demands that Labour function through the voice of its elected officers and Local Unions, the other ignores and disregards constituted authority.

"Disregard and indifference to the authority of District Officers weakens them in their negotiating efforts on behalf of the Union. Labour men in all countries are noted for their steadfast loyalty one to the other. I urge, in the interests of the Union and its membership, a one hundred per cent loyalty to your elected officers while they hold office.

"It is their duty and responsibility, not only to promote the interests and protect the rights of the membership generally, but also to safeguard the constitution, principles and established policies of the Union. This responsibility may, and at times does, involve the distasteful task of using drastic measures in order to keep the 'family home' in order. Nevertheless, when conditions require it, this duty and responsibility should be fearlessly faced.

"A district Wage Agreement is signed by the District Officers and their signature is a pledge guaranteeing the honourable fulfilment of its terms. In the discharge of those duties, the officers are entitled to and must have the confidence, support and co-operation of the entire membership.

"What is worth having is worth working for, and, as already pointed out, the United Mine Workers of America is a worthwhile organization. In the interests of its membership, in the interests of the industry, as well as of the country, I urge upon the entire membership a more active interest and deeper concern in its work problems. Attend its meetings and give to it your fair contribution. There can come out of any organization only that which its members are prepared to put into it."

Many of these disputes are due to the fact that there has been no contract between the company and its employees since 1935. This, to quote again Judge McArthur's Report on a dispute between Old Sydney Collieries and its employees, "creates a difficult and perhaps even dangerous situation. Neither party being bound by the wages or working conditions of the past may be tempted to substitute arbitrary measures and even forces as an alternative to negotiation in debating wages or working conditions." The great obstacle in the way of a contract has been the disagreement on the matter of wages. Now that this Board, after most careful investigation, has found that there cannot be any increase of wages until the earnings of the company have increased (or until some assistance from outside is given), the majority of the Board (Mr. Muise dissenting) is of the opinion that a contract should be signed embodying the present wage scale. If this recommendation be adopted the Board is unanimously of the opinion that such contract in so far as wages are concerned should be revised so soon as money is available from any source to increase such wages in accordance with the recommendation of this Board.

Furthermore, to put an end to disputes there must be a reference to some independent person or body to whom such dispute between management and employees can be referred.

The Board is in agreement with opinions expressed by all parties appearing before it that provision should be made in the contract for the settlement of disputes by the appointment of an umpire or by some other method upon which the parties can mutually agree, the object being that both parties should be able to refer grievances for settlement to some authority with confidence that a prompt and fair decision can be obtained and the decision should be loyally accepted by both parties.

Also the Board considers there should be a clause dealing with the question of absenteeism with a view to its elimination so far as that is possible.

Subject to the foregoing remarks the Board approves the U.M.W. of America contract of 1937 with Dominion Coal Company as a satisfactory basis for negotiations in the Acadia Coal Company situation.

Your Board would also recommend that, when meetings take place between representatives of employees and the management, verbatim reports of the proceedings should be taken and such minutes read and agreed to before the parties separate. Such minutes would prove very valuable in subsequent discussions and would prevent disputes as to what occurred. An instance of such dispute came before our Board and in the absence of agreed minutes no conclusions whatever could be reached.

Regarding arrears for rent and coal supplied to the miners by the company, your Board has considered the request of the employees for the cancellation of these arrears. From the standpoint of the company the financial position does not justify any sacrifice of assets. From the standpoint of the men owing these debts the burden of debts is a discouragement, and witnesses testified that it was responsible for a certain amount of absenteeism and failure to take advantage of every opportunity to increase production.

The fact is that these debts were incurred over a period of the last six years past, during most of which the number of working days was small and some workers were unable to earn subsistence for themselves and families. These arrears were incurred with the consent of the company, which permitted them in order to assist those who were most needy. It is true that the company's rents are lower than those of private landlords and that the company supplies coal at less than cost. We are of the opinion that it would not be to the disadvantage of the company and that it would be of some real assistance to those owing these debts if the same were cancelled. The loss would be in any event considerable in collecting old arrears, and the fact that no deductions for arrears would be made from the pay envelopes in addition to the substantial deductions already made for hospital dues, union dues, doctors' fees, relief, church contributions and current rent and coal, would be of some help to the men concerned. The Board, therefore, recommends that all arrears owing to the company by employees for rent and for coal up to May 31, 1940, be cancelled and trusts that this recommendation will be accepted by the company as a generous and helpful gesture and that it will be appreciated as such by the men.

All of which is respectfully submitted this 14th day of July, 1940.

(Sgd.) W. H. Harrison,
Chairman.

(Sgd.) L. A. Forsyth,
Member.

(Sgd.) P. G. Muise,
Member.

Report of Board in Dispute between the Old Sydney Collieries, Limited, and its Employees

The report of the Board of Conciliation and Investigation in the case of the dispute between the Old Sydney Collieries, Limited, and its employees being members of District 26, United Mine Workers of America, was received in the Department of Labour on July 17.

The personnel of the Board which dealt with this dispute was as follows: Honourable Mr. Justice W. H. Harrison, of the Supreme Court of Nova Scotia, chairman; Mr. Lionel A. Forsyth, K.C., of Montreal, P.Q., nominated by the company; and Mr. P. G. Muise, of New Waterford, N.S., nominated by the men.

The report is signed by all three members, Mr. Muise dissenting, however, from the Board's recommendation in regard to the wage scale.

The text of the report follows:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between the Old Sydney Collieries, Limited, (Employer); and its employees being members of the U.M.W. of America, District No. 26.

To the Hon. Norman A. McLarty, K.C.,
Minister of Labour,
Ottawa.

The Board of Conciliation appointed by you and composed of the Hon. Mr. Justice W. H. Harrison, Chairman, Mr. L. A. Forsyth, K.C., nominee of employer, and Mr. P. G. Muise, nominee of employees, begs leave to report as follows.

The Board commenced its sittings at Sydney Mines on Friday, July 5, and, excepting Sunday, sat continuously up to and including July 10.

Briefs were submitted on behalf of both parties.

The employees were represented by Mr. D. W. Morrison, President, District No. 26, United Mine Workers of America, Alex A. McKay, Secretary-Treasurer, District No. 26, United Mine Workers of America, and William Carey, Board Member, Sub-district No. 2, United Mine Workers of America, and the company was represented by Mr. Michael Dwyer, President of Old Sydney Collieries, Limited, Mr. R. C. McDonald, Assistant Secretary-Treasurer of Old Sydney Collieries, Limited, and Mr. R. R. Dickson, Superintendent of Old Sydney Collieries, Limited.

The brief on behalf of the employees stated that the principal dispute was on the matter of wages and asked that the wage rates be increased so as to make the wages paid by Old Sydney Collieries, Limited, uniform with wages requested from Dominion Coal Company, Limited; that minimum datal rate be $4, and the datal pay from minimum to $5.01 be increased by 25 cents per day; also that a percentage increase be given to

all wage earners equivalent to percentage increase in cost of living since August, 1939. Secondly the employees asked that arrears for rent and coal owing by employees to the company be written off and cancelled. (These debts on May 31, 1940, amounted to $82,191.47.) In connection with the request for increased wages the Board was asked to make the fullest possible inquiry into any financial aspects now affecting the payment of wages and in this connection to consider whether the management and control of Old Sydney Collieries, Limited, is so connected with Dominion Steel & Coal Corporation, Limited, and other affiliated companies that the wages of employees are detrimentally affected thereby.

All the above matters were carefully inquired into by the Board. Full information was supplied by the company officials and by representatives of the employees upon all the matters considered. The hearings were conducted with a genuine desire on both sides to give the Board the actual facts bearing on the company's situation and on the other hand the need of the lower paid classes of miners for an increase of their earnings.

It was not considered necessary to call in any accountants to check the company's figures. These were furnished under oath by the Assistant Secretary-Treasurer, Mr. R. C. McDonald, who was most helpful to the Board by his readiness to produce all figures asked for, involving much extra work for himself and staff.

The claim was made that the basic adult datal rate paid employees at the collieries of this company, although substantially higher than that received by employees performing similar work at the Acadia Coal Company and at certain other mines in Nova Scotia (Dominion Coal Company operations excluded), and higher than the general common labour rate in Nova Scotia, was insufficient to enable the recipients to provide themselves and their families with the necessities of life. In support of this contention the Board was asked to accept as conclusive proof statistics published by the Department of Labour at Ottawa. While a literal acceptance of the figures furnished might go far to justify the argument put forward, the opinion of the members of the Board was divided as to the propriety of such a literal application in the instance before them, but all agreed that it would be highly desirable if funds were available to increase the datal rates in the lower brackets so that the classifications now receiving these rates might have approximately similar earnings for the same class of work as are available to other mine workers in the same locality.

The Board finds itself also in unanimous accord with the principle approved by the McTague Conciliation Board in its report dated March 31, 1940, in these words:—

> . . . we take the position that it is in the national interest that standards should be raised wherever it can be shown that industry can afford to do so out of profits. In other words, labour is entitled to a fair living wage on advancing standards consistent with the ability of the particular industry to pay.

Respecting the financial position of the company. This company was organized and incorporated in the year 1938. Their balance sheet on August 1, 1938, shows capital stock outstanding of $400,000 common stock. There are no bonds and no preferred stock. No dividends have been paid.

The company is in a favourable position as regards working capital, which on December 31, 1939, amounted to $687,378. This company leases its mines from Nova Scotia Steel & Coal Company, Limited, at a rental of $60,000 per annum, which is less than enough to cover proper depreciation on the property. Old Sydney Collieries, Limited, operates the mines, and all expenditures for rentals and betterments are paid by it and it also pays to the Province the royalties exigible on the coal extracted.

The accounts submitted show a profit for the five months from August 1, 1938, to December 31, 1938, amounting to $16,907, and for the twelve months' period ending December 31, 1939, a profit of $16,646.

The company presented an estimate by their engineers of extraordinary expenditures necessary to keep the mine in operation and for further developments amounting to $119,000 in the year 1940, $165,000 for the year 1941, and $217,000 for the year 1942, or a total of $501,000 in the next three years. Of this amount at least one-half would be properly chargeable to operating expense and not to capital account.

Again the nature of the company's operations is such that no fair test of results can be obtained by taking a broken period of less than one year. While from the year's operations the company showed a profit of $16,646 in the year 1939, Mr. R. C. McDonald, Assistant Secretary-Treasurer, testified that at May 31, 1940, this profit, together with the surplus of $16,907 made in 1938, was more than wiped out, and, while it is hoped that the full year 1940 will show a profit, the fact is that at the present time there is no surplus money from which the increased wages can be ordered.

The Board finds that Old Sydney Collieries is one of four operating companies owned or controlled by Nova Scotia Steel & Coal Company, Limited, the functions of the latter having, since its reorganization, been confined

to those of a holding company. Dealings of Old Sydney Collieries, Limited, with the parent company and with the other affiliated operating companies have been subjected to close scrutiny by the Board, with the result that the Board finds that in no instance has it been shown that the transactions between this company and the affiliated companies have been effected so as to operate to the disadvantage of Old Sydney Collieries, Limited, or its employees.

This company, like Acadia Coal Company, employs the Dominion Coal Company, Limited, as its agent for selling coal, and also receives the services of its mining, electrical and mechanical experts, also of its purchasing department, Workmen's Compensation Department, etc., for all of which services they pay the annual sum of $30,450. This amount is approximately 5 cents per ton of coal sold and we believe is much less than would result if Old Sydney Collieries, Limited, attempted to provide itself with a staff competent to carry out these services.

Although there is no money in the company at the present time to provide a fund out of which increased wages can be provided, one member of the Board, Mr. Muise, considers that a fund sufficient to pay increased wages to at least the scale recommended by the McTague Conciliation Board for the employees of Dominion Coal Company, should be provided by the Province of Nova Scotia and the municipalities concerned foregoing some of their charges against the company, as was done at the time of the reorganization of the Nova Scotia Steel & Coal Company, Limited, in 1938, on the ground that the company is administering part of the public domain of the Province and that the public are, therefore, directly concerned in maintaining this industry and seeing that an adequate wage is paid to those engaged in it.

Upon the evidence presented both by the company and by certain employees the Board considers that there is some reason to hope that the development work now being proceeded with and the expenditures now in contemplation may bring about an improvement in the operating position and an increase in the output, which hope, if realized, can, by co-operation of the management and the employees in the elimination of unnecessary interruptions in production, improve finances so that wage scales, where necessary, can be adjusted.

The necessity of a contract between the company and employees was stressed by several witnesses, notably by the local Union representatives, Messrs. Mann, Carruthers and McLean. They ascribed a very large part of the troubles at the mine to the absence of a contract regulating working conditions. They also agreed, and the company officials did not dissent therefrom, that a provision in the contract for the appointment of an umpire, or some person independent of both the management and employees, would be a great improvement on the present system, where there is no third party to whom disputes can be referred.

The absence of a contract, to quote Judge McArthur's report on a dispute between Old Sydney Collieries, Limited, and its employees, "creates a difficult and perhaps even dangerous situation. Neither party being bound by the wages or working conditions of the past may be tempted to substitute arbitrary measures and even force as an alternative to negotiation in debating wages or working conditions." The great obstacle in the way of a contract has been the disagreement on the matter of wages.

Now that this Board, after most careful investigation, has found that there cannot be any increases of wages until the earnings of the company have increased (or until some assistance from outside is given), the majority of the Board (Mr. Muise dissenting) is of opinion that a contract should be signed embodying the present wage scale. If this recommendation be adopted the Board is unanimously of the opinion that such contract in so far as wages are concerned should be revised so soon as money is available from any source to increase such wages in accordance with the recommendation of this Board.

The Board is in agreement with opinions expressed by all parties appearing before it that provision should be made in the contract for the settlement of disputes by the appointment of an umpire or by some other method upon which the parties can mutually agree, the object being that both parties should be able to refer grievances for settlement to some authority with confidence that a prompt and fair decision can be obtained and the decision should be loyally accepted by both parties.

Also the Board considers there should be a clause dealing with the question of absenteeism with a view to its elimination so far as that is possible.

Subject to the foregoing remarks the Board approves the U.M.W. of America contract of 1937 with Dominion Coal Company as a satisfactory basis for negotiations in the Old Sydney Collieries, Limited, situation.

Your Board would also recommend that, when meetings take place between representatives of employees and the management, verbatim reports of the proceedings should be taken and such matters read and agreed to before the parties separate. Such minutes would prove very valuable in subsequent discussions and would prevent disputes as to what occurred. An instance of such a dispute

came before our Board and in the absence of agreed minutes no conclusion whatever could be reached.

The Board listened with interest to evidence from representatives of the Local Unions at Princess and Florence Collieries who wished to put before the Board their view as to specific matters of concern to them and to their members.

From this evidence, which was given with clarity and candour, the Board concludes that the failure of machine operators in the Florence Mine to cut the bottom coal is a contributing factor to low "tons per man" output, with consequent lowered contract earnings. It is a matter to which the company should give early attention. Failure of the cutters to do their work properly calls for disciplinary action, in which action, it was intimated by the witnesses, the Union officials should and would willingly co-operate.

Regarding arrears for rent and coal supplied to the miners by the company, your Board has considered the request of the employees for the cancellation of these arrears. From the standpoint of the company the financial position does not justify any sacrifice of assets. From the standpoint of the men owing these debts the burden of debts is a discouragement, and witnesses testified that it was responsible for a certain amount of absenteeism and failure to take advantage of every opportunity to increase production.

The fact is that these debts were incurred over a period of the last six years past, during most of which the number of working days was small and some workers were unable to earn subsistence for themselves and families. These arrears were incurred with the consent of the company, which permitted them in order to assist those who were most needy. It is true that the company's rents are lower than those of private landlords and that the company supplies coal at less than cost. We are of the opinion that it would not be to the disadvantage of the company and that it would be of some real assistance to those owing these debts if the same were cancelled. The loss would be in any event considerable in collecting old arrears, and the fact that no deductions for arrears would be made from the pay envelope in addition to the substantial deductions already made for hospital dues, union dues, doctor's fees, relief, church contributions and current rent and coal, would be of some help to the men concerned. The Board, therefore, recommends that all arrears owing to the company by employees for rent and coal up to May 31, 1940, be cancelled and trusts that this recommendation will be accepted by the company as a generous and helpful gesture and that it will be appreciated as such by the men.

At the request of the Honourable the Minister of Labour the Board has investigated the nature and origin of a dispute between certain employees of Princess Colliery No. 1, operated by Old Sydney Collieries, Limited, and the operating Company, as a result of which dispute these employees were idle from June 25 to June 27 inclusive, and all productive operations of the colliery were suspended on Friday, June 28, and Saturday, June 29, on which days hearings of the Board were in progress at Stellarton relative to Acadia Coal Company matters.

The Board heard evidence from employees and company officials actively and indirectly involved in the dispute. As is not unusual in such matters, the version of the witnesses supporting one side or the other in the controversy was conflicting.

The dispute arose with reference to clearing a fall of stone which interfered with the operations of the afternoon shift at No. 3 wall of No. 9 South section of the colliery in question on June 25, 1940.

The working force at this wall consists of 15 men, and it is beyond dispute that, on the afternoon in question, the Deputy whose duty it was to examine and report upon conditions in this section prior to the commencement of shooting and loading operations on this wall had reported the place "all clear" or ready for shooting and loading operations. This report was made notwithstanding the fact that, to the knowledge of the examiner, a fall of stone had occurred, which, unless cleared up, would have seriously interfered with the operation of "cleaning the wall."

The examiner and others concerned were of the opinion that the stone could be cleared in time to permit of the shooting and loading operations and the good faith of the report is not questioned. Unfortunately, subsequent to the visit of the examiner, a further fall took place, with the result that, when the overman and the crew engaged upon the wall arrived on the scene, the efforts of those previously employed on the work of clearing the stone had not succeeded and the wall was not ready for the shooting and loading operations of the afternoon shift.

It should be noted here that the shooters and loaders are contract workers whose wages and earnings are in direct relation to the tonnage of coal produced from their labour.

Both parties to the dispute agree that the nature and location of the fall of stone were such that until it was cleared coal could not be removed and loaded from the wall, and that no more than six men at one time could safely or conveniently work at the fall.

The overman, after examination of the situation, concluded that six men could clear up the fall by 7 or 7.30 p.m., in which event

the wall could be cleaned, which would enable the crew to earn the normal return on their shift. He called upon the crew for three pairs, selected by the custom of the pit, to work at the stone fall.

The overman alleges that these six men refused to do the work unless the whole crew of fifteen men were guaranteed a datal shift, namely, pay for a full shift of eight hours ($3.77) for removing the stone. The version of the overman is supported by that of the underground manager who was called to the scene. The men, on the other hand, claim that they requested that all fifteen men be employed on the stone so that they could "get their shift." They state that they considered that all fifteen working in relays could remove the stone more quickly, thus insuring them sufficient time to clean the wall during their shift.

The men who testified admitted frankly that they did not mention working in relays to the officials.

Whatever form the proposals of the men in fact took, and the Board makes no findings on this point, they were not accepted by the overman nor by the underground manager, and the latter, after a direct request to the men to comply with the overman's orders, informed the men that their refusal to do so left him no alternative but to "knock off" the wall.

The men then left the mine. On the following day certain of the men affected called upon the Manager asking to be paid the datal shift ($3.77) for the shift lost and a similar amount for the shift upon which they were then due to work, arguing that the situation, by analogy with a stoppage of work by an official by reason of a breakdown—a matter of specific prior agreement, entitled them to the remuneration claimed.

The Manager expressed his opinion that the circumstances did not justify such a demand but referred it by telephone to the Superintendent, who said that the men should go to work and discuss their claim with him on the following day. The men on the wall refused to go to work on the 26th of June, and on the following day the entire producing labour force of the mine absented themselves from work, tying up the entire mine. This state of affairs continued for four shifts.

On July 2nd the mine resumed operations. The men from No. 3 wall, accompanied by their Board member and members of the Mine Committee, met and discussed the case with the Superintendent, who refused to allow any compensation to the men affected on the ground that they had improperly refused to obey the orders of the overman and the underground manager.

The Board, having considered the matter, finds it unnecessary to make any finding of fact as to the conflicting versions of the incident, but considers the following observations pertinent:—

1. If the version of the overman and the underground manager be accepted, the attitude of the men in demanding pay for a full datal shift for the entire crew for removing the stone, in addition to payment either at contract rates or for a full datal shift for removing the coal, was entirely unreasonable.

2. If the version of the men be accepted, their proposal was not unreasonable, and it is to be regretted that it was not, which is admitted, explained to the officials at the time and in the mine.

3. In any event, as was stated by the witness Lee, one of the men concerned, the course pursued by the men in refusing to work at the stone as ordered by the overman was improper. The proper course was, undoubtedly, as Lee agreed, to carry on in accordance with the overman's orders and take up the grievance, if any developed in the result, through the usual channels.

4. The tie-up of the mine was inexcusable. Indeed, no excuse was offered and all concerned—officials of the union, as well as those of the men affected who testified—made no attempt to justify it. It should be said, however, that, on the evidence before the Board, no U.M.W. official can be said to have encouraged or sanctioned the tie-up. On the contrary, the evidence discloses that Wm. Carey, the sub-district Board Member, asked the men to go back to work, but in vain.

In the result, this trifling dispute, which, had the overman's request been complied with, might easily have settled itself, and in which only fifteen men were concerned at the outset, finally caused a loss in wages to the workmen of $8,900, and a loss to the company of 3,710 tons of coal, a result which this Board deplores.

Those responsible for this tie-up acted, not to promote, but to defeat the best interests of all concerned if it be conceded, as indeed it must be, that the primary need of this industry, particularly as affecting labour, is that production shall continue with a minimum of interruption when work is available.

We note with satisfaction that the settled policy of the U.M.W. of America is to avoid and eliminate absenteeism (by which we mean absence from work without good and sufficient cause) and tie-ups of the mine.

In connection with the Board's investigation of this most recent interruption it should be stated that other instances of a similar character, although arising from a variety of disputes, were brought to our attention. The Board is of opinion that these practices have

operated to the distinct disadvantage of this company and its employees and that everything possible should be done to prevent their recurrence, that disciplinary measures should be taken by the District Board of the Union and that in the enforcement of such discipline the Union should have the entire co-operation of the Company Management.

Upon this whole subject the remarks of Judge McArthur, a judge of the County Court for the Cape Breton District, in his report of November, 1939, upon certain disputes in Old Sydney Collieries, are most pertinent and timely. Judge McArthur has been for thirty years in close association with the coal industry and its mines in the Province of Nova Scotia and for many years solicitor for the U.M.W. of America. He therefore speaks with authority. He said in part:

"The United Mine Workers of America, through its International and District Constitution, and under its well established policy, stands for the orderly adjustment of wages, disputes and differences through the process of negotiations and conciliation, resorting to the weapon of strike only as a last resort, and then after the most careful consideration has been given to it by both the District Board and the International Executive.

"It also declares, as its unalterable policy, that once a contract is negotiated and entered into, its terms, its conditions, and its procedure for the adjustment of such disputes as may arise during its existence, shall be honoured and observed.

"During the past two years and a half, in the face of agreements to the contrary, and in every case without any authorization from the District Board, there have been two hundred and eleven illegal strikes or stoppages of work in certain sections of the mines of District 26, resulting in the loss of earning to employees of approximately $400,000; a loss in the production of some 300,000 tons of coal, with a correspondingly enormous loss to the Company.

"The only reason or justification that I have heard advanced in support of these tie-ups, is that it serves as an effective lever to compel the Company to speed up favourable decisions for the men.

"May I suggest that those who advocate this system, and remain members of the United Mine Workers of America are not consistent. The advocacy of illegal strikes and tie-ups is contrary to the established policy of the Union. Strikes and tie-ups, without the approval of the District Board, are in contravention of the Union Constitution, and, from what I have learned during this inquiry, against the wishes and best judgment of more than eighty per cent of the Union's entire membership. It is not only constitutionally illegal, but, in this District, it is clearly the case of a very small minority imposing conditions upon a large majority, conditions clearly inconsistent with every principle of the organization to which they belong.

"Although that vast majority of the miners are anxious and desirous that the Union should function in accordance with the principles of its Constitution and joint contracts, this investigation has disclosed, that considerably less than ten per cent of the membership of the respective locals are primarily responsible for the conditions above referred to. A very large percentage of the membership, for one reason or another, fail to actively interest themselves in its work, with the result that, in some cases at least, Local Unions find themselves in the hands of a group who, for one reason or another, deliberately ignore their officers, the Constitutional principles and mutual agreements of their organization, and regard with no sense of responsibility the resultant loss in earnings occasioned to their fellow workmen. It also appears that in and about some of the collieries, an even smaller percentage than ten seems to have conceived the idea that it is their right, without reference to the District Officers, and without giving their Local Union or fellow employees an opportunity to express a considered opinion, to tie up the mine, thus throwing out of employment for one shift or more hundreds of men. . . . . .

. . . . . .

"'Pit action,' as it is sometimes called, and collective bargaining through the avenue of negotiation, cannot both survive side by side. One is an orderly system, the other in the end destructive. One demands that Labour function through the voice of its elected officers and Local Unions, the other ignores and disregards constituted authority.

"Disregard and indifference to the authority of District Officers weakens them in their negotiating efforts on behalf of the Union. Labour men in all countries are noted for their steadfast loyalty one to the other. I urge, in the interests of the Union and its membership, a one hundred per cent loyalty to your elected officers while they hold office.

"It is their duty and responsibility, not only to promote the interests and protect the rights of the membership generally, but also to safeguard the constitution, principles and established policies of the Union. This responsibility may, and at times does, involve the distasteful task of using drastic measures in order to keep the 'family home' in order. Nevertheless, when conditions require it, this duty and responsibility should be fearlessly faced.

"A district Wage Agreement is signed by the District Officers and their signature is a pledge guaranteeing the honourable fulfillment of its terms. In the discharge of those duties, the officers are entitled to and must have the confidence, support and co-operation of the entire membership.

"What is worth having is worth working for, and, as already pointed out, the United Mine Workers of America is a worthwhile organization. In the interests of its membership, in the interests of the industry, as well as of the country, I urge upon the entire membership a more active interest and deeper concern in its work problems. Attend its meetings and give to it your fair contribution. There can come out of any organization only that which its members are prepared to put into it."

All of which is respectively submitted this 14th day of July, 1940.

Report of Board in Dispute between the Algoma Steel Corporation, Ltd., and its Employees

The final report of the Board of Conciliation and Investigation established to deal with differences between the Algoma Steel Corporation, Ltd., and its employees being members of the Algoma Steel Workers' Union was received by the Minister of Labour towards the close of July.

In addition to the steel workers' dispute there had been referred to this Board disputes between the same firm and (1) certain railway employees engaged in switching service, and (2) employees being members of Lodge 485, International Association of Machinists.

The composition of the Board in the steel workers' dispute was as follows: His Honour Judge A. H. Dowler, chairman; Mr. Lynn B. Spencer, K.C., nominated by the company; and Mr. W. F. O'Connor, K.C., nominated by the men. Mr. O'Connor later resigned and Mr. C. L. Beattie was appointed in his stead. When dealing with the two other disputes, however, Mr. Beattie was replaced on the Board by Mr. George Bagwell, the nominee of the railway employees and the machinists.

The Board in its report deals with all three cases, its recommendations concerning the steel workers' dispute being unanimous. In regard to the railway employees' and machinists' disputes the Board's recommendations are also unanimous save in so far as concerns the question of wages, and on this subject Mr. Bagwell submitted a minority report.

The text of the report of the Board and of Mr. Bagwell's minority report follows:

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between "Algoma Steel Corporation, Limited" and its Employees, being members of the "Algoma Steel Workers Union," and its Employees, being members of the "Brotherhood of Locomotive Firemen and Enginemen" and the "Brotherhood of Railroad Trainmen," and its Employees, being members of "Lodge 485, International Association of Machinists."

Honourable Norman McLarty,
Minister of Labour,
Ottawa, Ontario.

Sir,—A Board of Conciliation was established by you on December 19, 1939, to investigate the dispute between the corporation and its employees, being members of the Algoma Steel Workers Union, composed of His Honour A. H. Dowler, chairman, W. F. O'Connor, K.C., for the employees, L. B. Spencer, K.C., for the corporation.

The dispute had to deal with the request by the employees for a general increase of wages of eight and one-half cents per hour and/or proportionate increase on tonnage rates.

This Board held meetings and made an interim report, dated January 15, 1940, which was duly filed. One of the provisions of the report provided that the Board would reconvene after the expiration of the three months, if requested so to do by the employees.

The employees, after the expiration of the three months' period, requested the Board to reconvene and the Board accordingly held meetings at Sault Ste. Marie on May the 20th and 21st, with Mr. Charles Beattie representing the employees in the place of W. F. O'Connor, K.C., who had resigned.

The Board took evidence and received briefs presented by the parties and the Board adjourned to allow the employees to have the powers of the Board enlarged (the company consenting) to include the question of an adjustment of hourly rates for maintenance employees, as well as certain operational adjustments, in addition to the original demand for an increase of eight and one-half cents per hour and/or a proportionate increase on tonnage rates. The request of the employees was granted by The Honourable the Minister of Labour on June 20, 1940.

On May 21, 1940, the employees, being members of the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Railroad Trainmen, made an application for establishment of a Board of Conciliation for revision of wage rates, and the company consenting to the establishment of a Board, the Honourable the Minister referred this dispute to this Board and appointed Mr. George B. Bagwell a member of the Board in substitution for Mr. Charles Beattie, to deal only with this dispute.

On June 25, 1940, the employees, being members of Lodge 485, International Association of Machinists, made an application for establishment of a Board of Conciliation for a proposed agreement covering wages and working conditions, particulars of which are fully set out in the application. The Honourable the Minister referred this dispute to this Board and appointed Mr. George B. Bagwell a member of the Board in substitution for Mr. Charles Beattie, to deal only with this dispute.

The Board held meetings at Sault Ste. Marie on Monday, July 8, to Saturday, July

13, inclusive, when all parties presented briefs, to which were attached voluminous exhibits. These were also supported by the evidence of witnesses. The whole discussion was marked by the utmost goodwill and friendliness.

The Board endeavoured to have the parties, by consultation and discussion, settle their differences, but without success.

The dispute between the Algoma Steel Workers Union and the company can be discussed under three headings.

(*a*) Operational Adjustments.

After hearing the evidence and discussions, the Board are unanimously agreed that operational adjustments should be made in accordance with the Schedule "A" attached to this report. The Board cannot see its way clear to recommend any further operational adjustments.

(*b*) Adjustment of hourly rates for maintenance men.

The rate structure which has heretofore been in effect respecting the maintenance employees is not altogether satisfactory, the representatives of the employees contending that there is too great a spread between the hourly rates paid to the maintenance employees and the remuneration received by the production employees. This rate structure is the outcome of many years under changing managements.

The employees were satisfied to give an undertaking that the production employees would not use any award which this Board might make decreasing the spread between the earnings of the maintenance employees and themselves, as an argument at any time hereafter to assist in securing them, the production employees, any increase in wages.

The Board was satisfied that the maintenance employees should receive some consideration so as to decrease the spread between their earnings and the earnings of the production employees. After considering various methods, the Board unanimously agreed that the method to accomplish this would be by recommending an increase in wages of two cents per hour.

(*c*) A general increase in wages of eight and one-half cents per hour and/or proportionate increases on tonnage rates.

No evidence was submitted to the Board dealing with any increase based on proportionate increases on tonnage rates, and the Board consider that both parties have abandoned that issue. The employees based their claim to this increase on the ability of the company to pay and on the increased cost of living.

The board carefully considered the financial position of the company and came to the conclusion that this did not justify them in recommending any increase in wages. On the other hand, however, the board reached the conclusion that the employees had established that they were entitled to some increase on account of the increased cost of living.

In coming to their conclusions, the Board of course had in mind the important declaration of policy made by the Government of Canada set out in paragraph two of Order in Council 2685 of the 20th of June, 1940, suggesting that any temporary adjustments in remunerations made due to war conditions might well be in the form of bonus payments. However, the Board, after giving due consideration to the provisions in the Order in Council quoted above, following representations made by the representatives of the Algoma Steel Workers' Union that at the present time the employees who received the least remuneration were in need of immediate assistance, decided that in making the following recommendation they should give the benefit of it entirely to those employees who received the least remuneration.

Deciding, therefore, that in the present emergency some relief against the increased cost of living was necessary, so far as those employees were concerned, the Board unanimously recommends that all those employees who upon the date upon which both parties accept this recommendation, are receiving less than one hundred and twenty-five dollars per month, should receive an increase in wages of two cents per hour and those employees who are receiving between one hundred and twenty-five dollars and one hundred and fifty dollars per month, should receive an increase in wages of one cent per hour.

Re: Dispute of the Employees, members of the "Brotherhood of Locomotive Firemen and Enginemen" and the "Brotherhood of Railroad Trainmen."

The transportation employees of the corporation, members of the above unions, ask to be paid standardized railway rates. Their representatives urged in support of their application that standardized railway rates were paid in the yards of the Algoma Central Railway, which adjoin the yards and plant of the

corporation, and that the work performed by the transportation employees was similar to that performed by employees of Algoma Central Railway. The corporation, however, contended that its transportation employees should be considered as its employees and that the policy of its present management had been not to disturb the relationship of wages paid in one department to wages paid in another and that this rate structure was the growth of a number of years.

The corporation further pointed out that its total transportation costs were greater than those of similar competitive industries.

After giving consideration to the argument adduced on behalf of the transportation employees, we can find no justification for interfering with the present rate structure of the corporation and the present policy of the corporation in that respect. We do recommend, however, that the transportation employees be treated as maintenance employees and receive the same increases.

Re: Dispute of the Employees, members of "Lodge 485, International Association of Machinists."

The members of the above lodge are only one of the mechanical trades in the employ of the corporation. Their representative urged that they should be dealt with on a different basis than the other mechanical trades and the other maintenance men. We can find no justification for dealing with this group on any different basis than the other maintenance employees and we, therefore, recommend that they receive the same increase in wages as the other maintenance employees.

In connection with the proposed agreement submitted to the corporation by the above lodge, there is no dispute with reference to clauses 1, 4, 5, 6, 7 and 8. In so far as clause two is concerned regarding overtime, the corporation pay time and one-half for hours worked in excess of eight hours per day. We are of the opinion that this should not be extended.

Clause nine—"after one year's service, one week's holiday with pay." Owing to the policy and financial condition of the company, we find no justification for approving of this request.

Clause three covers wage rates, which we have already dealt with.

The Board has been faced with the instability of conditions generally and in this industry in particular and the possibility of far reaching changes occurring in possibly the immediate future, and as before stated, formed the opinion that some relief should be provided against possible increases in living costs and in so far as it is possible to do so, desire to relieve the apprehension of employees as to the possible adverse effect this might have upon them, and recommend that this might be accomplished by bonuses which should be paid if the increase in the cost of living from the date upon which both parties accept this remuneration shows an increase of five per cent in a period of six months from the date upon which both parties accept this recommendation.

The index number (all items) as published in the Labour Gazette from time to time is to be the guide in deciding whether the increased cost of living has reached five per cent or more. The first revision shall be as at February first, 1941, and shall be based on a comparison with the cost of living as at August first, 1940. Subsequent revision dates shall be on the first of August and the first of February in each year. That the said bonuses shall be revised downward should the cost of living show such a decrease as of any revision date on the same basis as applies to increases, provided, however, that in no instance shall such a downward revision affect the basic wage rate.

Mr. Bagwell, member of the Board, in connection with the dispute between the members of the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Railroad Trainmen and the members of Lodge 485, International Association of Machinists, is in agreement with the other members of the Board on all matters in dispute save and except the question of wages demanded by the members of the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Railroad Trainmen and the members of Lodge 485, International Association of Machinists.

We wish to thank all parties and persons who appeared before us, who did their best to help us and come to the conclusions set out above. We trust that all parties to this proceeding will recognize that their interests are mutual and will accept the recommendations herein. All of which is respectfully submitted.

Dated at Sault Ste. Marie, Ontario, this 13th day of July, 1940.

(Sgd.) A. H. Dowler.
(Sgd.) C. L. Beattie.
(Sgd.) Lynn B. Spencer.

Minority Report

Hon. NORMAN MCLARTY,
Minister of Labour,
Ottawa, Ontario.

DEAR SIR:

In the matter of the Industrial Disputes Investigation Act and of a dispute between "Algoma Steel Corporation, Ltd.", and its Employees, being members of "Brotherhood of Locomotive Firemen and Enginemen" and the "Brotherhood of Railroad Trainmen," and its Employees, being members of "Lodge 485, International Association of Machinists."

Thanks to the courtesy of the Chairman, His Honour Judge A. H. Dowler, and my fellow Board Member, Mr. L. B. Spencer, K.C., I have had the benefit of reading their majority report and recommendations herein.

The facts leading up to the appointment of this Board to deal with the above mentioned disputes and the details as to Board sittings are clearly set out in their majority report and there is no need for me to repeat them.

The decision of the majority of the Board as set out in their report was that they could find no justification for dealing with the transportation employees of the corporation, such as its engineers, firemen, conductors, and brakemen, members of the above unions, so as to interfere with the present rate structure of the corporation and the present policy of the corporation in that respect. In the case of the machinist employees of the corporation, members of the above mentioned "Lodge 485, International Association of Machinists," the majority of the Board found "no justification for dealing with

this group on any different basis than the other maintenance employees." The majority of the Board recommended, however, that in both cases, i.e., in both the case of the transportation employees and the machinists, they should receive the same increase in wages as that recommended for the "maintenance" employees of the corporation, as more fully set out in that portion of their report dealing with this type of employee, and which provides in effect for an increase of 2 cents an hour in the wages of those receiving less than $125 per month and 1 cent an hour in the wages of those employees receiving between $125 and $150 per month. With these findings and recommendations of the majority of the Board I am, after considered thought, unable to agree for the following reasons:—

Re *Dispute of the Employees, members of the "Brotherhood of Locomotive Firemen and Enginemen" and the "Brotherhood of Railroad Trainmen."*

As pointed out in their brief presented to the Board by the employees this dispute relates solely to rates of pay. In all other respects they and the company are in agreement. In effect the men ask that they be paid the standardized railway rates paid by all the railroads for similar work.

A comparison of the wages being paid and the wages asked for is as follows:—

	Present Wages		Proposed Wages	
	Per Day	Per Hour	Per Day	Per Hour
	$	Cts.	$	Cts.
Locomotive Engineers	5 72	71½	6 88	86
Locomotive Firemen	4 68	58½	5 40	67½
Locomotive Conductors	5 56	69½	6 64	83
Locomotive Trainmen	5 16	64½	6 16	77

In support of their application the employees showed that standardized railway rates were being paid in the yards of the Algoma Central Railway, which yards directly adjoin the yards of the Algoma Steel Company and in which yards the type of work performed is similar to that performed in the yards of the steel company with the exception perhaps (as an inspection of the two yards makes clear) that, due to the type of equipment in use, the kind of material loaded and the physical characteristics of the company's yards, the work required of men working in the company's yards is of a more difficult and hazardous nature than that required of men working in the adjacent Algoma Railway yards.

Taking the company's own statement as set out in the brief left with the Board by Mr. Rahilly, General Manager of the company, the company is paying less to its transportation employees than its competitors.

Taking Mr. Rahilly's own figures, the Steel Company of Canada, Limited, pays its engineers 83 cents per hour, its firemen 67½ cents per hour, its conductors 79 cents per hour and its brakemen 73½ cents per hour.

The Dominion Steel and Coal Corporation, Limited, pays its engineers 86 cents per hour, its firemen 66 cents per hour, its conductors 79 cents per hour and its brakemen 66 cents per hour.

It was also brought out that the International Nickel Company at Coppercliff, Ontario, pays its engineers 80 cents per hour, its firemen 74 cents per hour, its conductors 80 cents per hour and its brakemen 74 cents per hour, a rate substantially in excess of that paid by the Algoma Steel Company, Limited, to its transportation employees doing a similar class of work. It may be true that in the yards of the Steel Company of Canada and in the yards of the Dominion Steel and Coal Corporation, Limited, they may be able to use a four-man as compared to a five-man crew, but the five-man crew is made necessary in the Algoma Steel Company, Limited, due to the layout of its yards, and the fact that a five-man crew is accordingly required is no justification for paying them less than is paid by the company's competitors for a similar class of services.

It was also brought out at the hearing that two previous Conciliation Boards appointed between these same parties have recommended that standard rates be put into effect by the corporation.

In 1918 standard rates were put into effect by the corporation and these rates continued in force until November 1, 1920, at which time a new agreement was arrived at which contained a clause providing that—

> "The wage rate of engineers, firemen, conductors, and brakemen in the transportation Department will remain the same as those paid to similar classes employed in the Algoma Central Railway yard at Sault Ste. Marie."

A further Conciliation Board was organized in the fall of 1923 and, under date of

September 6, a majority report was issued recommending that standard rates of pay be paid to the company's transportation employees. In his minority report Mr. F. H. McGuigan, representing the company, stated that while he agreed with his colleagues on the Board regarding the equity, justice and wisdom in maintaining a standard rate of pay for employees in yard service performing the same or similar work, he could not concur with them on the grounds that it would be unjust to increase the burdens of the company under its then financial condition.

Evidence was also adduced before the Board as to increase in the cost of living in the City of Sault Ste. Marie and actual figures were cited to the Board obtained from business men and merchants in the City which indicated that the price of necessities of life, including such items as food, clothing, fuel and rent, had gone up at least ten to fifteen per cent on the average.

The company's answer to the request of its transportation employees for an increase in their wages so as to bring them up to the standard rates is *firstly* that the company is not in a financial position to meet their demands and *secondly* that its wage rates for its transportation employees must be established in relationship to the wage rate paid in other departments in its plant, the Company's policy, it is stated, having been to adjust wages uniformly in all departments. Dealing with the first objection, namely, the company's inability to pay, it is to be noted that this same objection was raised before two Conciliation Boards dealing with this identical question and both Boards decided that the company's ability to pay was not the true test to apply and recommended that standard rates be paid despite the fact that the company was in a much worse financial condition than it is now. In my opinion the financial ability of the Algoma Steel Company, Limited, to pay standard rates should not be considered the determining factor if indeed it should be considered as a factor at all in coming to a conclusion as to whether or not the transportation employees are justified in asking that they be paid the standard rate of pay for the services they perform.

The question of the financial ability of individual enterprises to pay the standard or prevailing rates of pay has been discussed in many arbitration, conciliation and court proceedings.

An excellent brief was submitted by the transportation employees' representative dealing with his question of "ability to pay".

From the many decisions of arbitration boards and court judgments therein cited, the principle emerges clearly defined that the "ability to pay" factor should not be regarded in coming to a conclusion as to what wages should be reasonably paid. The true test is what is the standard or prevailing rate that is being generally paid for similar work under similar conditions, and the "ability to pay" factor should not be considered by a conciliation board or an arbitration board as a factor in recommending an increase in wages merely because the corporation is in a good financial condition and able to pay it, nor for recommending against an increase in wages merely because the payment of the increase might work some hardship upon the company financially speaking.

As was said in the judgment in connection with the dispute between the Broken Hill Proprietary Company, Limited, and Barrier Branch of the Amalgamated Miners Association of Broken Hill with respect to wages, to be found in Volume 3 of the Commonwealth of Australia Arbitration Reports—

> "first of all is an employer who is poor to be ordered to pay as high wages as an employer who is rich".

"Now without laying down a rule absolute and unconditional under all circumstances, I strongly hold the view that unless the circumstances are very exceptional the needy employer under an award should pay at the same rate as a richer rival. It would not otherwise be possible to prevent the sweating of employees, the growth of parasitic enterprises, the spread of industrial unrest which it is the function of this Court to allay. If a man cannot maintain his enterprise without cutting down the wages which are proper to be paid to his employees—at all events, the wages which are essential for their living—it would be better that he should abandon the enterprise."

A recent discussion of the ability to pay factor will be found in the report of the Board set up to investigate a dispute between the Mobile and Ohio Railway Company and its employees. The report of this emergency Board dated December 9, 1933, states—

> ". . . . The carrier naturally rests its original reduction and subsequent refusal to restore wages upon inability to pay. This may be a valid justification in case of a temporary emergency but this is not being recognized as a determining factor in fixing wage rates."

There are numerous other authorities which may be cited, but the principle seems to be too clearly established for argument that with a corporation "ability to pay" should not be the yard stick used in determining whether the rates of pay asked are reasonable and proper, but rather that the proper test is what is the rate of wages being paid for similar work under similar conditions.

While, accordingly, in my opinion the ability-to-pay factor does not enter into this question, it is interesting to note that the last financial statement of the Algoma Steel Corporation, Limited, issued shortly before the Board held its sittings, shows that the Company had an increase in sales of 57·24 per cent, had doubled its operating profits, and had a net increase in net profit, according to its statement on the financial page of the *Globe and Mail* of Toronto, "of more than 300 per cent."

This same authority states that this profit is "equal to $35.44 a share on 22,015 preferred shares as compared with $10.33 a share a year earlier".

It will be seen that the financial position of the Company has improved very materially during the past year, and now would appear to be an opportune time to pass on to its transportation employees, in the form of an increase in wages sufficient to bring them up to the standard rates being paid for similar services, some of the benefits that the Company itself has received as indicated by its statement.

Summing up, in view of the fact that the Algoma Steel Company, Limited, is paying lesser wages to its transportation employees than its competitors, such as the Steel Company of Canada and the Dominion Steel and Coal Corporation, Limited, and is paying less than is paid by the Algoma Central Railway in its adjacent yards for less hazardous work, and taking into consideration the fact that two previous Conciliation Boards have recommended that standardized rates be paid, and having in mind the greatly improved financial position of the Company on the one hand and a decided increase in the cost of living to the man on the other, I am definitely of the opinion that it is only reasonable and just that the transportation employees be paid the standard rate of wages as asked for by them.

Re *Dispute of the employees, members of "Lodge 485 International Association of Machinists."*

In this dispute the representatives of the machinists' union submitted a proposed agreement between the Algoma Steel Corporation and the union covering hours per day, overtime, seniority, shop committees and other questions such as apprenticeship ratio and holidays with pay.

At the Board hearings it appeared that there was an agreement between the parties on all matters other than the rate of wages, the machinists asking for an increase from the 62 cents to 66½ cents per hour presently being paid by the Algoma Steel Corporation, Limited, to its machinists, to 80 cents per hour, being the rate it is alleged is being paid to machinists generally in the province. In support of their application the representatives of the machinists submitted an able brief in which is included a comparison of the rates paid by the Algoma Steel Corporation to those rates paid by other companies and organizations in their district and a further comparison of the rates paid to machinists in the steel industry generally. These figures show, for example, that the Abitibi Power and Paper Company, of Sault Ste. Marie, pays 87 cents to 90 cents per hour to its machinists, the Chromium Mining and Smelting Corporation 70 cents per hour, the Great Lakes Power Company 70 cents per hour, and the Algoma Central Railroad 69½ cents per hour, and that the Dominion Steel and Coal Company, of Sydney, Nova Scotia, pays 69½ cents per hour, and the Steel Company of Canada, at Hamilton, Ontario, 70 to 75 cents per hour. These figures show that the Algoma Steel Corporation, Limited, is paying its machinists considerably lower wages than is paid men in their own city for a similar type of work and below the figure paid by competitors such as the Dominion Steel and Coal Company and the Steel Company of Canada.

The Company's answer to the request of their machinist employees for an increase in their hourly rates to bring them up to the average being paid in Sault Ste. Marie and throughout the Province generally was the same as the answer to the request of their transportation employees for an increase in their hourly rates, namely, the financial inability of the Company to pay the increase and the policy of the Company to adjust wages uniformly in all departments of the Company.

I have already dealt with the question of the Company's "ability to pay" and with its financial position and the remarks I have made in this connection in dealing with the dispute between the transportation employees and the Company apply with equal force to this dispute.

The Company's ability to pay is not the test but rather what is the prevailing rate of wages being paid to machinists in the city of Sault Ste. Marie or in the province generally. There is a good deal of evidence as to machinists being able to command a minimum rate of 80 cents per hour for their services more particularly in connection with aircraft and war industries.

Mr. Riley, representing the Seamen's Union, however, was fairly accurate in my opinion when he stated that the average rates being paid machinists on the whole was 75 cents per hour and this in my opinion would be a reasonable rate for the machinist employees

to accept, having in view the likely continuity of employment and other factors involved.

I cannot attach much importance to the second objection of the Company, namely, that it would be a violation of the Company's policy of adjusting wages uniformly in all departments to grant the machinists the increase they ask for.

If one class of workmen by reason of their special qualifications, acquired through many years of apprentice work at low wages, are able to command a higher rate of wages for their services due to their skill or an increased demand for their specialized services, they have a right to ask for and obtain what their labour is worth as indicated by the prevailing rates being paid by industry generally for their services.

Indeed, it appears to me that failure on the part of the Company to pay them the prevailing rates can have only one result, namely, the leaving by the men of their employment with the Company for employment with other concerns paying the standard rates. To say that one class of employees in a plant cannot have its wage rate raised without at the same time raising the wages of all other classes of employees in the plant does not seem reasonable.

The class asking for the increase may not be receiving the standard rates paid elsewhere for similar services while the rest of the plant may be receiving standard rates of pay. To say that you could not bring up the class receiving less than the standard rates of pay to the same level as the rest of the employees so that the whole plant would be receiving standard rates of pay is not feasible. For these reasons, and for the reasons more particularly set out in my remarks dealing with the dispute between the Company and its transportation employees dealing with the increase in living costs of Sault Ste. Marie, I am of the opinion that the machinists are entitled to an increase in their wage rate to the average figure of 75 cents per hour above mentioned.

All of which is respectfully submitted.

Dated at Toronto, Ontario, this 1st day of August, A.D. 1940.

(Sgd.) G. Bagwell.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1940

THE following table shows the number of disputes, workers involved and time loss for July, 1940, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time lost in man working days
*July, 1940	15	7,191	18,612
*June, 1940	14	7,154	38,937
July, 1939	10	4,420	12,445

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While the number of strikes and lockouts recorded during July was slightly greater than during June, with a slight increase in the number of workers involved, there was a considerable decrease in the time loss in man working days from the figures for June when a strike of textile factory workers at Drummondville, P.Q., caused time loss of 30,000 days. Most of the time loss during July was due to a strike of salmon fishermen on the British Columbia coast, a strike of rubber workers at Guelph, Ont., and seven strikes of coal miners in Nova Scotia. The record does not include four strikes reported in the press on July 31, about which particulars have not been received, but all appear to be of a minor nature. These include coal miners in one mine in Nova Scotia for one shift, truck drivers near Reserve, N.S., and at St. Thomas, Ont., and civic labourers at Picton, Ont. In July, 1939, three-quarters of the time loss was due to three strikes of coal miners in Nova Scotia.

There were no disputes carried over from June but fifteen disputes commenced during July, fourteen of which were terminated during the month. Two resulted in favour of the employers and five in favour of the workers involved. Compromise settlements were reached in two cases and the results of five disputes were recorded as indefinite. At the end of the month, therefore, there was one strike or lockout recorded as in progress, namely: hotel chambermaids, Montreal, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to one such dispute, namely: fur factory workers, Toronto, Ont., October 17, 1939—October 31, 1939.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Salmon Fishermen, British Columbia Coast.—Negotiations commencing during June between the canning companies and the fishermen's representatives did not result in an agreement as to the prices to be paid to fishermen until July 10. Owing to the uncertainty as to the market in Great Britain and the heavy run of sockeye expected the canners proposed prices substantially lower than in 1939, but early in July these were accepted except for the prices of pink salmon for which the fishermen demanded 6 cents and 6½ cents instead of 5 cents and 5½ cents offered. On July 10 agreement was reached at 5½ cents and 6 cents. In the meantime most of the 8,000 fishermen had proceeded to the fishing areas. The delay in fishing, therefore, affected chiefly some 1,500 seine fishermen and some gillnet fishermen on the Fraser River for some days. For some varieties of fish the season had opened on June 20 but it was reported that there was comparatively little loss during June.

Coal Miners, Stellarton, N.S.—Employees in one colliery ceased work on July 17 in support of certain miners demanding that their pay should be made up to the minimum of $3.45 per day, earnings at piece rates being less. Work was resumed on July 22 pending investigation. As a result of conciliation by a representative of the Dominion Department of Labour the claims of the miners were conceded without prejudice.

Coal Miners, Florence, N.S.—Employees in one colliery ceased work on July 23 against the employment of three miners from another colliery among fifteen taken on to replace miners who enlisted, demanding that only local unemployed men should be engaged. It was stated that the three men objected to were skilled miners. As a result of conciliation by the Deputy Minister of Labour for Nova Scotia work was resumed on July 25, the demands of the strikers being withdrawn.

Rubber Factory Workers, Guelph, Ont.—A dispute as to the wage scale and the employment of women and boys in certain positions held up operations in a rubber factory from July 15 to July 18. The factory had been operated under a closed shop agreement with a union chartered by the American Federation of Labor but this had expired on June 30 when the factory was closed for the annual two weeks shutdown. The management had posted a new wage scale for the resumption of work, which the union claimed lowered wages and caused discrimination against experienced men by substituting women and boys. The union requested a wage increase of fifteen per cent. It was reported that the management stated the factory would be closed unless the union accepted the wage scale and the union alleged that this constituted a lockout. The union applied for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The Ontario Department of Labour was dealing with the dispute and it was arranged that work would be resumed under the conditions in effect on June 30 and that the dispute would be dealt with by a board appointed by the Ontario Department of Labour.

Artificial Silk Factory Workers, Drummondville, P.Q.—A number of employees in the night shift in one department of an establishment ceased work on July 5 and while no demands appear to have been made it was indicated that a bonus of $3 per week was sought. Dissatisfaction with the settlement of the strike in the establishment from May 11 to June 12 was also reported. The strikers and sympathizers broke windows in the house of a worker and one man was shot by the occupant. Order was restored by municipal and provincial police. The stoppage of manufacturing held up work also on the day shift of July 6 for some hours. A number of the strikers and some sympathizers were dismissed for their actions.

In the account of the previous strike (commencing on May 11) in the Labour Gazette for June, it was stated that the management had offered increases in wages of ten to twenty-five per cent and that apparently a closed shop union agreement was demanded. Information has since been received from union officials and other sources, that these proposals were not made.

Cotton Factory Workers, Cornwall, Ont.—A number of employees in the weaving department in one mill ceased work in the

afternoon of July 10 against the employment of one man alleged to be in violation of the seniority clause in the agreement. About 500 other employees were indirectly involved as the mill was closed. A delegation of the workers met the Minister of Labour at Ottawa on July 11 and it was arranged with the management that the man in question would start in a junior position in the department. Work was resumed the next morning.

FOUNDRY WORKERS (MOULDERS), RENFREW, ONT.—The moulders in an establishment manufacturing stoves, etc., ceased work on July 10, their proposal for an increase in wages of ten per cent not having been conceded. After negotiations the superintendent referred the matter to the management but the men ceased work before a decision was given. Work was resumed on July 12 when increases in wages averaging eleven per cent were given.

FOUNDRY WORKERS (ROLLING MILL), AMHERST, N.S.—Employees in the rolling mill of an iron and steel manufacturing establishment ceased work on July 15 to secure an increase in wages from 30 cents per hour to 35 cents. This was conceded with time and one-half rates for overtime and double time for Sundays and work was resumed on July 18.

AUTOMOBILE PARTS FACTORY WORKERS, SARNIA, ONT.—Employees in one department of an establishment producing automobile accessories ceased work at noon on July 16 demanding the dismissal of a worker as the result of a personal disagreement with other employees. While this employee was of alien origin there were no allegations of misconduct in this respect. Work was resumed next morning, under new working arrangements. The employment of the man objected to was terminated.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1940*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to July, 1940.				
NONE.				
(b) Strikes and Lockouts commencing during July, 1940.				
FISHING AND TRAPPING—				
Salmon fishermen, British Columbia coast	.....	1,500	10,000	Commenced July 1; for increase in salmon prices; terminated July 10; negotiations; compromise.
MINING, ETC.—				
Coal miners, Glace Bay District, N.S.	5	2,390	2,390	Commenced July 2; against employment of miners of alien enemy origin; terminated July 2; return of workers; indefinite.
Coal miners, Glace Bay, N.S.	1	250	250	Commenced July 3; against employment of miners of alien enemy origin; terminated July 3; return of workers; indefinite.
Coal miners, Glace Bay, N.S.	1	300	300	Commenced July 8; against employment of miners of alien enemy origin; terminated July 8; return of workers; indefinite.
Coal miners, Glace Bay, N.S.	1	150	150	Commenced July 10; against employment of miners of alien enemy origin; terminated July 10; return of workers; indefinite.
Coal miners, Stellarton, N.S.	1	481	1,924	Commenced July 17; for increased wage rates in one section; terminated July 20; return of workers pending investigation; in favour of workers.
Coal miners, Stellarton, N.S.	3	610	610	Commenced July 19; in sympathy with the miners on strike July 17 at Stellarton; terminated July 20; return of workers pending investigation; in favour of workers.
Coal miners, Florence, N.S.	1	700	700	Commenced July 23; against employment of three workers from another mine; terminated July 24; concilation, provincial; in favour of employer.

*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1940*—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
MANUFACTURING—				
Rubber Products—				
Rubber factory workers, Guelph, Ont.	1	315	1,260	Commenced July 15; alleged lockout; dispute as to wage rates in new contract and replacing of men by women and boys; terminated July 18; conciliation, provincial; indefinite.
Textiles, Clothing, etc.—				
Artificial silk factory workers, Drummondville, P.Q.	1	100	100	Commenced July 5; to secure a weekly bonus; terminated July 6; replacement of workers; in favour of employer.
Cotton factory workers, Cornwall, Ont.	1	223	260	Commenced July 10; alleged violation of seniority clause in agreement; terminated July 11; conciliation, federal; compromise.
Metal Products—				
Foundry workers (moulders), Renfrew, Ont.	1	12	24	Commenced July 10; for increased wages; terminated July 11; negotiations; in favour of workers.
Foundry workers (rolling mills), Amherst, N.S.	1	111	333	Commenced July 15; for increased wages; terminated July 17; negotiations; in favour of workers.
Automobile parts factory workers, Sarnia, Ont.	1	21	11	Commenced July 16; against employment of a certain worker; terminated July 16; negotiations; in favour of workers.
SERVICE—				
Business and Personal—				
Hotel chambermaids, Montreal, PQ.	1	28	300	Commenced July 19; for increased wages; unterminated.

* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month bringing down to date that given in the March, 1940, issue in the review of Strikes and Lockouts in Canada and Other Countries, 1939. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain

Legislation setting up an arbitration tribunal for the settlement of disputes is summarized on page 760 of this issue.

The British *Ministry of Labour Gazette* publishes statistics dealing with all strikes and gives some details of the more important ones.

The number of disputes which began during June was 30 and 5 were unterminated at the end of May, making a total of 35 in progress during June. The number of workers involved was 7,300 and the resultant time loss 14,000 man working days.

Of the 30 disputes which began during June, 8 arose out of demands for increased wages and

9 were over other wage questions; 6 were over questions regarding the employment of particular classes or persons; 6 arose out of questions respecting working conditions; and one was over a question of trade union principle. During June final settlements were reached in the case of 30 disputes, of which 7 were settled in favour of workers, 17 in favour of employers and 6 resulted in compromise settlements. In one other dispute work was resumed pending negotiations.

Three thousand coal miners went on strike July 17 in protest against summonses which had been issued against a number of the workers for alleged breach of contract at a Yorkshire colliery. They were persuaded by a union officer to resume work July 20.

France

The statistical year book for the year 1938 issued by the general statistical office of France, and received this year, reports 3,678 strikes for the year 1937, involving 426,587 workers, as compared with 17,091 strikes and 2,422,844 workers involved in the year 1936.

Argentina

A volume on statistics of strikes has recently been published by the National Department of Labour of the government of Argentina. The number of strikes, strikers and time loss since 1919 is as follows:—

	Number of strikes	Number of strikers	Time loss in man working days
1919.....	367	308,967	3,262,705
1920.....	206	134,015	3,693,782
1921.....	86	139,751	976,270
1922.....	116	4,737	150,894
1923.....	93	19,190	895,842
1924.....	77	277,071	1,268,318
1925.....	89	39,142	125,367
1926.....	67	15,880	287,379
1927.....	58	38,236	352,963
1928.....	135	28,109	224,800
1929.....	113	28,271	457,022
1930.....	125	29,331	699,790
1931.....	43	4,622	54,531
1932.....	105	34,562	1,299,061
1933.....	52	3,481	44,779
1934.....	42	25,940	742,256
1935.....	69	52,143	2,642,576
1936.....	109	85,438	1,344,461
1937.....	82	49,993	517,645
1938.....	44	8,871	228,703
1939.....	49	19,718	241,099

United States

Preliminary estimates for May, 1940, which as the Bureau of Labour Statistics points out are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 230 strikes as having begun during the month, which with 115 unterminated at the end of April, made a total of 345 in progress during the month. The number of workers involved in these disputes was approximately 75,000 with a resultant time loss of 650,000 man working days. The comparable figures for the previous month, which have been partially revised but are not final, show that there were 290 strikes in progress involving about 55,000 workers with a resultant time loss of about 450,000 man working days.

A two day stoppage of work in the cloak and suit industry involving between 15,000 and 20,000 workers in the New York City district was amicably settled by the state governor July 13, when it was agreed to refer the questions as to eliminating unfair competition, etc. to an impartial board. There were no demands for changes in wages or hours.

A strike involving, directly and indirectly, 3,000 machinists and blacksmiths at Seattle, Washington, for five weeks was settled through a Department of Labour conciliator in July. An increase of 5 cents per hour for some classes and a vacation with pay for all were conceded.

Mutual Aid Scheme of British Co-operative Societies

The Co-operative Union and Co-operative Wholesale Societies in England and Wales are establishing a Mutual Aid Fund from which to assist those societies suffering damage and loss owing to the war and the prevailing conditions due to hostilities.

The fund which is to be established by the Co-operative Union is to be built up of contributions of one penny per £ of the sales of member societies during 1939, the Co-operative Wholesale Society contributing one penny per £ of their sales to those member societies agreeing to contribute to the scheme.

A circular was sent out during the week of July 6 to all societies in England and Wales asking them to indicate whether they would be prepared to join the Mutual Aid scheme. By the week of July 20 over 300 societies representing a trade in 1939 of £89,851,000 and their contributions to the scheme on the basis of 1d. in the £ of 1939 sales would be £374,381.

UNEMPLOYMENT INSURANCE IN CANADA

Bill Considered by Special Committees of House of Commons and Senate—Review of Evidence Submitted—Amendments—Adoption and Royal Assent

ON July 16, as was indicated in the July issue of the Labour Gazette (pp. 682-6), the resolution preceding the Unemployment Insurance Bill was adopted and the Bill was given first reading in the House of Commons. On July 17, the Prime Minister, Rt. Hon. W. L. Mackenzie King, stated that he had conferred with the members of the government on Mr. Hanson's suggestion that a special committee of the house might be appointed after the second reading of the Bill. The Prime Minister believed that such a special committee might serve a useful purpose.

On Friday, July 19, the Minister of Labour, the Hon. N. A. McLarty, moved the second reading of the bill. Hon. R. B. Hanson, Leader of the Opposition, speaking to the motion, stated the principles which underlie unemployment insurance as follows:

> First there is the fact that insurance benefit is a right established by contributions previously made, and in no sense a form of relief. I do not intend to labour that point because I think it is elementary, fundamental and fairly well-known. The benefits are to be in proportion or relative to the contributions made and at the same time they will entitle a low paid worker to receive a relatively high percentage of his wages. In the second place, weekly insurance benefits are not to be as great as or greater than normal weekly earnings and of course that is fundamental too. They could not possibly go beyond normal weekly wages. The third principle involved which to me is a vital principle, is that the normal standard of living of the wage-earner is to be protected. I think that is highly desirable.

Mr. Hanson recommended that appointments should be made through the Civil Service Commission. Referring to the long list of exceptions from coverage, he concluded:

> A word with regard to the contributory principle. My view is that this is absolutely sound. Any other policy would be suicidal and would not commend itself to the country. I know the Minister may find opposition to that principle in certain quarters. I am sorry to say there are in this country people who think that the state owes them a living. The sooner they get away from that idea the better. I controvert that principle and I have never ceased to controvert it throughout the ten years in which such difficult economic conditions have prevailed. But I do suggest that the state does owe to its citizens the right of opportunity to make a living—perhaps I should limit that to the right to make a living.

Mr. J. R. MacNicol (Davenport) referred to the merit rating provisions which exist in some of the state insurance schemes in the United States as working to the advantage of all concerned. Mr. MacNicol declared:

> The manufacturer was encouraged to organize his plant so that employees laid off would be at a minimum. In other words, under ordinary circumstances he might lay off a number of workers, but if under the merit system he hoped to come under the provisions of the measure he would organize his plant so that workers would not be laid off but be engaged in other departments. In this respect their measure strikes me as one tending to permanency in jobs, and with that feature of the United States Bill I am in complete agreement . . . Briefly, manufacturers in the United States are encouraged to give more continuous employment.

Mr. MacNicol held that the time was a suitable one to enact an unemployment insurance bill, and believed that there should be at least one or two good years during which full wages would be paid and during which employment would be at a peak.

Relation to Relief

Mr. Angus MacInnis (Vancouver East), said the unemployment insurance scheme would serve to take many persons off relief.

> Anyone who has gone to an unemployment relief office and has watched applicants for relief make their applications, . . . will realize the degrading effect of unemployment relief. While this measure will not by any means put an end to the need for unemployment relief, it will take a certain number of people. . . out of the category of relief recipients. When they become unemployed, instead of having to go to the relief office and have all their private affairs investigated, they will go to the unemployment insurance office, present their cards, and certain conditions being met, they will receive their unemployment insurance benefits as a matter of right and not as a matter of charity. That in itself is a great step forward.

Mr. MacInnis hoped that before long some of the excepted occupations might be brought under the Bill.

Importance of National Scheme

Mr. Paul Martin (Essex East), emphasized the necessity for having a national scheme rather than regional schemes, stating that

> . . . the working class move constantly from one province to another, and the difficulty would be greatly enhanced in such an instance particularly when one worker moved from an insured province into an uninsured province. Second, it would be unfair that the tax-payers of an uninsured province should contribute equally with the tax-payers

of an insured province. Third, the producers of an insured province would be saddled with a substantial item of cost which would not be borne by their competitors in the uninsured province.

He added that it was equally important for the system of employment offices to be national in scope.

Mr. A. W. Neill (Comox-Alberni), in expressing his support of the Bill, felt nevertheless that persons in receipt of Old Age Pensions ought not to be disqualified from benefits. He asserted the loggers of British Columbia should be included, as logging was one of the principal industries in B.C., and as conditions in that industry west of the Cascade Mountains were different from those prevailing elsewhere in Canada. Mr. Neill believed that transport by water and domestic service should also come within the Bill.

Following this discussion, the Bill received second reading.

Bill Referred to Special Committee

On Monday, July 22, the Special Committee of the House of Commons on the Unemployment Insurance Bill met for the first time. The members of the Committee were Hon. N. A. McLarty, Chairman, and Messrs. Cardin, Chevrier, Graydon, Hansell, Homuth, Jackman, Jean, MacInnis, Mackenzie (Vancouver Centre), McNiven (Regina City), Picard, Pottier, Reid, Roebuck and Antoine Chasse, Clerk of the Committee.

Explanation by Departmental Officers

Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, was the first witness before the Committee, and said:

> The subject of unemployment insurance is one which has been under constant examination and review in the Department of Labour for a period of upwards of twenty years. The Minister of Labour (Hon. N. A. McLarty) in presenting the resolution to the house on which the present bill is founded referred to a recommendation made in April, 1919, in favour of the establishment of a national system of unemployment insurance, which was made by the Royal Commission on Industrial Relations which had toured the country from coast to coast. This recommendation was unanimously endorsed by a national industrial conference, which assembled in Ottawa in the fall of 1919 and which was attended by 210 leading representatives of industry and labour and representatives of the government as well.
>
> Members of the committee are aware of course, that the principle of a state system of unemployment insurance, a contributory system to be supported by employers, and workers, and assisted by the state, has been approved on more than one occasion by a resolution in the house. I had, myself, the privilege of attending as a witness before a committee of the house in 1928 and 1929 when this subject was under consideration; at that time on motion of Mr. Heaps. It is not necessary, of course, that I should do more than remind the members of the committee of the adoption by parliament of the Employment and Social Insurance Act of 1935 and of its disallowance in 1937 by the Judicial Committee of the Privy Council, as involving an invasion of provincial rights. In the fall of the same year, 1937, in which the decision of the Privy Council was made, the then Minister of Labour, the late Hon. Mr. Rogers, arranged for a visit to Canada to be made by Mr. D. Christie Tait of the International Labour Office in Geneva, who is regarded as an authority of international repute on unemployment insurance, both as to legislation and administration; for the purpose of giving us the benefit of his views in the preparation of a bill for presentation to parliament suited to the conditions existing in this country. Letters were addressed at that time by the Prime Minister, the Rt. Hon. Mr. Mackenzie King, to all of the provincial governments, as you will recall, asking that parliament should be vested with the power to deal with this subject matter by amendment to the British North America Act; but the consent of three of the provinces to this procedure was not given until the present year. And, as we know, the British North America Act was amended accordingly within the past few weeks.
>
> May I make mention as well of the endorsation of the national system of unemployment insurance by the National Employment Commission which was appointed by the late Minister of Labour in 1937, in its final report in 1938, and as well of the endorsation of unemployment insurance by the Royal Commission on Dominion-Provincial Relations, the report of which has been presented to the government and to parliament since the opening of the present session.

Mr. Brown estimated that unemployment insurance covered upwards of ninety million people in different parts of the world and many more if dependents were taken into account. The 2,100,000 wage-earners who would be covered by the new Bill would represent a large proportion of the wage-earning population of the country, which was estimated by the Bureau of Statistics for 1941 at 2,794,000. He then proceeded to outline the provisions of the Bill and the principles underlying them, saying: "We are convinced, that in the present Bill neither the single person nor the married person with dependents will suffer. . . . We are satisfied that it compares favourably as well with the system which exists across the line in the United States."

Mr. Brown emphasized the fact that the employment offices would offer placement opportunities to uninsured as well as insured wage-earners. If the local authorities saw fit to maintain their service, they would retain the right to do so. The witness quoted an opinion from the Department of Justice to the effect that parliament had authority to launch a

system of employment offices "such power being necessarily ancillary to the power to legislate in relation to unemployment insurance. The provinces, however, continue to have authority to legislate in relation to employment offices, licensing of private agencies, etc., but such provincial legislation would be invalid if repugnant to dominion legislation."

Administrative Costs

Mr. A. A. Heaps, of the Department of Labour was called by the committee and gave evidence concerning administrative costs. He referred to the five years of experience of unemployment insurance in the United States, and to the improvement in the British system between 1933 and 1940. He estimated that the cost of administration would be about $5,250,000 per year. The following table of British costs since 1933 was submitted in evidence:

Cost of Administration Unemployment Insurance in Great Britain

	Administration cost	No. of persons insured	Cost per capita
1933.. ..	£4,213,315	12,885,000	£ ·327
1934.. ..	3,755,564	12,960,000	·289
1935.. ..	4,144,054	14,002,500	·296
1936.. ..	4,609,391	14,285,000	·323
1937.. ..	4,870,000	13,926,500	·349
1938.. ..	5,874,592	14,839,500	·396
Average..			·334
			or 6/8d.

The cost in Great Britain seemed therefore to be about $1.70 per head of insurable population; in the United States for the fiscal year 1938-39 the cost was $2.10, although there were fifty-one separate and complete administrative units in that country. Mr. Heaps believed that the only index of administrative cost was that based on the number of persons covered, and expressed the opinion that the more familiar method of expressing costs as percentages, either of contributions or of benefits, was almost meaningless.

> Supposing for some reason or other contributions had to be increased from the basis of 100 to 120, the cost of administration would not necessarily go up, but the percentage of cost to total contributions would be 8⅓ per cent as against 10. Many different factors could disturb such a percentage index; it would be affected by changes in the weekly amount of benefit; changes in the duration of benefit or in the proportion of persons exhausting benefit rights; by changes in the number of persons unemployed or in the number of waiting days; or by changes in the amount or rate of contributions. Considering that our population is more scattered than in the United States, also that we have perhaps more outlying districts than they have, ... if we were to allow approximately twenty per cent in addition to the United States costs of administration, we would arrive at a reasonably fair estimate of what the cost would be here in the Dominion of Canada.

The costs of administration had therefore been placed at $2.50 per insured person, the witness declared.

In answer to a question the witness showed that the "waiting period" in the Bill was shorter than that in the United States.

In conclusion, Mr. Heaps said, "practically the whole of the administration of this Bill when it becomes law will be in the hands of representatives of employer and employee, who pay by far the larger proportion of the fund. . . because you have employer and employee sitting in on the administration of this proposed Act we are going to get a fairly sound and efficient administration."

Advantages of Graded System

Mr. Eric Stangroom, of the Department of Labour outlined the trend which exists at the present time towards a graded scheme rather than the flat rate scheme. Referring to the introduction of a graded system in South Africa, Norway, Germany, Italy and other countries, he stated:

> In Great Britain the Ministry of Labour in 1931, speaking before the Gregory Commission, stated they had investigated the problem of changing their system to a graded system. The officials of the ministry said that they approved of it in principle, but because of the rather distressing condition of their fund at that time they thought it was unwise to make the change then.

Mr. Stangroom then referred to the fact that Mr. D. Christie Tait of the International Labour Office, Dr. Bryce Stewart, and Dr. Douglas Brown of Princeton, are all in favour of the graded scheme rather than a flat scheme.

Continuing, he declared:

> A flat rate scheme must be fixed at the lowest earnings of any worker in any part of the country; otherwise the benefits would exceed wages. If the benefit exceeds wages there is a tendency to malingering; men will prefer unemployment benefits to a job... The problem of over-insurance in Great Britain is still very serious, and it remains perhaps, the principal administrative difficulty. As the cost of living rose, and changed, they had to increase their contributions and benefits, to make their benefits total something reasonable under the circumstances; and with each change they have found that they immediately create over-insurance in various low-wage areas; that is, the benefit is more than the normal wage of the insured person.
>
> Some attempts have been made to apply a "ceiling" in Great Britain, but pressure from various groups has made it impossible. For instance, at present there is a bill before the British Parliament which suggests an increase in contributions and benefits for the simple reason that the cost of living has increased. Since the war started in Britain it has risen some 25 points. During the last war they had

the same experience. Benefits and contributions were adjusted several times during the war as the cost of living rose, so the real value of the benefits changed considerably. Weighting for cost of living, and the wage index, the ratio of benefits at the 1930 rate was eighteen shillings and tenpence for a family of four, in 1914; and forty-seven shillings in 1919, and then later, in 1928, it went down to thirty-one and fourpence

Thus, the flat rate has to be continually adjusted to the movements of the cost of living. If benefits are related to earnings, the average benefit would be higher than the flat rate, because the above-mentioned restrictions would be removed. You have no danger of over-insurance where you never pay the full amount of the earnings.

Mr. Stangroom then explained, in answer to a question by Mr. Reid, that the tremendous debts of the British scheme were accumulated, not because of any fault in the insurance scheme proper, but because the funds collected in contributions had been used to pay direct relief. "In 1934 they split 'assistance' away from unemployment insurance so the unemployment insurance scheme would remain actuarially sound. As a matter of fact it has remained so sound that the debt which was anticipated would be paid off by 1970 has been almost completely paid off by now."

The witness enumerated the advantages of a graded scheme as follows:

A rate related to earnings cushions the shock of unemployment better than the flat rate since it is closely related to the standard of living. All workers have fixed obligations in the way of rent, and perhaps time payments on a radio and so on, which a dollar a day benefit would not effectively meet; and generally speaking it might be said a person arranges his budget according to his normal expectation of earnings. A flat rate automatically reduces the worker to the minimum standards in the country. If you cannot pay a benefit that does not exceed the lowest wage earner's income in the country, then naturally that flat rate of benefit must be extremely low. And therefore you reduce the high wage earner to a standard which has no value to him whatsoever.

The witness pointed out that a rate based on earnings automatically adjusts contributions and benefits to various wage levels in each part of the country and to different occupations and age groups.

A flat rate suitable for rural areas or during a period of low wages may be entirely inadequate in large cities or in periods of high prices and wages, making a supplement from relief necessary. In Great Britain it is to be remembered that where because of low wages or fixed obligations benefit is insufficient, the person can also apply for Unemployment Assistance and in many cases that is done.

Mr. Stangroom pointed out that a graded system was not, in his opinion, regressive taxation.

You are taking a contribution which is not only related to the benefit, but a contribution which is definitely related to a man's earnings. The benefit is, as you will notice by the formula, a direct multiple of that amount of contribution. If he pays twice the amount of contribution, he gets exactly twice the benefits.

In the same way, the witness stated, grading takes care automatically of the sex distinction.

If it is the case that women on the average earn 65 per cent of the average male rate then naturally benefits under a flat scheme have to be adapted in that way. But if you relate benefits directly to contributions, which are related to earnings, then you automatically take care of that, and where a woman does earn a high wage she is compensated according to her standard of living.

The witness pointed out that a graded scheme might readily be extended to agriculture or other occupations.

In Great Britain, when they investigated the problem of extending unemployment insurance to agriculture, they found that the benefits were too high for agriculture and the contributions were too high a percentage of the man's normal earnings. The result is that they had to set up an entirely separate scheme of contributions and benefits. ..... A graded scheme permits you, when you have set up your administrative machinery, to extend it to agriculture if you wish.

On being asked by Mr. Hansell about the status of unemployed persons who became sick, Mr. Stangroom pointed out that under unemployment insurance a man would not receive benefit if he were sick, since he would not be available for nor capable of work. "A man must be able to accept a job which is offered to him." Unemployment insurance should not be used as a health insurance scheme, he said.

Ratio Rule

Explaining the working of section thirty-four of the Bill, the ratio rule, Mr. Stangroom pointed out that its complication was merely superficial, and that in actual working it was simple and automatic.

The ratio rule permits an insured person to draw benefits in any benefit year—that is, at the time he begins to be unemployed—directly related to his employment history during the preceding five years, and his claims for unemployment benefit during the preceding three years. The purpose of extending this formula beyond the employment history of the benefit year is to make it possible to level out fluctuations that would occur in the period of benefit to which he would otherwise be entitled.

The benefit, you will notice, in 34 (*a*) is one day of benefit for every five days contribution paid by him in the preceding five years, less as in (*b*), one day for every three days benefit drawn in the preceding three years. For example, suppose a man worked thirty weeks during the first year that he was covered by unemployment insurance. He would be entitled at the end of that period, if unemployed and if he fulfilled the other statutory conditions,—that is

availability for work and so on,—to one-fifth of the period in insurance benefit; that is, six weeks. If he worked thirty weeks in the following year of his coverage and again became unemployed, he would have accumulated sixty weekly contributions, one-fifth of which would be twelve weeks. But from this would be taken one-third of the number of benefits which he enjoyed the previous year, that is two weeks. Therefore the period of benefit to which he would be entitled the second year would be ten weeks. If he had the same employment experience of thirty weeks during the third year, the benefit paid would run to seventy-six days, and in the fourth year eighty-seven days. If over a period of years he was normally employed for thirty weeks he would be entitled to fifteen weeks' benefit; that is, half the time of his employment.

At first glance it looks as if he is entitled to only one-fifth of the time, but actually he relies on employment experience which entitles him to one-half of his unemployment history in benefit duration; if he worked thirty weeks on the average over a period of years he would still receive fifteen weeks' benefit, as if he had worked thirty weeks exactly each year. Similarly if a man worked twenty-four weeks either exactly or on the average, he would be entitled to twelve weeks' benefit, if he had built up five years employment history.

The ratio rule had been proposed by experts and by such British authorities as Sir Llewellyn Smith, and Mr. G. Ince who made the survey in Australia. The ratio rule removes many abuses. It gives an advantage to the workman with a good employment record, because he does not lose benefit rights in each benefit year, but has the advantage of five years' employment history; the workman is given an incentive to draw on his own reserve in short periods of unemployment. If during the five-year period he becomes ill, or goes into non-insurable employment or even to prison, the five years may be extended to seven years; thus his rights are not in any way jeopardized.

Mr. Stangroom pointed out that during the war of 1914-1918 five committees proposed extensions to the British unemployment insurance scheme, and that in 1916 the number of persons insured was doubled, and that the British scheme was being extended during the present war despite the possibility of invasion.

He also pointed out, in answer to a question by Mr. Reid, that the new Bill covers employers of one, two, three, four, etc., employees; while under the American scheme the small firms employing eight or in some cases four employees, are not included under the legislation there. Mr. Stangroom stated that had the British scheme been still further extended before 1918 the tremendous deficit would not have existed. "It was unfortunate that the extension was not made during the war. Otherwise, these people would have paid enough contributions to be able to sustain the scheme on an actuarial basis."

Merit Rating

Mr. J. S. Hodgson of the Department of Labour was called, and gave evidence concerning the question of merit rating:

Merit rating in principle seeks to differentiate the rate of contributions paid generally by employers in consideration of their payroll record. An employer who has a small labour turnover and whose employees are, therefore, secure is, under a system of merit rating, entitled to pay a lower rate of contribution; and, conversely, if the employer is not maintaining a stable firm and has at one time a great number of persons employed and at another time fewer employees, then he is expected, under a merit rating or experience rating system, to pay a higher rate of contribution. Merit rating is as old as unemployment insurance itself, being first proposed, I believe, by Mr. Justice Brandeis, of Boston, Massachusetts, in 1911, the year in which unemployment insurance was introduced in Great Britain. It has been fully discussed in the intervening period, and it was not until 1935 when the United States passed its Social Security Act that merit rating was actually attempted.

Merit rating takes many forms, but it is my belief that all forms are similar on the whole in principle. It is seldom used in what we call a tripartite system,—a system in which the employer, the employee and the state contribute. It is more generally found, as in the United States, where the employer foots the whole bill.

The chief advantages claimed by the exponents of merit rating are, first, that it will provide employers with the incentive to stabilize employment conditions in the firm which they are operating; secondly, that merit rating will make for a more precise distribution of the social costs of unemployment; third, that it will aid in preventing abuses of the unemployment insurance program by either workers or employers; fourth, that it will provide for an equitable distribution of the employer contribution; fifth—and this is akin to the first point—that it will promote security on the job; and finally that the accumulation of an unnecessarily large fund will be prevented by a system of merit rating.

The chief disadvantages which have been pointed out are, first, that employers have little control over conditions outside of their plants. It is suggested that conditions outside of individual plants are in reality the conditions which are chiefly responsible for unemployment. Arising from that is the conclusion that attempts to stabilize by employers by reason of this merit rating provision would be likely to have a small effect. The second point is that it is very difficult—some persons believe it is impossible—to devise a satisfactory formula for working out the rates the employers should pay under such a system. Third, it is believed that merit rating has the tendency to endanger the solvency of any fund simply because it cuts down the reserves which are accumulated, and when bad times come and large sums are drawn in benefits that the fund is not sufficiently resilient to maintain itself. Fourth, it has been suggested that administrative costs are seriously increased by merit rating provisions, in the sense that firm computations must be made of the payroll record relating to the number

of persons employed, the proportion of those persons that have been fully employed, and the proportion that have been laid off; all this must be related to an average employer contribution rate, to arrive somewhere at the just contribution rate for a particular employer.

The fifth disadvantage of merit rating which has been suggested is that in times of prosperity under merit rating, employment may be expected on the whole to be stable and rates of contribution fall because the employer has a preferential rate. Conversely in a time of depression when employment is not so stable the employer is penalized and he must pay the higher rate. Thus, in the fat years one does not raise the fund for the lean years, but in the lean years one is paying more contributions just at a time when one can least afford it. . . . The sixth, that employers least able to stand the increase in costs will in most cases fall in the group with the highest rates; that the most unstable employer contributes the highest rates. Seventh, that many employers would benefit through purely fortuitous circumstances. Eighth, that no incentive is offered employers to increase the bulk of their employment but only to stabilize their business; the inference being presumably that employers would take on employees only when they are reasonably sure that they will not have to discharge them. It is suggested by those who urge this argument that the benefit of merit rating is inoperative, increases the bulk of unemployment while stabilizing the individual firm, if that is in reality possible. And ninth, that it is impossible to place responsibility for unemployment upon a specific employer.

The witness quoted from the majority report of the New York State Advisory Council (March 1, 1940), the following:

> "The causes of unemployment are beyond the power of any single employer or even an entire industry to control. There is no point in laboring the obvious, nor is it necessary once more to point out that the losses which an employer sustains because of the irregular operations of his plant exceed by a wide margin the fullest contribution that could be asked of him for unemployment insurance. Thus, every employer has these many years already had a financial incentive to stabilize, greater than any savings that can be promised him under any system of experience rating. That fact that industry has not stabilized is the most convincing proof that it cannot stabilize."

Mr. Hodgson pointed out that many of the industries which would benefit from merit rating provisions, such as banking, public utilities, chain grocery stores, and drug stores, are inherently stable, "and their stabilized employment is not the result of any action on the employer's part. On the other hand, building trades, the automobile industry, perhaps, and others which have a definite season, would be having to pay higher rates of contributions simply because of the necessary characteristics of the market for which they produce."

In answer to a question by Mr. Jackman, Mr. Hodgson pointed out that during the year 1939 the State of Wisconsin, which is the prototype of merit rating, paid on its claims an average of only $45.79. Only one State in the Union showed a lower average amount of benefit paid, and that was the State of South Carolina, "which is a cotton State and therefore perhaps not strictly comparable. That figure seems to be rather pertinent to the argument."

In answer to Mr. Pottier, the witness pointed out that stabilization could only be achieved with minimum working costs. "No employer can hope to stabilize on the maximum number of employees that he employs at any time at the peak of his operations. It is to be expected, I think, that the employer will do all he can to meet enlarged demands in prosperous times through overtime or stretching the normal week in other ways."

Insurance by Industry

On the question of insurance by industry as opposed to a pooled fund, the witness cited Sir William Beveridge. In a system of insurance by separate industries, "demarcation of industries presents an extraordinarily difficult problem. Every industry shades off imperceptibly into a number of neighbouring ones. Two or more processes normally forming part of different industries are often found integrated in one and the same establishment."

In answer to a question by Mr. Roebuck, Mr. Hodgson pointed out the danger of attempting to draw an analogy between workmen's compensation and unemployment insurance. "Industrial accidents and disease do not depend on prosperity or depression to the same extent as does unemployment. Moreover, the right to insurance benefit and the duration of benefit depend to some extent on the employment record of the insured person. Neither the particular employer nor any industry as a whole is responsible for unemployment in the sense that the employer and the industry may be said to be responsible for industrial disease and accidents."

Explanation of Schedules

The witness explained the meaning of the lowest contribution category. The employer in this case makes no deduction from wages; the purpose of this provision is to avoid introducing new incentives to the employment of persons at wages less than ninety cents a day, or before reaching sixteen years of age.

In answer to a question by Mr. Roebuck, the witness explained that the amount of benefit, where contributions have been paid in respect of an insured person in more than one category, would be thirty-four or forty times the average workman's contribution made in

respect of him. "If he has paid in the nine-cent contribution class for fifteen weeks, and then paid in the twelve-cent contribution class for another fifteen weeks. . . . his benefit rate will be ten and one-half multiplied by thirty-four or forty." The duration of benefit is determined according to the ratio rule. The right to benefit is determined by adding the number of daily contributions paid within the two years immediately preceding the claim for benefit.

When asked by Mr. Reid regarding the provision covering employers who pay stamps when laying men off in order to give them power to draw benefit, the witness stated that such action would be fraud, and would be liable to prosecution.

It was pointed out that although the "ceiling" is placed at two thousand dollars a year in full employment, the Commission is also empowered to include persons earning at a high weekly rate but not employed continuously through the year. Persons actually receiving over two thousand dollars a year, who have been insured persons for five years, may continue as insured persons by paying the employer's and the workman's contribution themselves.

Replying to a question by Mr. Graydon, the witness said that the Commission would have to take cognizance of tips and bonuses, if the relationship between earnings and benefits was to be realistic.

Representations Before Committee

On July 23 the Special Committee began to hear those who had expressed the desire to give evidence.

The Canadian Manufacturers' Association

The first representation was made by Mr. W. C. Coulter on behalf of the Canadian Manufacturers' Association. Mr. Coulter opposed the pooled type of scheme, in which contributions are not ear-marked. He felt that the great proportion of seasonal employment in Canada, the fluid state of the labour market and the great distances between centres of employment, made savings schemes much more desirable. The witness submitted that an opportunity should be provided for a full discussion of the implications of unemployment insurance before enacting the measure.

> "It will inevitably entail a substantial amount of novel and troublesome administrative work on the part of employers at a time when many of them are focusing their attention on war production, and others are handicapped by losing experienced men who enlist in the armed forces. Even in peace time, the setting up and putting in working order of such an elaborate and complicated scheme would be a problem involving great difficulty and considerable inconvenience and dislocation. The seriousness of these considerations is greatly intensified under war conditions."

Mr. W. H. Macdonell, speaking on behalf of the same association, felt that a system of unemployment assistance should also be introduced.

> The insurance scheme laid down in the bill will only take care of a limited number of unemployed for a limited length of time. If widespread unemployment should continue for a length of time there would inevitably be a large number of unemployed who would either never become entitled to benefit or would exhaust their right to benefit. In these circumstances, unless a supplementary unemployment assistance scheme, with a means or need test, is set up along with the insurance scheme there is grave danger that the same thing would happen in Canada as happened in Great Britain prior to 1931, namely, that there would be irresistible pressure to "let down the bars" and continue to pay unemployment benefit regardless of contribution.

Opposition was expressed to the pooling system, on the ground that the low-wage steadily-employed worker would be required to pay contributions for the high wage employee in industries where work is not steady. Mr. Macdonnell also endorsed the merit rating principle.

Mr. W. R. Yendall outlined an alternative to unemployment insurance, in which the employee pays seventy-five cents a week and the employer twenty-five cents a week, until one hundred dollars or perhaps two hundred dollars has been accumulated. Then an employment reserve certificate is issued to him as his individual protection against unemployment. Both employer and employee then stop contributing. If a man is involuntarily unemployed he takes his certificate to a bank and may draw up to ten dollars a week; when he again obtains employment, contributions resume until the debts are paid.

The Trades and Labour Congress

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, was called. He expressed the belief that it would be dangerous to make any changes in the Bill without careful checking to see the effect of those changes. He drew attention to certain differences between the new Bill and the 1935 Act, such as the adoption of the ratio rule, the accordance of equal treatment to women, and the relating of benefits to established standards of living.

The witness recommended that the "ceiling" of earnings should be raised to $2,500, so as

to extend benefit rights to more highly paid groups, and making it possible to draw contributions from the more stable employments; and that the age limit of dependent children be raised from fifteen to sixteen years.

Mr. Moore commended Section 99 of the Bill, which provides for the establishment of reciprocal arrangements with other countries. He felt that a number of details might be suggested, but recommended that these be investigated by the Advisory Committee after the Act was in full operation. The adequacy and balance of benefits and contributions might be further investigated at a later date, and a number of the presently excluded employments might be brought within the scope of the Bill. He approved the payment of the Advisory Committee, in view of the great responsibility borne by that Committee.

In answer to a question asked by Mr. MacInnis, Mr. Moore expressed the opinion that the "waiting period" was rather long, but that this was perhaps inevitable because of the size of the country. Claims would have to be checked and questions determined, before the nine-day period had elapsed; in many cases some of those nine days would have been accumulated earlier in the year. In this connection Mr. Moore declared:

> "The object of this scheme is to see that the cheques are available while the man is unemployed, and immediately available. Experience may show that the time can be shortened considerably. Of course, in Great Britain there are fewer difficulties of that kind to overcome, but even there they had a six day period at the outset although I think that time has been shortened to three days. It should be possible, when we get this Advisory Committee working for us, to shorten the length of time within which a man can qualify to receive the benefits."

The witness stating that he believed the time was most opportune for the introduction of unemployment insurance, said:

> This is the time when the machinery can be got under way with the least strain, because this is the time when the burden will be least; and with the funds created, accumulated over the time of active employment, we will have something with which to meet the dislocation which we are hopeful will be of as short duration as possible, but which will be inevitable following this war. The problems of demobilization must be faced, all the workers engaged in the munition industry and industries of that kind make it necessary for re-alignment and changes in plans to be made. There is bound to be unemployment at the time of a change-over such as that. Therefore, this is the opportune time to prepare for the re-alignments that are bound to come. That being the case unemployment insurance will help to take care of these workers through that limited time because of the accumulated benefits that will have been built up. So I think it is an opportune time to bring in legislation of this kind.

Mr. Moore opposed the merit rating system because low rates would be paid by some employers merely "from fortuitous circumstances which operate to his advantage."

In answer to a question by Mr. Hansell, Mr. Moore emphasized the difference between insurance and direct relief and stated:

> "By contributing to the unemployment insurance scheme you can draw that money without any recognition being taken of your savings or your own ability to carry on. If those cases do arise, and they may in some instances, it may easily be necessary to get relief additional to unemployment insurance. . . In my opinion the worker would sooner take the benefits under unemployment insurance and maintain his independence in getting them as a right, than take the higher rate and have to prove his destitution and disclose all his family affairs to investigators and be subject to general scrutiny."

The witness believed that the payment of benefits would lead to an increase in purchasing power in times of depression "and perhaps the first thing that the workers purchase is food, therefore, his purchases of food stabilize the market and, to that extent will undoubtedly improve the farmers' position." He contended that unemployment insurance would modify the volume of unemployment.

Asked by Mr. Hansell about the disqualification for striking, Mr. Moore said, "That is where labour is trying to be fair. Perhaps it would be asking too much to ask the employer to contribute to a fund that would finance our fight against him. In other words, the unemployment insurance benefit would not be used to strike against the employer."

When asked by Mr. Graydon about the provisions relating to "suitable employment," the witness endorsed the provisions of the Act, and stated in conclusion, "there are provisions there also to protect the worker from being forced into seeking work for which he is not only not suited but which might be harmful to him. For instance, if you force a violinist into ditch-digging you would render him useless for his ordinary employment. Therefore, at no time would that be considered suitable employment. That is one of the important considerations in administering the Act, consideration must be given to maintaining a man's employability in his regular employment."

Canadian Hospital Council

Dr. Harvey Agnew of the Canadian Hospital Council appeared before the Committee and claimed that unemployment in the hospital field was negligible. The insurance plan, Dr. Agnew stated, would impose a heavy financial burden upon hospitals and hospital employees would have little likelihood of ever deriving any benefit. Dr. Agnew felt that charitable

non-profit institutions should not be required to use their limited funds for an insurance scheme, and therefore pleaded for the exclusion of hospital employees from the scope of the Bill. This suggestion was later adopted.

Retail Merchants' Association

The next witness, Mr. Geo. S. Hougham of the Retail Merchants' Association of Canada, asserted that retail employment in Canada is relatively constant, and that therefore the retail trades should not be compelled to pay the full contribution rates. He also recommended that the Committee should consider the exclusion of the retail trades from the scope of the Bill. Finally, Mr. Hougham suggested that because of the "hundreds of thousands of people engaged in retail distribution right across Canada," the retail trade should be represented upon the Advisory Committee.

Canadian Chamber of Commerce

Mr. N. J. Dawes in giving evidence on behalf of the Canadian Chamber of Commerce, assured the Committee of the Chamber's eagerness to co-operate in social measures, but felt that the effective adoption of the Bill should be postponed. He recommended that a Special Committee should be set up, with employers' and workmen's representatives "charged to investigate not only the practical application of the terms of this Bill but also the advantages of alternative schemes."

Mr. Dawes questioned the desirability of unemployment insurance as a wartime enactment, since he felt that it would divert manpower and money from the war. In answer to a question by Mr. Hansell, the witness asserted that unemployment insurance would inevitably lead to lower wages or higher prices. He alluded to the social services which individual companies in Canada had introduced, and agreed with Mr. Roebuck that these services pay for themselves from the point of view of health and efficiency.

Mr. F. D. Tolchard, general manager, Board of Trade of the City of Toronto, recommended that the Bill should be deferred until the next session in order to permit all those interested reasonable time to submit their views. He felt that it was inequitable to tax stable industries under a pooled fund, to pay for the instability of other businesses. The contributions would be a form of taxation and would lead to higher prices. "The result will be to limit Canadian export possibilities because of the disadvantage under which Canadian exporters may be placed as compared with foreign competitors." The witness recommended that the Civil Service should be brought within the scope of the Bill.

All-Canadian Congress of Labour

Mr. Norman S. Dowd of the All-Canadian Congress of Labour, on behalf of the Congress, gave general endorsement to the Bill. He felt that ideally unemployment insurance "should be a direct charge upon industry since the individual workers are not responsible for unemployment." Nevertheless the workmen of Canada seemed willing to contribute, and a non-contributory scheme could not perhaps be introduced. He suggested that when the scheme was in full operation some of the excluded employments should be covered and the $2,000 ceiling should be raised, after study by the Advisory Committee. He urged the Committee to report favourably upon the Bill.

Canadian Committee for Industrial Organization

Mr. C. H. Millard gave evidence on behalf of the Canadian Committee for Industrial Organization, urging that the Act should be made operative as quickly as possible, that the $2,000 ceiling be raised, and that the number of exclusions be reduced when possible. He supported the recommendation made by Mr. Moore that allowances be paid in respect of dependent children up to 16 years instead of 15 years; and agreed with the suggestion that some remuneration should be allowed for members of the Unemployment Insurance Advisory Committee.

Canadian Railway Association

Mr. I. C. Rand gave evidence on behalf of the legal committee of the Canadian Railway Association. He pointed out that the railways paid salaries twice a month, and that the payment of contributions on a weekly basis might lead to serious accounting difficulties. He therefore suggested an amendment empowering the Commission to prescribe contributions for periods greater than a week. (This suggestion was later adopted by the Committee.) Mr. Rand also recommended that contributions should be taken as a percentage of wages in the case of the railways.

Mr. F. C. S. Evans drew the attention of the Committee to the Canadian National-Canadian Pacific Act of 1939, under which adjustment allowances are paid to persons losing employment because of co-operative measures between the two railways; he recommended that unemployment insurance benefits should be reduced by the amount of railroad adjustment allowance.

Disqualification for Striking

The Committee proceeded to consider the Bill section by section in detail. Mr. Reid drew attention to the disqualification for striking, and an officer of the Department of Labour

explained that this was the only system which had been found practicable in other countries.

> It is immaterial which side is responsible, or that one side is acting unreasonably or arbitrarily or contrary to the terms of an agreement or to long established custom if there is in fact a dispute; the merits of the dispute are irrelevant. It is equally irrelevant that either the employers' or the workmen's association is taking no part in it or not officially recognizing it, or that either side is not utilizing its full resources by a general lock-out or by a general calling out of all work people.

Canadian Bankers' Association

On July 24th, further representations were made to the Committee. Mr. H. T. Jaffray gave evidence for the Canadian Bankers' Association, and pointed out that any employee who has served for three or four years in a bank, is likely to retain his employment, except in the case of misconduct. The banks had set up their own system of old age and disability pensions. The witness was of the opinion that the contributions to the unemployment insurance fund would constitute an inequitable burden, and that employees in the banking industry would draw relatively small benefits. Mr. Jaffray asked for a differentiation in rates in favour of the banking industry.

Canadian Life Insurance Officers' Association

Mr. V. R. Smith of the Canadian Life Insurance Officers' Association recommended that full study should be made before the Commission actually began to work. He pointed out that insurance companies have a very light labour turnover, and recommended that the insurance industry should be accorded the same treatment as the Civil Service.

Canadian Transit Association

Mr. I. S. Fairty, speaking on behalf of the Canadian Transit Association, pointed out that he also spoke on behalf of a "sheltered industry." The urban transport industry was competing at a disadvantage with the automobile and therefore financial reserves were inadequate to pay contributions to the insurance fund. He asserted that "unemployment in the case of this public utility is so rare as to be practically non-existent." He therefore felt that the industry would be paying in much more than its employees would draw out in benefits.

In answer to a question by Mr. Homuth, the witness stated that, while the number of employees may not vary widely, the personnel might vary considerably.

Loggers

Mr. W. B. Farris, counsel for the B.C. Lumber and Shingle Manufacturers' Association, testified that the inclusion of loggers within the Bill would constitute a difficult task. "I think that the administrative costs with respect to the loggers would probably exceed their contributions." The witness provided statistics of labour turnover in the logging industry in British Columbia.

Confederation of Catholic Workers

Mr. Alfred Charpentier gave evidence on behalf of the Confederation of Catholic Workers of Canada. The Confederation supported the Bill, he said, but felt that the wage-ceiling should be raised to $2,500, that longshoremen and others might be included, and that the disqualification for striking might be modified so that "workers who go on strike in full compliance with the law of the country should not in any shape or form be deprived of their insurance benefits."

Actuarial Aspect

Mr. H. H. Wolfenden, Toronto actuary, who had been subpoenaed, expressed his views on the actuarial aspect of unemployment insurance in wartime as follows:

> It is my conviction that the scheme set out in Bill 98 is, at the present time, "actuarially indeterminate." My reason for that opinion is this: Actuarial soundness requires the actuary to be able to formulate his methods of calculation "with reasonable certainty, and with adequate (though not, of course, excessive) margins of safety." In this case —in the year 1940, in respect of any estimate of future unemployment—it is, it seems to me, wholly impossible to formulate methods of calculation "with reasonable certainty, and with adequate margins of safety." It is quite impossible to assume with any reasonable certainty what the basic rate of unemployment, on which all the calculations must be based, is likely to be.

He stated that if the unemployment rate in 1943 and 1944 rose to 25 per cent and 35 per cent, respectively, the fund would become insolvent unless the Advisory Committee made drastic re-adjustments. In answer to a question by Mr. Roebuck, Mr. Wolfenden explained that his inability to describe any unemployment insurance scheme as actuarially sound was because of the outbreak of the war . He suggested that the collection of contributions should commence upon a date to be fixed by proclamation. In answer to a question by Mr. Pottier, the witness agreed that unemployment might possibly drop after the war as the result of industrial development.

The witness recommended that the methods of administration should be reviewed by a committee of employers and employees, but did not recommend postponement of the Bill.

Mr. A. D. Watson, Chief Actuary of the Department of Insurance, explained that the technical parts of his report had not yet been forwarded to Mr. Wolfenden. Mr. Watson believed he had allowed for a reasonable margin of safety, and added:—

> You cannot put in a statute now that will make people wise five or ten years from now. You have to assume, legislatively, that people will be sensible five or ten years from now and do the wise thing. I am sure that those aspects of the Bill are adequate; we cannot say what people will do in the future, but they are legislatively adequate to give all the necessary protection and safeguards.

When asked by the Chairman to give reasons why certain persons had been excluded, the witness explained that it would be undesirable to include classes of people who have no prospects of obtaining employment at an employment office,—policemen, teachers, and civil servants. With regard to domestic servants, the difficulty was chiefly one of inspection. In the case of fishing and logging, the difficulty was that of checking up to see if stamps are kept on the books and to see that persons are actually at work. The witness pointed out that the Advisory Committee could recommend extension of the coverage.

Locomotive Workers

Mr. William L. Best, of the Brotherhood of Locomotive Firemen and Enginemen, endorsed the Bill and reiterated the recommendation that the wage-ceiling should be raised.

On July 25 the Committee met *in camera* and concluded its consideration of the Bill. An amendment was recommended, bringing wood-processing plants in certain cases within the terms of the Bill.

Report of Special Committee

On July 26 the Minister of Labour, in moving that the House go into committee, pointed out that the Special Committee had presented a unanimous report, and explained the amendments made,—empowering the Commission to prescribe contribution periods greater than a week and to deal with anomalies arising from the operation of foreign unemployment insurance laws; removing the disqualification of persons receiving Old Age Pensions; providing for the remuneration of the Advisory Committee; and bringing wood-processing plants within the terms of the Bill.

The Minister also summarized the representations which had been made to the Committee.

Mr. Johnston (Bow River) recommended that provision should be made for domestic servants, farm labourers and the armed forces.

Mr. Hanson (Leader of the Opposition) reviewed the evidence of Mr. Wolfenden, stressing the actuarial aspect of the measure.

Mr. Green (Vancouver Centre) believed that the loggers of British Columbia should be included, as logging work was not seasonal in that province. Hon. Mr. McLarty pointed out that the question was one of administrative difficulty.

The Minister also gave assurances, in answer to a question by Mr. Hanson, that appointments under the Act would be made through the Civil Service Commission.

Mrs. Nielsen (North Battleford) proposed an amendment entitling employees on strike to benefits. Mr. McLarty stated that the Canadian labour organizations had approved the provision of the Bill, and that a similar provision had been applied without change for twenty-nine years in Great Britain.

On July 29 the Committee of the House continued its deliberations. The Minister of Labour promised that the inclusion of loggers would receive early consideration from the Advisory Committee and that an attempt would be made to solve the administrative difficulties.

Mr. Hanson suggested that hospitals, which were charitable institutions, should not be compelled to contribute to the fund; in this view Mr. Howden concurred. Mr. McLarty explained that professional nurses, probationers and domestic help were already excluded, and that the only persons in hospitals covered by the Act were janitors, engineers, elevator operators and the like. "The janitor or the engineer is covered, not by the fact that he is in the hospital, but because he is a janitor or an engineer." He pointed out that these persons were not numerous, but that to exclude them would create anomalies, and would deprive them of benefit rights.

Mr. Coldwell (Rosetown-Biggar) expressed the hope that agricultural labour might be brought under the Bill at a later date.

Mr. Homuth and Mr. Jackman felt that banking employees and civil servants, as they were both stable employments, should be treated alike.

Mr. T. L. Church (Broadview) believed that the armed forces ought to be given the benefits of unemployment insurance.

The Bill was given third reading and passed.

Consideration in Sénate

The Bill received its first reading in the Senate on July 29.

On July 30, in moving the second reading of the Bill, the Hon. Mr. Dandurand explained the underlying principles, the advantages of the graded system and the ratio rule, and the importance of unemployment insurance as a wartime measure.

"After ten years of depression we are now making a stupendous war effort, and men are being engaged in war industries to help forward that effort. What will the end of the war mean to Canada? We are at present at the peak of our war activity. Is not this a time to ask these men to contribute to a protective fund? Should not the employers strain every nerve to meet the impact which will follow the close of the war? If no fund is accumulated during these years when the going is good, wages are high, and thousands and thousands of men, previously unemployed, are at work, it goes without saying that when the war ceases there will be no fund."

Rt. Hon. Mr. Meighen expressed the view that the Bill should be deferred. He felt that full attention should be given to the war itself, and that it would be presumptuous at the present time to forecast what the post-war conditions might be. He believed that the burden imposed by unemployment insurance upon agriculture would be severe: the farmer would pay taxes for the scheme, and would also pay higher prices for the products of industry, Mr. Meighen declared.

The Bill was read a second time and referred to the Standing Committee on Banking and Commerce.

Summary of Evidence Submitted to Senate Committee on Banking and Commerce

On July 30, 31 and August 1, the Unemployment Insurance Bill having been referred to the Senate by the House of Commons, was considered by the Senate Committee on Banking and Commerce, the following being a brief summary of the evidence submitted.

Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, the first witness to appear before the Committee, outlined the provisions of the Bill and referred to the importance of the graded contributions in preference to the flat rate principle, and indicated that the lowest rate of benefit was merely a reflection of a wage-situation.

Canadian Chamber of Commerce

Mr. N. J. Dawes and Mr. R. P. Jellett, representing the Canadian Chamber of Commerce, requested that time be allowed to study the public reaction to and the incidence of the scheme. The opinion was expressed that money ($72,000,000) and men would be diverted from the prosecution of the war and suggested that a committee should be appointed, composed of government employees, employers and working people, to study all schemes which have been proposed.

Mr. Jellett stated he considered that the Act would be used in the future for relief purposes and to insure unstable industries.

Bell Telephone Company

Mr. N. A. Mulock, General Counsel for the Bell Telephone Company, approved of unemployment insurance in principle and practice, but felt that this particular scheme lacked inducements to stabilization. He considered that the exaction of an employer contribution tended to increase unemployment, while merit rating, as provided for in 39 out of 48 states of the United States, might stabilize employment. The Bell Telephone Company had already stabilized its employment and should not be penalized, the witness declared. It was pointed out by Mr. Mulock that the Company had lately laid off very few employees, but had engaged few new employees, the staff being reduced by about five per cent. Mr. Mulock criticized Section 22 which prescribes the exaction of an employer's contribution even where a certificate of exemption is held.

Mr. Eric Stangroom of the Department of Labour explained that Section 22 sought to eliminate incentives to employ non-insured persons.

Mr. J. S. Hodgson of the Department of Labour explained the reasons why merit rating had not been adopted.

Canadian Manufacturers' Association

Mr. W. C. Coulter of the Canadian Manufacturers' Association appeared before the Committee and asserted that if the Bill became law, employers would have to hire several thousand new clerical employees. He believed that uniform rates for all industries were inequitable, stable industries thereby being penalized. He claimed that there was a need for time to consider the Bill and doubted the actuarial soundness of the scheme.

Mr. R. W. Yendall, also representing the Canadian Manufacturers' Association, supplemented the evidence which he had given to the Special Committee of the House of Commons. Stating that he was opposed to the pooling principle, Mr. Yendall referred to the experience in Wisconsin in June, 1938, where of 4,663 employer accounts, 2,899 had withdrawn less than ten per cent of their contributions. He indicated the necessity of a National Employers' Council, and the fallacy of attempting to deal with complicated problems by simple panaceas, and proposed as an alternative the Unemployment Reserve Certificate Plan. He suggested that this plan might be used for other purposes besides unemployment. In conclusion, Mr. Yendall stated that individual reserve accounts are becoming increasingly popular.

Trades and Labour Congress

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, urged the immediate adoption of the Bill.

He pointed out that any necessary amendments could be made after the passage of the Act, and that there would be opportunity for full consideration before contributions were actually taken. He doubted that 35 per cent unemployment among insured persons could be realistically expected, and pointed out that in Great Britain 75 per cent of the insured persons draw 24 weeks' benefit or less. He asserted that unemployment insurance is only a first line of defence.

Mr. Moore stated that he did not favour merit rating, as employment conditions are largely the result of circumstances outside individual plants (e.g. subsidies, tariffs, etc.); and that merit rating meant the "freezing out" of those employees who otherwise would be employed during peak periods and resulted in an increase in overtime working. He pointed out that the Social Security Board of the United States was unequivocally in favour of pooled funds, and that in his opinion only a pooling system could keep down the cost. Employer saving schemes, he stated, had been inadequate to deal with unemployment.

Mr. Moore emphasized the need for an employment service for the following reasons: (1) Wartime labour supply; (2) Organization of demobilization; and (3) Readjustment of the peacetime economy.

Mr. Moore asserted that the British scheme had been actuarially sound, and that the large debt accumulated in Great Britain was merely the result of financing central relief from the contributed funds. He stated that he did not feel that work people would be made less independent by an unemployment insurance scheme.

All-Canadian Congress of Labour

Mr. N. S. Dowd, representing the All-Canadian Congress of Labour, stated that the Congress had for many years favoured the adoption of unemployment insurance. He believed that the Bill had sufficient administrative safeguards to keep it effective. Mr. Dowd was of the opinion that civil servants and persons in upper salary brackets should contribute. Justifying the contributions by the state and the employer Mr. Dowd declared that workmen have only a small part in shaping business policy, and, therefore, only a small part in causing or preventing unemployment.

Actuarial Basis of Fund

Mr. A. D. Watson, Chief Actuary of the Insurance Department, was called to give evidence regarding the 12½ per cent unemployment rate upon which the Bill was said to have been predicated. Mr. Watson stated that the crude percentage of unemployment does not give the pattern or distribution of unemployment, and does not indicate how much of the unemployment would be of insured persons, or would be treated in benefit days. He explained that 30 per cent had been added to the benefit days computed on the distribution of 1921-31 and corresponding deductions had been made from the contributions; thus the rate of unemployment of insured persons would be about 15 per cent—and of all wage earners a much higher figure. Other deductions (i.e. sick time, etc.) Mr. Watson declared had been made with great caution. In calculations made, he had assumed that all insured persons who might become unemployed during a stipulated period would draw the maximum benefit to which they were entitled. He was therefore of the opinion that his estimates had been on the conservative side.

Mr. Watson pointed out that for 18 months after the conclusion of the war of 1914-18, employment conditions were good. In answer to a question asked by Senator Ballantyne, he said that even if the war should end soon after contributions had commenced, the fund should not be rendered insolvent, because unemployment on a large scale was not to be expected immediately upon the end of the war, and because under the ratio rule insured persons in the early years are entitled to draw only a relatively small amount of

benefit. Mr. Watson stressed the fact that while contributions come in at the rate of 100 per cent at first, benefits are being drawn only in a much smaller proportion. He emphasized the fact that by the ratio rule a fall in employment reduces the number of benefit days.

Replying to a question asked by Senator Meighen, Mr. Watson stated that the administrative strain upon individual firms should not be great, as the chief responsibility would be the attaching of a stamp to a book.

The witness explained the reasons why civil servants, clergymen, school teachers, policemen, letter carriers, etc., had been omitted from the scope of the Bill. He pointed out that Civil Servants in particular do not use the employment exchanges and when unemployed there is no alternative employer in their kind of work.

Senator Coté was of the opinion that the rates for persons with families in low categories were not adequate to sustain such families. Mr. Watson replied that the detailed provision for dependency in 1935 would have been difficult to administer and emphasized the fact that low benefit rates are related to low wages. Senator Meighen interjected that benefits cannot of course be equal to wages, or there would be no incentive to work. Mr. Watson estimated that the scheme would cover about half the population of the country. He stated that the Advisory Committee would be in a position to keep the scheme out of financial difficulties.

Operation of Scheme in Relation to War

Dr. W. A. Mackintosh, Economic Advisor to the Department of Finance, said that the insurance scheme would assist rather than hinder the prosecution of war. To some extent it would prevent private consumption from competing with the national effort, and thus prevent prices from rising unduly, $4,000,000 each month becoming available for investment in government securities. If this money were not withdrawn by unemployment insurance contributions, then it would have to be withdrawn by taxes or loans.

Dr. Mackintosh felt that the employment offices would be of great value in effectively organizing the labour market during the war, and read a statement made in the House of Commons by the Honourable Mr. Ilsley, Minister of Finance, (*Hansard*, July 30) to the effect that the employment offices might be of equal importance with National Registration.

Reasons for Enactment of Bill

At the request of the Committee Mr. Stangroom of the Department of Labour outlined briefly the reasons why the enactment of the Bill should not be postponed. The Provinces had all consented to the measure; every Federal Government in recent years had endorsed the principle; the busy state of the labour market would bring a maximum revenue to the Fund for investment in Dominion securities; additional war taxation or borrowing would become unnecessary; the employment exchanges would distribute labour where it was most needed and with a minimum waste of time; and in the reconstruction period, unemployment insurance would be immeasurably more satisfactory than ill-considered emergency measures of relief.

Senator Meighen asked if the 15 per cent difference between wages and benefits in the low wage categories would be sufficient incentive to work. Mr. Stangroom replied that the differential was of great significance where income was low.

Committee Consideration of Bill

The Committee then considered the exclusion of persons in hospitals and other charitable institutions, and Senator Coté proposed an amendment of the third schedule in favour of married persons maintaining dependents.

The Committee considered the Bill section by section, Senator Coté's amendment being defeated.

The only substantive amendment adopted by the Committee was the exclusion of persons working in hospitals and charitable institutions "where in the opinion of the Commission, the hospital or charitable institution is not carried on for the purpose of gain."

A new section was added to the Bill, repealing the Employment and Social Insurance Act, 1935.

The Committee then decided unanimously to report the Bill as amended.

Third Reading in Senate and Royal Assent

On August 1, Senator Dandurand moved the third reading of the Bill. Senator Meighen proposed to add a section to the Bill providing that it should come into force on the termination of the war. On division the amendment was defeated, and the Bill received third reading.

An August 2, in the House of Commons the Hon. N. A. McLarty moved concurrence in the amendments made by the Senate. The motion was agreed to, and on August 7, the Bill received Royal Assent.

WAR TIME PRICES AND TRADE BOARD

Amplification of Administrators' Powers

WITHIN a few weeks of the establishment of the Wartime Prices and Trade Board (Labour Gazette, September, 1939, pp. 889-890) were appointed by Order in Council four Administrators to survey and direct the distribution of certain "key" commodities (Labour Gazette, October, 1939, page 994 and November, 1939, page 1103). These Administrators were assigned to supervise the following commodities: Sugar, wool, coal, and hides and leather.

Recently the powers of the sugar, wool, coal and hides and leather Administrators have been amplified by Orders in Council.

Powers of Sugar Administrator

In the case of the Sugar Administrator it was stated in the Order in Council that "the Wartime Prices and Trade Board have reported to the Minister of Labour that the price to be paid by the Sugar Administrator to the United Kingdom Sugar Controller for sugar produced from future crops may be subject to fluctuations and that it is deemed in the public interest, in order to safeguard the stability of market conditions, that the power of the Wartime Prices and Trade Board, acting through the agency of the Sugar Administrator, be amplified."

Accordingly the powers conferred by the amended section (2) are as follows:

(*a*) The Wartime Prices and Trade Board, acting through the agency of the Sugar Administrator, shall have power from time to time to sell to Canadian refiners and to others requiring sugar in Canada raw cane sugar at such prices as the Sugar Administrator, under direction of the Board, may prescribe, and to allocate the sugar aforesaid amongst refiners and other Canadian users of sugar in such manner as to secure throughout Canada a steady and adequate supply of sugar to consumers.

(*b*) All sugar refiners in Canada shall sell to the Sugar Administrator as and when required by him, all raw sugar, and all refined sugar, syrups, liquid sugar and molasses manufactured from beet or cane now or hereafter in their possession at such prices as the Sugar Administrator, under the direction of the Wartime Prices and Trade Board, from time to time may prescribe and, to effectuate such power, the Sugar Administrator, under the direction of the Board, shall have power to take possession of all or any such sugars accordingly.

(*c*) The Wartime Prices and Trade Board, acting through the agency of the Sugar Administrator, shall have power to resell such raw sugar, and refined sugar, syrups, liquid sugar and molasses manufactured from beet or cane to Canadian refiners and others requiring sugar in Canada at such prices as the Sugar Administrator, under the direction of the Board, may from time to time prescribe, sufficient to assure the Board against loss in its sugar operations in maintaining and stabilizing a reasonable wartime price in regard to sugar.

Powers of Wool Administrator

The powers of the Wool Administrator were also amplified in view of the special arrangements between the Wartime Prices and Trade Board and the United Kingdom Wool Control. (The United Kingdom Wool Control purchased for the duration of the war all New Zealand and Australian crossbred wools and has for the current year made substantial purchases of crossbred wools in non-Empire countries, paying varying prices for the same grade in the different countries of origin . It has undertaken to sell crossbred wools to Canadian purchasers at the weighted average price for each grade of wool, irrespective of its origin.)

By Order in Council (P.C. 3555), July 30, the powers of the Wool Administrator were re-defined as follows:

2. The Wool Administrator, without detracting from any power heretofore conferred on him, shall have power, under the direction of the Wartime Prices and Trade Board, from time to time

(*a*) to buy, sell and otherwise deal in, store, transport, allocate and distribute wool;

(*b*) to process wool or require any person, firm or corporation in the business of processing wool to process any specified wool in any specified manner and in such priority to any other business of such person, firm or corporation as may be specified;

(*c*) to enter, or authorize any person to enter, any place for the purpose of inspecting any wool;

(*d*) to take possession of any wool or wool-bearing animal and deal with or dispose of it in any manner;

(*e*) for any purpose aforesaid, to enter into possession of and utilize any land, building, plant and equipment used or capable of being used for the processing, storing or transporting of wool and to use any motive power available;

(*f*) subject to the approval of the Minister, to fix prices or markups or maximum prices of maximum markups at which any wool shall be sold or offered for sale ;

(*g*) subject to the approval of the Minister, to fix or limit the quantities of any wool which may be sold or distributed by or to any person, firm or corporation within prescribed periods of time and to prohibit sale or distribution in excess of the quantities so fixed or limited;

(*h*) subject to the approval of the Minister, to issue and re-issue a permit or licence to any person, firm or corporation to buy, sell or otherwise deal in wool and to suspend, cancel or refuse to issue any such permit or licence whenever he deems it in the public interest so to do and to fix the fees payable for the issue of such permits or licences and to prescribe the manner, procedure, terms and conditions under which such permits or licences shall be obtained;

(*i*) subject to the approval of the Governor in Council, to prohibit persons, firms and corporations from exporting or importing wool without a permit or licence aforesaid, and, subject to the approval of the Minister, to prohibit persons, firms and corporations from processing, acquiring, disposing of, transporting or otherwise dealing in wool without a permit or licence aforesaid;

(*j*) to require any person, firm or corporation owning or having possession, control or power to dispose of any wool, to deal with and dispose of any such wool in specified manner;

(*k*) to require any person, firm or corporation owning or having possession, control or power to dispose of or dealing in any wool, to produce to any person authorized in writing for the purpose by the Wool Administrator any books or documents and to permit the person so authorized to make copies of or extracts from any such books and documents and, when the Wool Administrator deems it necessary, to remove any such books and documents;

(*l*) to require any person, firm or corporation processing, storing, importing or dealing in wool to furnish, in such form and within such time as the Wool Administrator may prescribe written returns under oath or affirmation showing such information as the Wool Administrator may deem necessary;

(*m*) subject to the approval of the Governor in Council, to advance money to any person, firm or corporation in the business of processing wool for the purpose of assisting such person, firm or corporation in the carrying on of such business, out of such monies as may be designated by the Governor in Council or as may be otherwise duly provided;

(*n*) to deposit all funds received by him in such bank or banks as the said Board may direct and, for all proper and official purposes, to draw there-against by cheque signed by such persons as the said Board may from time to time designate; all surplus funds, on the termination of the office of Wool Administrator to be paid to the Receiver General of Canada to form part of the Consolidated Revenue Fund of Canada;

and the Wartime Prices and Trade Board Regulations shall be deemed to have been and are hereby amended in so far as is necessary to give effect to these regulations.

3. If the Wool Administrator takes possession of any wool or any other property, the consideration to be paid in respect thereof, in default of agreement, shall be such, in the case of wool, as is prescribed by the Wool Administrator under the direction of the Wartime Prices and Trade Board with the approval of the Minister and, in the case of other property, shall be such as is determined by the Exchequer Court on a reference thereto by the Minister.

4. Any contravention of or failure to observe any regulation, prohibition, permit, licence or requirement of the Wool Administrator shall be deemed to be an offence against these regulations and the Wartime Prices and Trade Board Regulations, and the penalties prescribed in the Wartime Prices and Trade Board Regulations shall extend and apply thereto.

Wool and Wool Tops

On August 6, the Wartime Prices and Trade Board announced that on and after August 3, no wool or tops may be imported into Canada without a permit from the Wool Administrator, David C. Dick.

Powers of Coal Administrator

Similarly it was considered expedient in the public interest to amplify the powers of the Coal Administrator and on July 20 an Order in Council provided:

1. The Coal Administrator, under the direction of the Wartime Prices and Trade Board, is hereby empowered from time to time

(*a*) to purchase, receive, acquire, sell, store, transport and distribute coal, coke and other solid fuels;

(*b*) To prescribe prices and scales of payments to be made to him by buyers of solid fuel acquired by him or otherwise under his control;

(*c*) To prescribe the manner, procedure, terms and conditions according to which such prices and payments shall be paid by and collected from buyers;

(*d*) To receive and do such things as may be necessary to collect all sums that may become due to him accordingly;

(*e*) To pay all sums that may become due by him to all persons entitled thereto;

(*f*) To do such things and execute such documents as may be necessary or expedient to give effect to his powers.

2. The Coal Administrator shall deposit all funds received by him in such bank or banks as the Board may direct and the funds so deposited may be drawn against for the aforesaid payments and for such other proper and official purposes as the Board may authorize, by cheques or transfers signed by such persons as the Board may from time to time designate.

3. On the termination of the office of Coal Administrator, any surplus funds to the credit of the Coal Administrator shall be paid by him to the Receiver General of Canada to form part of the Consolidated Revenue Fund of Canada.

4. The Coal Administrator shall keep proper records and books of account, which records and books shall be subject to audit by the Auditor General of Canada at such times and in such manner as the said Auditor General shall determine.

Powers of Hides and Leather Administrator

The powers of the hides and leather administrator were also enlarged when an Order in Council was passed on July 8, requiring that "until further notice licences for the export from Canada of leather, hides and skins, other than fur skins, shall be granted only when approved by the hides and leather administrator on behalf of the Wartime Prices and Trade Board."

This action was taken in view of the effect of increased military activity in Canada and the advance in industrial employment necessitating increased production of leather for footwear and other products, and also on account of the fact that a substantial part of Canadian requirements of hides and skins is supplied by foreign countries in some of which restrictions have been placed on the export of hides, skins and leather products.

LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA IN 1940

LAWS of labour interest passed during the recent session of parliament, which opened on May 16 and closed on August 7, include an Act to establish a system of compulsory insurance against unemployment, an Act to provide for unemployment and agricultural assistance and amendments to the Civil Service Superannuation Act, 1924 and the Income War Tax Act. The National Resources Mobilization Act, which confers upon the Governor in Council emergency powers to mobilize human and material resources for the defence and security of Canada, was summarized in the Labour Gazette for July at p. 629.

Unemployment Insurance and Relief

The Unemployment Insurance Act, 1940, is dealt with fully commencing on page 791 of this issue.

The Unemployment and Agricultural Assistance Act is a re-enactment, with certain changes, of a statute of like title passed in 1939 and enables the Governor in Council to enter into an agreement with any province for the alleviation of unemployment and distress and with corporations, partnerships or individuals for the expansion of industrial employment. The agreements may provide for the payment of moneys appropriated by the Parliament of Canada for such purposes during the fiscal year 1940-41. As under the 1939 Act, the Dominion may make loans to the provinces to assist them in paying their share of expenditures in carrying out their agreements under the Act or under the Youth Training Act. Under a new provision, however, such loans may only be made when the Governor in Council considers them necessary and in the national interest and on such conditions as he may consider advisable. Other changes include an amendment to the preamble directing efforts under the Act to developing the economy of the Dominion to carry on the War and the omission of the provision made in the 1939 Act for the Dominion itself to undertake works and projects for the relief of unemployment. As formerly, no financial assistance is to be granted to any province unless it agrees to furnish such information and permit such examination and audit as the Dominion may deem necessary. Provision is made for continuing commitments made and agreements entered into under the Acts of 1936, 1937, 1938 and 1939.

The Governor in Council may make regulations for carrying out the Act and a report showing the amount of money expended, the loans made and the obligations contracted, is to be laid before Parliament within 30 days after the expiration of the Act or, if Parliament is not then in session, it is to be published and made available by the Department of Labour. The Act expires on March 31, 1941, but obligations incurred under it may be discharged.

Civil Service Superannuation

The Civil Service Superannuation Act was amended to ratify an Order in Council (P.C. 2261) of August 11, 1939, which gave effect to a recommendation of the House of Commons Committee on Civil Service Superannuation in 1939, and requires male persons becoming contributors after the date of its passing to pay contributions at the rate of (*a*) 5½ per cent, if their salaries exceed $1,200 but do not exceed $1,500 per annum and (*b*) 6 per cent, if their salaries exceed $1,500 per annum. This rate is not to reduce the remainder of the salary below $1,140 per annum in case (*a*) or $1,417.50 in case (*b*). Formerly, all contributors paid 5 per cent and this continues to be the rate for female contributors and for male contributors receiving less than $1,200 per annum. Only service for which contribution has been made is to be counted as service for superannuation purposes. Active service overseas during the

Great War may be counted, with certain restrictions. Contributors appointed otherwise than by the Civil Service Commission are required to furnish a certificate of health before coming under the Act.

National Defence Tax

An amendment in the Income War Tax Act provides for a National Defence Tax on all persons residing or earning income in Canada who have an annual income of over $600 if single and without dependants or over $1,200 if married or a widow or widower with a dependent child or a person maintaining a domestic establishment and supporting a dependant therein. The tax rate is 2 per cent except for single persons without dependants whose incomes exceed $1,200 per annum who pay 3 per cent. A tax credit of $8 is allowed in respect of each dependant. The amount of tax payable is not permitted to reduce the income of the taxpayer below the minimum fixed above, $600 or $1,200, as the case may be.

Employers are to deduct the taxes payable by their employees from salary or wages, beginning with moneys earned or accruing due during and after July, 1940. Every employee liable to tax must file with his employer a return, in prescribed form, as to his personal status and dependants. If he fails to do so his tax is to be deducted at the rate applicable to an unmarried person without dependants.

Bill Not Passed

A Bill to amend the Transport Act, which was withdrawn, contained a section enabling the Minister of Transport to license public or private commercial vehicles to carry goods or passengers in the National Parks of Canada, determine the qualifications of drivers of such vehicles and limit or regulate the hours of duty of employees.

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Pilots Sydney, Nova Scotia

Revised by-laws for the Pilotage District of Sydney, Nova Scotia, were approved on June 26, replacing those of September, 1935. Subject to certain exemptions made by the Act and the by-laws, all ships, including ships in tow, other than scows, must pay pilotage dues according to tonnage. Detention of pilots from causes other than weather is to be charged at the rate of $3 for the first three hours and $1 for each additional two hours or part thereof.

Each pilot is to be paid monthly a sum not exceeding his share of the balance remaining after providing for expenses and pension fund, and any balance remaining at the end of the year is to be divided among the pilots in proportion to the time worked. The maximum amount which a pilot may receive in any year is raised from $3,500 to $4,500.

An applicant for a pilot's licence must be a British subject, 25 to 50 years of age, have a certificate not lower than Master, Home Trade, and satisfactory testimonials showing that he has traded into the port of Sydney for at least 24 months as master of a home trade or foreign going vessel. He is also required to have certificates as to health, eyesight, and character and pass an examination and serve one year's probation.

Provision for a pilots' committee is continued and any representations by the pilots to the Pilotage Authorities must be made through such committee. The use of intoxicants or narcotics is prohibited for pilots on duty or about to go on duty and also if it interferes with their work or good conduct, for those on shore during the navigation season. For certain specified offences, a pilot is liable to suspension or withdrawal of his licence and to a fine of not more than $200 which may be deducted from earnings.

Annual leave not exceeding 21 days a year may be granted to pilots having one year or more of service and sick leave up to two months with full pay and one month with half-pay in any 12 consecutive months. Further sick leave without pay may be granted by the Pilotage Authority. A pilot injured on duty may obtain leave up to six months with full pay and a further six months on half-pay. The pilot must send notice of illness or injury to the Superintendent and may be required to submit to a medical examination. A medical certificate is required if sick leave exceeds six days.

As formerly, a pilot retired through age or infirmity is entitled, if he has less than five years' service, to a return of his contributions to the pension fund and, if he has served five years or longer, to his share of the sum available but not exceeding $25 per annum for each year of service with a maximum of $900 a year. Upon the death of a pilot, whether

retired or not, one-half the sums which would have been payable to him on retirement may be paid to his widow with an additional $25 per annum for each child under 18 years of age, instead of 16 as formerly. Upon the death of the widow, her pension is to be divided equally among the children under 18 years of age but no child may receive more than $250 per annum. The new age limit of 18 years for children is not to affect those who have ceased to receive pension before these by-laws came into force and the pension conditions do not apply to retired pilots or widows who were on pension prior to September 11, 1935. Benefits are not payable to the widow of a pilot unless she was his wife at the time of his retirement. A pilot over 50 years of age who is dismissed owing to a shipping casualty is entitled to a life pension at one-half the rate paid to those retired through age or infirmity. A pilot retiring of his own accord before the age of 60 is entitled to the return without interest of such sums as the Pilotage Authority determines to be his interest in the Pension Fund.

Among regulations published by the provinces in the past few weeks are those governing trade schools in Manitoba and minimum wages in Quebec and Saskatchewan.

Manitoba Trade Schools Regulation Act

Regulations relating to the registration of trade schools were gazetted on July 13 and provide control over the establishment and conditions of operation of these schools generally similar to that exercised in Alberta, British Columbia, Nova Scotia and Saskatchewan.

A person applying for registration as the keeper or operator of a trade school must do so upon a prescribed form and must supply detailed information regarding the school premises, its administrative and teaching personnel, equipment and actual and potential enrolment. Five character references furnished by reputable people within the province must accompany the application, while teachers must make statutory declaration setting forth their qualifications in addition to supplying references as to character and experience. Information regarding the course of instruction to be offered, text books to be used, supplies and equipment needed by students and fees to be charged must be submitted in detail. At the same time copies of all advertising matter to be used in connection with the school, copies of all contracts, or details of them if they are verbal, between sales agents and the trade-school operator, and the names and addresses of these sales agents must be sent with the application. Evidence must be given that the school has complied with sanitary, fire and other regulations including those relating to equipment, machinery and tools. The registration fee is $50 if one course only is taught, with a $10 increase for each additional course up to $200, but the school must also deposit with the Minister a bond or policy of a bonding house in the sum of $1,000. The certificate of registration must be prominently displayed.

Numerous provisions are made for the protection of students and the public, including the prohibition of oral or written guarantees of a position on graduation, of misleading advertising including the use of help wanted columns and unregulated broadcasts, of references to governmental approval of the course and of exaggerated claims as to a student's competency after graduation. The certificate or diploma granted to a student on completion of his course must be in a prescribed form which merely states that he has completed his course. Finally, when a student gives notice in writing of his intention to discontinue his course, the trade-school may retain from the fees paid only an amount proportional to the instruction taken plus 25 per cent of the amount remaining due, while if an operator is unregistered or has made false or misleading statements he is not permitted to retain any fees collected.

Quebec Fair Wage Act

The minimum wage set by Order 4 for messenger and delivery boys has been increased by two cents to 12 cents an hour in the case of those who furnish and repair their own bicycles by an amendment gazetted July 6.

A modification of Order 4 which restricts the number of learners to 10 per cent of the working staff of an employer in any one zone provides that if an employer has five permanent employees he may also engage one learner.

Several rules of interpretation of Order 4 were gazetted on July 6. It is made clear that the minimum wages set in the order apply to a 48-hour week not only for banks and insurance companies as referred to in a resolution of June 4 but also to stock brokers', bond dealers' and broadcasting establishments, and that a 54-hour week applies to post offices and retail sales departments of electrical power and gas companies.

A rule of interpretation relating to Order 17 governing employees in Montreal laundries was gazetted on July 6 and deals with overtime payment. The order states that employees must be paid for work after a number of hours in a week varying from 48 to 72 according to the class of work and in all cases after 12 hours a day at least one and a half times the regular hourly rate for their cate-

gory and the new rule states that the regular hourly rate means the amount actually paid per hour even where this is higher than the minimum set in the order.

An amendment in Order 4 gazetted on July 20 provides that wage earners doing loading and unloading or stowage work on ships in Rimouski Harbour are entitled to 35 cents for each hour of work performed between 6 a.m. and 7 p.m. and 40 cents an hour between 7 p.m. and 6 a.m. For Sunday work the rates are doubled.

Order 23 governing employees in taverns in Montreal and vicinity is renewed for a further six months from July 21.

Saskatchewan Minimum Wage Act

An order gazetted on July 15 provides that from July 31 where employers or employees who come under the minimum wage orders for shops, factories, hotels and restaurants, beauty parlours and barber shops, theatres and dance halls are also covered by schedules under the Industrial Standards Act the provisions of the latter as to wages and hours are to prevail.

LABOUR LEGISLATION IN QUEBEC AND NORTHWEST TERRITORIES IN 1940

MANY important changes were made in Quebec labour laws at the last session of the Legislature which sat from February 20 to June 22. A Labour Council was established to study labour questions. A new Minimum Wage Act was passed and the Collective Agreements Act was revised. There are several changes in the Workmen's Compensation Act and an extension of the cases in which silicosis is compensatable. The Act granting pensions to teachers and other school employees is made more favourable to the beneficiaries and the classes covered by the Needy Mothers' Assistance Act are increased. Under the last mentioned Act and the Acts providing pensions for the aged and blind, provision is made for furnishing municipalities with information as to the recipients.

Labour Council

A Superior Labour Council has been established under an Act in charge of the Minister of Labour to be composed of 24 members appointed for three years by the Lieutenant-Governor in Council on the recommendation of the Minister of Labour. The Council is to study matters relating to the protection of the workers, the rationalization of labour, collective agreements, minimum wages, labour inspection, the prevention of industrial accidents, apprenticeship, vocational guidance, rehabilitation of the unemployed, social insurance and assistance, slum clearance and the ownership by workmen of their own homes. The Minister of Labour may invite the Council to make a preliminary study of any economic and social problems of the province. The Council may, of its own initiative, study any particular aspect of such problems with the approval of the Minister.

The Council members are chosen, one-third on recommendation of the most representative labour organizations of the Province, one-third to represent capital as recommended by the most representative employers' associations and one-third from persons specially conversant with social and economic problems. The associations which have recommended appointees may request their replacement for a reason approved by the Superior Council in plenary session. Council members are eligible for re-appointment.

The Council is to elect a president and two vice-presidents, also a permanent board of six members appointed for one year and eligible for re-appointment, to prepare its work and serve as a connecting link between the Council and the Minister of Labour. The Permanent Board is made up of two representatives of each group, namely, labour, employers and independent members. The members are replaced in the same way as they are appointed.

The Superior Council is to meet at least twice a year on the dates fixed by the Permanent Board with the assent of the Minister of Labour who is to summon the first meeting. The Council may accept, reject or amend the Board's decisions.

The Permanent Board is to draft by-laws governing its own working as well as that of the Council and the mode of election of the officers of the Council. The Council may amend the by-laws which come in force on approval of the Lieutenant-Governor in Council. The Permanent Board may designate persons to investigate and report on particular problems and may recommend such remuneration for persons not attached to the Council as the Minister deems appropriate.

In addition to the permanent members of both Council and Board, there is provision for associate members who hold office during pleasure and take part in the deliberations but do not vote. The Lieutenant-Governor in

Council may appoint to the Council three representatives of the Department of Labour and three of the Department of Trade and Commerce. The Ministers of these two departments may each designate one of these representatives for appointment to the Board.

Both the Council and the Board may summon witnesses and require them to produce documents in their possession. The Board's secretary is to fulfil the same duties for the Superior Council. He is to prepare an annual report under the direction of the Permanent Board, the report to be approved by the Superior Council in plenary session and then submitted to the Minister of Labour. The secretary and other officers are appointed by the Lieutenant-Governor in Council. Board members serve without salary but are indemnified for the cost of attending the meetings.

Minimum Wage Act

The new Minimum Wage Act came into force on the day of its sanction except that the section repealing the Fair Wage Act is to be effective on a day to be fixed by proclamation. The Act also repeals the Forest Operations Commission Act, those formerly covered by it being brought under the Minimum Wage Act. The repeal of the two statutes, however, does not affect regulations made under them.

The Minimum Wage Act applies, like the Fair Wage Act, to all employed persons except agricultural workers and household servants, those governed by a decree under the Collective Agreements Act or other similar Act and those governed by a collective agreement made under the Professional Syndicates Act, unless the Minimum Wage Commission set up to give effect to the Act declares the agreement less advantageous than its ordinances. The Commission is to supervise the carrying out of any agreement under the Professional Syndicates Act as if it were one of its own ordinances.

The Minimum Wage Commission under the Minister of Labour is to take over all the rights and obligations of the Fair Wage Board save the restrictions the Act may effect. The Commission which has the powers of an ordinary civil corporation is to be composed of five members appointed by the Lieutenant-Governor in Council who also chooses the president, vice-president and the employees and the Act stipulates that the present members and employees of the Fair Wage Board are to be transferred to the Commission.

The Commission is to collaborate with employers and employees in the establishment of minimum wages and also to act as an arbitration council in disputes between employers and employees and to supervise and control working conditions generally. As was provided in 1939 for the Fair Wage Board, a decision in writing, signed by all members of the Commission, is to have the same validity as a resolution adopted at a regular sitting. Authority is given to make regulations concerning internal management and duties of staff, the conduct of its sessions, etc., the procedure for investigations and the form of reports which must be made to the Commission. Regulations may provide also for a registration system for the employees of professional employers, that is, employers who habitually have one or more employees engaged in work which is subject to an order or to compel employers to keep a register of names and addresses of employees, their competency, hours of work, wages, mode of payment, etc., also to transmit monthly, a written report of such information. As before, a detailed report of receipts and disbursements is to be submitted to the Minister quarterly and at other times if the Minister so requires. The Commission may levy on any category of such employers not more than one per cent of the wages paid to their employees. They may make regulations to compel employers to post orders and documents and to compel every employer unless expressly exempted to deliver to each employee his wage in a sealed envelope on which certain particulars are written, the envelope to be initialed by the person who made up the pay. All regulations except those relating to the proceedings of the Commission must be gazetted after approval by the Lieutenant-Governor in Council.

The Commission has power to fix minimum time or piece-rates for any class of workers, the conditions of payment, hours of work, conditions of apprenticeship and the proportion of apprentices in any undertaking and any other working conditions considered to be in accordance with the spirit of the Act.

It is stipulated, however, that unless, in the Commission's opinion, a more expeditious procedure is justified by special circumstances, the Commission may call a conference of an equal number of representatives of employers, employees and the public which will be presided over by a member of the Commission and which will make recommendations to the Commission for a minimum wage ordinance. In the case of an ordinance for a particular industry, the Commission may convene a conciliation board made up of representatives of employers and employees concerned and presided over by one of the Commissioners. If employers or employees fail to nominate representatives, the Commission may appoint on its own initiative.

The Commission has power to approve, amend or reject the findings of a conference

or board and the Lieutenant-Governor in Council may amend or reject draft ordinances submitted by the Commission. An ordinance may be amended only following the same procedure by which it was put in force but the Commission may suspend an ordinance for not more than two months. An ordinance or a resolution suspending an ordinance is to go into effect on the 28th day after publication in the Official Gazette or on the day fixed in the publication but not prior to the date of publication.

The provisions of a minimum wage ordinance are declared to entail a matter of public order and to govern any work of the kind contemplated by the order in the district to which it applies. Regardless of the employer's occupation he is forbidden to make an agreement with an employee to pay a rate contrary to that fixed by the ordinance for the work and where such agreement is made the employee has the right to recover the sum due under the ordinance. Unless the ordinance expressly forbids it a contract of hire may provide for higher wages and better conditions than those laid down in the ordinance applying to the work. A professional employer and a sub-contractor or any intermediary are jointly and severally responsible for the payment of the proper wage rate. Settlement of accounts between employer and employee entailing a wage reduction are null unless approved by the Commission. Neither may any interest in the employer's business be sold to an employee without the consent of the Commission.

The Commission is now authorized to take action on behalf of any employee who has failed to bring suit within 15 days or has neglected to proceed with the action for 15 days, even if the employee has renounced his claim or has not been informed of the Commission's action and without having to prove that the employee has not brought suit or that he has failed to proceed with it. Civil actions may not be brought after the lapse of six months but in a case of fraud the period is to date from the time the Commission discovered it.

Several changes were made in the penalty sections, separate provisions being made for the various types of offence. Penal actions must be brought by the Commission and within six months from the date of the offence. At the option of the Commission penalties may be imposed on summary conviction or by a penal action before a civil court. The competency of the court in the case of an action on behalf of several employees whether brought by the Commission or not is to be determined by the total amount claimed. The Commission is to turn over to the employees the net amount realized in the action on their behalf. Any of the Commission's inspectors may, as of right, at any time examine an employer's records and require the necessary information under oath in writing signed by an employer or employee. It continues to be an offence for an employer to dismiss a man for giving information to the Commission's representatives or for testifying in a prosecution or investigation or to dismiss him with intent to re-engage him at a smaller wage. The fine for the first offence must not exceed $50 and costs; for subsequent offences the fine is to be at least $25 and not more than $100 and costs.

The Act provides that after receiving a claim from the Commission the employer cannot validly pay the sums which are the object of such claim except by handing them over to that body. To the examination of an employee of the opposite party when he is produced by the Commission is declared inapplicable the provision in the Code of Civil Procedure which prohibits leading questions, unless the witness attempts to elude the question or to favour the other party or unless he is the other party.

Collective Agreements Act

Similar provisions to those set out in the last paragraph are contained in the revised Collective Agreements Act, the rights given to the Minimum Wage Commission being granted to the parity committees or joint committees, as they were formerly called, under the Collective Agreements Act. In neither the Minimum Wage Act nor the Collective Agreements Act is exemption given, as in the former statutes, to employment on works for the Provincial Government. The section relating to freedom of association in the Fair Wage Act is omitted altogether from the Minimum Wage Act and in the Collective Agreements Act it is revised to declare it unlawful to prevent, directly or indirectly, an employee from becoming a member of an association and to make a first offence punishable by a maximum fine of $25 and costs and a subsequent offence by a fine of from $25 to $50 and costs. Thus have been dropped the clauses in the former Acts which were generally considered to make illegal efforts to impose a closed shop.

The new Collective Agreements Act went into effect on the day it was assented to but the repeal of the former Act does not affect the agreements or the joint committees set up under it. As before, the Act does not apply to agricultural work, the employment of blind persons or to the operation of railways subject to Dominion jurisdiction. It is expressly stated, however, that the construction

or alteration of railways or railway buildings or the operation of railway hotels is not exempt from the Act.

An order in council adopted on petition of one party to a collective agreement between an association of employees and one or more employers or an association of employers makes legally binding on all employers and employees in the industry or trade covered by the agreement within the province or in a particular district the provisions of the agreement relating to wages, hours of work and apprentices, the classification of operations and such other provisions as the Lieutenant-Governor in Council may deem to be in conformity with the spirit of the Act.

The conditions relating to the passing of the order in council remain unchanged, the public notice of the petition, 30 days for the lodging of objection, responsibility of the Minister of Labour to satisfy himself as to the probable effect of the agreement and the power of the Government to amend the agreement. A change has been made, however, in the authority of the Lieutenant-Governor in Council as regards the date on which the order in council becomes effective. Under the old Act, the Government had power to make an order in council retroactive over a period of not more than four months. This is no longer possible and the order in council extending an agreement comes into effect on the date it is adopted but it must be gazetted as soon as possible. If any change is made in the order in council embodying the agreement or if it is repealed, the order in council effecting such change or repeal goes into force when gazetted or on a date fixed in the order in council. An amendment in the order in council may be made only on recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published.

The Act contains similar provisions to those of the repealed statute and the Minimum Wage Act concerning the application of the order in council to work of the kind contemplated by it regardless of the employer's occupation, the nullity of any agreement between an employer and employee for a lower wage, the right of an employee to recover the proper wage in spite of such an agreement as well as the validity of an agreement for a higher wage or better conditions than those laid down in the agreement.

The clauses relating to the formation of joint committees to supervise and enforce the agreements are like those in the old Act, the parties to each agreement being required to organize such a committee and the Minister being empowered to add not more than four members nominated by the employers and employees not party to the agreement. A new provision permits any party to an agreement to replace its representatives on the committee after the lapse of a year in spite of any regulation to the contrary adopted by the committee.

A joint committee is constituted a corporation after publication of a notice of approval of its regulations by the Lieutenant-Governor in Council. The committee may bring suit on behalf of any employees who have not instituted an action on their own account within 15 days, instead of one month as in the former Act, from the date on which wages were due or who have neglected for 15 days to proceed with a suit entered upon. Such action by a committee may be taken under similar conditions to those laid down for action for the recovery of wages by the Minimum Wage Commission.

A committee may appoint a secretary, inspectors and other employees and fix their remuneration. Any person having custody of a committee's funds must deposit security with the Minister of Labour. The secretary and inspectors are given the right, formerly given the committee, to enter premises, examine documents and require information.

The provisions concerning the assessment of not more than one-half of one per cent that may be made on a professional employer's payroll or on both the employers's payroll and the employees' wages or on wages only remain much the same but the Lieutenant-Governor in Council may reduce or increase the rate of assessment or may order no further levy to be made by publication of an order in the *Official Gazette*.

Certificates of competency which could formerly be required of workmen by a joint committee, with the approval of the Lieutenant-Governor in Council, only in municipalities with a population of more than 4,000 may now be made obligatory throughout or in a part of the region to which an agreement applies. Another new provision gives the joint committee power to order that any certificate of competency granted by an association of employees to one of its members shall be voided unless the holder passes an examination set by the board of examiners which is to be given free of charge. The committee may require certificates of classification for the employees who do not have to have certificates of competency. These now include clerical or office employees and those whose work requires no apprenticeship as well as the classes formerly covered, namely, labourers and employees licensed under statutory authority.

Workmen's Compensation

The special provision in the Act entitling an executive officer of a corporation and his dependants to compensation on fulfilment of certain conditions is changed to apply to the directors of a corporation and their dependants.

In the provision relating to accidents occurring outside the Province where the employer has a place of business in the Province and the residence of the workman and usual place of employment are in the Province and the employment outside has not exceeded six months in the service of the same employer, it is now stipulated that compensation is payable only where none is granted under the law of the place where the accident occurs.

Another change makes clear that where an accident to a workman entitles him to an action against some person other than his employer and he elects to be paid compensation, the provision in the Act granting the Workmen's Compensation Commission, or the employer if he is individually liable, the rights against such third party, takes effect by the mere making of the election and may be exercised to the full extent of the amount which the employer or the Commission may be called on to pay as a result of the accident. The Legislative Council added a provision that if as a result of the Act the employer or the Commission is afterwards freed from the obligation of paying a part of the compensation so recovered, that amount is to be reimbursed the next month. Repealed is the section providing that an employer or his workman in an industry within the collective liability system had no right of action against another employer within the system but allowing the Commission to direct that the compensation awarded in a Schedule I case where the accident resulted from the negligence of an employer or workman in another class in the same schedule should be charged against the class to which the last mentioned employer belonged.

The section allowing payment of compensation to a member of an employer's family is amended to require that notice of his employment must have been given to the Commission before the accident if the member was not on the payroll and his wages and name were not furnished to the Commission in the regular statement required of employers.

Certain sections are amended to bring them into line with other clauses of the Act. Since compensation is payable in respect of children up to 18 years of age, in the section allowing the Commission to divert compensation from a workman to his wife and children if he has left the Province without providing for their support, the age 16 is changed to 18 years.

The sections enacted in 1938, providing for the establishment of a medical board to revise the medical evidence adduced before the Commission in accident cases, which board was never set up, are repealed. So also is the provision added in 1938 for the appointment of an officer to replace the Commission in administering the accident fund and fixing and collecting assessments.

The schedule of industrial diseases to which silicosis incurred in mining was added in 1938, has been amended to extend that provision to quarrying, cutting, crushing, grinding or polishing of stone and smelting, grinding or polishing of metal. Workmen suffering from seven other occupational diseases are brought under the Act. These are: bursitis, dermatitis, infected blisters, retinitis, and poisoning from carbon monoxide, brass, nickel or zinc, nitrous fumes or the sequelae of any of these.

Teachers' Pensions

Changes effective July 1 were made in the sections of the Education Act which refer to the pensions of primary school teachers and inspectors. They restore some conditions in effect prior to 1935. The number of years' service necessary to qualify for such a pension which was in 1935 raised from 20 to 25 is again reduced to 20. The minimum pension is increased from $150 to $200 and also by five dollars per year of service above 20 years and up to 35 years. The maximum is now $1,500 instead of $1,200.

The provision inserted in 1935, which raised from 50 to 56 the age up to which married women retiring after 20 years' service were entitled only to reimbursement of their contributions to the pension fund without interest, has been revised to reduce the age again to 50.

The provision for repayment without interest, on the occasion of a teacher's incapacity, of sums paid into the pension fund is again allowed after ten years' service. This was changed in 1935, to make it payable after 15 years' service. A new provision allows any teacher or inspector who has belonged to a religious teaching order in Quebec to be given credit for five years of such teaching on condition that he pay the contributions for the pension fund based on a salary estimated by the members of the administrative commission of the fund. The pension becomes payable quarterly instead of semi-annually.

Mothers' Pensions, Old Age Pensions and Pensions for the Blind

An amendment to come in force on proclamation extends the Needy Mothers' Assistance Act to mothers who have residing with them one legitimate child under 16 as well as those with two or more children under that age.

The Act now covers not only a woman whose husband is confined in a lunatic asylum at public expense but also a woman who has been deserted by her husband for five years and one whose husband is totally disabled and kept in a public charitable institution. It is made clear that women who were British subjects at birth come under the scheme as well as those who have been British subjects for the 15 preceding years. The clause requiring seven years' residence immediately preceding the application for an allowance now requires domicile for the seven years and actual residence for at least 1,825 days during that period.

The section which allowed payment of the allowance to a grandmother under certain conditions is extended to cover an aunt or sister where there is no grandmother capable of taking charge of the children. A new clause provides for payment of an allowance to an administrator appointed by the body or the Minister charged with carrying out the Act when the beneficiary seems to him incapable of making good use of the allowance. The administrator is to use it for the needs of the beneficiary and of the children, and must account to the body by which he is appointed.

The expenses of carrying out the Act are now all to be paid out of the Consolidated Revenue Fund and borrowing money for this purpose is no longer authorized.

Amendments in this Act as well as in the Old Age Pensions Act and the Blind Persons Aid Act, also to come in force on proclamation, allow the administrative authorities to require a certificate of the treasurer or accountant of the municipality in which he is domiciled enumerating the real property which has been inscribed in the applicant's name or in the name of his or her wife or husband during the preceding five years on the municipal valuation roll. The authorities administering these Acts may supply annually to the members and officers of every municipal council a list of persons in the Province benefiting from them but the latter are forbidden to reveal such information. A municipal officer may indicate to the administrative authority any person who does not appear to be entitled to a pension or allowance.

There are new provisions in the three Acts allowing the Lieutenant-Governor in Council to impose on the municipalities a contribution not exceeding in the case of mothers' pensions 5 per cent and in the case of old age and blind pensions up to 2 per cent of allowances paid to beneficiaries domiciled therein. In all cases the Lieutenant-Governor in Council may determine how the domicile is to be established for the purposes of such contribution and regulate all the conditions.

Technical Education

An Act to establish an Arts and Trade School at Rouyn provides for the use of a new school building at Rouyn partly as a primary school but with sufficient accommodation set aside for a technical school.

Northwest Territories

The Workmens' Compensation Ordinance, 1940, (Labour Gazette, April, 1940, p. 349), was amended on April 30 to authorize the Commissioner of the Northwest Territories to make an order directing employers in any business, calling, trade, or occupation to enter, if possible, into an arrangement, satisfactory to the Commissioner, for the protection of their workmen, with a Workmen's Compensation Board of a province or territory other than the Northwest Territories. If an employer declines to carry out such an order the Commissioner may refuse to grant him a licence to carry on business, or may cancel one already granted.

The Businesses, Callings, Trades and Occupations Licence Ordinance, 1938, under which the licences referred to above are issued, was amended on May 8, 1940, to require an applicant for a licence who is an employer of labour to state whether or not he has made an arrangement in accordance with the Workmen's Compensation Ordinance and to set out fully such arrangement or explain his reason for not making one.

During the month of July there were 7,902 accidents reported to the Workmen's Compensation Board of Ontario, as compared with 6,206 during the month of June, and 5,242 during the month of July a year ago. The benefits awarded amounted to $571,730.96, of which $463,740.94 was for compensation and $107,990.02 for medical aid.

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at June 30, 1940

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at June 30, 1940. (The text of the Old Age Pensions Act was given in the LABOUR GAZETTE for April, 1927, page 375, and the new regulations were reviewed in the issue for March, 1938, pages 286-288.)

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (LABOUR GAZETTE, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is $240 per annum. If, however, a blind person marries another blind person after March 31, 1937, maximum pension is reduced to $120. If a pensioner is unmarried, the maximum pension is reduced by the amount of his income from earnings or other sources in excess of $200 a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of $165, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $400. If a pensioner is married to a person receiving a pension in respect of blindness, his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $200.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette* of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

OLD AGE PENSIONS—FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1940

	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	New Brunswick Act effective July 1, 1936	Nova Scotia Act effective Mar. 1, 1934	Ontario Act effective Nov. 1, 1929

ANNUAL CONVENTION OF QUEBEC FEDERATION OF LABOUR

WITH over one hundred delegates in attendance, the Quebec Provincial Federation of Labour held its third annual convention in Hull on July 27 and 28, the sessions being presided over by President J. Arthur D'Aoust.

At one of the early sessions of the convention a resolution was adopted expressing assurances of loyalty to Canada and the wholehearted co-operation of the membership to the Government in the implementing of the nation's war effort.

Thirty-two resolutions were considered by the convention and dealt with a variety of subjects. Resolutions concerning the Quebec Collective Labour Agreements Act called for the abolition of the "open shop" principle maintained in the Act; the fixing of prices for services in the barbering trade; compulsory setting up of joint committees to supervise the carrying out of decrees; the opening of negotiations for renewals of agreements not more than 60 days prior to expiration of existing contracts and the re-inclusion of weekly newspapers under the jurisdiction of the Act. Another resolution asked for the amendment of this Act and also the Minimum Wage and Professional Syndicates Acts outlawing employer-controlled associations of employees.

The convention urged that in all legislation respecting the regulation of wages and hours of labour, definite provision be made to protect workers in the exercise of their right to organize and bargain collectively through unions of their own choosing.

The convention decided to seek legislation prohibiting the granting of injunctions in industrial disputes before both parties to the dispute have been heard.

Strong condemnation was voiced of the practice of employers, particularly in the needle trades, of having work done in private homes. It was charged that in some instances even the most elementary hygiene was ignored and that deplorably low wages were paid. The Provincial Government will be requested to take necessary action to prohibit continuance of these conditions and thus remove this unfair competition with regular shops and factories conforming with existing laws. The Federation also declared its opposition to prison labour entering into competition with free labour.

Other resolutions sought to prevent employment of female workers in the dispensing of alcoholic beverages; establishment of a 48-hour work week for employees of hotels, taverns and restaurants; annual vacations with pay for all workers; the granting of printing contracts by the Provincial Government only to firms which are properly equipped and operate under fair labour conditions; payment of compensation for silicosis contracted by workers in industries other than mining; the inclusion of hotel and restaurant employees under the Workmen's Compensation Act; maintenance of proper hygienic conditions in taverns; the establishment and maintenance of adequate standards of unemployment relief. Free and compulsory education, in both the French and English languages, within the province was again urged by the Federation.

General opposition was expressed by the convention to the system of toll charges on Quebec bridges. It was also decided to press for a reduction in the fees charged on private motor vehicles and an additional levy on those used for commercial purposes.

In the election of officers, Raoul Trepanier, Montreal, was elected president by acclamation, the retiring president Arthur D'Aoust declining the nomination because of pressure of official duties as vice-president of the Brotherhood of Paper Makers. Marcil Francq, Montreal, Acting Secretary, was elected Secretary.

Vice-presidents elected were J. B. Arsenault, Three Rivers; Joseph Matte, Quebec; and Claude Jodoin, Montreal. Regional vice-presidents: Albert Gibeault, Gatineau; Emile Lajoie, Three Rivers; W. Brown, Kenogami; and W. O. Bonnet, Sherbrooke. Gustave Francq, Montreal, was elected as delegate to the 56th annual convention of the Trades and Labour Congress of Canada to be held at Vancouver in September next.

The annual meeting of the Federation in 1941 will be held in St. Jean d'Iberville.

TRAINING FOR MUNITIONS WORK

IN view of the rapidly increasing tempo of Canadian industry, geared to the war effort with its emphasis on armament, aircraft and munitions production, the following article entitled "Training For Munitions Work" is extracted in its entirety from the July issue of *Industrial Welfare*, the official publication of the Industrial Welfare Society of Great Britain:

Reduced to its simplest terms, training for manual work means clear and detailed instructions as to how a job is to be done; a certain period during which a worker's purpose is recognized to be, not maximum output, but mastery of certain movements; and supervision of progress during this period by some particular person charged with teaching the elements of the job or operation.

On these fundamentals can be built up training schemes for different types of operation. Some will take a few hours, some days, some months to learn. Apprenticeships which take years will not help us in the present emergency. We have to make do with the skilled labour already trained. By the widespread application of the principles of mass production—the subdivision of every job into the simplest possible operations—it may be possible to do this. The problem of training is therefore rather different from that of peace time.

French Training Scheme

It may be of interest to examine the way in which our late Allies prepared to train and organize the vast army of women which was to take the place in the munitions factories of the men called to the colours. Firstly it was realized that many specialized operations such as turning shells can be taught in a few hours or days, and most armament factories arranged to train women for this specialized job. In the second place it was decided to replace skilled men by quickly trained semi-skilled who were either to be taught just the few movements required for a particular operation or to be trained to carry out certain jobs under careful supervision. This type of training was estimated to take from four to twelve weeks—rather less than the average in our Government training centres.

The training was very intensive, based on elaborate selection and a very small number of students to each instructor, to ensure careful supervision. Instructors, who were all craftsmen, were chosen from the army, as there were none to spare from industry, and after a short period of training, were sent into factories, usually in groups of three, to set up works schools. Assistant instructors were selected from among the factory's own skilled workers. These were trained for two weeks and the school was then ready to recruit trainees in the proportion of four to each instructor or 36 to 48 to each school. An engineer in the works was always made responsible for keeping in touch with the school and for helping the chief instructor in matters connected with recruitment, accommodation, machines, work to be done and placement of trained workers.

Government Training Centres

The Government Training Scheme in this country (Great Britain), originally started to rehabilitate the younger unemployed men, is being very much expanded and altered to meet new conditions, though it is not yet designed to train women. Classes are now only given in engineering trades. Men are to be trained intensively to carry out certain special operations. Numbers of new centres with accommodation for several thousand trainees are being opened. A system of double shifts has been introduced in the machine operator and instrument maker's classes and the introduction of three shifts is under consideration. The courses of training have been cut down from six months to from three to five, and they may now vary in length according to the ability of the trainee. Some men are given even shorter courses and then placed with employers who are willing to continue their training on their own premises.

The recruiting campaign has again been intensified and the centres have been thrown open to men in employment, if they are not in reserved occupations, and even to men in reserved occupations, if they have been unemployed for two months or more. If the training courses are closely enough linked to the needs of industry, as they can be with co-operation on both sides, all men with any mechanical aptitude should be able within a comparatively short time to play a useful and essential part in the war effort.

The principal difficulty in expanding training centres further is the lack of suitable instructors. Some could undoubtedly be released from industry. Although it may seem shortsighted to deprive a good training scheme, even in a non-essential industry, of its best instructors, the offers made by a number of employers to do this are certainly in the national interest.

Works Short-term Training

In spite of expansion of Government training, works training schemes are more necessary than ever, though some of them may have to

be adapted to meet the new short-term needs. A leading British aircraft firm has successfully introduced a short term training scheme in order to assist the speed-up of production of flying boats. A school has been built for the instruction of unskilled workers, and the usual course is for a period of six weeks. This innovation in British aircraft factory management was possible only with the full co-operation of the skilled employees.

No previous engineering experience is required of the trainees, and no definite course of instruction is laid down. The amount of coaching given varies according to the alacrity with which each individual masters a particular job. Great care is exercised in guarding against men being put on actual construction work until they are qualified. The course completed, the men pass from the school to the main factories, where they are engaged on detail fitting, sub-assembly and main assembly.

Women Engineers and Supervisors

The Government training centres still do not cater for women. The only schemes are those run by the Women's Engineering Society for women of skilled and supervisory grades. Successful courses were organized in London last winter and another has just started at Manchester. The syllabus includes training in foremanship, instruction in workshop practice and practical work. All those who have gone through these courses have entered works as operatives, and most have soon been promoted. Some are being specially trained for tool-setting and others are being used for quite responsible inspection work. If employers would show interest in the training of some of their skilled operatives in such courses, it might be possible to start more. In an article in *The Engineer* of April 19, 1940, Miss V. Holmes writes "It may be stated that the greatest difficulty of all is still that of collecting a sufficient number of the right type of student in districts where facilities for their training are available."

But these are the few select women. What of the many, the women who are expected to pour into industry in their thousands as soon as industry is ready to receive them? In the article referred to above Miss Holmes says "in the last war, the usual practice was to allocate a newly-engaged and untrained girl to a machine tool which was being operated by an experienced hand. An article written in 1916, describing a shell factory, states that girls trained in this way could work a machine after three days' training, were efficient in seven days and reached their maximum efficiency in two months. It is not suggested that all semi-skilled work can be learned quite so rapidly, but with the modern sub-division of processes, little time need be spent on training." But that time must be well spent. One of the essential functions of the personnel manager or welfare supervisor is to see that this initial training, whether it lasts three or seven days, is conscientiously carried out.

INDUSTRIAL HYGIENE IN ONTARIO, 1939

THE annual report of the Director of the Industrial Hygiene Division of the Ontario Department of Health (Dr. J. G. Cunningham) for the year 1939 declared that there were "further evidences of interest and activity in health supervision instituted by industry for its employees."

Contributing to this objective were certain committees on which the Division was represented, among which were:

- A Committee of the Metal Trades, considering provisions for dust control in foundries, and periodic examination of workmen exposed.
- A Committee Advisory to the Industrial Hygiene section of the Federal Department of Health which recommended a survey of industry in Canada to determine existing industrial medical services, and which recommended that the War Supply Board provide for special reference to health supervision in contracts awarded for war materials. These recommendations have been accepted.
- A Committee of the Canadian Engineering Standards Association which is considering Canadian specifications for welders' filter goggles and glasses.

Dealing with the effect of the war on industrial health the report noted:

"Under war conditions when raw materials are available, labour becomes the limiting factor in production. All measures are directed to maximum output and it is then better realized that general sickness is even more important than industrial accidents because of the much greater loss of time involved. Prolonged working hours are more likely to decrease production than to increase it, and many other conditions of work assume greater significance. For industrial operations of such

a temporary and emergent nature, it is frequently more practical to control a health hazard by medical supervision of workers than by exensive alterations to process and equipment. . . . ."

Specific Occupational Hazards.—The investigations during the year included:

(*a*) Silica exposures in polishing, grinding, sandblasting and china manufacture.

(*b*) Lead exposure in the manufacture of foundry bronze, lead foils, paint, toys; reclaiming scrap and in mine assay offices which now appear as one of the more important sources of hazard from this metal.

(*c*) Benzol exposure in the manufacture of rubber shoes, patent leather, rubber cement and lacquers.

(*d*) Carbon tetrachloride and trichlorethylene exposures in degreasing and dry-cleaning.

(*e*) A variety of exposures producing cases of dermatitis, such as from chromium in tanneries where there appears no doubt that reduced chromium as the sulphate can produce severe dermatitis; from adhesive paste, exotic woods, morphine and cutting oils.

(*f*) Miscellaneous inquiries such as arsenic in insecticides, weed killer, and button manufacture; asphalt fumes, hydrogen sulphide in sewers, steel alloys in welding, and explosion from baking oven enamels.

More detailed inquiry was made respecting the use of carbon tetrachloride by furriers for cleaning; of ethyl mercury phosphate (cerasan) as a disinfectant for seed grain; of chlorinated phenol as wood preservative; of a spray gun for the application of molten lead in automobile body repairs; of radio-active compounds for dial painting, of carbon tetrachloride in degreasing machines designed for trichlorethylene.

Laboratory and Clinical Investigations.—Indicative of the methods used in checking industrial hazards the report states:

To keep the laboratory and clinical investigations within limits, the services of one physician working with factory inspectors, are largely given over to the evaluation of suspected hazards, requiring considerable experience if the results are to be at all satisfactory. In the course of this work, two hundred visits were made and twenty-two companies were required under the Factory, Shop and Office Building Act to provide and report to the Division the results of periodic physical examination of workmen exposed to dangerous materials. This involved about fourteen hundred examinations by company physicians, six hundred and forty-seven in lead, one hundred and thirty in arsenic and lead, two hundred and fifty-six in benzol and three hundred and eighty-four in radium. As a result of this supervision no case of serious poisoning has developed in these exposures.

To carry out the special inquiries, the Industrial Hygiene Laboratory has conducted about five hundred chemical determinations in relation to three hundred exposures. This aspect of the work has been restricted to some extent by the chemical facilities needed for the enforcement of the bedding regulations. On the other hand, some local branch factories of American companies have conducted their own inquiry into dust exposures and the best means for their control. About one thousand blood smear examinations have been made to assist in the diagnosis of suspected cases of occupational disease or in the supervision of those exposed. There have been three hundred examinations in factory clinics, four hundred in connection with claims for workmen's compensation for silicosis and a few examinations each in those exposed to benzol, lead, cyanide and radium. In addition, the clinician has issued one hundred and seventy-two certificates for fitness for employment in mines and examined or assisted with others on various Department Boards in nearly eight hundred cases. Chest-X-ray films of workmen exposed to dust have been referred by many local physicians and from the Provinces of Manitoba, Alberta, Quebec and Nova Scotia and from Newfoundland.

Dust Control.—The engineering control of dust hazards, states the Director, is facilitated by the provisions in the Factory Act, requiring submission of plans for new factories or for extensions to existing ones.

Co-operation with the Department of Labour results in consideration of structural and equipment needs before expenditures are made, in many instances with considerable saving to employers. Dust determinations have been limited to those processes where the degree of exposure was doubtful or for testing the effectiveness of new control equipment. A number of factories have been supplied with detailed plans prepared in the Division for the correction of known hazards, for example, in ore-smelting, aeroplane coating, abrasive manufacture, ore-loading, porcelain enamelling. Special attention continues to be directed to the control of dust in the foundry industry where this year in twenty-five plants detailed recommendations have been made. Employers in this industry have effected very definite improvements and as an organization are still active in this direction. By request, comments have been prepared and forwarded on the proposed codes developed and submitted by the Codes Committee of the American Foundrymen's Association.

Other sections of the Director's report deal with the enforcement of bedding regulations (labelling of bedding and certain types of furniture at the time of manufacture or second-hand material before being exposed for sale) and with the administration of regulations governing saw-mill, mining, and construction camps.

LABOUR RELATIONS IN UNITED STATES MARITIME INDUSTRY

Report and Recommendations of Maritime Labour Board

COMPREHENSIVE recommendations for the stabilization of labour relations in the maritime industry are contained in the report of the Maritime Labour Board submitted to the President and the Congress of the United States.

This report is in compliance with section 1010 of title X of the Merchant Marine Act of 1936, as amended, which reads as follows:

> On or before March 1, 1940, the Board shall submit to the President and to Congress a comprehensive plan for the establishment of a permanent Federal policy for the amicable adjustment of all disputes between maritime employers and employees and for the stabilization of maritime labour relations. As far as may be, the Board shall seek to secure through its mediatory efforts agreement between maritime employers and employees upon the plan it is hereby required to submit.

As stated in the introduction to the report, the recommendations are based upon: (1) Experience of the Maritime Labour Board with the administration of title X; (2) conferences with representatives of organizations of maritime employers and employees held by the Maritime Labour Board; and (3) studies and investigations made by the Maritime Labour Board, including an examination of the various legislative proposals submitted during the Seventy-fifth Congress which eventuated in enactment of title X.

It is significant, the report observes, that almost from its origin the mediatory services of the Maritime Labour Board have been used both by employers and employees. Between the date of its establishment on July 6, 1938, and October 1, 1939, more than 70 disputes were handled by the Board covering in excess of 110,000 workers. These cases involved questions pertaining to the making and maintaining of written agreements, to the renewal of agreements, and to stoppages of work resulting from lock-outs and strikes. The experience of the Board has embraced practically all issues over which maritime employers and employees have been in conflict during recent years, and has brought the Board into close contact with the industry. The Board has thus gained a realistic appreciation of the day-to-day problems incident to collective bargaining which confront employers and workers in the maritime industry.

"In compliance with section 1010, which provides that the Board shall seek to secure through its mediatory efforts agreement between maritime employers and employees upon the plan it is hereby required to submit, the Board has conferred with representatives of the major employers' and workers' organizations.

"These were conferences arranged for the purpose of eliciting the views of the parties directly at interest in maritime labour disputes, with regard to the kind of plan which should be submitted to the Congress for the amicable adjustment of labour disputes...."

These conferences indicated widely divergent views as to the type and scope of a special Federal mediatory agency for the promotion of collective bargaining and the mediation of disputes in the maritime industry.

This absence of agreement, it is stated, not only between maritime employers and their employees but also between organized groups of employers on the one hand and organized groups of employees on the other is a major reason for the Board's conclusion that for the immediate future the public interest requires a specialized Federal agency for the mediation of disputes and the establishment of Federal policy with respect to collective bargaining in the maritime industry.

"The recommendations of the Board fall into two main categories: (1) Specific amendments to title X regarding measures necessary to strengthen existing facilities for making and maintaining collective agreements, and for the amicable adjustment of disputes; and (2) a general recommendation intended to encourage the development of collective bargaining in the maritime industry by removing existing impediments to its growth.

"The Board does not assume that its recommendations constitute a final, full-grown plan designed to inaugurate an era of perfect harmony between maritime employers and employees. In a democratic country, orderly and amicable employer-employee relationships in any industry are predicated upon a gradual growth of mutual respect and understanding, which in the maritime industry are still in the formative stage.

"The Board is fully aware of the immediate and imperative need for securing an uninterrupted flow of water-borne commerce, particularly because of the close connection between the merchant marine and the national defence. But the Board is also mindful of the fact that in seeking a basis for the development of an enduring and steadfast employer-employee relationship, primary emphasis must be placed upon normal conditions rather than upon those which might obtain during periods of national emergency."

Chief Recommendations

Several of the chief recommendations proposed, and the Board's explanatory notations are contained in the following paragraphs from the report:

The Maritime Labour Board, or its successor, should be authorized to consider and determine questions concerning representation of employees of maritime employers.

The navigation laws of the United States or any other laws relating to seamen should not be so construed as to abrogate the right of seamen to strike in domestic harbours.

The receipt of Federal construction or operating subsidies should also be made conditional upon compliance with the provisions of section 8 of the National Labour Relations Act.

It is the judgment of the Board that the observance of the provisions of the National Labour Relations Act with respect to unfair labour practices should be made a condition for receiving federal subsidies. . . .

To achieve this and section 1002 should be further amended to provide that persons or corporations, found guilty by a court of competent jurisdiction of any of the unfair labour practices prohibited by section 8 of the National Labour Relations Act, should become ineligible to receive, or to continue to receive, federal construction or operating subsidies for a specified period of time.

This recommendation is intended as a special inducement to those who are the direct beneficiaries of governmental aid to obey the provisions of the National Labour Relations Act.

In the interests of orderly labour relations in the maritime industry, the report declares, the Board believes it is imperative to stop effectively any attempt by unfair maritime employers to engage in practices inimical to the rights of maritime employees. Since many maritime employers are receiving governmental subsidies and others are likely to apply for such subsidies, it would be an added inducement to them to abide by the provisions of law as regards the fundamental rights of labour, if the law made maritime employers who are guilty of unfair labour practices ineligible for subsidies for a specified period. This additional penalty would do no harm to fair employers and could only be objectionable to those who have not as yet fully recognized the rights of their employees to self-organization.

The jurisdiction of the Maritime Labour Board, or its successor, should be extended to personnel on all documental vessels upon navigable waters within the jurisdiction of the United States, except vessels covered by the Railway Labour Act.

The Board's reason for this recommendation is that it believes the effectiveness of the Board, or its successor, would be enhanced if it were in a position to handle all labour disputes in which maritime employers and employees are involved, irrespective of the kind of waterborne trade involved in the dispute. The jurisdiction of the Maritime Labour Board, should be coextensive with that of the maritime labour unions where such jurisdiction covers employees on vessels upon navigable waters within the jurisdiction of the United States. The jurisdiction of these unions are not confined to vessels on the high seas and on the Great Lakes, but extend to inland waterways and to harbour craft.

The jurisdiction of the Maritime Labour Board, or its successor, should be extended to include employees engaged in ship repairing.

The jurisdiction of the Maritime Labour Board, or its successor, in matters relating to labour disputes in the maritime industry as defined by this section, should be made exclusive.

The term "employee" should include the seagoing personnel on Government-owned merchant vessels operated for the account of the Government by managing agents or corporations. The term "maritime employer" should include managing agents or corporations operating Government-owned merchant vessels for the account of the Government.

The purpose of this recommendation is to insure the right of collective bargaining to the seagoing personnel on Government-owned merchant vessels which are not directly operated by a governmental agency, but which are operated for such agency by a managing agent or corporation.

It is the judgment of the Board that if this amendment were adopted, it would materially assist in the stabilization of labour relations in the maritime industry, and would in no way infringe upon the sovereignty of the Federal Government. . . .

The Maritime Labour Board is of the opinion that employees on Government-owned merchant vessels, when they are operated by managing agents or corporations, should have the same rights of collective bargaining as do employees on privately owned merchant vessels, whether subsidized or not.

Revaluation of Seamen's Statutes

In addition to its recommendations the Board asked Congress to consider action on several problems, and it explained these as follows:

The studies and investigations undertaken by the Board with regard to the impact of laws pertaining to seamen upon collective bargaining problems have brought into relief a series of pertinent questions which have led the board to believe that at least some of these laws may need revision with a view to bringing them in line with modern conditions of water transportation and with modern concepts of employer-employee relationships. Among these questions are the following:

First, in what way does the requirement that seafaring men sign shipping articles conflict with the collective agreements which the seafaring men enter into with the shipowners?

Second, should the contents of shipping articles be revised to conform with modern conditions of water transportation, or should the requirement for signing shipping articles be entirely done away with?

Third, when does concerted economic action on the part of merchant seamen constitute a legal right and when can such action be construed as mutiny?

Fourth, is a command of a master of a merchant vessel "lawful" when such command infringes upon the rights of seamen collectively to refuse to perform work in order to enforce a lawful economic demand?

Fifth, should the duties of Shipping Commissioners, as defined in the law of 1872, be revised to meet changed conditions which have resulted from the establishment of collective agreements between maritime employers and employees?

Sixth, is there still need for the maintenance of registers of seamen by Shipping Commissioners?

The report contains fourteen chapters with appendices, each of which deals extensively with some phase of maritime labour relations.

EARNINGS OF EMPLOYEES IN MANUFACTURING INDUSTRIES IN CANADA, 1934-1936

THE Dominion Bureau of Statistics has issued a report entitled "Weekly Earnings of Male and Female Wage-Earners Employed in the Manufacturing Industries of Canada, 1934-1936" which includes statistics compiled from a Supplemental Schedule sent out to all manufacturers reporting to the Census of Industry in respect to their operations in 1934, 1935 and 1936. This survey was made to meet an increasing public demand for information as to the distribution of the pay-rolls among the individual wage-earners. Each manufacturer was asked to show the numbers of male and female workers receiving weekly earnings of specified amounts for any week in the month of highest employment in the establishment. Salaried workers, such as managers, superintendents, professional and office or clerical employees, were not included in the survey. The need for information of this character was brought out during the investigation of the Royal Commission on Price Spreads in 1934, (LABOUR GAZETTE, May, 1935, page 407). The Commission through its accountants obtained data on earnings for certain industries only. The Bureau undertook the present survey to make available similar information for all manufacturing industries and also to implement in part the recommendations of the International Labour Office on statistics of wages and hours. It is expected that similar special surveys will be made from time to time in the future. Data as to the numbers of wage earners in manufacturing industries in Canada at specified weekly earnings were given for the years 1915 and 1919 in the Canada Year Book, 1921, pages 604 and 641 and for 1920 and 1921 in the issue for 1922-23 pages 739 and 740. Statistics of the numbers of wage-earners working specified hours in manufacturing industries have been collected annually since 1924.

From the data obtained in this survey and from the annual census of manufactures it was possible to calculate the annual and weekly earnings of male and female wage-earners separately. Some of the more important summary tables from the report are reproduced herewith. Table I shows the average annual earnings by provinces and industrial groups for 1934, 1935 and 1936, Table II shows the number of wage-earners at specified weekly earnings, under $6, at $6 to $6.99, etc., within dollar ranges up to $30, within ranges of $5 up to $50 and at $50 and over for the same three years. In the report these figures are given also by provinces and by industrial groups for Canada. Table III shows the number of wage-earners at specified weekly earnings by industrial groups for 1936 only within wider ranges, five dollars, by industrial groups. In the report these figures are given for all provinces by industrial groups and also for each of the leading industries by provinces. Table IV gives similar figures for the twenty-five leading manufacturing cities in 1936. Table V shows the average weekly earnings in each province by industrial groups in 1936. In the report these figures are given for 1934, 1935 and 1936 and also for Canada for each manufacturing industry separately. Information in the Department of Labour shows that wage rates in manufacturing industries averaged about ten per cent higher in 1939 than in 1936. (Wages and Hours of Labour in Canada 1929, 1938 and 1939 issued as a supplement to the LABOUR GAZETTE, March, 1940, page 5.)

Other tables in the report show the percentage distribution of wage-earners by earnings, province and industrial group and also average weekly earnings; average annual and weekly earnings in 1936 in the forty leading industries; the numbers of wage-earners, by provinces and industrial groups and average weekly earnings in 1934, 1935 and 1936; average weekly earnings in 1936 for each of the leading manufacturing industries in

Montreal, Toronto, Hamilton, Winnipeg, Vancouver, and Windsor; average weekly earnings of male and female wage-earners in 1934, 1935 and 1936 in each manufacturing city and town as follows: in Prince Edward Island, Charlottetown; in Nova Scotia, 11 localities; in New Brunswick, 10 localities; in Quebec, 41 localities; in Ontario, 91 localities; in Manitoba, 7 localities, in Saskatchewan, 9 localities; in Alberta, 6 localities; and in British Columbia, 10 localities.

The report contains 70 pages and may be obtained from the Dominion Bureau of Statistics, Ottawa, price 25 cents.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, JUNE, 1940

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on July 1 was 12,159, the employees on their pay-rolls numbering 1,220,791 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June was 1,973 having an aggregate membership of 258,369 persons, 7·6 per cent of whom were without employment on July 1. It should be understood that the report on the number of unemployed workers refers only to organize labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of July, 1940, as Reported by Employers

Employment showed further, important expansion at July 1, when the improvement was above the average for that date in the experience of the years since 1920; the number added to the reported working forces was also considerably larger than at July 1 of last summer, although it was not equal to the gain from June to July in 1937 and a few earlier years of the record.

Statistics were received by the Dominion Bureau of Statistics from 12,159 establishments employing 1,220,791 workers; this was an increase of 36,508, or 3·1 per cent over their June 1 staff of 1,184,283. The index (1926=100) rose from 120·9 in the preceding month, to 124·7 at July 1, 1940. This figure was the same as that for July 1, 1929, and was otherwise the highest for that date in the twenty years for which data are available. The latest index was 7·7 per cent above that of 115·8 at the beginning of July of last summer.

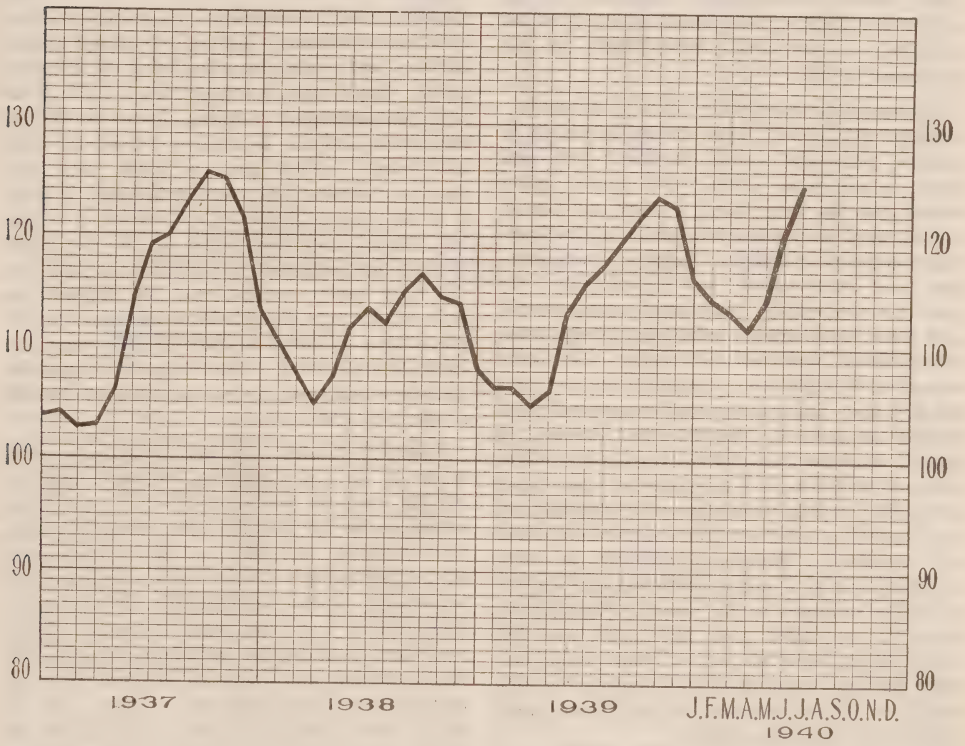
Since the increase at the date under review was above normal in the experience of other years of the record, the seasonally-adjusted index also advanced, standing at 122·3, compared with 120·9 at June 1.

Calculated on the 1926 average as 100, the unadjusted indexes at July 1 in recent years are as follows:—1940, 124·7; 1939, 115·8; 1938, 113·5; 1937, 119·1; 1936, 104·6; 1935, 99·5; 1934, 101·0; 1933, 84·5; 1932, 88·7; 1931, 103·8; 1930, 118·9; 1929, 124·7; 1928, 117·7 and 1927, 109·7.

Employment in manufacturing as a whole continued to increase, bringing the index to a new high of 130·3, where it was ten points above the previous July maximum of 120·3 in 1929. There were pronounced gains over June 1, 1940, in food, lumber, pulp and paper, chemical, electrical apparatus, non-ferrous metal and iron and steel, together with smaller advances in many other branches of manufacturing. Leather and textile plants, however, reported seasonal curtailment.

Among the non-manufacturing industries, logging, mining, communications, transportation, services, trade and construction and maintenance showed substantial improvement, that in the last-named being greatest. The increases, except in logging, were seasonal in character; with the exception of those in mining, they were generally larger than usual for the time of year. The advance in logging was not in accordance with the custom in earlier years of the record, in sixteen of which the trend at July 1 had been downward in that industry.

The firms furnishing statements for July 1 of last year had numbered 11,760, and their employees had aggregated 1,126,216, an increase of approximately 26,100 over their June 1, 1939, staffs. A generally favourable movement had then been indicated in the non-manufacturing groups with the exception of logging, while manufacturing had reported a slowing-up.



Employment in Financial Institutions

For some months, statistics of employment have been collected from banks, trust companies and stock market operators. For

July 1, 407 firms and branches in these lines of business reported staffs aggregating 34,937 persons, compared with 33,614 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the July 1 survey of employment to 1,255,728 in 12,566 establishments, and slightly lowers the index of 124·7 in the industries above enumerated to 124·4; when the employees of the co-operating financial organizations were added to the general figures for June 1, the index declined from 120·9 to 120·6. The July 1, 1939, index stood at 115·8 without the figures from the financial institutions, and at 115·6 when they were included.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Employment by Economic Areas

The trend continued generally upward throughout the Dominion, the provincial gains in employment ranging from 2·3 per cent in Ontario and 2·6 per cent in British Columbia, to 6·1 per cent in Alberta and 7·1 per cent in New Brunswick. Numerically, the largest increase was in Ontario, where 11,820 persons were added to the staffs of the co-operating firms. The volume of employment in each of the five economic areas was greater than at July 1, 1939. The indexes in Quebec and Ontario were at their peaks for the beginning of July in the twenty years of the record. In the Prairie Provinces, the favourable comparison goes back to 1930; in the Maritimes, employment at the latest date was brisker than in any other July in the period since 1920, with the exception of that in 1937, while in British Columbia, the index numbers for July 1 in 1937 and 1929, only, were higher.

Maritime Provinces.—Statements were tabulated from 855 establishments employing 91,996 men and women, as against 86,809 in the preceding month. This increase (to which the three provinces in this area contributed), brought the Maritimes' index to 124·0 at July 1, 1940; it was then some eight points

higher than at the beginning of July in 1939, when the gain over the preceding month had been rather larger. Highway construction and logging reported the greatest expansion in operations at the date under review, but there were also additions to staffs in trade, services, communications and mining. Manufacturing showed little general change, improvement in food, lumber, pulp and paper, leather and some other classes being slightly more than offset by losses in chemical, iron and steel, clay, glass and stone and textile factories; the losses were largely seasonal in character.

The 832 employers in the Maritime Provinces whose returns were included in the survey for July 1, 1939, had reported 85,530 workers, as compared with 79,982 in the preceding month.

Quebec.—Manufacturing showed greater activity in Quebec, there being increases in lumber, pulp and paper, chemical, iron and steel, non-ferrous metal and some other classes; on the other hand, leather and textile plants were seasonally slacker. In the non-manufacturing industries, logging, transportation and construction and maintenance reported considerably heightened employment, and there were smaller gains in mining, communications, services and trade. The personnel of the 3,041 co-operating firms included 362,696 men and women; as compared with 352,198 at June 1, this was an increase of 10,498 workers, or three per cent. The advance was seasonal in character, the trend in Quebec having been upward in fourteen of the preceding nineteen years for which data are available. Industrial activity in that province was at a higher level than at July 1 of earlier summers of the record. Standing at 126·6 at the latest date, the index was 2·6 points above that at July 1, 1939, when the 2,907 business enterprises making returns had employed 353,301 persons, or some 8,450 more than in the preceding month.

Ontario.—Further but smaller increases in personnel were indicated in Ontario, where the 5,278 establishments whose statistics were tabulated reported 517,370 employees, or 11,820 more than at June 1. The movement at July 1 in previous years has usually, though not invariably, been upward, the average change being a moderate advance; the gain at the date under review was decidedly larger than the average, and also exceeded that recorded in the same month of last summer. The latest index was higher than in any other July for which data have been tabulated.

The expansion at the date under review took place mainly in construction, manufacturing and transportation, but logging, communications, services and trade were also busier. Mining, on the other hand, was slacker. The largest gains in manufacturing were in the lumber, vegetable food, iron and steel, electrical apparatus and non-ferrous metal industries, while seasonal curtailment was shown in leather and textile factories.

The 5,140 employers furnishing statistics for July 1, 1939, had a staff of 455,570, as compared with 451,121 in the preceding month.

Prairie Provinces.—The most important expansion recorded in this area was in construction and maintenance and transportation, but manufacturing, mining, communications, services and trade also afforded more employment. Data were compiled from 1,710 firms with an aggregate working force of 147,022 persons at July 1, as against 140,575 in their last return. This gain of 6,447 men and women exceeded the average increase at July 1 in the earlier years of the record, and was also larger than that noted at the beginning of July last summer. The index, at 112·4 at the date under review, was the highest for July in any year since 1930, being considerably above that of 104·0 at July 1, 1939, when the 1,667 co-operating establishments reported 134,548 employees, as compared with 130,630 at June 1, 1939.

British Columbia.—Continued advances were made in British Columbia, where a staff of 101,702 persons was employed at the date under review by the 1,274 firms whose statistics were received, and who had 99,151 employees at the beginning of June. Manufacturing was seasonally busier, particularly in the food, lumber and iron and steel divisions; transportation, construction and trade also reported improvement, and there were slight gains in mining, communications and services. On the other hand, logging showed curtailment as compared with June 1, 1940, a number of camps closing as a result of the fire hazard. Employment was brisker than at the same date in 1939, or any other summer of the record except those of 1929 and 1937, when the indexes were 118·2 and 117·1, respectively, as compared with 114·8 at the latest date, and 111·0 at July 1, 1939. The 1,214 establishments furnishing data for the beginning of July last year had employed 97,267 men and women, an increase of 3,751 over their staffs in the preceding month.

Table 1 gives index numbers by economic areas.

Table I.—INDEX NUMBERS OF EMPLOYMENT BY PROVINCES AND ECONOMIC AREAS

(Average Calendar Year 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
July 1, 1927	109·7	112·8	109·6	108·9	110·7	109·1

July 1	124·7	124·0	126·6	129·6	112·4	114·8
Relative Weight of Employment by Provinces and Economic Areas as at July 1, 1940	100·0	7·6	29·7	42·4	12·0	8·3

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Employment by Cities

Seven of the eight centres for which separate tabulations are made—Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver—showed heightened activity, while the tendency was seasonally downward in Windsor. The largest gains were in Toronto and Vancouver. Except in Quebec (where there was practically no general change in the twelve-month comparison), employment in each of these metropolitan areas was more active than at July 1, 1939. In Montreal, Quebec, Ottawa and Winnipeg, the indexes were higher than at that date in any other year since 1930; in Toronto and Hamilton, the favourable comparison goes back to 1929, while the Vancouver figure was at its maximum for any month in the years for which statistics are available for the cities.

Montreal.—Employment in Montreal reported considerable improvement, mainly in transportation and building. Manufacturing, however, showed a slowing-up, largely as a result of seasonal dullness in textile factories; leather production was also quieter, but iron and steel, non-ferrous metal and lumber plants indicated substantial gains. A combined working force of 177,994 men and women was recorded by the 1,789 co-operating employers, who had 176,787 workers at June 1. A decrease had been noted at July 1, 1939, when 1,694 firms had a staff of 167,666; the index then was lower, standing at 108·3, as compared with 114·3 at the latest date.

Quebec.—An upward movement was evident in Quebec City, where statements were tabulated from 214 establishments with 17,670 employees, compared with 17,427 in the preceding month. Employment in construction and manufacturing advanced, while other industries showed little general change. The index was practically the same as at the beginning of July last summer, although the increase in personnel had then been larger.

Toronto.—There was continued improvement in industrial activity in Toronto at July 1, when manufacturing, transportation, building construction and trade were brisker. The largest gains were in manufacturing, particularly in iron and steel. Textile factories, on the other hand, were slacker. The 1,810 employers making returns enlarged their staffs by 1,957 workers to 156,868 at the beginning of July. At the same date of last year, the 1,748 co-operating business concerns had increased their labour forces by 398 persons, to 140,477; the July 1, 1939, index had stood at 109·4, compared with 121·4 at the latest date.

Ottawa.—Statistics were received from 236 establishments with 16,830 men and women on their paylists, or 837 more than in the preceding month. Most of the increase took

place in manufacturing and construction. A decidedly smaller gain had been indicated at July 1, 1939, when 228 firms had reported 15,134 employees. Employment then was much quieter than at the date under review.

Hamilton.—There was a further advance in Hamilton, where 622 workers were added to the forces of the 334 employers furnishing information, bringing them to 40,540 at the beginning of July, 1940. Manufacturing showed continued improvement, notably in the food, textile, electrical apparatus and iron and steel divisions, and trade also reported moderately increased activity. Construction, however, was not so active. For July 1 of last year, 330 returns were tabulated, showing a combined staff of 34,410, compared with 34,049 at June 1, 1939; activity was then at a lower level than at the latest date, when the index was at its maximum for any month in the years since 1929.

Windsor.—A seasonal decline of 2,301 persons was recorded in the payrolls of the 194 co-operating employers, who had 19,820 in their employ at the date under review; the loss took place mainly in the iron and steel industries, but the textile and some other divisions were also rather dull. The index, at 143·4, was considerably higher than at July 1, 1939, when a larger contraction had been indicated. The personnel of the 197 firms then furnishing data had included 15,853 employees.

Winnipeg.—Transportation, construction, manufacturing and trade registered moderate advances, while little general change took place in other industries. An aggregate working force of 44,342 men and women was reported by the 537 firms making returns; this was a gain of 826 over their June 1 staffs. The improvement noted at the beginning of July last summer had involved a similar number of workers, but the index of employment then was seven points lower than that of 101·3 at the latest date. The 521 statements tabulated for July 1, 1939, had shown a combined payroll of 40,952.

Vancouver.—The trend of employment in Vancouver was favourable, according to statistics from 553 establishments employing 41,683 persons, as against 40,212 in the preceding month. There were increases in all industrial groups, those in manufacturing, transportation and construction being most pronounced; within the first named, the largest additions to the payrolls were made in food and iron and steel factories. Expansion on a smaller scale had been recorded by the 518 concerns co-operating at the beginning of July last year, whose employees had numbered 37,544. The index then, however, was over ten points lower than that of 122·9 at the latest date; this was the highest figure indicated in any month for which information is available.

Employment by Industries

Manufacturing.—Employment in manufacturing showed continued expansion at July 1, when a staff of 670,123 men and women was reported by the 6,697 co-operating establishments, whose employees in the preceding month had numbered 664,512. This increase of 5,611 workers, which was considerably larger than usual for the time of year, raised the index (1926=100) from 129·2 at June 1, 1940, to a new all-time high of 130·3 at the date under review. The previous maximum for July was in 1929, when the figure had been 120·3, while the index for July of last summer had stood at 111·3.

The movement at the beginning of July had been downward in nine and upward in ten of the nineteen preceding years for which data are available, the average change from June to July in the period being a very slight advance. Since the improvement at the date under review exceeded this average gain, the seasonally-adjusted index also showed an increase, rising from 126·7 at June 1, to 127·7 at the first of July. Like the crude index, the seasonally-corrected figure was the highest on record in any month for which statistics are available, in a period of nearly twenty years.

An analysis of the data for July 1, 1940, shows pronounced expansion in the animal and vegetable food, lumber, pulp and paper, beverage, chemical, electrical apparatus, iron and steel and non-ferrous metal groups, with smaller gains in a number of other divisions. The exceptions to the generally upward movement were leather, textile and miscellaneous manufactured products. The losses in the first two of these were seasonal, while the general increase in iron and steel was contrary to the usual movement at July 1 in the experience of the years since 1920.

At July 1 in recent years, the unadjusted indexes in manufacturing have been as follows: 1940, 130·3; 1939, 111·3; 1938, 111·8; 1937, 119·0; 1936, 104·7; 1935, 98·5; 1934, 93·8; 1933, 83·0; 1932, 85·4; 1931, 97·2; 1930, 111·3; 1929, 120·3; 1928, 113·1 and 1927, 106·8.

The manufacturers furnishing statistics at July 1, 1939, had numbered 6,410 and their employees had aggregated 569,948, as compared with 570,330 in the preceding month.

Animal Products, Edible.—Additions to staffs were recorded in this group, 710 persons having been taken on the 341 establishments making returns, which had 29,728 in their employ. Considerable improvement was noted in fish-canning, and there were also gains in

dairies. The index, at 151·6 at July 1, 1940, was several points higher than at the same date of last summer, when the indicated increase had been on a rather larger scale.

Leather and Products.—Statements were received from 342 manufacturers in this division, employing 22,577 workers, as compared with 23,906 at the beginning of June. Most of this seasonal decrease took place in boot and shoe factories, and occurred mainly in Quebec and Ontario. Activity generally in this group was greater than at July 1 of last year, although a smaller decline from the preceding month had then been reported.

Lumber and Products.—Rough and dressed lumber mills showed substantially heightened employment, and container factories were also brisker. The general increase in the lumber

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	†Relative Weight	July 1, 1940	June 1, 1940	July 1, 1939
MANUFACTURING	54·9	130·3	129·2	111·3

ALL INDUSTRIES	100·0	124·7	120·9	115·8

† The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

group exceeded that noted at July 1, 1939, when the index stood at 93·1, as against 102·6 at July 1, 1940. A combined working force of 55,586 employees was reported by the 991 firms co-operating at the date under review; this was 2,782 more than at the beginning of June, 1940. The most pronounced gains were in Quebec, Ontario and British Columbia.

Musical Instruments.—Employment in musical instrument works considerably increased at July 1; 36 plants employed 1,823 persons, or 51 more than in the preceding month. The index was higher than at the first of July, 1939, although a larger increase had then been noted.

Plant Products, Edible.—The resumption of operations in fruit and vegetable canneries caused an important advance, and bread and biscuit factories were also busier; although the gain on the whole was not equal to that registered at July 1 of a year ago, the index then was some eight points lower. Returns were received from 548 manufacturers of vegetable foods, having 39,002 operatives, as against 37,234 at June 1, 1940. The improvement took place mainly in Ontario and British Columbia.

Pulp and Paper Products.—There was a moderate advance in paper product manufacturing, while pulp and paper mills were decidedly busier. The 720 co-operating employers throughout the Dominion reported 73,671 workers compared with 73,009 at June 1. A larger gain had been indicated in the group as a whole at July 1, 1939, but the index of employment was then over eight points lower than at the date under review, when it was at its maximum for this record of some twenty years.

Rubber Products.—A slight increase was shown in rubber factories, in which employment was in practically the same volume as in the summer of last year. Statistics were tabulated from 53 firms with 13,519 employees at the date under review, as compared with 13,430 in the preceding month.

Textile Products.—A further and larger contraction was reported by the 1,240 co-operating textile manufacturers, who employed 121,478 workers, or 4,321 fewer than at the beginning of June. The greatest losses were in woollen, silk, headwear and garment and personal furnishing factories, and occurred mainly in Quebec and Ontario. A smaller decline had been indicated at the corresponding date in 1939, but the level of employment was then decidedly lower. The decreases were seasonal in character, the tendency having been downward at July 1 in fifteen of the nineteen preceding years for which statistics are available.

Tobacco.—Employment in this division showed little general change at the beginning of July, according to data from 48 establishments employing 8,255 persons, compared with 8,276 in the preceding month. An upward movement had been noted at the same date last year, when the index was, however, slightly lower.

Beverages.—Further improvement was recorded in the production of beverages; 146 manufacturers reported 9,900 workers, an increase of 377 over their June 1 staffs. Activity in those industries was at a rather higher level than at the corresponding date of last summer.

Chemicals and Allied Products.—There was a pronounced increase in the personnel of chemical factories, 325 of which had 23,662 employees, compared with 22,818 at June 1. Firms in Quebec reported most of the expansion. A loss had been shown at the beginning of July, 1939, and the index of employment was then many points lower.

Clay, Glass and Stone Products.—Continued improvement took place in building material plants, the 222 co-operating establishments enlarging their forces by 143 persons to 12,131 at the date under review. There were moderate gains in Ontario and the Prairie Provinces. The level of employment was above that indicated at July 1 of a year ago, when the trend had also been upward.

Electric Light and Power.—An advance was registered in central electric stations, 103 of which reported a combined working force of 17,725 persons, as against 17,444 at the beginning of June. The index was nearly six points higher than at the same date in 1939, although a larger gain had then been recorded.

Electrical Apparatus.—There was an increase of 592 in the staffs of the 128 manufacturers furnishing data, who had 20,696 employees at July 1. Firms in Ontario reported most of the expansion. The number engaged in the production of electrical apparatus was substantially greater than at July 1 in the preceding year, when the advance indicated had not provided work for so many persons.

Iron and Steel.—The trend in iron and steel factories was again favourable, the upward movement being contra-seasonal. Improvement at the date under review was noted in boiler, engine and tank, machinery, aeroplane, shipbuilding, wire and structural iron and steel plants, while there were losses in automobile, railway car and heating appliance works. Returns were compiled from 950 employers whose forces aggregated 168,307 workers, as against 166,047 in the preceding month. Employment at July 1, 1939, had declined, and was then in much smaller volume.

Non-Ferrous Metal Products.—A further increase was registered in non-ferrous metal products; the 201 co-operating manufacturers

employed 29,271 operatives, or 815 more than at the beginning of June. A smaller gain had been noted at the corresponding date of last year, when the index was many points lower.

Mineral Products.—Further slight improvement was shown in this division, in which the index stood at 173·7, compared with 160·5 at July 1, 1939. Statistics were received from 101 employers, whose staffs rose from 13,704, at June 1, 1940, to 13,783 at the date under review.

Logging

There was an important increase in employment in logging, 4,788 men being added to the staffs of the 389 reporting firms, who employed 35,866 at July 1. The improvement took place mainly in New Brunswick and Quebec, while curtailment was recorded in British Columbia, partly owing to the closing of camps during the season of acute danger from fires. A moderate decrease had been shown at the same date in 1939, when the index was about twenty-six points lower; the latest figure was higher than that for the same month in any previous year of the record, except 1937.

Mining

Coal.—Employment was moderately reduced in coal-mines, 104 of which employed 23,562 men, as compared with 23,732 in their last report. There were slight losses in the Maritime and Western coal-fields. Little general change had been noted at July 1 of last year, but the employment level was then rather lower.

Metallic Ores.—The trend was downward in metallic ore mines; statements were tabulated from 209 operators employing 43,947 persons, or 265 fewer than at June 1. The decline took place largely in Ontario, while there were gains in British Columbia and some of the other provinces. The general index, at 352·8, was three points higher than at July 1, 1939.

Non-Metallic Minerals, other than Coal.—There was a further pronounced increase in the staffs of the 103 co-operating non-metallic mineral mines, which employed 10,432 workers, or 663 more than in the preceding month. Employment was a little brisker than at the beginning of July a year ago, when a gain had also been made.

Communications

Continued improvement was indicated in this group, according to the reporting companies and branches, which had a personnel of 23,885 men and women, compared with 23,260 at June 1. Employment on both telephones and telegraphs was in greater volume. A rather smaller increase, on the whole, had been recorded at July 1, 1939, and the index in this division was then lower.

Transportation

Street Railways and Cartage.—There was heightened activity in the local transportation group, 311 firms having 31,308 workers in their employ, as against 31,076 in the preceding month. An advance had also been noted at the same date in 1939, but the index then was several points lower.

Steam Railways.—Statistics tabulated from 102 companies and divisional superintendents in the steam railway operation group showed that they employed 65,287 men at the beginning of July, or 3,448 more than in the preceding month; the improvement was widespread. Expansion on a much smaller scale had taken place at July 1 of last year, and employment was then decidedly below its level at the time of writing.

Shipping and Stevedoring.—There was a further increase in the number engaged in water transportation, 124 companies having enlarged their staffs by 417 employees, bringing them to 17,531 at July 1. The index stood at 93·2, compared with 93·9 at the beginning of July, 1939, when the trend had also been upward. At the date under review, there were advances in Quebec, Ontario and the Western Provinces, while the movement was downward in the Maritimes.

Construction and Maintenance

Building.—Continued activity was noted in building construction, the gain in employment greatly exceeding that indicated at July 1, 1939; the situation in this group was then not so favourable. The 879 co-operating contractors employed 34,235 workers, as compared with 29,336 in the preceding month. There was expansion in all provinces, that in Quebec being most pronounced.

Highways.—The number of men engaged on road construction and maintenance substantially increased at the date under review, when the 413 employers furnishing data had 58,539 employees, or 10,167 more than at the beginning of June. There were considerable advances in all provinces except Quebec, the largest gains being in Ontario. Employment in this group was not so active as at July 1, 1939, when greater increases had been indicated.

Railways.—A combined working force of 34,458 persons was reported by the 29 contractors and divisional superintendents whose statistics were tabulated, and who had 31,924 employees at June 1. The largest advances

were in Quebec and Ontario, but the movement was generally upward except in British Columbia. Smaller additions to the staffs had been noted at July 1 a year ago, and the index then was ten points lower than that of 86·2 at the date under review.

Services

There was continued expansion in the service group, according to returns from 600 employers with 32,995 men and women on their staffs, as compared with 31,515 in the preceding month. The opening of the summer hotel season caused most of the improvement, which was rather greater than that reported at July 1, 1939; employment then was in slightly less volume. The tendency at the date under review was favourable in all five economic areas.

Trade

The trend of employment in retail and wholesale trade was upward, the gain in personnel in the former being especially marked. Statements were tabulated from 2,113 firms having 138,623 employees, as against 136,544 at the beginning of June, 1940. Employment was at a rather higher level than at the same date of last summer, when less pronounced improvement had been indicated by the co-operating trading establishments.

TABLES

Index numbers of employment by economic areas, and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada at the date under review.

(2) Unemployment in Trade Unions at the Close of June, 1940

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work in other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The improvement in conditions for local trade union members, which has been maintained uninterruptedly since the close of February, was again apparent throughout June, though the change from May was quite slight, the percentage of 7·6 reported on the last day of the month being the smallest on record for June in any year since 1929. The percentage for the month under review was based on the returns received by the Department of Labour from a total of 1,973 local unions with a membership aggregate of 258,369 persons, 19,694 of whom were without employment at the end of the month. Gains in available work of more pronounced degree than in comparison with May were manifest from June last year, when unemployment stood at 11·6 per cent. Quebec unions alone showed some slowing up in industrial activity from May, curtailment in the garment trades particularly affecting the situation in that province adversely. On the contrary, Manitoba unions reported noteworthy advances in work afforded, the garment trades appearing to be quite actively engaged compared with a fairly substantial percentage of unemployment in May, while expansion in lesser degree was evident in steam railway operation. Saskatchewan, Alberta and British Columbia unions reflected more moderate increases in employment and a fractionally upward tendency was indicated among Ontario, Nova Scotia and New Brunswick members. All provinces participated in the more favourable employment movement apparent from June last year, Ontario, Manitoba and New Brunswick unions showing the most extensive gains, in which the majority of trades and industries shared. In Nova Scotia, Alberta and Saskatchewan the advances noted were of somewhat lesser degree, while Quebec and British Columbia unions showed a moderately better trend of activity.

Each month the records of unemployment for the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Of these, Winnipeg unions showed a rather substantial rise in available employment during June from the preceding month and in Halifax also notable gains were recorded. The movement in Regina, Toronto, Vancouver and Saint John was also toward greater activity, though the variations from May were slight. Employment in Montreal, however, indicated some falling off, dullness in the garment trades being largely responsible for the less favourable trend, and in Edmonton activity was but nominally retarded. When compared with the returns for June last year Toronto, Saint John and Halifax members reflected decided betterment in conditions during the month reviewed and appreciable gains were noted by Winnipeg unions. In

Montreal and Regina lesser advances, though fair sized, were apparent. From Vancouver and Edmonton the improvement indicated was quite slight.

The chart accompanying this article illustrates the trend of unemployment by months from January, 1934, to date. The curve during January of the present year remained at almost the same level as at the close of 1939, what nominal variation was evident being in a favourable direction. In February, however, there was a slight upward tendency reflected by the curve, a manifestation of retarded activity on a small scale, but from the close of February the curve has moved in a steadily downward direction, denoting gradual and continued improvement, until at the end of June it reached a level below that which had been attained at the close of June in any year since 1929.

The manufacturing industries as a whole registered some curtailment in activity during June from the previous month, as shown by the returns received from a total of 589 unions covering a membership of 103,335 persons. Of these, 8,759, or 8·5 per cent, were idle on the last day of the month, contrasted with a percentage of 6·8 in May. The drop in employment from May was attributable largely to the quietness apparent in the garment trades which was rather seasonal in character, though in the iron and steel trades also, there was some slowing up in activity. Cigar and tobacco, and leather workers, electric current employees and metal polishers reported declines involving a considerably smaller number of members. On the other hand, glass and rubber workers were much busier during the month under review and substantial gains were apparent among meat cutters and butchers. Small scale advancement was also noted by fur and hat, cap and glove workers, and general labourers. The situation was but fractionally improved for bakers and confectioners, brewery, textile and carpet, and wood workers and paper makers. Printing tradesmen and jewellery workers maintained the same level of employment as in May. When a comparison is made with the returns for June a year ago, the majority of trades reflected a more favourable employment tendency. Especially noteworthy were the increases in activity apparent among glass workers, metal polishers, meat cutters and butchers, hat, cap and glove workers, and general labourers. The iron and steel, and textile trades, and jewellery workers also showed employment expansion of considerable degree while some improvement was evident among fur and, garment workers, bakers and confectioners, paper makers, and printing tradesmen. Electric current employees, however, indicated noteworthy curtailment in work afforded from June last year and among rubber workers moderate recessions occurred. The situation declined slightly for cigar and tobacco, wood and leather workers.

Coal mining on the whole employed somewhat larger working forces during June than in either the preceding month or June last year, the 54 organizations from which returns were tabulated, with a membership embracing 20,987 persons, showing that 2,083 or 9·9 per

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

cent were without employment on the last day of the month, contrasted with percentages of 11·2 in May and 14·6 in June, 1939. The improvement from May was largely confined to the coal fields of British Columbia, which afforded adequate work for all members reported compared with a marked unemployment percentage in May, though contributory increases on a small scale were evident in Alberta. Activity for Nova Scotia miners eased off very slightly from May. In New Brunswick, however, the situation remained unchanged from the preceding month. As in the previous comparison, British Columbia miners showed the most pronounced employment expansion when compared with the returns for June, 1939, which was augmented by moderate gains in Nova Scotia and Alberta. New Brunswick members reported a small percentage of idleness in comparison with a fully engaged situation in June last year.

Building and construction operations were further stimulated during June, continuing the favourable employment movement noted since the close of February, the unemployment percentage of 13·5 reported for the month under review being the lowest on record in these trades for any month since October, 1929. The percentage for June was based on the reports tabulated from 233 associations of building tradesmen, comprising a membership of 26,773 persons, 3,604 of whom were idle on the last day of the month. In May unemployment stood at 19·9 per cent. Improvement in substantial measure was apparent also from June last year when 24.7 per cent of the members reported were out of work. All trades contributed a share to the total advancement noted from May, bricklayers, masons and plasterers, plumbers and steamfitters, tile layers, lathers and roofers, and steam shovelmen showing a decidedly better employment level. Gains in activity on a much smaller scale, yet rather noteworthy, were registered by granite and stonecutters, and more moderate increases occured among carpenters and joiners, hod carriers and building labourers, bridge and structural iron workers, electrical workers, and painters, decorators and paperhangers. Contrasted with the returns for June last year the situation for bridge and structural iron workers, hod carriers and building labourers, and tile layers, lathers and roofers improved extensively during the month reviewed and large scale advancement was evident among bricklayers, masons and plasterers, carpenters and joiners, plumbers and steamfitters, and steam shovelmen. Considerably better conditions also prevailed for painters, decorators and paperhangers and increases in work afforded of rather small degree were apparent among electrical workers. Granite and stonecutters alone, indicated restricted activity from June last year, which was quite pronounced.

The trend of employment in the transportation industries during June was slightly more favourable than in the preceding month according to the reports compiled from 833 local unions involving a membership of 71,667 persons. Of these, 2,366 were idle at the close of the month, a percentage of 3·3, in comparison with 4·7 per cent of unemployment in May. Gains on a somewhat larger scale were manifest from June, 1939, when 6·3 per cent of the members reported were without employment. In the steam railway division, which included almost 80 per cent of the entire group membership reported, there was a slight increase in activity noted from May, while the improvement over June last year was of moderate proportions. The navigation division showed noteworthy curtailment in work afforded from May, but the situation remained much the same as in June last year, what nominal change was indicated being in a less favourable direction. Teamsters and chauffeurs reflected a fractionally improved situation from May and rather noteworthy

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1929	4·0	1·6	7·7	4·3	7·1	5·3	6·4	5·9	**5·7**
Average 1930	5·4	3·7	14·0	10·4	9·6	10·6	13·3	11·6	**11·1**

advancement when compared with June, 1939. Street and electric railway employees were quite actively engaged during June, as in both the previous month and June a year ago, the percentage of inactivity remaining identical in the three months under comparison.

Among retail shop clerks 0·4 per cent of idleness was recorded during June, in contrast with a fully engaged situation in May and with only 0·1 per cent of idleness in June, 1939. Reporting for June were 4 associations of these workers, combining a membership of 1,922 persons.

Civic employees showed a slight tendency toward retarded activity during June, both when compared with the returns for the previous month and June, 1939. This was apparent from the reports compiled from 80 associations of these workers with a membership total of 9,710 persons, 225 of whom, or 2·3 per cent, were unemployed, as compared with 1·6 per cent in May and with a percentage of 1·5 in June, 1939.

In the miscellaneous group of trades during June approximately the same level of employment was maintained as in the preceding month, the 137 organizations forwarding reports with an aggregate of 10,471 members, showing that 417 or 4·0 per cent were idle on the last day of the month, in contrast with a percentage of 3·9 in May. In June a year ago 5·3 per cent of inactivity was recorded. Theatre and stage employees alone reported moderate declines in work afforded from May, which were substantially offset by the slight advances noted by barbers and the fractional gains manifest among hotel and restaurant employees, stationary engineers and firemen and unclassified workers. In all trades, however, a more favourable tendency was evident from June last year, theatre and stage employees, barbers and stationary engineers and firemen showing rather small gains in available work, while the trend for hotel and restaurant employees and unclassified workers was but nominally upward.

Fishermen during June suffered losses in employment over both the preceding month and June a year ago, the recessions in the latter comparison being quite extensive. Reporting for the month under review were 5 locals of these workers with 2,780 members, 770 or 27·7 percent of whom were unemployed on the last day of the month, in contrast with percentages of 19·5 in May and 7·3 in June, 1939.

At the close of June, 7 associations of lumber workers and loggers made returns to the Department of Labour, covering a membership of 2,758 persons, 560 or 20·3 per cent of whom were out of work, in comparison with a percentage of 14·6 in May and with 10·1 per cent of inactivity in June last year.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1929 to 1939, inclusive, and also the percentages of unemployment for June of each year from 1929 to 1938, inclusive, and for each month from June, 1939, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for June, 1940

The volume of business transacted by the offices of the Employment Service of Canada for the month of June, 1940, as shown by the average daily placements effected was over 5 per cent less than that of the previous month, but nearly 10 per cent better than that of the corresponding period a year ago. All industrial divisions, except farming, manufacturing and transportation, in which fair gains were reported, showed declines from May, the largest of these losses being in services, construction and maintenance and logging, with others of smaller proportions in trade and mining. In comparison with June a year ago, gains were shown in manufacturing, services, transportation and trade, the highest of which were in the two first named groups. Fewer placements were registered in construction and maintenance, logging, farming and mining, but, with the exception of construction and maintenance, none of these decreases was very large.

The accompanying chart shows the trend of employment from January, 1938, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications both followed a sharp downward course during the first half of the month, the level of vacancies, however, remaining practically stationary during the latter half, and that of placements dropping another one and a half points. At the end of the period, however, the level of vacancies was slightly higher than at the close of the corresponding period last year, while that of placements was fractionally lower. The ratio of vacancies to each 100 applications was 58.1 during the first half and 58·2 during the second half of June, 1940, in contrast with ratios of 54·3 and 56·1 during the corresponding periods of 1939. The ratios of placements to each 100 applications during the periods

under review were 55.1 and 53.5 as compared with 51·9 and 54·2 during the corresponding month of 1939.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1940, was 1,629, as compared with 1,780 during the preceding month and with 1,441 in June a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,800, in comparison with 2,608 in May, 1940, and with 2,612 in June last year.

The average number of placements made daily by the offices of the Service during June, 1940, was 1,521, of which 1,013 were in regular employment and 508 in work of one week's duration or less, as compared with the total daily average of 1,608 during the preceding month. Placements in June a year ago averaged 1,386 daily, consisting of 895 in regular and 491 in casual employment.

During the month of June, 1940, the offices of the Service referred 37,862 persons to vacancies and effected a total of 36,482 placements. Of these, the placements in regular employment were 24,294, of which 18,959 were of men and 5,335 of women, while placements in casual work totalled 12,188. The number of vacancies reported by employers was 25,338 for men and 13,740 for women, a total of 39,078, while applications for work numbered 67,188, of which 48,312 were from men and 18,876 from women. Reports for May, 1940, showed 46,274 positions available, 67,801 applications made, and 41,800 placements effected, while in June, 1939, there were recorded 36,013 vacancies, 65,291 applications for work and 34,634 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1930, to date:—

Year	Placements		
	Regular	Casual	Totals
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940 (6 months)	113,406	68,464	181,870

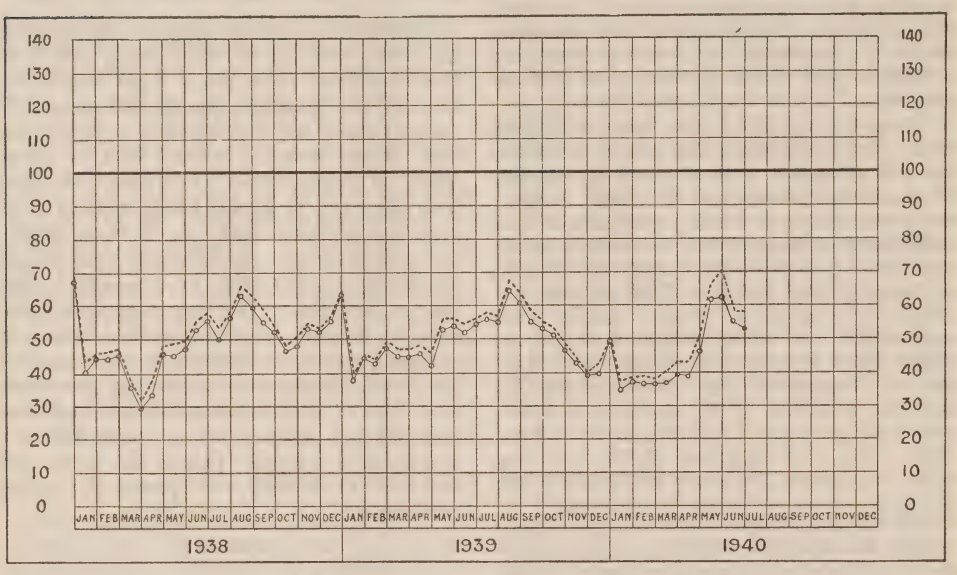
Nova Scotia

During the month of June positions offered through employment offices in Nova Scotia were nearly 6 per cent fewer than in the preceding month, but almost 69 per cent above the corresponding period of last year. There was a decline of nearly 7 per cent in placements when compared with May, but an increase of nearly 70 per cent in comparison with June, 1939. The increase in placements over June of last year was mainly due to a gain in building construction, although moderate improvement was also reported in services. Of the small changes in all other groups, the most important were declines in logging and mining. Placements by industrial divisions were manufacturing 33; logging 65; construction and maintenance 1,346, and services 875, of which 669 were of household workers. There were 1,306 men and 156 women placed in regular employment.

New Brunswick

Opportunities for employment, as indicated by orders received at employment offices in New Brunswick, were nearly 8 per cent better than in the preceding month and nearly 40 per cent above the corresponding month of last year. There was an increase also in placements of nearly 3 per cent when compared with May and of almost 32 per cent in comparison with June, 1939. As in Nova Scotia, the improvement in building construction accounted for the gain in placements over June of last year. The only changes of note were an increase in logging and a decline in services. Industrial divisions in which most of the placements were effected during the month were logging 107; construction and maintenance 803 and services 682, of which 512 were of household workers. During the month 605 men and 64 women were placed in regular employment.

Quebec



The demand for workers, as indicated by orders received at employment offices in the Province of Quebec during June, was nearly 10 per cent less than in the preceding month, but over 23 per cent above the corresponding month of last year. Placements were 2 per cent higher than in May and over 20 per cent above June, 1939. The most important increases in placements over June of last year were in logging, manufacturing and transportation. Placements were also slightly higher in farming. These gains were partly offset by a substantial decline in the highway division of construction and maintenance. Placements by industrial divisions included manufacturing 946; logging 1,708; farming 201; transportation 459; construction and maintenance 1,885; trade 86 and services 3,772, of which 3,329 were of household workers. Regular placements numbered 4,447 of men and 2,071 of women.

ONTARIO

There was a decrease of over 23 per cent in the number of positions offered through employment offices in Ontario during June when compared with the preceding month, but a gain of nearly 17 per cent in comparison with the corresponding month of last year. Placements were over 22 per cent less than in May, but more than 11 per cent higher than in June, 1939. Farm placements were considerably less than during June of last year and there was a moderate decline in mining, but gains were reported in all other groups, the most important of which were in manufacturing, construction and maintenance, logging, services, trade and transportation. Placements by industrial divisions included manufacturing 1,612; logging 1,117; farming 1,475; mining 100; transportation 270; construction and maintenance 5,037; trade 449 and services 4,544, of which 2,390 were of household workers. There were 8,163 men and 1,568 women placed in regular employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

MANITOBA

Employment opportunities, as indicated by orders received at employment offices in Manitoba during June were nearly 5 per cent less favourable than in the preceding month and nearly 26 per cent below the corresponding month of last year. Decreases were also reported in placements of nearly 5 per cent when compared with May and of over 23 per cent in comparison with June, 1939. The decrease in placements from June of last year was due to a substantial decline in the highway division of construction and maintenance. This loss was partly offset by gains in farming, building construction and manufacturing. There was a moderate decrease in logging. Industrial divisions in which most of the placements were effected during the month were manufacturing 106; logging 165; farming 1,074; construction and maintenance 278 and services 731, of which 566 were of household workers. Regular placements numbered 1,538 of men and 282 of women.

SASKATCHEWAN

Orders received at employment offices in Saskatchewan during June called for over 30 per cent fewer workers than in the preceding month and nearly 28 per cent fewer than during the corresponding month of last year. Slightly smaller percentages of loss were reported in placements under both comparisons. When comparing placements by industrial divisions with June of last year, the most important changes were declines in construction and maintenance, logging and farming and increases in transportation and services. Variations in other groups were nominal only. Placements by industrial divisions included farming 215; transportation 111; construction and maintenance 176 and services 672, of which 437 were of household workers. There were 380 men and 324 women placed in regular employment.

* 63 Placements effected by offices now closed.

ALBERTA

Employment offices in Alberta during June were notified of nearly 25 per cent fewer vacancies than in the preceding month, but nearly 19 per cent more than during the corresponding month of last year. There was a decrease of over 22 per cent in placements when compared with May, but an increase of nearly 21 per cent in comparison with June, 1939. Except for a fairly large decrease in logging, all industrial divisions showed increases in placements over June of last year. The most important gains were in farming and construction and maintenance, and manufacturing. Placements by industrial divisions included manufacturing 96; farming 603; construction and maintenance 505; and services 587, of which 396 were of household workers. During the month 1,226 men and 348 women were placed in regular employment.

BRITISH COLUMBIA

Orders received at employment offices in British Columbia during June called for less than 1 per cent more workers than in the preceding month and nearly 34 per cent fewer than during the corresponding month of last year. Similar percentages of change were reported in placements under both comparisons. The decrease in placements from June a year ago was due to large declines in logging and in the highway division of construction and maintenance. These losses were partly offset by increases in all other groups, the largest of which were in manufacturing, services and farming. Placements by industrial divisions were manufacturing 336; farming 351; construction and maintenance 1,299 and services 1,016, of which 592 were of household workers. There were 1,294 men and 522 women placed in regular employment.

Movement of Labour

During the month of June, 1940, the offices of the Employment Service of Canada effected 24,294 placements in regular employment, 12,748 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 479 were granted the Employment Service reduced transportation rate, 374 proceeding to centres within the same province as the despatching office and 105 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices during June issued 12 certificates for reduced transportation, one provincial and 11 interprovincial. The former was of a bushman transferred from Thetford Mines to Chicoutimi. The Hull office was responsible for all the transfers within the province, which were of bushmen, 6 of whom went to Pembroke and 5 to North Bay. Ontario offices granted reduced rate certificates during June to 328 persons going to provincial employment. Travelling from Port Arthur 191 bush workers, 5 cookees, one tractor operator, one sawmill labourer, one carpenter and one restaurant worker were bound for situations within the territory covered by that city office. The Port Arthur zone also received 47 bush workers from Timmins and 13 bush workers and one welder from Sudbury. To centres within its own zone the Fort William office despatched 36 bush workers and 3 sawmill workers. Destined to the Fort William zone in addition were 7 bushmen journeying from North Bay and one stationary engineer from Kenora. From Toronto 17 building construction workers were transported to North Bay, while from Sudbury one engineer proceeded to a point within the Sudbury zone. The North Bay office was instrumental in the transfer of one painter to Timmins and of one cook to Sudbury. In Manitoba during June 95 persons took advantage of the Employment Service reduced transportation rate, 3 of whom travelled to provincial situations and 92 outside the province. All of these secured their certificates at the Winnipeg office. Provincially the movement was within the Winnipeg zone and included 2 mine workers and one bushman. The Port Arthur zone was the destination of the workers travelling outside the province, among whom were 86 bushmen, 5 mine workers and one boilermaker. Saskatchewan transfers at the reduced rate during June were of bushmen, 2 in number, who proceeded to Port Arthur on certificates secured at Regina. Taking advantage of the reduced rate in Alberta during June 41 persons were transported to provincial employment. The movement was entirely from Edmonton to centres within the same zone and comprised the transfer of 10 building construction workers, 8 water transportation employees, 4 waitresses, 4 cooks, 3 sawmill hands, 3 highway construction labourers, 2 fishermen, 2 parks employees, 2 chamber maids, one miner, one laundress and one chauffeur. In British Columbia during June the Vancouver office issued a transportation certificate to a miner bound for a point within the Vancouver zone.

Of the 479 persons who benefited by the Employment Service reduced rate during June, 207 were conveyed by the Canadian National Railways, 224 by the Canadian Pacific Railway, 47 by the Temiskaming and Northern Ontario Railway and one by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada during June, 1940

The June report of building permits compiled by the Dominion Bureau of Statistics, includes returns from 167 of the 202 municipalities in Canada which have systems of issuing such permits and of this number 158 reported detailed operations. The remaining 9 advised that no permits had been issued during the month of June while 35 municipalities had failed to report by July 10.

The total value of permits reported as issued in the month of June is $9,425,773. Revised values for the month of May include returns from 198 municipalities and aggregate $13,809,696. Reports were received from 54 of the original 58 municipalities and show a value of $7,231,786 for last month. The corresponding revised value for May includes all returns and is $10,085,971 while the June 1939 value was $7,849,970.

The total value of permits issued by all municipalities during the first six months of the current year is $46,941,580. The value for the 58 municipalities for the same period is $34,249,110, while their corresponding value in 1939 was $26,861,062.

During the month of June new construction of all types amounted to 79 per cent of the total value, while the percentage of new residential construction was 44·6.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1940

EMPLOYMENT conditions, as indicated by the work of the Employment Service of Canada during the quarter April to June, 1940, were more favourable than those reported during the corresponding quarter of 1939, as there was an increase of 21 per cent in vacancies offered and of 16 per cent in placements effected in regular and casual employment. This was chiefly owing to pronounced gains recorded in services and manufacturing, augmented by others of smaller proportions in logging, transportation, trade, construction and maintenance and farming, the only group to show a reduction being mining, in which the loss was fairly small. All provinces, except Manitoba and British Columbia, registered more vacancies and placements than were listed in the corresponding quarter of last year, the highest gain being shown in Ontario. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1940.

From the chart on page 842 which accompanies the article on the work of the employment offices for the month of June it will be seen that the trend of the curves of vacancies and placements in relation to applications showed little change during the first half of April from that of the preceding period, but followed a marked upward course until the middle of May. During the latter half of that month, however, the courses pursued were quite divergent, that of vacancies being decidedly upward, while that of placements remained almost stationary; a downward trend was then followed by both until the middle of June, very little change being registered by either during the latter half of that month. At the close of the period the level of vacancies was somewhat higher and that of placements slightly lower than those recorded at the end of the corresponding quarter a year ago. During the period April to June, 1940, there was a ratio of 57·7 vacancies and 52·6 placements for each 100 applications for employment, as compared with 53·0 vacancies and 50·2 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,569, of applications registered 2,720, and of placements effected 1,432, in contrast with a daily average of 1,332 vacancies, 2,515 applications and 1,264 placements in regular and casual employment during the same quarter of 1939.

During the three months April to June, 1940, the offices reported that they had made 112,939 references of persons to positions and had effected a total of 108,779 placements, of which 69,157 were in regular employment and 39,622 in casual work. Of the placements in regular employment 52,674 were of men and 16,483 of women. A comparison with the corresponding period of 1939 shows that 93,474 placements were then made, of which 55,023 were in regular employment and 38,451 in casual work. Applications for employment during the period under review were received from 149,061 men and 57,657 women, a total of 206,718, in contrast with the registration of 186,080 during the same period of 1939. Employers notified the Service during the quarter April to June, 1940, of 119,244 vacancies, of which 75,275 were for men and 43,969 for women, as compared with 98,546 opportunities for work offered during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1940.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JULY, 1940

Reports of the Superintendents of the Employment Service

THE employment situation at the end of July was reported by the Superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busily engaged in looking after growing crops, most of which were in excellent condition, with farm produce at the market very plentiful and good prices prevailing. Logging activity consisted chiefly in the cutting of pulpwood and pit props, while sawmills were working overtime. Fishing was fair. Coal mines in the New Glasgow area operated 5 and 6 days per week, while those in Cape Breton and vicinity worked from 4 to 6 days. Manufacturing concerns, with few exceptions, were very busy and no idleness was reported by the iron and steel industry. Apart from projects undertaken by the National Defence Department, where many men found employment, no large building jobs were under way. A considerable amount of small work was being carried out, however, and skilled tradesmen were fairly well employed. Some highway construction also was in progress. Passenger and freight traffic by rail and bus was heavy, although tourist travel was somewhat slower. Reports on water transportation were not available, but all ports were busy and shipping of lumber was brisk along the Miramichi River. Trade kept up well, with collections fair. Numerous requests for household help were received by the Women's Division and placements made.

A fair demand existed for farm help in the province of Quebec. Wood cutting operations were carried on at Chicoutimi on a very large scale and increasing activity was apparent at LaTuque, where more than 200 men were engaged in river driving operations; 10 sawmills were also operating night and day at Levis to supply the Lauzon shipyards. All manufacturing plants at Chicoutimi, Hull, LaTuque and Matane were working to capacity; a large increase was reported in the sugar industry at Montreal and the iron and steel works there had increased their output. Factories in and near Quebec City also were busy, as were those in Sherbrooke, Thetford Mines and Three Rivers, and more than 1,000 persons were employed in the shipyards at Levis. Building, likewise, throughout the province was more active. Dam construction also was progressing favourably and highway work was being carried on. Transportation was active and trade satisfactory. In the Women's Division, however, there was much difficulty in securing experienced maids for household service.

The call for experienced farm help continued in Ontario with few men applying, consequently, a number of farmers had hired partly experienced boys for the summer months, offering $15 to $25 per month for this type of helper. In the Niagara district, where fruit picking was in progress, the situation for casual fruit pickers by the day had been fairly well met, but in Essex County a heavy storm had caused thousands of dollars damage to standing crops and farm buildings. Logging was rather quiet, the chief call being for pulp cutters and peelers, the shortness of the pulp peeling season contributing somewhat to the apparent lack of interest by applicants in this type of work. Sawmills, however, continued to operate steadily with full crews. There were no requests at all for miners, except at Timmins, where the demand was heavy. Nearly all manufacturing concerns continued to work steadily, with full staffs, those industries such as iron and steel and textile plants engaged in war contracts being particularly busy. At Kitchener, the Emergency War Training Program also was making good progress, with 72 students and refreshers attending, 10 placements already having been made in the metal industries from this group. Building construction in general was prospering and work on several airports, as well as other National Defence projects, had absorbed numerous men, the number of unemployed building tradesmen having been reduced to a lower level than for some time past. Highway construction also was accelerated and completion of contracts was expected shortly; extra railway gangs, too, had been sent out. Trade was brisk and real estate more active. With improved industrial conditions there was an increasing demand for experienced help for hotel and domestic service, but lack of suitable applicants proved a handicap; vacancies were also listed for factory help, but these workers were more easily supplied.

Calls for farm help in the prairie provinces were increasing, as early cutting had commenced, particularly in districts where excessive heat and grasshoppers were proving a menace. In Alberta hail storms had caused some damage, but on the whole heavy rains had done a great deal of good. Logging and mining were both quiet, although the latter industry showed a slight improvement over that of the corresponding period last year. Manufacturing industries also were running fairly well. All National Defence projects were progressing favourably and other building construction was more active. Highway construction, both urban and rural, continued

and railway running trades and shops were busy. Retail and wholesale trade was average. An increase was noted in requests for farm domestics, but these applicants were difficult to secure. There were also numerous calls for casual household help in the various cities and these were more readily obtained.

Farm help in British Columbia was in demand, but experienced men were difficult to find. Fruit and vegetable canneries were opening and these afforded employment for a number of hands. While there had been some curtailment during the past two months in logging, improved shipping facilities for export lumber and the increase in domestic requirements, together with the need for sitka spruce for aeroplane manufacturing, had lately increased lumbering operations and prospects were promising for a record log scale for this year. Following the recent rains there was also a further movement of men back to the camps. All sawmills were busy; several were running night shifts and in some cases wages had been raised 10 per cent. Final catches of fish at Prince Rupert were heavy and prices good; a satisfactory run of sockeye and cohoe was continuing and trollers also were doing well. Coal mining was slack, but indications were that base metals, as well as gold, were being produced in greater quantities. Construction too was active and nearly all competent building trades mechanics were fairly well employed. Great activity likewise prevailed at drydocks, shipyards and waterfronts and with the exception of requests for a few highly skilled workers, all labour requirements were being met. Trade was good and the various Women's Departments were busy, although difficulty was still found in filling orders for experienced cooks and cooks-general.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, July, 1940, summarized the employment situation as follows:—

There was a further reduction in unemployment between May 20 and June 17. Between these two dates the number of unemployed persons on the registers of Employment Exchanges in Great Britain fell by 113,987.

As compared with June 12, 1939, the number unemployed at June 17, 1940, in Great Britain was lower by 582,744.

The industries showing the greatest reductions, between May 20 and June 17, in the numbers unemployed included building and public works contracting, the distributive trades, coal mining, agriculture and horticulture, dock and harbour service, local government service, and the cotton industry. On the other hand, unemployment increased in the tailoring, dressmaking and millinery, and linen industries.

Apart from a small increase in Northern Ireland there was a further reduction in the numbers registered as unemployed in every division. The decrease was greatest in the North-Western Division; there were also large decreases in the London, North-Eastern and Northern Divisions, in Scotland, and in Wales.

The number of insured persons, aged 16-64, recorded as unemployed in Great Britain and Northern Ireland at June 17, 1940, represented 5·2 per cent of the total number of insured persons, aged 16-64, at July, 1939, as compared with 6·1 at May 20, 1940; at June 12, 1939, the percentage unemployed was 9·3. For persons within the general scheme the corresponding percentages were 5·3 at June 17, 1940, 6·2 at May 20, 1940, and 9·6 at June 12, 1939. For persons within the agricultural scheme the percentages were 2·3, 3·4 and 4·3 respectively.

United States

Approximately 235,000 workers were added to the payrolls of non-agricultural industries between May and June raising the June employment to the highest point reached this year, according to an official report issued on July 25 by Miss Frances Perkins, United States Secretary of Labor. With this increase the June total shows an increase of more than 900,000 workers employed compared with the figures for June, 1939. All major sections of non-agricultural employment, with the exception of mining, reported gains in employment afforded.

The following paragraphs taken from the official report indicate the employment situation in the United States to be as follows:

One of the most significant features of the current report was the rise of about 50,000 in factory employment from May to June. Usually factory employment declines by about 60,000 at this season of the year. Greater-than-seasonal or contraseasonal gains in many lines of manufacturing activity, particularly the war materials industries, offset the seasonal losses reported in automobiles, cotton goods, women's clothing, and other industries showing declines.

In the war material industries, aircraft firms continued to expand operations, nearly twice as many workers being employed as at this time last year, while engine, shipbuilding, and machine tool plants also reported further substantial gains.

In addition to the gains in these industries, other factories stimulated directly or indirectly by Government on war-time orders, took on additional employees. In the steel industry, more than 21,000 additional workers were hired in June. Firms manufacturing electrical machinery took on 3,000 more workers, woollen and worsted goods plants hired more than 7,000 additional workers in June, and men's clothing firms approximately 7,600.

In other major fields of employment, approximately 61,000 more workers were employed on public and private construction work in June than in the preceding month and about 35,000 were added by utility and transportation companies. Retail and wholesale trade employment increased by 34,000, and the financial, service and miscellaneous industries absorbed 28,000 additional workers. Employment in the Federal, State, and local government service, including the armed forces of the United States, navy yards and arsenals, was about 36,000 higher than in the preceding month. In the group of mining industries there was a net decline of about 7,000 workers, due to seasonal recessions in anthracite and bituminous coal mining. Metal mines, quarries, and crude petroleum producing firms reported gains over the month interval.

Other factors contributing to the gain in factory employment from May to June were the seasonal gain of nearly 32,000 workers in the canning and preserving industry, reflecting the beginning of peak season activity, and less pronounced but substantial seasonal gains in the ice cream, beverage, tin can, and a number of the building materials industries. The most pronounced employment losses over the month interval were seasonal in character and included women's clothing (19,000 workers), automobiles (13,300 workers), cotton goods (8,800 workers), fertilizers (7,500 workers), and dyeing and finishing textiles (4,900 workers).

Employment in the private building industry showed a slight increase of 1·6 per cent from May to June, according to reports from 13,183 contractors employing 144,656 workers. Weekly payrolls also increased 1·6 per cent. Compared with June, 1939, employment was 5·7 per cent higher and payrolls 9·5 per cent above the corresponding month of last year.

The June levelling-off of employment follows the usual May to June pattern of preceding years, with a comparable June gain of 1·4 per cent occurring in 1939 and the average June increase over the previous 8-year period being 2 per cent. Employment continued to improve in six of the nine geographic divisions with recessions occurring in the Middle Atlantic, West South Central, and Pacific States. The largest gains were registered in the East North Central and Mountain States.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age,

it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages Scales of the respective provinces.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935", which came into force on May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by Federal grant in the form of contribution, subsidy, loan, advance or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreement with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for government supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are

fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage rate of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

As complete lists of the contracts awarded by the Department of Munitions and Supply are being issued weekly through the office of the Director of Public Information, and are being published in the press, this information will not be duplicated here. Particulars of the contracts which have been awarded recently by various other departments of the Government of Canada, however, appear hereunder:—

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work, and also specify that the rates of wages set out therein are *minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

Construction of R. C. N. Administration Building, Sydney, N.S. Name of contractors, Hall Construction Co., Ltd., Halifax, N.S. Date of contract, July 8, 1940. Amount of contract, $44,421.31 and unit prices. A fair wages schedule was included in the contract as follows:—

	per hour
Brick and hollow tile layers	$0 95
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 80
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 65
Elec. or Gas	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 70
Electricians (inside wiremen)	0 70
Engineers, operating, steam:	
Single or double drum	0 65
Three or more drums	0 75
Engineers on steel erection	0 75
Fireman, stationary	0 45
Hoist operators-tower (gas. or elec.)	0 50
Labourers	0 40
Lathers (metal)	0 60
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters and glaziers	0 60
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 75
Roofers, shingles (wood, asbestos)	0 80
Sheet metal workers	0 70
Structural steel workers	0 75
Terrazzo layers	0 70
Terrazzo finishers and helpers	0 55
Watchman	0 35
Waxers and polishers (floor)	0 45
Welders and burners on steel erection	0 75

Construction of wharf repairs at Lang Bay, B.C. Name of contractor, W. Greenlees of Vancouver, B.C. Date of contract, June 18, 1940. Amount of contract, approximately $3,436. A fair wages schedule was included in the contract as follows:—

	per hour
Pile Driver Foreman	$1 25
Pile Driver Engineer	1 12½
Pile Driver man	1 00
Boomman	1 00
Bridgeman	1 00
Fireman	0 68¾
Labourer	0 45

Construction of Naval Ordnance Stores Buildings at H. M. C Dockyard, Halifax, N.S. Name of contractors, Fundy Construction Co., Ltd., Halifax, N.S. Date of contract, July 8, 1940. Amount of contract, $94,212 and unit prices. A fair wages schedule was included in the contract as follows:—

	per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 70
Cement finishers—walls	0 80
floors	0 60
Cement and concrete mixer operators—steam	0 65
Cement and concrete mixer operators—gas or electric	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Electricians (inside wiremen)	0 85
Elevator constructors	0 97
Elevator constructors' helpers	0 68
Engineers operating steam, (single or double drums)	0 65
(three or more drums)	0 75
Engineers on steel erection	0 75
Hoist operators tower (gas. or elec.)	0 50
Firemen, stationary	0 45
Labourers	0 40
Lathers—metal	0 60
Linoleum layers	0 55
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters and glaziers	0 60
Plasterers	0 80
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 85
Roofers, felt and gravel; patent; composition	0 45
Roofers, sheet metal	0 70
Sheet metal workers	0 70
Stonecutters	0 70
Stonemasons	1 00
Stonemasons' helpers (mixing and tempering mortar)	0 45
Structural steel workers	0 75
Shovel operators (gas.)	1 00
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Terrazzo layers	0 70
Terrazzo finishers and helpers	0 55
Tile setters (asphalt)	0 70
Tile setters (ceramic)	1 00
Tile setters' helpers (all men assigned to help tradesmen)	0 45
Watchman	0 35
Waxers and polishers (floor)	0 45
Welders and burners (on steel erection)	0 75
Welders and burners (acetylene or elec.)	0 70

Construction and placing of two submerged breakwaters at Sydney Harbour, N.S. Name of contractor, Mr. Ralph M. Hall, Halifax, N.S. Date of contract, July 11, 1940. Amount of contract, approximately $67,820.60. A fair wages schedule was included in the contract as follows:—

	per hour
Blacksmiths	$0 60
Blacksmiths' helper	0 45
Boatman (rowboat)	0 40
Compressor operators—gas or elec.	0 50
Drill runners	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team	0 70
Hoist operator—tower (gas or elec.)	0 50
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Timbermen and cribmen (measuring, scribing and, by the use of the axe, adze, etc., cutting and fitting timber)	0 50
Watchmen	0 35
Pile driver and derrick foremen	0 75
Pile driver and derrick engineers	0 65
Pile driver and derrick men (rigging, setting and signalling)	0 55
Pile driver and derrick firemen	0 45
Pile driver and derrick labourers	0 45
	per day
Divers (full day's pay to be allowed whether employed full or part time)	14 00
Divers' tenders (full day's pay to be allowed whether employed full or part time)	5 00

Construction of a warehouse at Sydney, N.S. Name of contractor, Mr. Ralph M. Hall, Halifax, N.S. Date of contract, May 7, 1940. Amount of contract, approximately $42,418.30. A fair wages schedule was included in the contract as follows:—

	per hour
Blacksmiths	$0 60
Blacksmiths' helpers	0 45
Brick and hollow tile layers	0 95
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 80
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 65
Gas. or elec.	0 50
Compressor operators (gas. or elec.)	0 50
Crane operators (gas. or elec.)	0 70
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 70
Drill runners	0 50
Electricians	0 70
Engineers, operating, steam:	
Single or double drum	0 65

	per hour
Firemen, stationary	0 45
Hoist operators (gas. or elec.)	0 50
Labourers	0 40
Machinists	0 60
Motor truck driver	0 45
Motor truck driver and truck	1 45
Painters and glaziers	0 60
Pipefitters	0 55
Roofers, felt and gravel	0 45
Pipelayers, solderers and caulkers	0 50
Sheet metal workers	0 70
Tractor operators	0 50
Watchmen	0 35
Welders and burners (acetylene or elec.)	0 65

Construction of a new office block at H.M.C. Dockyard, Halifax, N.S. Name of contractors, Stewart Construction Co., Ltd., Halifax, N.S. Date of contract, July 11, 1940. Amount of contract, $64,880 and unit prices. A fair wages schedule was included in the contract as follows:

	per hour
Brick and hollow tile layers	1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 70
Cement finishers—floors	0 60
—walls	0 80
Cement and concrete mixer operators:	
Steam	0 65
Gas. or elec.	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Electricians (inside wiremen)	0 85
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Engineers on steel construction	0 75
Firemen, stationary	0 45
Hoist operators-tower (gas. or elec.)	0 50
Labourers	0 40
Lathers, metal	0 60
Linoleum layers	0 55
Marble setters	1 00
Marble setters' helpers (all men assigned to help tradesmen)	0 45
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters and glaziers	0 60
Plasterers	0 80
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 85
Roofers, felt and gravel (patent): composition	0 45
Roofers, sheet metal	0 70
Sheet metal workers	0 70
Stonecutters	0 70
Stonemasons	1 00
Stonemasons' helpers (mixing and tempering mortar)	0 45
Structural steel workers	0 75
Steam shovel engineers	1 00
Steam shovel craneman	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Shovel operators (gas.)	1 00
Terrazzo layers	0 70
Terrazzo finishers and helpers	0 55
Tile setters (asphalt)	0 70
Tile setters (ceramic)	1 00
Tile setters' helpers (all men assigned to help tradesmen)	0 45
Watchman	0 35
Waxers and polishers (floor)	0 45
Welders and burners on steel erection	0 75

Erection of a new Shaughnessey Hospital at Vancouver, B.C. Name of contractors, Armstrong, Monteith Construction Co., Ltd., Vancouver, B.C. Date of contract, June 20, 1940. Amount of contract, $719,700 and unit prices. A fair wages schedule was included in the contract as follows:—

	per hour
Asbestos insulation workers	$0 85
Brick and hollow tile layers	1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Blacksmiths	0 75
Blacksmiths' helpers	0 50
Carpenters and joiners	0 90
Cement finishers	0 90
Cement and concrete mixer operators:	
Steam	0 90
Gas. or elec.	0 60
Compressor operators (gas. or elec.)	0 60
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	1 00
Drill runners	0 55
Engineers, crane (steam, gas. or elec.)	0 90
Electricians (inside wiremen)	1 00
Elevator constructors	1 04
Elevator constructors' helpers	0 71
Engineers, operating, steam:	
Single or double drums	0 90
Engineers on steel construction	1 12½
Firemen, stationary	0 50
Hoist operators—tower (gas. or elec.)	0 60
Labourers	0 45
Lathers (metal)	1 00
Linoleum layers	0 75
Machinists	0 75
Machinists' helpers	0 50
Marble setters	1 10
Marble setters' helpers (all men assigned to help tradesmen)	0 50
Mastic floor layers	0 85
Mastic floor rubbers and finishers	0 60
Mastic floor kettlemen	0 60
Mastic floor labourers	0 50
Motor truck drivers	0 50
Motor truck driver and truck	1 50
Ornamental iron workers	1 12½
Painters and glaziers	0 80
Plasterers	1 00
Plasterers' helpers (mixing and tempering material)	0 62½
Plumbers and steamfitters	1 00
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers, felt and gravel: patent	0 50
Roofers, sheet metal	1 00
Rodmen, reinforcing steel	0 75
Steam shovel engineers	1 12½
Steam shovel cranemen	0 90
Steam shovel firemen	0 74⅛
Steam shovel oilers	0 60
Shovel operators (gas.)	1 12½
Sheet metal workers	1 00
Stonecutters	1 00
Stonemasons	1 10
Stonemasons' helpers (mixing and tempering mortar)	0 50
Structural steel workers	1 12½

	per hour
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Tile setters (ceramic)	1 12½
Tile setters (asphalt)	0 75
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Watchman	0 45
Waxers and polishers (floor)	0 50
Welders and burners (acetylene or elec.)	0 75
Welders and burners on steel construction	1 12½

Construction of an extension to No. 5 Wharf at H. M. C. Dockyard, Halifax, N.S. Name of contractors, Standard Construction Co., Ltd., Halifax, N.S. Date of contract, May 31, 1940. Amount of contract, approximately $64,938. A fair wages schedule was included in the contract as follows:—

	per hour
Asbestos insulation workers	$0 60
Asphalt rakers	0 55
Asphalt tampers, smoothers and spreaders	0 45
Blacksmiths	0 70
Blacksmiths' helpers	0 45
Boatmen (rowboat)	0 40

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Construction: Buildings and Structures

HALIFAX, N.S.—ELECTRICAL CONTRACTORS AND EMPLOYERS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 625.

Agreement to be in effect from May 1, 1940 to April 30, 1941, and thereafter from year to year, subject to notice.

The terms of this agreement are the same as those of the Industrial Standards Act schedule, as summarized in the LABOUR GAZETTE, July, 1940, page 735 and October, 1938, page 1176.

KINGSTON, ONTARIO.—KINGSTON BUILDING CONTRACTORS ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS LOCAL 249.

Agreement to be in effect from May 1, 1940 to April 30, 1941, and thereafter from year to year, subject to notice.

A union representative may visit the job. The union will give preference in supplying men to local contractors before outside contractors unless such outside contractors have an agreement with the union.

Hours: 8 per day, 4 on Saturday, a 44 hour week.

Overtime: time and one half; work on Sundays and six specified holidays, double time.

Minimum wage rate for carpenters: 85 cents per hour (an increase of 5 cents per hour over the previous rate.) A lower rate may be fixed by the joint committee for any handicapped worker. No union member may undertake to supply either labour or material in competition with any member of the contractors' association unless he is paid at $1.05 per hour.

Disputes are to be settled by a joint committee, and if necessary, a neutral chairman, the decision of this committee to be binding. No strike to occur before a dispute has been referred to this committee.

Apprentices to be governed by the Ontario Apprenticeship Act.

KINGSTON, ONTARIO—CERTAIN MASTER PAINTERS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL 114.

Agreement to be in effect from May 1, 1940.

Only union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one half until midnight; double time after midnight and after 5 p.m. on Saturdays; double time for work on Sundays and four specified holidays.

Minimum wage rate: 75 cents per hour, spray painters 85 cents.

When men are required to stay away from home on a job, they shall be furnished transportation to and from the job at the start and the finish, and the expense of their board.

Apprentices to be governed by the Ontario Apprenticeship Act.

TORONTO, ONTARIO.—GENERAL CONTRACTORS SECTION OF THE BUILDERS' EXCHANGE AND CONSTRUCTION ASSOCIATION AND THE TORONTO AND DISTRICT COUNCIL OF CARPENTERS AND MILLMEN, UNITED BROTHERHOOD OF CARPENTERS AND JOINERS.

Agreement to be in effect from June 17, 1940 to March 1, 1941, and thereafter from year to year, subject to notice.

The business agent of the union to have access to the job.

Hours: 8 per day, Monday to Friday, a 40 hour week. When two or three shifts worked on a job, the second or third shift to be paid for at time and one seventh.

Overtime: time and one half. Work on Saturdays, Sundays and seven specified holidays, double time; except that for work in connection with the pouring of concrete on Saturdays, carpenters may work at straight time for the morning and double time thereafter.

Minimum wage rate for carpenters: 95 cents per hour commencing June 27, 1940.

A joint arbitration committee to be formed, to meet on request and the decision of this committee to be final and binding. No stoppage of work until a dispute has been disposed of by this committee.

Apprentices to be governed by the Ontario Apprenticeship Act.

Toronto, Ontario.—Certain Contractors and the International Brotherhood of Electrical Workers, Local 353.

Agreement to be in effect from July 1, 1940 to April 30, 1941, and thereafter from year to year, subject to notice.

Only union members to be employed and no union member to be permitted to work at electrical construction work for anyone who is not a party to this agreement.

Hours: 8 per day, Monday to Friday, a 40 hour week. Where two or three shifts are worked, 8 hours' pay for 7 hours' work.

Overtime: time and one-half from 5 p.m. to 10 p.m. and between 8 a.m. and noon on Saturdays; all other overtime and work on Sundays and eight specified holidays, double time.

Wage rate for electricians: $1.10 per hour. Journeyman in charge of work where a number of journeymen are employed to be paid additional remuneration.

For work outside the city, transportation to be paid by the employer.

One apprentice allowed to each employer, and in addition, one apprentice or unskilled person to three journeymen in a shop.

Toronto, Ontario.—Sheet Metal Contractors' Section of the Builders' Exchange and Construction Association and the Sheet Metal Workers' International Association, Local No. 30.

The agreement which came into effect June 1, 1937, and was summarized in the Labour Gazette, July, 1937, page 814, September, 1936, page 830, and July, 1935, page 692, was renewed from March 1, 1939 to February 29, 1940, with a reduction in wages from 97½ to 92½ cents. It was again renewed for the period March 1, 1940 to February 28, 1941, with the understanding that a meeting be held August 26, to consider a wage increase, which, if agreed on, would take effect from September 1, 1940.

Toronto, Ontario.—Certain Building Wrecking Firms and the International Hod Carriers, Builders and Common Labourers' Union, Local 756 (Building Wreckers).

Agreement to be in effect from March 1, 1940 to April 1, 1941.

This agreement is simliar to the one previously in effect and summarized in the Labour Gazette, August, 1939, page 856, and August, 1938, page 942, with this exception:

The wage rate is 47½ cents per hour for labourers and 52½ cents for barmen (increases of 2½ cents per hour).

Hamilton, Ontario.—The Mason and General Contractors' Section of the Hamilton Construction Association and the Bricklayers, Masons' and Plasterers' International Union, Local No. 1 (Bricklayers and Masons).

Agreement to be in effect from July 1, 1940 to April 30, 1941.

The employers recognize the union, and union members to be employed.

Hours: 8 per day, Monday to Friday, a 40 hour week. Where two or more shifts are used, 8 hours' pay for 7 hours' work on the night shift.

Overtime: time and one-half; work between 5 p.m. Friday and 8 a.m. Monday, and all work on five specified holidays, double time.

Wage rate for bricklayers and masons: $1 per hour (an increase of 10 cents per hour).

Disputes are to be referred to a joint arbitration board and if necessary to an independent umpire, whose decision will be final. No cessation of work pending such decision.

London, Ontario.—Mason Contractors Association, Master Masons and the Bricklayers', Masons' and Plasterers' International Union, Local No. 5 (Bricklayers and Masons).

Agreement to be in effect from May 1, 1940 to April 30, 1941.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, August, 1939, page 856, except that in addition to employing only members of the international union, employers agree to give local members the first preference.

The wage rate is unchanged at $1 per hour, with a 44 hour week.

Windsor, Ontario.—General Contractors' Section of the Essex County Builders' and Contractors' Association and the United Brotherhood of Carpenters, Local 494.

The agreement, in effect from April 29, 1938 to March 31, 1939, and which was to continue in effect from year to year, was similar to the agreement summarized in the Labour Gazette, July, 1937, page 815. A dispute in 1939 was submitted to an arbitrator (Judge Coughlin) whose decision was that the wage rate be reduced from $1 to 95 cents per hour. The 1938 agreement with the 95 cent per hour wage rate continues in effect to March 31, 1941, and thereafter from year to year, subject to notice. Regular hours are 40 per week.

Windsor, Ontario.—Master Plumbers of Windsor and United Association of Plumbers and Steamfitters, Local 552.

Agreement which came into effect March 1, 1939, continues to March 1, 1941, and thereafter from year to year, subject to notice.

Only union members to be employed, and union members will work only for members of the Master Plumbers' Association .

Hours: 8 per day, Mondays to Fridays, a 40 hour week. In case of shift work, second shift to begin at end of regular working day and be paid at 8 hours' pay for 7 hours work.

Overtime: time and one-half till midnight and on Saturdays between noon and 5 p.m.; all

overtime after midnight and after 5 p.m. Saturdays, and all work on Sundays and six specified holidays, double time.

Minimum wage rate for plumbers and steamfitters: $1 per hour.

For work out of the city, fare and board to be paid, and travelling time.

One labourer only allowed to each branch of the trade on any job, but where more than three journeymen plumbers or three journeymen steamfitters are employed, then one additional labourer may be allowed to each additional three journeymen plumbers or three journeymen steamfitters. One apprentice to be in each shop before labourers are hired.

A joint conference board to be formed for the settlement of disputes.

REGINA, SASKATCHEWAN.—REGINA MASTER PLUMBING, HEATING AND SANITARY ENGINEERS AND THE UNITED ASSOCIATION OF JOURNEYMEN PLUMBERS AND STEAMFITTERS, LOCAL 179.

Agreement to be in effect from May 1, 1940, until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1939, page 857, with this exception:

Minimum wage rate: the rate continues at 90 cents per hour until August 1, when it was to become 95 cents, and on November 1, is to be further increased to $1 per hour.

CALGARY, ALBERTA.—CALGARY GENERAL CONTRACTORS' ASSOCIATION AND THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION, LOCAL NO. 1 (BRICKLAYERS AND MASONS).

Agreement to be in effect from July 2, 1940 to July 1, 1941.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. In case of night shifts, 8 hours' pay for 7 hours' work.

Overtime: from 5. p.m. to midnight, Monday to Friday, and from noon to 5 p.m. Saturdays, time and one half; all other overtime and work on Sundays and three specified holidays, double time.

Minimum wage rate for bricklayers and masons: $1.20 per hour (an increase of 10 cents per hour over the previous rate); foremen 10 cents per hour extra.

For work out of town, railway fare and travelling time to be paid by the employer.

CALGARY, ALBERTA.—CALGARY GENERAL CONTRACTORS' ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 1779.

Agreement to be in effect from July 1, 1940 to March 31, 1941.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. In case of night shifts, 8 hours' pay for 7 hours' work.

Overtime: time and one half for first four hours; thereafter and all work on Sundays and four specified holidays, double time.

Minimum wage rate for carpenters: 90 cents per hour (an increase of 10 cents per hour), with the proviso "that the wage rate shall be open to revision on every occasion when it can be shown that the cost of living has increased to the extent of five per cent over that which prevailed at the time this agreement was signed or since the previous revision". Foremen to be paid at least 10 cents per hour over the journeymen's rate.

In case of any dispute, it will be referred to a joint committee.

EDMONTON, ALBERTA.—EDMONTON GENERAL CONTRACTORS ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 1325, AND THE AMALGAMATED BUILDING WORKERS OF CANADA, EDMONTON UNIT, NO. 1.

Agreements to be in effect from April 1, 1940 to March 31, 1941. Negotiations for new agreements to take place during January, 1941, if notice of change given by either party.

These agreements are similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1939, page 857. The wage rate is 90 cents per hour, with a 44 hour week.

EDMONTON, ALBERTA.—EDMONTON PLASTERING CONTRACTORS' ASSOCIATION AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS, LOCAL 372.

Agreement to be in effect from May 1, 1940 to April 30, 1941. The parties to meet during January to negotiate a new agreement.

This agreement is similar to the one which was summarized in the LABOUR GAZETTE, December, 1938, page 1411, with this exception:

The minimum wage rate for plasterers is $1.05 per hour (an increase of 5 cents per hour). Hours are unchanged at 44 per week.

EDMONTON, ALBERTA.—EDMONTON SOCIETY OF DOMESTIC SANITARY AND HEATING ENGINEERS, INC. AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 488.

Agreement to be in effect from May 1, 1940 to April 30, 1941, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1939, page 857, with the exception that in addition to each shop being allowed one plumber's apprentice, an additional apprentice is now allowed for each four additional journeymen employed.

The minimum wage rate for journeymen remains at $1.05 per hour, with a 44 hour week.

Construction: Canal Harbour and Waterway

VANCOUVER AND VICTORIA, B.C.—SCHEDULE OF WAGES AND TRADE RULES FOR THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCALS 2404 (VANCOUVER) AND 2415 (VICTORIA) (PILE DRIVERS, BRIDGE, DOCK AND WHARF BUILDERS).

These schedules came into effect April 1, 1937, and were amended May 22, 1940, to provide special conditions for tide and extraordinary traffic conditions. They have been accepted by letter by the contractors' association in Vancouver and verbally accepted by certain Victoria contractors.

Only union members to be employed, including foremen. The business agent to be allowed to visit the job.

Hours: 8 per day, Monday to Friday, a 40 hour week. Regular hours to be worked between 6 a.m. and 6 p.m. Two or more shifts may be employed at the regular scale, but 7½ hours to constitute a day's work, with pay for 8 hours.

Overtime: any time worked over 8 hours between 6 a.m. and 6 p.m. to be paid at time and one-half for first two hours and double time thereafter; all time worked after 6 p.m. and before 6 a.m. to be paid at double time. When three or more consecutive tide or traffic shifts are worked, all work outside the regular hours of 6 a.m. to 6 p.m. to be paid at the rate of 6 hours' work for 8 hours' pay. All work on seven specified holidays, double time.

Wages for pile drivers: foremen $1.25 per hour, $10 per day; crew, bridgemen and wharf-carpenters $1 per hour, $8 per day.

Any union member ordered to report to work and not put to work, to be paid for at least two hours' time "except when the elements of nature prohibit the work from going on."

On all outside jobs which do not last one month, travelling time to and from job to be allowed in addition to transportation and board.

Transportation and Public Utilities: Water Transportation

MONTREAL, P.Q.—STEAMSHIP AND STEVEDORING COMPANIES (OCEAN NAVIGATION) AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL 375.

Agreement reached following report of Board under the Industrial Disputes Investigation Act (LABOUR GAZETTE, May, 1940, page 426, and this issue, page 763). Agreement to be in effect from April 24, 1940, to December 31, 1940, and thereafter from year to year, subject to notice.

Preference of work to be given to members of this local union. The longshoremen to have the right to appoint representative on the wharves to be elected at a general meeting of the longshoremen.

Hours: the starting times for work are stipulated, and the parties agree that steps be taken to ensure that the average number of hours per week of the workers shall not exceed 48.

Overtime: for work during meal hours and thereafter until relieved, and for all work on Sundays and two holidays, double time.

The basic rates of pay are unchanged, but a war bonus of 8 cents per hour is added. Accordingly the longshoremen receive: 85 cents per hour for work between 7 a.m. and 12 noon and between 1 p.m. and 6 p.m., 95 cents per hour for work between 7 p.m. and 11 p.m., and $1.05 between midnight and 5 a.m.; 15 cents per hour extra to be paid for working on nitrate, bulk sulphur, bulk ore, potash, full cargoes of china clay and fertilizer, shifting bunker coal, handling cargo in refrigerators which is to be transported at 32° F. or lower, and also for grain trimming and bagging and for work performed in open 'tween deck where there is grain running in a hatch connected with the said open deck (this not to apply to men working other cargo in the lower hold).

For grain trimming and bagging, the running of the grain in the pipes to be stopped while men go down in the hold to work, two men to stand on deck during that time, if necessary.

The employers and the union each agree to post a bond of $2,000 to be held in trust for payment of any judgments or orders of any court of the province of Quebec, in favour of the other party, until the termination of this agreement.

Provision is made for the payment of minimum amounts to longshoremen called up at certain hours if they are not put to work immediately. The numbers of men for regular gangs are specified.

Any dispute which cannot be settled between the parties will be referred to a joint arbitration committee whose decision will be final.

Collective Labour Agreements Act, Quebec

The following agreements, amendments and repeal of agreements have recently been made obligatory by Orders in Council and are summarized in the next article:—

Women's Cloak and Suit Manufacturing Industry, Province of Quebec (amendment).

Grocers and Butchers, Sherbrooke (amendment).
Civic Employees (Outside Services), Quebec.
Civic Employees (Permanent Employees), Quebec.
Police Department Employees, Quebec.
Fire Department Employees, Quebec.
Barbers and Hairdressers, Joliette, (repeal).
Hairdressers, Montreal (amendment).

Industrial Standards Acts

The following schedules have recently been made binding by Orders in Council and are summarized in a special article below:

ONTARIO

Painters, Toronto (cancellation).
Carpenters, Belleville.
Filling Stations, Toronto.
Barbers, Sudbury and Copper Cliff.
Barbers, Port Arthur and Fort William.

SASKATCHEWAN

Painters, Regina (cancellation).
Carpenters, Swift Current.
Taxi Industry, North Battleford.
Beauty Culture, Regina.
Beauty Culture, North Battleford.

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC
Recent Proceedings under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May, 1938, issue of the LABOUR GAZETTE, page 503. Amendments to the Act are noted in the LABOUR GAZETTE, June, 1939, page 576. Agreements and regulations under the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette,* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette.* Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette,* the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in cities and towns of 5,000 or more and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette.* Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issue beginning May, 1938.

Recent proceedings under the Act include the extension of six new agreements, the correction of one agreement, the amendment of four other agreements and the repeal of one agreement, all of which are noted below. Requests for the extension of new agreements were published in the *Quebec Official Gazette,* as follows: an agreement affecting longshoremen (ocean and inland navigation) at Sorel and an agreement for civic employees of St. Joseph d'Alma, in the issue of July 6; an agreement for taxi drivers at Montreal, in the issue of July 13; an agreement for barbers and hairdressers at Three Rivers, in the issue of July 27. In addition, Orders in Council were published in the *Quebec Official Gazette* during July approving the constitution and bylaws of two joint committees and others approving the levying of assessments by eight joint committees, as listed below.

Manufacturing: Textiles and Clothing

WOMEN'S CLOAK AND SUIT MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved July 5, and published in the *Quebec Official Gazette,* July 13, amends the previous Order in Council for this industry (LABOUR GAZETTE, October, 1937, page 1157, and May, 1940, page 496) by extending the period of the agreement to June 30, 1942.

Construction: Buildings and Structures

BUILDING TRADES, THREE RIVERS.—An Order in Council, approved June 25, and published in the *Quebec Official Gazette,* July 13, amends the previous Orders in Council for these trades (LABOUR GAZETTE, May, 1940, page 497

and June, page 609) by adding another electrical contractor to the parties to the agreement.

Building Trades, St. Hyacinthe.—An Order in Council, approved July 12, and published in the *Quebec Official Gazette*, July 20, makes obligatory the terms of an agreement between Le Syndicat patronal catholique et national de la construction de St.-Hyacinthe (The employers' national Catholic union of the construction industry of St. Hyacinthe) and Le Syndicat catholique et national des ouvriers de la construction de St.-Hyacinthe (the national Catholic union of construction workers of St. Hyacinthe).

The Order in Council to be in effect from July 20, 1940 to April 30, 1942, and for another year if no notice of change given by either party.

The territorial jurisdiction comprises the counties of St. Hyacinthe, Bagot and Rouville, and is divided into two zones: zone I, the city of St. Hyacinthe and the municipalities of La Providence, St. Joseph, St. Antoine, parish of Notre Dame, north and south shore, and parish of St. Hyacinthe-le-Confesseur, north and south shore; zone II, the rest of the territorial jurisdiction.

Hours: 8 per day, 48 per week. Horse drivers and employees of the trucking transport and towing industry may work on a weekly basis of 54 hours.

Man	.35	.25
Man with one horse	.50	.40
Man with two horses	.65	.50

Foremen to be paid 10 cents per hour extra. Journeymen who are handicapped may be paid 5 cents per hour less than the regular rate, but not more than one man in ten may be paid at such lower rate.

One apprentice allowed to each five journeymen or fraction thereof. Apprentices to be paid 15 cents per hour during first year, 20 cents during second year, 30 cents in zone I and 25 cents in zone II during third year; 35 cents in zone I and 30 cents in zone II during fourth year. The working year for the purposes of apprenticeship to be at least 10 months out of 12.

Maintenance men to be paid in zone I at least $18 per week of 55 hours if tradesmen and $15 for labourers; in zone II $15 for tradesmen and $12 for labourers. The employer may deduct $2 per month for room if maintenance employee lodges in the establishment and 20 cents per meal if boarded in the establishment.

Trade

Retail Stores, Quebec.—An Order in Council, approved July 12, and published in the *Quebec Official Gazette*, July 20, amends the previous Order in Council for these establishments (Labour Gazette, January, 1939, page 96, March, page 336, July, page 729, October, page 1067, January, 1940, page 69, and April, page 391), by extending the period of the agreement to September 1, 1940.

Grocers, Butchers and Other Retail Stores, Coaticook.—An Order in Council approved June 28, and published in the *Quebec Official Gazette*, July 6, makes obligatory the terms of an agreement between L'Association patronale des négociants de Coaticook (the employers' association of business men of Coaticook) and Le Syndicat

catholique et national des employés de magasins de Coaticook (the national catholic union of store employees of Coaticook).

Agreement to be in effect from July 6, 1940, to July 5, 1941, and thereafter from year to year, subject to notice.

Hours: 57 per week for men, 54 per week for women, to be worked between 8 a.m. and 6 p.m. Monday to Friday and between 8 a.m. and 10 p.m. on Saturday, provided that establishments may be kept open till 7 p.m. Monday to Friday inclusive, if this extra hour is paid for. In drug stores and soda fountain stores, however, hours may be 80 per week. No work on Sundays or eleven holidays. No deduction from weekly wages to be made for such holidays.

Overtime: time and one-half.

Wages per week: one quarter of employees to be paid at least $18, a further quarter $15, a third quarter at least $12 and the others at least $8. Extra employees to be paid 25 cents per hour. Delivery employees with bicycle to be paid at least $6 per week of 57 hours or 12½ cents per hour if employed less than 9 consecutive hours. Office employees to be paid 15 cents per hour during first six months and 20 cents after six months.

Vacation: after one year's service, employees to be entitled to one week's vacation each year, without pay.

GROCERS AND BUTCHERS, SHERBROOKE.—An Order in Council, approved June 28, and published in the *Quebec Official Gazette,* July 6, amends the previous Order in Council (LABOUR GAZETTE, July, 1940, page 734) by changing the words "one week of vacation with pay" to "one week of vacation".

Service: Public Administration

CIVIC EMPLOYEES (OUTSIDE SERVICES), QUEBEC.—An Order in Council, approved July 12, and published in the *Quebec Official Gazette,* July 20, makes obligatory the terms of an agreement between the City of Quebec and Le Syndicat des Employés des Services exterieurs de la Cité de Québec, inc. (the union of employees of outside services of the city of Quebec, inc.) and L'Union des Employés municipaux de l'exterieur, inc. (the union of outside municipal employees, inc.). The Orders in Council to be in effect from July 20, 1940, to May 1, 1941, and thereafter from year to year, subject to notice.

Hours: 8 per day, to be worked between 7 a.m. and 6 p.m. No work on Sundays or religious holidays except in emergency. No work on St. Jean Baptiste Day, Dominion Day and Labour Day, but these days to be paid for.

Overtime: time and one-half for work over 8 hours and up to 16 hours; thereafter and all work on Sundays and religious holidays, double time.

Minimum hourly wage rates: Asphalt manufacturing machine—chief mechanic, 70 cents; mechanic and stationary firemen (boilers), 55 cents; weighers, mixers, workers on tubes, workers on "alivettes", 50 cents; others, 45 cents; watchmen, 40 cents; assistant checker, $25 per week; foreman watchman, $27 per week; clerk, $23 per week. Laying of asphalt—rollers and shift leaders, 65 cents; rakers, 60 cents; rakers' substitutes, 55 cents; surface men rammers, 50 cents; others, 45 cents; watchmen, 30 cents. Municipal shop (garage)—machinists, mechanics, painters, wheelwrights, blacksmiths, oxygen welders, electricians, plumbers, tinsmiths, stationary enginemen, 55 cents; mechanics' helpers, 45 cents. Municipal buildings—bricklayers, masons and plasterers, 75 cents; carpenters, joint pointers, cement finishers, electricians and plumbers, 55 cents; painters and caulkers, 50 cents. Aqueduct—stationary enginemen, enginemen-mixers, enginemen-compressors, plumbers, 55 cents; linemen, 50 cents; truck chauffeurs, 45 cents. Roads department—stationary enginemen, enginemen-compressors, enginemen-mixers, carpenters, joiners, cement finishers, 55 cents; chauffeurs on "snogos", on loaders, on blowers, on sprinkler trucks, 55 cents; chauffeurs on snow ploughs, 50 cents; chauffeurs on trucks, 45 cents; ticket distributors, 45 cents. Electricity department—electricians and cablemen, 55 cents. Rubbish department—those picking up rubbish, including truck drivers, carters or chauffeurs, performing the work required, $22 per week. Watchmen—$3 per day or per night. Stablemen, $22 per week; workers on public scales (for all work required, at any time), $23; bridge operators (for navigation season); $28; firemen (furnaces) at city hall, $24.50. Parks—gardeners, 50 cents; labourers and carters, firemen, 45 cents. "Palais Montcalm"—employees (for work required), $21; maintenance men, $18. Snow removal and all other departments—labourers and carters, 45 cents; store keepers, $25 per week.

Any disputes are to be referred to an arbitrator agreed upon by the parties or to a joint arbitration committee.

CIVIC EMPLOYEES (PERMANENT EMPLOYEES), QUEBEC.—An Order in Council, approved July 12, and published in the *Quebec Official Gazette,* July 20, makes obligatory the terms of an agreement between the city of Quebec and Le Syndicat professionel des fonctionnaires municipaux de Québec, inc. (the professional union of municipal employees of Quebec, inc.). The Order in Council to be in effect from July 20, 1940 to May 1, 1941, and thereafter from year to year, subject to notice.

Hours: 9 a.m. to 5 p.m., except between June 15 and September 15, during which period hours to be from 9 a.m. to 4 p.m.; one hour and a half allowed for lunch period, Saturday hours from 9 a.m. to 1 p.m.

Overtime: no overtime to be paid except for special cases which shall be studied by the joint committee.

Wages: the statutory increases of $50, $75 or $100 established in this agreement are to be granted automatically each year until the maximum for the position is reached, except when otherwise decided by the committee of competency. A schedule of annual salaries is given, showing the minimum, the annual increases and the maximum for each class. The annual minimum for a few of these are: clerk grade 3 (lowest salary bracket) $900; labourers, watchmen, etc., $1,000; clerk grade 2, aqueduct.

operators, $1,200; instrument men $1,400; clerk grade 1 and accountants $1,500; chief electrician $1,700; superintendent of aqueduct, superintendent of alarm telegraph, graduate sanitary chief-inspector, $1,800; pay master $2,000; superintendents of public works for wards $2,200 and $2,500; surveyor, architect, assistant chief of police, assistant chief of fire service, $2,500; engineer of public works, chemist, $2,800; chief collector, chief accountant and assistant treasurer, $3,000; engineers for public works services, lawyer for city, $3,500.

Regular employees to be appointed permanent one year after May 1 following the date of their employment. Examinations to be held for promotions. Employees may not be made permanent if older than 40 years, and are to retire and receive a pension at 65.

Vacation: two weeks vacation each year.

Sick leave of 1½ days per month, which may be accumulated is allowed.

Police Department Employees, Quebec.—An Order in Council, approved July 12, and summarized in the *Quebec Official Gazette*, July 20, makes obligatory the terms of an agreement between the city of Quebec and Le Syndicat professionel de la Police municipale de Québec, inc. (The professional union of the municipal police of Quebec, inc.). The Order in Council to be in effect from July 20, 1940 to May 1, 1941, and thereafter from year to year, subject to notice.

Hours: constables to be divided into two shifts, the change from one shift to the other to take place every 24 hours (24 hours on duty, then 24 hours off duty). If required to remain on duty by order of the chief of police they shall do so without pay.

Minimum weekly wages: cadet $18; constable (for one year from the May 1 following the date of employment) $21, with increase of $1 per week each year till maximum of $28 per week reached; taximeter checker $30; corporal $30; sergeant $32; inspector $38.46 per week or $2,000 per year.

Uniforms to be supplied by the city.

Disputes are to be referred to an arbitrator mutually agreed on, or to a joint arbitration committee.

Fire Department Employees, Quebec.—An Order in Council, approved July 12, and published in the *Quebec Official Gazette*, July 20, makes obligatory the terms of an agreement between the city of Quebec and l'union nationale et catholique des employés du departement de Feu de Québec, Inc. (the national Catholic union of fire department employees of Quebec, Inc.).

Hours: firemen to be divided into two shifts, the change from one shift to the other to take place every 24 hours (24 hours on duty, then 24 hours off duty). If required to remain on duty by order of the chief of the fire brigade, they shall not be paid for that overtime work, but the overtime hours shall be subsequently taken off the regular time, at the option of the chief.

Minimum weekly wages: cadets $18; firemen $21 (from one year from the May 1 following the date of their employment), with increase of $1 per week each year to a maximum of $28 per week, lieutenants $28 to $30, captains $30 to $32; repairers $28, assistant secretary of the department $30, chief mechanic $33; fire prevention—fountain post inspectors and chimney sweeper $25, chimney sweepers' captain $30, prevention inspector $26, secretary of prevention office $28; alarm telegraph—lineman and cableman $28, foreman $30.

Uniforms to be supplied by the city.

Disputes are to be referred to an arbitrator mutually agreed on or to a joint arbitration committee.

Service: Personal and Domestic

Barbers and Hairdressers, Joliette.—An Order in Council, approved July 12, and published in the *Quebec Official Gazette*, July 20, repeals the Order in Council which made this agreement obligatory and the one renewing it (Labour Gazette, January, 1939, page 96, and January, 1940, page 70).

Hairdressers, Montreal.—An Order in Council, aproved July 5, and published in the *Quebec Official Gazette*, July 13, amends the previous Orders in Council (Labour Gazette, August, 1939, page 862, March, 1940, page 284, June, page 610) by extending the period of the agreement to September 1, 1940.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the *Quebec Official Gazette*, July 6 and 20:

Grocers and butchers, Sherbrooke.

Building Materials, Province of Quebec.

Notices were published in the *Quebec Official Gazette*, July 13 and 20, that authorization was given by Orders in Council for the joint committees to levy assessments on employers and employees, parties to the following agreements:

Barbers, Hull.
Hairdressers, Montreal.
Barbers, Rouyn and Noranda.
Building Materials, Province of Quebec.
Retail Trade, Quebec (amendment).
Grocers and butchers, Sherbrooke.
Cloak and Suit Industry, Province of Quebec.
Men's and Boy's Clothing Industry, Province of Quebec.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario and Saskatchewan

IN five provinces—Ontario, Alberta, Nova Scotia, Saskatchewan and New Brunswick—legislation provides that, following a petition from representatives of employers or employees in any industry, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour; in Saskatchewan under the Commissioner of Labour and Public Welfare; in New Brunswick under the Minister of Health and Labour. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, May, 1938, page 501, and June, 1939, page 574; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, June, 1938, page 633, and June, 1939, page 567; Nova Scotia, in June, 1936, page 604, and July, 1939, page 671; Saskatchewan, in the issue of June, 1937, page 635, May, 1938, page 507, and June, 1939, page 581; New Brunswick, in the issue of October, 1939, page 996. Similar legislation is in effect in Part II of the Fair Wages Act of Manitoba for certain industries (LABOUR GAZETTE, May, 1938, page 499, and June, 1939, page 570). Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Ontario

Construction: Buildings and Structures

CARPENTERS, BELLEVILLE.—An Order in Council, dated July 18, and published in *The Ontario Gazette*, July 27, makes binding in the city of Belleville and within five miles of it the terms of a schedule of wages and hours from August 6, 1940, "during pleasure".

Hours: 8 per day, 48 per week.

Overtime: time and one-half unless the Advisory Committee has issued a special permit to the employer authorizing the performance of such work at a lesser rate; work on Sundays and eight specified holidays, double time.

Minimum wage rate for carpenters: 70 cents per hour. The Advisory Committee may fix a special minimum rate of wages lower than the regular minimum rate for any handicapped employee.

PAINTERS, TORONTO.—An Order in Council, dated July 18, and published in *The Ontario Gazette*, July 27, revokes the Order in Council making a schedule binding for this trade, which was summarized in the LABOUR GAZETTE, April, 1939, page 436.

Trade

GASOLINE SERVICE STATIONS, TORONTO.—An Order in Council, dated July 18, and published in *The Ontario Gazette*, July 27, makes binding in the city of Toronto and adjacent suburban territory, the terms of a schedule for the gasoline service industry, from August 6, 1940, "during pleasure".

This industry comprises the business of operating gasoline service stations or pumps and the services incidental thereto, such as washing, oiling or lubricating automobile vehicles, repairing or changing tires and making minor running repairs.

Minimum rate of wages for all employees in the gasoline service industry to be 25 cents per hour. No deduction may be made from an employee's wages unless the net wage (after deductions have been made) is at least the minimum wage rate above mentioned.

Service: Business and Personal

BARBERS, SUDBURY AND COPPER CLIFF.—An Order in Council, dated July 18, and published in *The Ontario Gazette*, July 27, makes binding the terms of a schedule for the barbering industry in the city of Sudbury, the town of

Copper Cliff and certain other specified territory, to be in effect from August 6, 1940 "during pleasure".

The terms of this schedule are the same as those of the previous schedule which was in effect only in the towns of Sudbury and Copper Cliff, and which was summarized in the Labour Gazette, May, 1938, page 581.

Barbers, Port Arthur and Fort William.—An Order in Council, dated July 18, and published in *The Ontario Gazette*, July 27, makes binding the terms of a schedule for the barbering industry in the cities of Port Arthur and Fort William, to be in effect from August 6, 1940, "during pleasure".

The terms of this schedule are similar to those of the schedule previously in effect and summarized in the Labour Gazette, March, 1937, page 363, the rate for full time salaried barbers being $22 per week.

Saskatchewan

Construction: Buildings and Structures

Painters, Regina.—An Order in Council, approved July 5, and published in *The Saskatchewan Gazette*, July 15, cancels the Order in Council which had made this schedule binding (Labour Gazette, July, 1939, page 732).

Carpenters, Swift Current.—An Order in Council, approved July 11, and published in *The Saskatchewan Gazette*, July 31, makes binding the terms of a schedule for the carpentering industry in the city of Swift Current, to be in effect from August 10, 1940, "during pleasure".

Hours: 9 per day, 5 on Saturdays, a 50-hour week. In case of night shift work, 7½ hours to constitute a night shift, with no time deducted for meals; and for such 7½ hours' labour, 8 hours' payment to be allowed.

Overtime: time and one half; work on Sundays and four specified holidays, double time.

Minimum wage rate: foreman carpenter 80 cents per hour, first class carpenter 70 cents, second class carpenter 55 cents.

One apprentice allowed to each three journeymen on any job, and not more than two second class carpenters to each first class carpenter. Apprentices to be paid $12 per week during first year, $15 during second year and $22.50 during third year.

Transportation and Public Utilities: Local Transportation

Taxi Industry, North Battleford.—An Order in Council, approved June 5, and published in *The Saskatchewan Gazette*, July 31, makes binding the terms of a schedule for the taxi industry in the city of North Battleford and the town of Battleford and within five miles of them, to be in effect from August 10, 1940, "during pleasure".

Hours: 11 per day divided into two shifts with one hour interval between shifts; 66 hours per week of 6 days.

Overtime to be paid at 25 cents per hour.

Minimum wage rates: for full time employees $12 per week, part time employees 25 cents per hour, with at least 75 cents for work done on any day.

A scale of prices which must be charged customers is included.

Service: Business and Personal

Beauty Culture, Regina.—An Order in Council, approved July 4, and published in *The Saskatchewan Gazette*, July 15, amends the previous Order in Council for this industry (Labour Gazette, May, 1940, page 502).

Wages: in a shop where three or more employees are employed, an employer may adopt the following minimum rates instead of the minimum rates previously specified: at least 50 per cent of employees to be paid $18 per week, 25 per cent a minimum of $16, and the remainder at least $14. Overtime to be paid at 40 cents per hour. Part time employees to be paid 40 cents per hour, with a minimum of $1.60 in any one day.

No employer may employ more than one inexperienced employee for each four (or fraction thereof) experienced employees employed unless a permit is obtained from the Advisory Board to exceed this quota.

Beauty Culture, North Battleford.—An Order in Council, approved June 5, and published in *The Saskatchewan Gazette*, July 31, makes binding the terms of a schedule for the beauty culture industry in the city of North Battleford and the town of Battleford and within five miles of them, to be in effect from August 10, 1940, "during pleasure."

Hours: 48 per week.

Overtime: experienced beauticians 35 cents per hour, inexperienced beauticians 27½ cents per hour, plus bonus as noted below.

Wages: for full time experienced employees $13 plus bonus; for full time inexperienced employees, $7 per week during first six months, $9 during second six months and $12 during third six months, plus bonus.

Bonus: every employee to be paid a bonus equivalent to the amount by which 50 per cent of all charges made for the employee's work during each week exceeds the amount paid the employee.

A scale of minimum charges which must be made to customers is included in the schedule.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1940

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight. The cost per week of a list of certain staple foods, fuel and lighting, and rent, entering into a family budget was somewhat higher at the beginning of July owing chiefly to an advance in the cost of foods, while the Dominion Bureau of Statistics weekly index number of wholesale prices showed only minor changes.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.70 at the begininng of July as compared with $8.62 for June; $8.07 for July, 1939; $8.57 for July, 1938; $6.67 for March, 1933, the low point in recent years; $10.91 for July, 1930; $10.27 for July, 1922; and $16.92 for June, 1920, the post war peak. Thirteen items in the list advanced in cost during the month under review, seven declined and nine were unchanged. The most important changes were increases in the cost of beef, lamb, potatoes, and eggs and decreases in butter and cheese. Including the cost of fuel and rent with that of foods the total cost was $17.84 at the beginning of July as compared with $17.72 for June; $16.93 for July, 1939; $17.45 for July, 1938; $15.41 for June, 1933, the low point in recent years; $21.26 for July, 1930; $20.67 for July, 1922; and $26.92 for July, 1920, the post war peak. Increases in the price of coal in some localities caused an advance in the cost of fuel. Rent also increased slightly.

Wholesale prices continued to show little change in July from the level of recent months. The Dominion Bureau of Statistics weekly index number was 82·0 for the week ended July 26, 82·2 for the week ended July 5 and 81·9 at the beginning of June. The latest figures available on a monthly basis are for June when the index was 81·6 as compared with 72·6 for July, 1939; 78·6 for July, 1938; 87·6 for July, 1937; 63·5 for February, 1933, the low point in recent years; 97·2 for July, 1929; 98·7 for July, 1922; and 164·3 for May, 1920, the post war peak. Group changes during the month were slight. The Vegetable Products group declined from 72·2 for the first week to 70·5 for the week ended July 12 after which there was little change. The decrease early in the month was due mainly to lower prices for potatoes, flour and milled products. The Chemicals and Allied Products Group was the only other one to record substantial change advancing more than 4 per cent. In this group the price of iodine rose 23 per cent.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of July of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in some of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received, and includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market

(Continued on page 880)

COST PER WEEK (IN TERMS OF THE AVERAGE RETAIL PRICES IN SIXTY-NINE CITIES IN CANADA) OF CERTAIN STAPLE FOODS, FUEL AND LIGHTING, IN THE QUANTITIES STATED, AND RENT ENTERING INTO A FAMILY BUDGET.

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family.

price per cord from price quoted. d. Including semi-bituminous. f. Petroleum coke. g. Natural gas used extensively $35-$50, according to condition and conveniences. r. Mining company houses in district $5-$10 per month; others, five and

(Continued from page 872)

conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of food tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the list of foods entering into the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Beef prices averaged considerably higher at the beginning of July than at June 1. Sirloin steak and round steak each advanced about two cents per pound, the former averaging 31·1 cents per pound and the latter 26·8 cents. Lamb was up in the average from 30 cents per pound to 32·1 cents. The prices of fresh pork and bacon changed little. Fresh eggs were higher in most localities and the Dominion average price was 27·4 cents per dozen at July 1 as compared with 26·5 at the beginning of June. Milk has been unchanged in the average during the last six months. The

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

price of creamery butter was lower in many cities, the Dominion average being down from 27·6 cents per pound to 26·4 cents. The average price of bread has been 6·7 cents per pound since March. The price of onions was higher in nearly all localities, the Dominion average being up from 5·5 cents per pound to 8·4 cents. Substantial advances in the prices of potatoes were reported from many cities particularly in the western provinces. The Dominion average price was up from $1.94 per 100 pounds in June to $2.04 in July. Granulated sugar was fractionally higher at 7·5 cents per pound. Numerous increases were reported in the price of United States anthracite. The Dominion average price rose from $15.11 to $15.52 per ton.

The following are the prices for Welsh coal "cobbles" and "French nut" at the beginning of July, 1940: Halifax $17.75; Charlottetown, $17.40; Saint John $16; Quebec $15.50; Three Rivers $16.50; Sherbrooke $16.75; Thetford Mines $17.50; Montreal $16-$16.50; Ottawa $18; Kingston $17; Belleville $16.50; Peterborough $18.50; Oshawa $17; Toronto $16; St. Catharines $15.75; Hamilton $15.50 and $15; Galt $16.50; Sudbury $18.50; Cobalt $21; Timmins $19.75; Winnipeg $20.50.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended July 26, 1940, monthly figures not yet available.

•Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the July issue of the LABOUR GAZETTE.. Since these monthly notes are all compiled from British and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

In most of the continental European countries some measure of control over prices and distribution has been put in force. In some of these countries the publication of price data has been suspended and in other countries direct information is now unobtainable, although information contained in the publications of neutral countries is noted.

Great Britain and Northern Ireland

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 134·6 for June, as compared with 133·7 for May, an increase of 0·7 per cent for the month, and of 37·2 per cent over June, 1939. As compared with the previous month, food and tobacco prices had risen 1·6 per cent, while industrial materials and manufactures were only 0·1 per cent higher.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 187 at the beginning of July, an increase of about 3 per cent for the month. Food prices were about 6 per cent higher, due to higher prices for new potatoes, milk and for eggs and fish. Rent was unchanged, clothing was one per cent higher; fuel and light and other items groups were unchanged. As compared with the cost of living at the beginning of September, 1939, the cost of living has increased about 21 per cent.

Eire

COST OF LIVING.—The index number of the cost of living, on the base July, 1914=100, as published in the Irish Trade Journal, was 204 for May, an increase of 3·6 per cent over the February level, and of 18 per cent over the August, 1939, level. Since August, 1939, food prices have risen 14 per cent, clothing 29 per cent, fuel and light 31 per cent. The cost of living index number includes in addition to these groups, rent and sundries. The rise of 31 per cent in fuel and light is due largely to freight and insurance charges.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Department, on the base 1926-1930=1000, was 1168 for April, an increase of 1·3 per cent for the month. Each one of the six component groups contributed in some measure to this increase.

COST OF LIVING.—The index number of retail prices, on the base 1923-1930=1000, was 1017 for April, as compared with 1012 for March. There were increases in the food groups as a whole, although the groceries subgroup showed a slight decrease. Fuel and light were also higher.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 77·5 for June, a decrease of 1·1 per cent for the month. The metals and metal products group showed a slight increase, house furnishings were unchanged, while for all the other eight groups, decreases were recorded.

The *Annalist* index number, on the base 1926=100, was 79·7 for June, a decrease of 1·4 per cent for the month. There were decreases in all groups except chemicals which were unchanged.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923=100, was 86·4 for June, an increase of 0·5 per cent over the May level. Food was 1·4 per cent higher. There were increases of 0·1 per cent in housing and in coal prices; the clothing group was unchanged.

The index number of the Department of Labour and Industries of Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 137·4 for July, an increase of 0·4 per cent for the month "due primarily to higher prices for meats." There was no change in the clothing, shelter and sundries groups.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1940

DURING the second quarter of 1940 there were 211 fatal industrial accidents (including deaths from industrial diseases reported by workmen's compensation boards, etc., as well as fatalities incidental to occupational pursuits) as compared with 219 fatal accidents in the second quarter of 1939. Of the 211 fatalities in the second quarter of 1940, 52 occurred in April, 84 in May, and 75 in June. Fatal accidents during each year are recorded by quarterly periods in the issues of the Labour Gazette for May, August and November of that year, and in February of the following year.

The supplementary lists of accidents not reported in time for inclusion in the reports covering the periods in which they occurred contain 7 fatalities for 1939, and 17 for the first quarter of 1940.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Information concerning accidents was received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners of Canada, certain other official sources, as well as from the correspondents of the Labour Gazette, and newspaper reports.

Classified by groups of industries the fatalities occurring during the second quarter of 1940 were as follows: Agriculture, 18; Logging, 35; Fishing and Trapping, 10; Mining, Non-Ferrous Smelting and Quarrying, 38; Manufacturing, 28; Construction, 25; Electric Light and Power, 11; Transportation and Public Utilities, 22; Trade, 10; Finance, 1; Service, 13.

Of the mining accidents, 27 were in "metalliferous mining," four in "coal mining," and seven in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, one was in "animal foods," one in "textiles and clothing," seven in "saw and planing mill products," eight in "pulp, paper and paper products," seven in "iron, steel and products," one in "non-ferrous metal products," two in "non-metallic mineral products," and one in "chemical and allied products."

In construction there were 15 fatalities in "buildings and structures," five in "shipbuilding," four in "highway and bridge," and one in "miscellaneous construction."

In transportation and public utilities there were 12 fatalities in "steam railways," seven in "water transportation," two in "local and highway transportation," and one in "storage."

In trade there were five fatalities in "wholesale," and five in "retail."

Of the fatalities in service, nine were in "public administration," one in "recreational," and three in "personal, domestic and business."

There was no serious disaster resulting in the loss of a large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

On June 3, at Edmundston, N.B., six pulp millworkers lost their lives in a fall from a pulpwood conveyor when it collapsed while they were fighting a fire.

When a train struck their truck, near Wolfville, Nova Scotia, on May 24, a farmer, his son and a labourer were killed.

Three loggers were drowned on June 8, when a boat overturned, near Rouyn, Quebec; and at Port Neville, British Columbia, on May 8, two loggers were killed when struck by a cable that broke.

When a scallop sloop capsized, two fishermen were drowned, off Digby Neck, Nova Scotia, on April 1.

Two miners lost their lives in a premature dynamite explosion, at Goldfields, Saskatchewan, on June 13; and two asbestos miners were asphyxiated by gas fumes in a mine tunnel, at Thetford Mines, Quebec, on May 28.

Two building construction labourers died when overcome by gas fumes in an excavation, at Toronto, on June 15.

On June 29, two linemen were electrocuted by a fallen power line, near Pakenham, Ontario.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first quarter of 1940 has been compiled which contains 17 fatalities, of which one was in agriculture, five in logging, four in mining, non-ferrous smelting and quarrying, three in manufacturing, one in construction, one in electric light and power, one in transportation and public utilities, and one in trade. Two of these accidents occurred in January, three in February, and 12 in March.

A further supplementary list of accidents occurring in 1939 has been made. This includes seven fatalities, of which one was in logging, two in construction, three in transportation and public utilities, and one in trade. One of these accidents occurred in January, one in July, one in September, one in October, one in November and two in December.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Validity of Ontario Industrial Standards Act upheld in High Court

On June 14, Mr. Justice Roach of the Ontario High Court of Justice dismissed with costs an action of a boys' clothing manufacturing company against the advisory committee appointed under the Industrial Standards Act of Ontario to enforce the schedule of wages and hours made binding under the Act on the men's and boys' clothing industry. The plaintiffs challenged the validity of the Act and sought a declaration that it is ultra vires of the provincial legislature; also that the schedule is ultra vires. They further asked for an injunction restraining the defendant from enforcing the schedule and from enforcing payment of sums alleged by the defendant committee to be owing to it by the plaintiffs.

The Act authorizes the Minister of Labour to establish "zones" within the province and sets up the machinery by which, within those zones, uniformity of wages and working hours for employees engaged in the industry may be established. On the petition of representatives of employers or employees in any industry within a designated zone or zones the Minister may authorize an officer to convene a conference of the employers and employees to investigate the conditions of labour in the industry and to agree on a schedule of wages and hours for the industry. In such a schedule, subject to the approval of the Ontario Industry and Labour Board and with respect only to an interprovincially competitive industry, provision may be made for assessing the employers concerned or both the employers and employees to provide revenue for the enforcement of the schedule. The joint advisory committee of employers and employees is given power to collect and pay money. If, in the opinion of the Minister, the schedule is agreed to by a proper and sufficient representation of employers and employees, he may approve and recommend to the Lieutenant-Governor in Council that it be declared binding on employers and employees in the industry during pleasure or for not more than 12 months. The Lieutenant-Governor in Council may make regulations for carrying out the provisions of the Act.

The question before the Court was whether the Act is within the exclusive powers granted to the provinces by Section 92 of the British North America Act or whether it is among those which Section 91 allots to the Dominion Parliament. The Court held that the Act is within the competence of the provincial legislature which gives it jurisdiction among other

things over (1) property and civil rights in the province; (2) the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province made in relation to any matter coming within any of the classes of subjects enumerated in Section 92 and (3) generally all matters of a merely local or private nature in the province.

The validity of the Act was attacked on four grounds:

(1) the assessments imposed on employers and employees constitute indirect taxation;

(2) the Act deals with the regulation of trade and commerce;

(3) the Act, the orders in council with the schedule attached and the regulations result in a combine under the Dominion Combines Investigation Act; and

(4) they encroach on the exclusive legislative power of the Dominion Parliament as to criminal law.

As Mr. Justice Roach at the trial excluded evidence as to the effect of the legislation, counsel for the plaintiffs declined to argue the case. The Court therefore suggested possible arguments none of which it felt could be allowed.

As to the first point, authority was cited to show that the fact that the employer is required to deduct the assessment from wages does not make the tax indirect. The tax is a direct tax on the employees. A Privy Council case laid down that, apart from every other consideration, such assessments can be justified on the ground that they are a charge for services rendered, that is to defray the cost of operating the machinery of the Act. This principle applies to the levy on both employers and employed.

On the question of "regulation of trade and commerce" a subject allotted to the Dominion, Lord Atkin in 1938 in the Natural Products Marketing Act case stated that "it is now well settled that the enumeration in Section 91 of the regulation of Trade and Commerce as a class of subject over which the Dominion has exclusive legislative powers does not give the power to regulate for legitimate provincial purposes particular trades or businesses so far as the trade or business is confined to the province . . . and it follows that to the extent that the Dominion is forbidden to regulate within the Province, the Province itself has the right under its legislative powers over property and civil rights within the Province." The Privy Council judgment in the Board of Commerce case in 1919 was referred to as deciding that the Dominion Parliament has no power to enact legislation of the character here in question.

As regards the Combines Investigation Act and the criminal law, the plaintiffs would have alleged, presumably, that those who agreed to the schedules and regulations have formed a combine to the detriment of the public or are guilty under the Criminal Code of conspiracy in restraint of trade, of agreeing unduly to lessen competition by imposing conditions that may drive manufacturers out of business. The Court considered that as the object of the Act was to secure uniform working conditions within the industry, it was for the reasonable protection of workmen. Combinations of workmen for that purpose were declared not to be within the scope of the Combines Investigation Act or of Section 498 of the Criminal Code and therefore the Industrial Standards Act could not be legislation relating to criminal matters. Further, as to the possibility of forcing employers out of business, a Privy Council case was referred to in which it was laid down that if a legislature has a certain power it would be wrong to deny its existence because by some possibility it may be abused or may limit the range otherwise open to the legislature. The substance of the Act in question is to regulate particular industries entirely within the province and it is therefore intra vires of the provincial legislature. For all these reasons the action was dismissed. An appeal against the judgment has been entered. *Tolton Manufacturing Co., Ltd., et al* v. *Advisory Committee appointed for Men's Clothing Industry under the Industrial Standards Act,* Ontario High Court of Justice, June 14, 1940.

Quebec Court of King's Bench Holds Old Age Pensions Commission cannot be Sued; On Appeal from Superior Court Judgment case is put "out of Court"

On April 12 the Montreal Court of King's Bench sitting on appeals, while disagreeing with the judgment of Mr. Justice Forest given in the Superior Court on December 18, 1939, held that the appeal from a judgment against it could not be maintained because it was brought by the Quebec Old Age Pensions Commission which was not a legal entity and against which judgment should never have been entered. There was no recognized litigant before the Court. The judgment was therefore annulled and the parties were put out of Court with the same effect as if the Superior Court had originally disallowed the claim.

The respondent, wife of an old age pensioner, had been awarded a maintenance allowance of $10 a month against her husband. On November 18, 1938, she caused a writ of seizure to be

issued against the Old Age Pensions Commission from which he was receiving $20 a month. The Commission declared that the pension was exempt from seizure by the terms of both the Dominion and provincial Acts under which it was granted. Both statutes declare old age pensions exempt from seizure, making no exception of claims for maintenance.

The pensioner's wife relied on a provision in the Quebec Code of Civil Procedure which while declaring maintenance allowance granted by a Court to be generally exempt allows them to be seized for debts of a like nature. The Code of Civil Procedure was in effect in Quebec when the Old Age Pensions Act was passed and the Court considered that the provisions of a special statute which are inconsistent with those of a prior general statute must prevail.

As to the right of the Old Age Pensions Commission to sue or be sued the judges were in agreement that it is not a legal entity but a group of civil servants without legal status, not possessing the powers which the Act allows the Minister of Labour to engage in litigation respecting old age pensions. *Commission des Pensions de Vieillesse de Québec v. Dame Poirier* (1940) 69 Rapports Judiciaires de Québec, Cour du Banc du Roi, 11.

Operator in Quebec Injured by Machine Awarded Damages where Insufficient Warning of Danger was Given

On July 11 Mr. Justice McKinnon of the Superior Court of Montreal gave judgment for the plaintiff in the sum of $658.50 damages plus costs in an action by a woman who suffered injury to her hand while employed by the defendant company as an operator of tea-bagging machines which automatically filled small cotton bags with tea, sealed the opening by stitching and trimmed the bags. When a pipe equipped with a blower system to carry off the waste cotton became clogged and she inserted her hand to remedy this, it came in contact with the fan and was injured.

The operator had been employed as such for about nine years but had worked on the particular machine for only three months. It was similar to those she had previously operated except that instead of being equipped with a small door through which the operator was required to remove blockages the exhaust pipe was tightly clamped to the extension of the housing and could only be disengaged by a mechanic equipped with the proper tools. When the pipe was disconnected the fan was kept in operation for use in dislodging the blockage.

On the day of the accident the new machine was blocked for the first time and the operator called on the foreman who disconnected the pipe and proceeded to remove the blockage. While he was thus engaged the operator inserted her hand in the opening and her fingers were caught in the fan. The foreman stated that he had warned the plaintiff to stand clear and if he needed her assistance he would call her, that when he saw what she was about to do he called to her and endeavoured to push her back but it was too late.

The Court felt that it was clearly one of the plaintiff's duties to be near the machine during repairs and to assist. The foreman knew she had been accustomed to insert her hand in the exhaust pipe of the old machine and she should have been warned that it would be dangerous to do what she had done in the past.

However, the Court considered that the plaintiff should bear one-half the damages as she was equally at fault. She admitted that she knew the fans were running and it should have been obvious to her that she could only insert her hand in safety for a short distance. The company's action in paying hospital expenses, doctors' bills and six weeks' salary was in accordance with a custom it had maintained over a period of years and could not be considered an admission of liability.

A further 12 weeks' salary at $16 a week was allowed, or $192. Compensation for suffering and humiliation from deformity was assessed at $200 and $800 was allowed for partial permanent incapacity. Medical expenses of $125 brought the whole amount to $1,317 for one-half of which, or $658.50, judgment was given with costs. *Boutin v. Salada Tea Company of Canada*, Limited, Montreal Superior Court, July 11, 1940.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME XL] SEPTEMBER, 1940 [NUMBER 9

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of August showed further important improvement, according to statements tabulated by the Dominion Bureau of Statistics from 12,214 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. They employed 1,252,934 workers, a number greater by 2·6 per cent than their July 1 staff of 1,221,316. The index, based on the 1926 average as 100, rose from 124·7 in the preceding month to an all-time high of 127·9 at August 1; the previous maximum for any month in the years for which statistics are available was the similar figure of 127·8 at August 1, 1929. The experience of the years since 1920 indicates that employment usually, though not invariably, gains at midsummer, there being on the average, a fractional increase in the index; the expansion at the beginning of August of the present year has rarely been exceeded at that date, and was substantially larger than the average gain from July to August in the period, 1921-1939. Accordingly, the seasonally-adjusted index also advanced, standing at 124·4, compared with 122·3 in the preceding month.

Heightened activity was recorded at the beginning of August in manufacturing, and in many of the non-manufacturing industries; the exceptions were logging and trade, which showed seasonal curtailment, though on a moderate scale.

As already stated, the unadjusted index (based on the average in the calendar year 1926 as 100) stood at 127·9 at August 1, 1940, compared with 124·7 at July 1, while at August 1 of recent years, the index has been as follows:—1939, 117·5; 1938, 112·1; 1937, 120·0; 1936, 105·6; 1935, 101·1; 1934, 99·9; 1933, 87·1; 1932, 86·3; 1931, 105·2; 1930, 118·8; 1929, 127·8; 1928, 119·3 and 1927, 110·5.

Unemployment in Trade Unions.—At the beginning of August reports were furnished to the Department of Labour by 1,974 local trade unions, comprising a membership of 260,248 persons. Of these, 16,638 were without employment, a percentage of 6·4 as compared with percentages of 7·6 at the beginning of July, 1940, and 11·1 at the beginning of August, 1939.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada showed favourable gains in the volume of business transacted in July, 1940, when compared with that of the preceding month and also that of the corresponding month a year ago, this computation being based on the average number of placements recorded daily at the offices of the Employment Service throughout Canada. Construction and maintenance and farming were mainly responsible for the increases registered under the first comparison and construction and maintenace, manufacturing, services and transportation under the second, the only reduction in placements from June being recorded in logging, services and trade and from July a year ago in farming. During July, 1940, there were listed 48,658 vacancies, 78,864 applications for work and 45,352 placements in regular and casual employment.

Prices.—In retail prices the cost per week of a list of certain staple foods, fuel and lighting, and rent entering into a family budget was $17.90 at the beginning of August as compared with $17.84 for July; $17.02 for August, 1939; $17.70 for August, 1938; $17.48 for August, 1937; $15.41 for June, 1933, the low point in recent years; and $21.90 for August, 1929. In wholesale prices the Dominion Bureau of Statistics weekly index number based upon prices in 1926 as 100 was 82·7 for the week ended August 30 as compared with 82·3 for the week ended July 26 and 82·2 for that ended July 5. Comparative figures on a monthly basis for certain dates are 82·4 for July, 1940; 72·4 for August, 1939; 76·0 for August, 1938; 85·6 for August, 1937; 63·5 for February, 1933, the low point in recent years; and 98·4 for August, 1929.

Business Statistics.—The table on page 888 gives the latest statistics available reflecting in-

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended August 30, 1940.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending August 31, 1940, and corresponding periods.

(6) Sugar production given in periods of four weeks ending August 10, July 13, and June 15, 1940; August 12, July 16 and June 17, 1939. (7) MacLean's Building Review.

(8) Index numbers are adjusted when necessary for seasonal variation. (9) Excluding gold.

(10) Now based on 203 municipalities instead of 58 as formerly.

dustrial conditions in Canada. The index of the physical volume of business in July continued upward being about 2½ per cent higher than in June and 20 per cent higher than in July, 1939. Of the principal groups of factors used in the index, that of mineral production was about 3 per cent lower than in the previous month but about 9 per cent higher than in July, 1939. The index of the manufacturing group showed substantial advance in both these comparisons. The increase in this group in July as compared with June was due mainly to increased activity indicated in meat packing, cotton manufacturing, the production of newsprint and in the output of iron and steel products. Decreased activity in the construction industry as compared with the previous month was indicated by the figures as to contracts awarded. The output of electric power has been upward in recent months the index in July being about 18 per cent higher than in July, 1939. Somewhat greater activity in the distribution of commodities was indicated by the figures for trade employment and car loadings which were higher both as compared with the previous month and with July, 1939. Information available for August shows wholesale prices, employment, the number of cars of revenue freight, and the value of contracts awarded at higher levels both as compared with July, 1940 and with August, 1939.

Strikes and Lockouts.—The number of strikes and lockouts recorded for August was 18, involving 6,712 workers and resulting in time loss of 15,953 man working days, as compared with 15 disputes during July, involving 7,191 workers with a time loss of 18,612 days. Most of the time loss in August was due to eight strikes of coal miners in Nova Scotia of brief duration and to a strike of embroidery workers in Montreal, P.Q., which was unterminated. In July most of the time loss was due to a strike of salmon fishermen in British Columbia and to seven brief strikes of coal miners in Nova Scotia. In August, 1939, there were 18 disputes, involving 11,823 workers with a time loss of 32,298 days, due chiefly to eleven strikes of coal miners in Nova Scotia.

Of the eighteen disputes in August, 1940, sixteen were terminated during the month. Nine resulted in favour of the employers and one in favour of the workers involved. Compromise settlements were reached in three cases and the results of three disputes were recorded as indefinite. Two disputes, involving approximately 500 workers, were shown as unterminated at the end of the month.

These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

Industrial Disputes Investigation Act

This month's issue contains the reports of three Boards of Conciliation and Investigation established under the provisions of the Act.

During August, seven applications for Boards were received and three Boards were established.

Complete information regarding recent activities under the Act will be found in the article commencing on page 895.

Control of rents by Wartime Prices Board

The Minister of Labour, Hon. Norman McLarty, announced on September 12 that the Wartime Prices and Trade Board had been given the power to "provide safeguards" against "undue enhancement of rentals" and shortage of housing accommodation particularly in areas where there has been an influx of military or industrial population.

Originally empowered to regulate prices and ensure the adequate supply and equitable distribution of such necessaries of life as food, fuel, clothing, the Minister declared that this widening of the Board's authority under war conditions was "in the national interest."

"The Wartime Prices and Trade Board has been giving considerable thought to this problem," Honourable Mr. McLarty added, "and will announce in the near future the localities where control will first be applied as well as the methods of control to be employed.

Order fixing prices of bread and flour rescinded

On August 6, the Wartime Prices and Trade Board, in accordance with authority conferred upon it by an Order in Council dated August 5, ordered that the maximum prices of flour and bread would be in the case of bread the prices prevailing on July 23, prior to the imposition of the wheat processing tax, and in the case of flour the prices of that date plus 35 cents a barrel. (Labour Gazette, August, page 756).

On September 6, the Wartime Prices and Trade Board rescinded its bread and flour price fixing order. In making the announcement of its action the Board stated:

"In ordering on August 6 that the prices of bread and wheat flour in Canada must revert to those prevailing on July 23 and that millers must, in respect of flour sales after the date of the Order, add to their invoices not more than half the levy of 70 cents per barrel, the Board emphasized that its ruling was in the nature of a standstill order in the interest of consumers generally, to provide an opportunity to examine the implications of the new legislation and permit an adequate investigation to be made.

"The Board's inquiry followed immediately upon the standstill order. It has included an audit by the Board's auditors of the books of representative flour milling companies in Canada. An interim report by the auditors indicates that the average profits resulting from the milling of flour for domestic consumption are considerably less in the case of the mills selected for investigation than the amount of the levy imposed by the Order; and since the mills subject to audit are among the most efficient in Canada, it is a reasonable assumption that most of the hundreds of smaller mills throughout the country are even less able than their larger competitors to bear the levy at present being assessed against their product.

The rescinding order is based upon the result of the audit of the milling concerns, which shows, to the satisfaction of the Board, that continued payment by millers of any appreciable part of the levy on flour would mean that most of the mills in Canada would face an actual operating loss, and that very few, if any, would make any profit on their flour milling activities. The Board's audit covered the 5 years ending August 31, 1939, the latter year being the last 12 months' period for which certified returns were available when the audit was commenced. It is quite possible that the operations for the current milling year ended August 31, 1940, will reveal a somewhat better position in respect of flour milled for domestic consumption, but full returns covering the year just closed will not be available for a month or six weeks.

Wartime expansion of youth training program

It is anticipated that more than 22,000 Canadians will have been trained to be aeroplane mechanics, aero-engine fitters and wireless operators for the R.C.A.F. as well as to fit into various skilled trades essential to war industry within the twelve month period, the Honourable Norman A. McLarty, Minister of Labour, announced on September 14. He stated the classes for these important branches of war work, conducted primarily under the Dominion-Provincial Youth Training Program, would be expanded materially and add to this number.

The Department of Labour is co-operating closely with the R.C.A.F. and other wartime industries in operating classes under the program.

Training given to young men during the past 12 months was divided into three categories, the Minister explained. In the first place there were classes to fit men for the various branches of ground work in the R.C.A.F. The enrolment in these classes in the past 12 months was approximately 3,000. It has been decided to practically double this figure in the next 12-month period. Up to the present, costs have been shared by the Dominion and Provinces but a substantial portion of the increase will be borne by the Dominion.

It was the intention to continue training in aeroplane manufacture and war industry carried on during the past summer in technical schools, through the Fall and Winter, Mr. McLarty announced. More than 7,000 young men were trained in sixty-five schools during the period from July to September. Over 7,000 additional would probably be trained in the period from October to June next. Training was given in machine shop work, aircraft manufacture, sheet metal work, welding and woodworking.

Finally, the industrial classes under the Youth Training Program had, in the past 12 months, trained over 5,000 men. The enrolment next year, it was anticipated, would be similar.

Acceleration of wartime industrial program in Canada

During the last week of August construction work began on several additional major plants in the government's industrial development program which now involves expenditures and commitments totalling more than $165,000,000, it was stated by the Hon. C. D. Howe, Minister of Munitions and Supply. The statement summarized the extent and some of the effects of the purchases and dealt with the details of the plant construction program now in progress comprising in all the erection or enlargement of more than 100 plants.

Some of these government-owned plants are already in operation. A large proportion of them are scheduled to be in production within the next months; still others will enter production in the second quarter of next year, and a few are scheduled for completion in the latter half of 1940.

"The effects of this program on our economy can hardly be estimated at present" said Hon. Mr. Howe, "For instance, in one city of moderate size some 15,000 more men will be employed; in another municipality one new plant will alone employ a staff of more than 7,000."

No accurate estimate of the annual value of the output of these plants is yet available, but the Minister pointed out that it might run to some $800,000,000. "The plants," he said, "are being located at those points in the Dominion where materials can be produced with the greatest speed, a necessity in war, and where an adequate supply of skilled

employees, raw materials, and suitable transportation facilities are available."

"Not only are government plants being built and equipped to make war material, but privately owned plants have increasingly been harnessed to war needs" stated the Minister, who emphasized the fact that expenditures of the Department of Munitions and Supply, since the beginning of the war, have averaged more than a million dollars a day to meet the immediate requirements of the armed forces.

Today, purchases by the Department of Munitions and Supply on Canadian account burst through the $300,000,000 mark. Purchases made on British account total some $85,000,000. Thus, with the $165,000,000 plant construction program now in progress, expenditures and commitments by this Department in the past eleven months amount to $550,000,000.

Labour Day messages of Canadian labour leaders

Reflecting the viewpoint of labour in the prosecution of Canada's war effort, the Labour Day messages of the nation's labour leaders indicate the active co-operation of the work people in their complete understanding of the issues at stake not only for a free labour movement but for a free civilization. A summary of the salient features of these messages is given in the folowing extracts:

Mr. Tom Moore president of the Trades and Labour Congress of Canada, stated in part.

"When war was declared a year ago, the Trades and Labour Congress of Canada pledged its full support to the Government's war effort. It attached no strings to this but does expect ample representation on all boards, commissions and committees dealing with the nation's war effort. Unfortunately, up to now, little consideration has been given to this by the Government which has somewhat limited labour's opportunities to co-operate.

"Labour realizes full well to lose the war is to lose all, and for that reason will readily respond to any justifiable call for action. It has a right, however, to be assured that in doing so its patriotism is not being exploited to needlessly break-down conditions that it has taken the organized workers more than half a century to build up....

"Though dark days may be ahead and much remains to be done before victory is won, on this Labour Day Canadian workers look with confidence to a brighter and happier future—a future when real peace shall prevail throughout the world; when freedom and liberty shall be the lot of all men; and, when social security will be assured for all workers."

Mr. A. R. Mosher, president of the Canadian Congress of Labour, referred to labour's participation in the war effort as follows.

"To the task of producing war-supplies and to meet the common needs of the people, the workers have given themselves unsparingly, and they will continue to do so. They are eager to serve Canada and the Commonwealth, anxious to make their utmost contribution to the winning of the war, glad to accept the responsibilities which are laid upon them. The organized workers particularly have reason for satisfaction on this Labour Day because of the larger measure of co-operation which has been obtained with the Dominion Government during recent months.

"The statement of Labour policy contained in Order-in-Council 2685, of June 19th, may be regarded as a great forward step for Canadian Labour; the acceptance of its principles by employers generally would go a long way toward establishing industrial harmony throughout Canada, and an increasing number of employers are realizing not only that the right to organize is fundamentally sound, but that the workers will and can co-operate more effectively through their Labour unions than otherwise....

"Canadian workers are deeply loyal to the land of their birth or adoption; they appreciate the privileges and opportunities which Canada affords. Many of them are serving in the military or naval or air forces; others are engaged in the multitudinous war-industries, and still more are providing food and transportation and housing. All together they are helping to build a bigger and better nation, and laying the foundations of an ampler life in the days after victory has been won...."

In his Labour Day message, Mr. Alfred Charpentier, general president of the Confederation of Catholic Workers of Canada, Inc., noted with regret the reduction in employment opportunities for both manual and non-manual workers brought about by mechanization and rationalization, declaring that for the same level of production as in 1929 Canadian industry employed a million and a half fewer hands in 1937. He protested against "industrial mechanization with its sole object of mass production to cut down costs and increase profits," and sympathized with the multitude of "the compulsory idle," especially youths for whom, "as the result of the present day economic system, work has become a mere myth."

Mr. W. T. Burford, secretary-treasurer of the Canadian Federation of Labour, emphasizing that the magnitude of the effort required is becoming appreciated by Canadian workers and industrialists, declared:

"Confidently they are shouldering the awful responsibility of replacing what has been lost and of pushing forward the supply of munitions and machines, first to restore the balance and then to reverse the odds in this deadly competition. In this task Canadian workers are determined to be worthy of those who wield the weapons they provide—the soldiers, sailors, and airmen who stand in the front line. That line, as the Prime Minister of Britain has said, runs also through the factories. Armourers and men-at-arms are close comrades in the conflict. All who make and deliver the food, clothing, and shelter, the guns, cartridges, and shells, the aeroplanes and the tanks by which war is waged—all who serve on the home sector of the front, in forest and field, factory and mine; the transport workers and the women who sew and weave—are treated as combatants by a ruthless foe in a total war. To serve as combatants is a duty and an honour. The challenge is taken up by the workers of Canada. For them, every stitch is a stitch in the shroud of Tyranny, every nail a nail in its coffin...."

Situation Regarding Skilled Workers in Metal Trades

It was recently announced from the Department of Labour that the demand for the more highly skilled workers in the metal trades has shown a sharp increase, due to Canada's war effort. A shortage among tool and die makers is reported by offices of the Employment Service of Canada at several points while transfers from point to point of certain other classes are necessary to cope with local situations.

There is some evidence that in the case of tool makers, for instance, those who had retired from or left the trade in recent years, are now returning. Also, employers are accepting older employees with the requisite skill. The Department of Labour has the situation under review, in order to assist industry in securing the necessary personnel in these vital trades.

Statistics of relief recipients for July

The grand total of all classes of persons on urban and agricultural relief across Canada in July of this year showed a reduction of 15·0 per cent from June, and 42·7 per cent from July a year ago, according to figures released by the Department of Labour. The grand total for July, as shown by the preliminary results from the registration of all direct relief cases carried out for the Department of Labour by the provinces and municipalities, stood at 462,000. Both urban and agricultural relief showed substantial decreases from a year ago.

Unemployed but fully employable persons on relief in July this year numbered 101,000, a decrease of 15·6 per cent from the revised June total. The figure for July this year showed a decrease of 28·2 per cent from July a year ago, and a decrease of 23·6 per cent from July, 1938.

A total of 395,000 persons were receiving non-agricultural relief in July, a decrease of 13·9 per cent from the corrected figure for the previous month: July, 1939, had shown a decrease of 4·1 per cent from June, 1939. This category includes all totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a decrease of 26·1 per cent from the figure for July, 1939, and a decrease of 20·5 per cent from the figure for July two years ago.

The Dominion total on agricultural relief continued to show a major decline from the year before, following improved crop conditions in 1939 in the Prairie Provinces. A total of 14,000 farmers who together with their dependents, accounted for a farm population of 67,000, were reported as receiving agricultural relief for subsistence in July. The Dominion total on agricultural relief in July decreased by 20·6 per cent from the revised June figure, and was 75·3 per cent less than July, 1939, and 80·3 per cent less than in July, 1938. Figures for July for Saskatchewan alone showed decreases of 81·2 per cent and 85·2 per cent from July, 1939 and from July, 1938, respectively, the Saskatchewan total of 44,000 persons on agricultural relief represented 65·7 per cent of the Dominion total in July this year.

Workmen's Compensation Laws in Canada

A revised edition in mimeographed form of the pamphlet on the provincial workmen's compensation laws has been issued by this Department. A similar pamphlet has been issued in July for some years.

Only the main points of the legislation are covered in the analysis. The scale of benefits and the diseases for which compensation is paid are set out in tabular form. Reference is made to the Conventions and Recommendations of the International Labour Conference on workmen's compensation for industrial accidents and diseases and for equality of treatment for national and foreign workers in the matter of compensation.

The principal legislative changes this year include an increase in the benefits in New Brunswick and the removal of the maximum of $2,500 which was imposed on compensation in case of disability. New Brunswick is thus brought in line with the other provinces, no

longer stipulating that disability benefits shall not exceed a fixed sum. The weekly benefit in case of disability is also raised from 55 per cent to 60 per cent of earnings, the minimum being increased from $6 to $8 or weekly earnings if the latter are less. The monthly benefits payable to dependants in case of the death of a workman may not exceed 60 per cent instead of 55 per cent of the workmen's average earnings and the monthly payment with respect to a son under 16 or a daughter under 18 is increased from $7.50 to $10.

In Quebec silicosis contracted in mining operations has been compensatable since 1938. Also to be compensated in future is silicosis contracted in quarrying, cutting or polishing stone or in smelting, grinding or polishing metal. Other diseases added to the schedule to the Quebec Act are certain forms of bursitis, dermatitis, infected blisters, retinitis and poisoning from carbon monoxide, brass, nickel or zinc, nitrous fumes or the sequelae of any of these.

In British Columbia a regulation during the year added to the list of occupational diseases within the Act, pneumoconiosis incurred while engaged in monument lettering or setting, stone dressing or cutting, sand blasting, reduction and smelting of ores or in the manufacture of alabastine, lime and gypsum products.

Nova Scotia added silicosis among coal miners to its list of compensatable diseases and the Workmen's Compensation Board was made liable to provide dental treatment when considered necessary by the physician attending any workman for whom medical care was provided through a private scheme permitted under the Act. Another change in the Nova Scotia Act makes the term of office of members of the Workmen's Compensation Board during good behaviour instead of the fixed period of 10 years.

International Labour Office temporarily located at McGill University

Announcement was made on August 17 by the Honourable Norman A. McLarty, Minister of Labour, that the Government of Canada has indicated its willingness that the personnel of the International Labour Office necessary to carry on the services should temporarily be transferred to Canada. By June of this year the Office at Geneva found itself practically isolated from the great majority of its member countries. Communication had become difficult if not impossible, so that it was obvious that the work of the organization could no longer be carried on effectively from Geneva. In this situation, the Canadian Government agreed to facilitate the temporary transfer of its personnel to Canada.

Canada has been a strong supporter of the International Labour Organization since its foundation over twenty years ago, and has maintained a permanent office in Geneva to facilitate co-operation with its work. A Canadian delegation was present at the first International Labour Conference in Washington in 1919 and Canadian delegations representing the Goverment, employers' and workers' organizations have been present at every annual conference since that time.

Montreal has been selected by the Director as the most suitable and convenient location for the new quarters of the International Labour Office and McGill University has agreed to provide the necessary office accommodation. The staff of the International Labour Office in Montreal will consist of between forty and fifty persons. The Director, the Honourable John G. Winant, was Governor of the State of New Hampshire for three terms and was designated by President Roosevelt as the first Chairman of the Social Security Board on the establishment of that body in Washington in 1937. Mr. Winant has been closely connected with the International Labour Office ever since the United States became a member in 1935 and he succeeded Mr. Harold Butler as Director on the latter's retirement two years ago. Among the members of the staff of the Office who will be coming to Montreal are two Canadians: Mr. Ainsworth Johnstone, formerly of Toronto, and Mr. Henri Binet of New Brunswick.

The International Labour Office was established in Geneva under the authority of the treaties of peace following the first Great War, to promote the improvement of industrial conditions by legislative action and international agreement. The essential object of the International Labour Organization has been to frame and supervise the applications of international rules with regard to conditions of labour. In addition to the preparation of draft labour conventions, the chief functions of the International Labour Office have been enquiries into labour conditions (contracts of employment, working hours, wages, etc.); unemployment; industrial health and safety conditions of agricultural labourers; technical education; social insurance; labour statistics, etc. and the collection of documentary material, information and publications on social and labour problems.

Defense vocational training in U.S.A.

In the August issue of the LABOUR GAZETTE (page 761) reference was made to a progress report made by the United States National Defense Advisory Commission to the President. Particular mention was made of the activities of the Division of Labour Supply in the formulating of plans for the training of skilled workers for defence industries and the utilization of vocational school facilities for that purpose.

Evidence of the progress being made in the United States on the vocational education national defence program is indicated in a report made by the United States Commissioner of Education forwarded to the National Defense Advisory Commission by the Federal Security Administrator.

The report shows that in one month's time (July), 80,614 persons have enrolled for defence training and that approximately 3,000 men have been placed in jobs. In one community, Paterson, N.J., 686 persons have been trained and placed since July 1. These placements, the report declares, have been in three important national defence industries located in or near Paterson—the Wright Aeronautical Corporation, the Watson Flagg Company, and the Curtis Propeller Division of the Wright Aeronautical Corporation. Current reports of placement reaching the U.S. Office of Education indicate that 20,000 trainees may move out of the summer schools into defence jobs by September 1.

These figures have been gathered from 41 states, the report declares, and show that the training of workers in vocational schools in 283 cities is one of the swiftest moving phases of the national defence program.

Men and boys 18 to 60 are being trained in summer schools opened for the special purpose of training workers for defence industries. A few women are enrolled in places where such industries require women workers.

The vocational training program was launched on July 1, an Act of Congress having appropriated $15,000,000 for the purpose.

Two types of training are provided by vocational schools in the national defence program. Pre-employment short courses giving instruction in specific skills such as welding and riveting have enrolled 51,604 men. Supplementary courses planned to aid workers on the job, who attend school to extend or improve their skills, have 29,010 registrants. Skills for which training is being provided include: Blue print reading, lathe work, milling, chipping and filing, parachute-making, welding, riveting, tool-making, auto machanics, aviation mechanics, pattern-making, drafting, electricity, radio, aviation sheet metal, foundry practice, machine shop practice.

The co-operation of labour unions has been of great assistance and in local communities more than 1,300 advisory committees consisting of representatives of labour and industry are working with the educational authorities in making local surveys of the supply of labour in relation to the needs of industry in their respective communities. These committees also determine the most satisfactory policies for operating a vocational training program in each local community.

I.L.O. Year Book 1939-1940

The I.L.O. Year-Book 1939-40 is the tenth issue of this annual publication of the International Labour Office. The need for economy has imposed a reduction of its size, but the volume contains, as in the past, a review of all the outstanding events in the world of industry and labour during 1939, and, to some extent, during the first quarter of 1940.

As indicated in the preface, the volume was already in the press in May 1940 and some of the information that it contains has therefore been out-distanced by events. But even this information retains much of its value, not only as a historical record, but for purposes of comparison with past and future years and as an account of social development which retains all its interest.

No change has been made in the general plan of the work. The far-reaching effects of war and mobilization are reflected in fact in every subject with which the volume deals and are therefore described separately for each subject in the various chapters and sections. One new feature has however been added—the chapter on "Assistance to Mobilized Men and War Victims", which gives a brief account of this important new development in a number of countries.

Under the Federal Fair Labour Standards Act, there is a minimum age of 16 for employment in industries engaged in interstate commerce or engaged in industries producing goods for shipment beyond the bounds of any state with certain exceptions. The Act also prohibits the employment of any person between the ages of 16 and 18 in occupations declared hazardous by the United States Children's Bureau. The occupations declared hazardous up to the present time are all occupations in or about plants manufacturing explosives or articles containing explosives and occupations of motor vehicle driver or helper on such vehicles.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

SEVEN applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour recently, as follows:—

(1) From approximately 200 employees of the Atlantic Sugar Refineries, Ltd., being members of the Atlantic Sugar Workers' Union. The dispute grew out of a proposed agreement submitted to the company by the union, the main points at issue being union recognition; an eight-hour day, with payment of time and a half for overtime and for Sundays and holidays; and wage increases of 8 cents per hour for men earning 45 cents per hour and less, and 4 cents per hour for men earning over 45 cents per hour.

(2) From employees of the Renfrew Branch of the Renfrew Woollen Mills, owned and operated by M. J. O'Brien, Limited. Approximately 200 employees are directly affected by the dispute, which relates to the request of the Employees' Organization for an increase of 20 per cent in rates of pay; a union closed shop; and payment to piece-workers of the minimum day rate when they earn a very small amount because of a poor run of cloth. A Board of Conciliation and Investigation was established by the Minister of Labour on August 21, the members of which are as follows: His Honour Judge C. A. Cameron, of Belleville, Ont., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other members; Mr. James A. Maloney, of Renfrew, Ont., nominated by the employees; and Mr. Hamnett P. Hill, K.C., of Ottawa, Ont., nominated by the company.

(3) From 280 employees of the Beauharnois Division of the Howard Smith Paper Mills, Ltd. The employees are members of Beauharnois Local No. 225 of the International Brotherhood of Paper Makers. The matters in dispute include their request for a union shop agreement; a general wage increase of 5 cents per hour; and time and a half for time worked over 9 hours per day. A Board of Conciliation and Investigation was established by the Minister of Labour on September 5, and members thereof were appointed as follows: on the employees' recommendation, Mr. J. A. McClelland, of Valois, P.Q.; on the company's recommendation, Mr. Paul Dufresne, of Montreal, P.Q. These two members have been requested to confer looking to a joint recommendation for third member, who will be chairman of the Board.

(4) From 118 employees of the Vancouver Engineering Works, Ltd., Letson and Burpee, Ltd., Canadian Sumner Iron Works, Ltd., and Ross and Howard Iron Works Co., Ltd. The men are members of Local No. 1, Moulders and Foundry Workers' Union, affiliated with the All-Canadian Congress of Labour. Wages and general working conditions are stated to be in dispute.

(5) From 110 employees of the Kingston Shipbuilding Company, Ltd., being iron ship builders, welders and burners, shipwrights, platers, caulkers, riveters, loftsmen, riggers, drillers, reamers, holders-on, heaters and helpers, members of Lodge 210, International Brotherhood of Boilermakers, Iron Ship Builders, Welders and Helpers of America. Refusal of the company to negotiate an agreement with representatives of the union is stated to be the cause of the dispute.

(6) From employees of the Peck Rolling Mills, Limited, Montreal, being labourers, machinists, plumbers, checkers, machine-operators, heaters, roughers, stranders, finishers, etc. Two hundred and nineteen workmen, members of the Steel Workers' Organizing Committee Local Union No. 2174, are directly affected by the dispute. The cause of the dispute is stated to be the company's refusal to negotiate with representatives of the union an agreement respecting wages, establishment of seniority rights, and other conditions of employment.

(7) From 114 employees of the Winnipeg Electric Company, being members of the Trackmen's Unit, One Big Union. The employees' grievance concerns the promotion of a junior man to the position of truck driver.

Other Proceedings Under the Act

The chairmanship of the board established to deal with a dispute between Canadian Vickers, Ltd., and employees of its boiler shop in Montreal, was filled on August 26 by the appointment of Hon. Mr. Justice M. B. Archibald, of the Supreme Court of Nova Scotia. The appointment was made by the Minister of Labour failing a joint recommendation from the other board members, Messrs. D. A. Paterson and John A. McClelland, nominees of the company and employees, respectively.

It was stated in the August issue of the LABOUR GAZETTE, page 762, that an application for a board had been received from employees of the Collingwood Shipyards, Limited, being members of Local 343, International Brotherhood of Boilermakers, Iron Ship Builders and

Helpers of America; Local 632, International Association of Machinists; and Local 559, International Brotherhood of Blacksmiths, Drop Forgers and Helpers. Subsequently 25 employees of this company being members of Local Union 468, United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada, asked that a similar dispute which they had with company should be included within the scope of the enquiry. A Board was established by the Minister of Labour on August 17 to cover the four classes of employees. The personnel of the Board is as follows: Hon. Mr. Justice W. F. Carroll, of the Supreme Court of Nova Scotia, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. F. Curzon Dobell, K.C., of Montreal, member nominated by the company; and Mr. J. A. McClelland, of Valois, P.Q., member nominated by the employees.

Report of Board in Dispute between the Eastern Car Company, Limited, and Its Employees

A unanimous report, containing recommendations as to settlement of a dispute respecting wages and other matters, was received on August 8 from the Board of Conciliation and Investigation established to inquire into differences between the Eastern Car Company, Ltd., and its employees being members of Local 1231, Amalgamated Association of Iron, Steel and Tin Workers of Steel Workers Organizing Committee.

The board consisted of Professor Norman A. M. MacKenzie, of Toronto, chairman, appointed on the joint recommendation of the other board members; Mr. Drummond Wren, of Toronto, nominated by the employees, and Mr. Russell McInnes, K.C., of Halifax, nominated by the company.

The text of the board's report follows:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between The Eastern Car Company, Limited, Employer; and its Employees being members of Local 1231, Amalgamated Association of Iron, Steel and Tin Workers of Steel Workers Organizing Committee, Employees.

To The Hon. NORMAN A. MCLARTY, K.C.,
Minister of Labour,
Ottawa, Ontario.

The Board of Conciliation appointed by you and composed of:—

Professor Norman A. M. MacKenzie, Chairman,

Mr. Drummond Wren, Nominee of Employees,

Mr. Russell McInnes, K.C., Nominee of Employer, begs leave to report to you as follows:—

The Board commenced its sittings at Halifax and New Glasgow on June 22, 23, 24 and 25 and after adjourning reconvened on July 25, at New Glasgow, N.S.

A single common brief in respect of the dispute in the Steel Works at Trenton and the dispute in the Eastern Car Company, Limited, was submitted by the Union and many of the matters dealt with applied to both plants.

The separate brief submitted by the Eastern Car Company, Limited, however, and its financial statement were dealt with in detail by the Board on August 2.

The employees were represented by Messrs. G. Miller Dick, Forman Waye and Chad. McMillan, the Company by Messrs. Michael Dwyer, I. Moeller and R. C. MacDonald.

The Eastern Car Company plant was visited by the members of the Board accompanied by representatives of the Union and the Company during the course of the proceedings.

The principal matter in issue in this dispute, as stated by the Union in their application for the Board, was a demand by the employees for an increase to 50 cents per hour for labour with appropriate adjustment of other rates and a 20 per cent increase for all piece work or contract rates and the settlement of all grievances.

The Eastern Car Company seems to be an efficient, well-operated plant and both parties to the dispute paid tribute to the good relations existing between employees and management. The industry is handicapped, however, by the fact that during long periods, in practically every year, it is forced to stand idle because of lack of orders. As stated in its evidence, it has only one customer, the railways of Canada, and only one of these—the Canadian National Railways—awards it substantial orders. This plant alone, it was stated, could supply the bulk of the box cars required by the Canadian National Railways and this in turn would provide the plant with full employment. There are, however, two other important car plants in Canada which share in the production of box cars for the Canadian National Railways and during the past year, as a result of this situation, the

plant of the Eastern Car Company was in full operation for some 86 days only.

This means that the employees receive annual earnings entirely inadequate to maintain themselves and in many cases are dependent on relief to keep them alive. This situation is one beyond the control of the management and it would seem can only be remedied by governmental action, or by an arrangement which would result in this plant getting the bulk of the orders for box cars placed by one or other of the railways.

In addition to wages, the other matters in issue included collective bargaining, seniority, classification, union organization, new employees and ventilation.

All these matters, with the exception of wages, were discussed by the parties before the Board and substantial agreement was reached in respect of same. This agreement is attached herewith as Appendix 'A.' In their presentation the representatives of the Union stated that the conditions in the galvanizing plant at the Eastern Car Company were unsatisfactory because of faulty ventilation and certain unsanitary conditions. The Chairman at the request of the parties inspected the galvanizing plant. It was found that the company's representatives and the management were sympathetic in respect of the requests of the Union in these matters, but in the case of practically every complaint made reasons were given indicating that it was difficult to substantially improve the situation.

The Board recommends, however, that as far as possible proper ventilation should be provided and that sanitary conditions be improved if found to be unsanitary.

As the 8-hour day is already in effect in this industry, this was not a matter in issue.

The Eastern Car Company, Limited, is one of the subsidiary companies of the Nova Scotia Steel and Coal Company, Limited. Its capital structure consists of $420,800 in gold bonds, $750,000 of preferred capital stock and $800,000 of common stock. The bonds are held by the public and the bulk of the preferred stock by the Dominion Steel and Coal Corporation, Limited. The common stock is held by the Nova Scotia Steel and Coal Company, Limited. This company in turn is controlled by the Dominion Steel and Coal Corporation, Limited.

The plant of the Eastern Car Company, Limited, is valued at $3,300,000 less some $1,786,000 depreciation. During the past year, 1939, the Company paid some $25,000 interest on bonds, $45,000 dividends on cumulative preferred stock and made a provision of $64,800 for depreciation. After paying these amounts and other accounts it showed an operating loss of some $10,000. The Eastern Car Company carries the inventory of raw materials for the Trenton Steel plant, for which it receives 2½ per cent. It is also an important customer of the Trenton Steel plant, but an examination of its statements showed that its purchases of materials from the Trenton plant were made at the market price and that the capital loaned to that plant was advantageous to both companies.

Our inquiries suggest that while this plant might be used for certain types of war work, it is best adapted to the manufacture of railway cars, although it could assist in certain of the operations necessary in shell production.

The wages in this plant, while slightly higher per hour than those in the Trenton Steel plant, are not as high as those in the Sydney Steel plant. It was stated by the representatives both of the Union and the Company that they were interested in ensuring that the highest wages compatible with the financial condition of the company should be paid and the Board feels that in situations and industries such as the Eastern Car Company, Limited, it is in the interest of all concerned that higher wages and greater annual earnings should be paid when the financial condition of the company makes this possible.

The problem before the Board then was reduced to one of determining the capacity of the Company to pay the increased wages requested by the men.

After careful consideration of the financial position of the Company and its prospects and having in mind the fact, as established by the evidence submitted, that the annual earnings of the employees in this plant are particularly low because of the limited period the plant is in operation, the Board recommends that the Company should grant a general wage increase to all its employees of 12½ per cent on all datal, hourly, contract, bonus, or other rates in force throughout the plant.

The Board further recommends that a minimum daily rate for all employees who do not benefit by bonus, check rates, tonnage, or otherwise, and excluding apprentices, boys and women, be fixed at $3.20 for each shift worked.

The Board feels it is in the best interests of both the Company and the employees that they should co-operate to the greatest possible extent in dealing with any differences of opinion or disputes that may arise between them. It believes that collective bargaining, if carried out in the proper spirit, will contribute to that end.

As a contribution to this it recommends that an independent arbitrator be agreed upon by the parties, who may be available to deal with and decide upon any disputes referred to him

by the parties which are not disposed of in the manner set out in the agreement attached herewith.

In this, as in other labour disputes that have occurred in the past few months, stress was laid upon the increased cost of living due to the war. The Board appreciates that this creates a serious problem for both labour and management. As a partial solution of this problem it recommends that the cost of living be examined at intervals of six months; that this examination be based upon the statistics published by the Department of Labour at Ottawa, that when these statistics show an increase of 5 per cent or more has occurred, the Company should agree to pay a bonus of 2 cents per hour for each 5 per cent increase, to each employee. If, on the other hand, there has been a decrease of 5 per cent or more, a deduction of the same amount—2 cents per hour—should be made from any bonus previously given.

The Board also recommends that an agreement based on the recommendations in this report be signed by the parties for a period of one year.

All of which is respectfully submitted, dated New Glasgow, N.S., this 5th day of August, 1940.

(Sgd.) Norman A. M. MacKenzie,
Chairman.

(Sgd.) Drummond Wren,
Member.

(Sgd.) Russell McInnes,
Member.

APPENDIX 'A'

NOTE.—The text of Appendix A is identical with that reproduced in connection with the Trenton Steel Works Limited on pages 901-905, except that Clause 19 is omitted, and in Clause 10 (General Committee) the representation on the General Committee is not specified by Plant departments.

Report of Board in Dispute between the Trenton Steel Works, Limited, and Its Employees

The findings of a Board of Conciliation and Investigation in regard to a dispute between the Trenton Steel Works, Ltd., and its employees, were received by the Minister of Labour on August 8. The same board dealt with this dispute as dealt with the dispute involving the Eastern Car Company, Ltd., and its employees, the workers in each instance being members of Local Union 1231, Amalgamated Association of Iron, Steel and Tin Workers of Steel Workers Organizing Committee.

In this case the report of the board was signed by the chairman, Professor Norman A. M. MacKenzie, and the board member nominated by the company, Mr. Russell McInnes, K.C. Mr. Drummond Wren, the employees' nominee on the board, dissented from the recommendations of the other board members concerning a general wage increase and submitted a minority report on this subject.

The texts of the majority and minority reports are given below:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between The Trenton Steel Works, Limited, Employer, and its Employees being members of Local 1231, Amalgamated Association of Iron, Steel and Tin Workers of Steel Workers Organizing Committee, Employees.

To The Hon. NORMAN A. MCLARTY, K.C.,
Minister of Labour,
Ottawa, Ontario.

The Board of Conciliation appointed by you and composed of:—

Professor Norman A. M. MacKenzie, Chairman,

Mr. Drummond Wren, Nominee of Employees,

Mr. Russell McInnes, K.C., Nominee of Employer, begs leave to report to you as follows:—

The Board commenced its sittings in Halifax on Saturday the 22nd day of June, A.D. 1940, and after several meetings at Halifax and New Glasgow the Board adjourned to give the parties an opportunity to settle their own differences. When no settlement could be reached the Board reconvened in New Glasgow on Thursday the 25th day of July and proceeded to hear the evidence adduced for and on behalf of each of the parties and arguments by their representatives.

Messrs. Forman Waye, Miller Dick and Chad. McMillan represented the Union and Messrs. Michael Dwyer, Howard Cantley and R. C. McDonald represented the Company.

Negotiations with the Company in respect of wages, hours and conditions of labour in the Trenton Steel Works, Limited, were opened on January 29, 1940. The employees demanded a 20 per cent increase in all daily earnings, an 8-hour day and the settlement of

all grievances. Since that date negotiations continued between representatives of the employees and the Company, but the Company finally stated that it was unable to meet the demands of the men.

The Company made counter-proposals for a 7½ per cent increase in hourly rates and a 7½ per cent increase in all tonnage piece rates where no datal or hourly rates are included in the daily earnings. The Company also agreed to accept the 8-hour day. These counter-proposals were submitted to the representatives of the employees on March 4 and in due course rejected by them. On April 27 a strike vote was taken by the employees and this resulted in a large majority in favour of a strike.

Application was then made to the Minister of Labour at Ottawa for the appointment of a Conciliation Board and, as stated above, a Board was granted. After the application had been made by the Union negotiations between the Company and representatives of the Union were continued and were still being carried on when the Board first met.

The situation in respect of the Trenton Steel Works, Limited is complicated by reason of the fact that during the last war, 1914-1918, this plant manufactured large quantities of munitions. This meant the employment of large numbers of workers, high wages and general prosperity in the community in which these works are situated. At the outset of the present war it was generally hoped and expected that similar conditions would prevail, that a great many of the unemployed would be employed and that the community generally would benefit as a result of the increased industrial activity. When this did not occur there was a general tendency to place the blame for this upon labour unrest or upon the policy of the Company in respect of this plant. This added to the feeling between employees and the Company and made the task of negotiating an agreement or settlement much more difficult.

According to the evidence submitted by representatives of the Company, the Trenton Steel Works, Limited, was incorporated as from August 1, 1938, and operates a steel plant consisting of rolling mills, plate mills, forge, bolt and nut department and machine shop. Prior to the formation of this Company the plant formed one of the operations carried on by the Nova Scotia Steel and Coal Company, Limited. The last-named company was incorporated in 1898 and owned and at various times operated coal mines, steel plants, iron ore mines, limestone quarries, steamships and lumber areas. Its capital structure prior to the recent receivership consisted of 5 per cent sinking fund gold bonds, 6 per cent mortgage debentures, 8 per cent cumulative preferred stock and common shares, totalling some $25,500,000.

As a result of successive losses over a period of years the position was finally reached where the Company could no longer meet its obligations and following on its default in the payment of bond and debenture interest was placed in receivership on January 19, 1933, and in liquidation in April of the same year. Joint receivers and liquidators were appointed by the Supreme Court of Nova Scotia to administer the properties. The deficit of the Company when placed in receivership was $4,075,101.87. Operations thereafter were carried on by the receivers until July 31, 1938, and throughout this period of 5½ years no interest was paid on either bonds or debentures. At the termination of the receivership the deficit had reached the figure of $8,828,889.76.

During 1938 a plan for the reorganization of the Company was formulated. The principal features of this reorganization were that provision for bond interest and sinking fund was made from proceeds accruing from the leasing of the Wabana Ore deposits. The other operations of the Company were thereby released from these charges.

The Trenton Steel Works, Limited, is one of four operating companies owned or controlled by the Nova Scotia Steel and Coal Company, Limited—the functions of the latter being confined since its reorganization to those of a holding company. The Nova Scotia Steel and Coal Company, Limited, has a capital structure at the present time consisting of first mortgage bonds in a principal amount of $3,775,000, debentures in a principal amount of $6,917,500 and common shares of a total par value of $3,000,000. The common shares, save for the Directors' qualifying shares and the debentures, are owned entirely by the Dominion Steel and Coal Corporation, Limited. The first mortgage bonds are a public issue and are widely held.

The nominal capital of $100,000 of shares in the Trenton Steel Works, the total capital stock of the Company, is entirely owned by the Nova Scotia Steel and Coal Company, Limited. To date no dividends have been paid on these shares. The Trenton Steel Works, Limited, when incorporated was given some $225,000 of working capital with which to commence operations and some $500,000 worth of materials were made available to it, for which it pays, in this latter case only, interest at the rate of 2½ per cent. It also rents the plant, buildings, equipment, etc., which it occupies and operates, from the parent company—the Nova Scotia Steel and Coal

Company, Limited—and for this it pays an annual rental of $30,000. This rental, plus the 2½ per cent interest on the raw materials, are the only sums paid by the Company by way of dividends, interest, depreciation or any other type of capital cost, although it should be noted that provision is made for the payment of interest on the bonds of the Nova Scotia Steel and Coal Company, Limited, from the lease of the Wabana Ore deposits.

During the period August 1 to December 31, 1938, the Company's operations resulted in a deficit of some $21,000. For the year 1939 there was an operating profit of about $108,000, this after the payment of $30,000 rental and 2½ per cent interest on the materials advanced but without provision for any other charges or for depreciation.

The Company claims that most of its equipment is old-fashioned and inefficient and an examination of the plant made by the Board seemed to bear out this contention.

The Company also claims that because of its geographic location it is unable to compete advantageously with the steel plants operating in Ontario and Quebec in the markets of those provinces or in Western Canada. This means, in the words of the Company's representatives, that the Trenton Steel Plant is, by and large, restricted to the Maritime Provinces' market and to such limited small scale operations as are not performed by other plants. This, if true, would imply that there is little likelihood of increased activity and increased earnings in the Trenton Steel Plant unless substantial orders for munitions of war are placed with this plant by the Dominion Government.

Even were this to happen, it was pointed out the plant is not at present equipped to manufacture munitions and it would take both time and a large amount of capital to provide and instal the necessary new equipment. This capital, it was stated, the Company would be unable to provide from its own resources.

These statements of the representatives of the Company explain in part at least the financial difficulties experienced by the Company in the past.

The Trenton Steel Works, Limited, is related by reason of its financial set-up, in an intimate way to the Dominion Steel and Coal Corporation, Limited, as well as to the Eastern Car Company, Limited, another subsidiary of the Nova Scotia Steel and Coal Company, Limited. Most of its raw materials are purchased from the first company and much of its manufactured products are sold to the second company. Because of this the Board thought it desirable to examine these purchases and sales. All the evidence available indicates that this relationship is a definite advantage, from the point of view of economical operation, marketing and management, to the Trenton Steel Works. Prices paid for raw materials to the Dominion Steel and Coal Corporation are the market prices and compare favourably with quotations by other Canadian companies and from English and American sources. The prices paid by Eastern Car Company to the Trenton Steel Plant for the manufactured products which it requires are the regular market prices. The same is true in respect of the coal purchased by the Trenton Steel Plant from the Acadia Coal Company, Limited, another fellow subsidiary.

This, in brief, is the economic and financial background of the dispute which the Board was asked to deal with.

According to the information submitted by the representatives of the Union, there are approximately 800 employees at the Trenton Steel Works, Limited, directly affected by this dispute. The basic datal rate in Trenton is 35 cents per hour and the hours worked nine and ten per shift. In the Steel Plant at Sydney, N.S., the datal rate is 43½ cents per hour and the 8-hour day is the practice there. The employees claim that as the work they do is similar to the work performed in the Sydney Plant that they should receive at least equal wages and that the hours of work should be limited to eight per day, or per shift, and the Board agrees that if and when the financial position of the Trenton Steel Works, Limited, makes it possible this should be done.

Other matters, among them, seniority, classification, union organization (including an understanding as to those who should be treated as confidential employees), new employees and sanitation and ventilation were raised by the representatives of the Union; but as the Board arranged a meeting at which these matters were discussed and in respect of which substantial agreement was reached, it seems unnecessary to deal with them in detail.

The terms of the proposed agreement discussed and approved at this meeting are set out in Appendix 'A' attached herewith.

The Board spent considerable time in an investigation of the plant itself and the working conditions in the plant, where it was alleged there were unsanitary conditions, particularly in respect of heating and ventilation.

While the Company's representatives were sympathetic towards the requests of the Union in respect of these matters, in practically every case there were reasons given why it was

difficult to improve conditions. The Board would recommend, however, that as far as possible proper ventilation should be provided and that conditions be improved if shown to be unsanitary.

These matters having been disposed of the two remaining to be dealt with by the Board were the questions of wages and hours of work. As the Union stated very definitely that they desire an 8-hour day and a 48-hour week, and as the representatives of the Company stated that they were willing to agree to this, the Board recommends that the 8-hour day be put into effect in this plant.

The matter of wages is more difficult to dispose of. As stated above, there seems to be no reason, except the inability of the Company to find the funds necessary to pay them, why employees in the Steel Works at Trenton should not receive wages equal to those paid in a similar industry in Cape Breton. In this connection the Board would like to go on record as approving of a statement in the McTague Report, in these words:—

> We take the position that it is in the national interest that standards should be raised wherever it can be shown that industry can afford to do so out of profits. In other words, Labour is entitled to a fair living wage on advancing standards consistent with the ability of the particular industry to pay.

Industries in Pictou County, both steel and coal, have been in difficulties on a number of occasions during the past two decades and the reports of the various commissions set up to inquire into these difficulties are the best evidence of this fact. Under difficulties such as those which have prevailed during the past two decades, it is doubtful whether in normal times these industries can effectively compete with similar industries more advantageously located elsewhere and at the same time pay adequate wages and a proper return on capital invested. If this is true, then the problem becomes a social one as well as an economic one and it may be that adequate wages will only be possible through Governmental assistance. In abnormal times, like those existing during the last war and the present one, the situation may of course be radically different and this in turn may well affect the question of wages and profits. It would seem wiser, however, to take all the relevant circumstances into account in coming to any conclusions about the matter of wages.

After careful consideration of the financial position of the Company and its prospects, and having in mind the offer made by the Company to its employees in March last, the majority of the Board recommends that the offer of the Company as made on that date be accepted.

The Board further recommends that a minimum daily rate for all employees who do not benefit by bonus, check rates, tonnage or otherwise, and excluding apprentices, boys and women, be fixed at $3.20 for a full-shift.

The Board feels it is in the best interests of both the Company and the employees that they co-operate to the greatest possible degree in dealing with any differences of opinion or disputes that may arise between them. It believes that collective bargaining if carried out in the proper spirit will contribute to this end. As a contribution to this it recommends that an independent arbitrator be agreed upon by the parties, who may be available to deal with and decide upon any disputes referred to him by the parties, which are not disposed of in the manner set out in the agreement attached herewith.

In this, as in other labour disputes that have occurred in the past few months stress was laid upon the increased cost of living due to the war. The Board appreciates that this creates a serious problem for both labour and management. As a partial solution of this problem it recommends that the cost of living be examined at intervals of six months that this examination be based upon the statistics published by the Department of Labour at Ottawa; that when these statistics show an increase of 5 per cent or more has occurred, the Company should agree to pay a bonus of 2 cents per hour to each employee for each 5 per cent or more that the cost of living may have increased. If, on the other hand, there has been a decrease of 5 per cent or more, a deduction of that amount—2 cents per hour—should be made from any bonus previously given.

The majority of the Board recommends that a contract based on the recommendations of the Board be entered into between the parties for the period of one year.

The details of this offer are set out in Appendix "B" attached herewith.

The views of the dissenting member of the Board are submitted herewith.

All of which is respectfully submitted dated New Glasgow, N.S., this 5th day of August, 1940.

(Sgd.) Norman A. M. MacKenzie,
Chairman.

(Sgd.) Russell McInnes,
Member.

APPENDIX "A"

1. Preamble

This agreement dated is entered into between the Trenton Steel Works, Limited (hereinafter referred to as the Company) and the Steel Workers Organizing Committee on behalf of the members of Lodge No. 1231 of the Amalgamated Association of Iron, Steel and

Tin Workers of North America (hereinafter referred to as the Union) on behalf of the employees of the Company who are members of the Union.

This agreement is made in accordance with provisions of, and under the conditions laid down in Bill No. 92, 1937, passed by the Legislature of Nova Scotia on April 7, 1937.

It is the intention and purpose of the parties hereto that this agreement will promote and improve industrial and economic relationships between the Company and its employees and to set forth herein the basic agreement covering rates of pay, hours of work and conditions of employment to be observed between the parties hereto.

The terms of this agreement shall apply only to employees of the Company, and shall not be interpreted as having any relation to employees working in any other plant or subsidiary company of the Trenton Steel Works, Limited.

2. Recognition

The Company recognizes the Union as a collective bargaining agency for these employees of the Company who are members of the Union. The Company recognizes and will not interfere with the right of employees to become members of the Union. There shall be no discrimination, interference, restraint or coercion by the Company or any of its agents against members because of membership in the Union. The Union agrees not to intimidate or coerce employees into membership, and also not to solicit membership on Company time.

3. Management and Working Conditions

(*a*) The management of the plant and the regulation, adjustment and direction of the working force is vested exclusively in the Company. The Union, its executive or any of the members of the Union shall not abridge these rights.

It is distinctly understood and agreed that in all cases of dispute and grievances of every nature arising under this contract, operations shall continue until every means of settlement is exhausted and if and when no settlement can be reached until one of the parties gives the other twenty (20) days notice in writing.

(*b*) *Discharge and Hire:* The right to hire and discharge is vested exclusively in the Company and the Union shall not abridge this right.

All new men hired to be considered as temporary employees until such time as they have served six months with the Company within a period of one year immediately prior to the date on which consideration is being given to placing such men on the payroll as permanent employees.

It is agreed that the regular or temporary employees shall be hired in preference to new men, if their services have been satisfactory. All things being relatively equal, preference will be given to men from Trenton, New Glasgow and other sections of Pictou County.

4. Seniority

It is understood and agreed that in cases of increase or decrease of forces the following shall be considered and where factors (*b*), (*c*) and (*d*) are relatively equal, length of continuous service shall receive special consideration.

(*a*) Length of continuous service.
(*b*) Knowledge, training, ability, skill and efficiency.
(*c*) Place of residence.
(*d*) Family status.

It is agreed that the decision regarding promotion of a man rests with the Company, subject to the considerations set out above; also agreed that the Union has no objection to the Company giving employment, necessary training and promotion to the men who are to be trained for responsible positions.

Seniority standing of any employee involved in dispute will be given on request.

5. Re-employment of Officers

The Company agrees that all men leaving their employment for elected or appointed positions in the Union, will at the expiration of their official duties be given employment at the Steel Plant, in the same classification from which they were granted leave. And while an officer of the Union shall be entitled to all privileges of employees, such as coal, etc.

6. Duties of Employees

In the event a member of the Union shall be discharged from his employment, from and after the signing of this agreement, and he believes he had been unjustly dealt with, such discharge shall constitute a case arising under the method of settling disputes herein provided. In the event it should be decided under the rules of this agreement that an injustice has been dealt the employee in regard to the discharge, the Company shall reinstate such employee and pay full compensation at the rate of pay at which the employee was working at the time of dismissal for the time lost. All such cases of discharge shall be taken up within five days from the date of discharge and prosecuted to conclusion as rapidly as possible.

The foregoing has no relation to and refers in no way to cases of suspension of an employee for a period. The Union recognizes the right of the Company to discipline an employee by suspending him from work for a stated period. There shall be no redress for an employee who has been justly suspended.

7. Regular Attendance at Work

When an employee absents himself from work without the consent of his Superintendent, or the latter's representative or without having notified his Superintendent or the latter's representative of his inability to attend work, other than because of proven sickness, he may be suspended; and if an employee becomes an habitual absentee, he may be discharged.

In cases where an employee reports late for work on his regular job, and where another employee has already been placed on that job, the former shall not take over his job (except at the discretion of the Superintendent) during the shift.

8. Adjustment of Grievances

Should differences arise between the Company and the Union or its members employed by the Company, as to the meaning and application of the provisions of this agreement, or should any local trouble of any kind arise in the plant, there shall be no suspension of work on account of such differences, but an earnest effort shall be made to settle such differences immediately in the following manner.

(*a*) Any man having a grievance shall take the matter up with his foreman, and if neces-

sary with the committee man in his department. Failing adjustment the foreman shall consult the Superintendent as soon as possible and advise the man, or men, of the decision arrived at.

(*b*) Failing adjustment, the man, or men, shall take the matter up with the General Committee, who shall then discuss the matter with the Superintendent of the Department.

(*c*) Failing adjustment, the matter shall be referred to the Union Executive to be discussed by them with the General Superintendent or his representative.

(*d*) In the event the dispute shall not have been satisfactorily settled the matter shall then be referred to the representative of the National Organization who shall confer with the Executive of the Company or their authorized representative. It is agreed that the appointment of an Umpire is desirable and the Company is prepared to enter into an arrangement with the Union for the appointment of such Umpire.

(*e*) Meetings between the members of the Union Executive and the General Superintendent, or his representative shall be held, if there is any business to be transacted, on the first Thursday of each month, beginning between the hours of 3 P.M. and 5 P.M., provided, however, that in the case of major disputes of sufficient importance that cannot reasonably be delayed until the next regular meeting, a special meeting may be called.

(*f*) No member of the Union Executive or any member of the General Committee shall leave his place of duty during the working hours, except with permission of the Superintendent, or his representative.

(*g*) The duties of the General Committee shall be confined to the adjustment of disputes between the Superintendent and the workers in the plant, arising out of this agreement.

(*h*) The intent of the foregoing is to obviate the necessity of independent action by either party, and to avoid delay in disposing of existing disputes.

9. In Case Men Refuse to Continue at Work Because of Grievance

If any man refuses to continue work because of a grievance which has not been taken up for adjustment in the manner provided herein, and such action shall seem likely to impede the operation on which the man is employed, in order that the operations can be continued, it shall be the duty of any member, or members, of the Union, provided he, or they are competent to immediately take the place, or places assigned to him or them in pursuance hereof, when called upon by the Department Superintendent.

Under no circumstance shall a grievance be taken up for adjustment or discussion during the suspension of work in violation of this contract.

10. General Committee

It is understood that a committee of eight men will be selected from the regular employees of the several departments of the Plant. This Committee shall be named General Committee and will represent all employees covered by this agreement in matters pertaining to seniority and general grievance. The Plant shall be divided as follows in order to select the committee:

Forge	1	Representative
Machine Shop	1	"
Carpenter Shop		
Cold Roll Department		
Electrical Department		
Repair Department	1	"
Structural Department		
Yard Department		
Mills	1	"
Roll Turning		
Shipping and Manufacturing	1	"
Bar Store		
Hot Unit	1	"
Packing Department		
Cold Unit	1	"
Machine Shop	1	"

One of these members of this committee shall be appointed as Chairman and will assist the other members in all departments in promoting harmony and settling grievances, if such should occur.

The General Committee or any member thereof in the discharge of its duties shall under no circumstances go around the plant or any department thereof, for any cause whatever, unless called upon by the Superintendent or his representative, or by a workman who may have a grievance he cannot settle with his foreman or Superintendent, or the latter's representative. However, it is mandatory for the Superintendent or his representative, and the workman affected to make a request for the general committee to come to the place where the grievance is, so that a thorough investigation can be made and adjustment of the grievance made, if possible.

No employee shall be paid by the Company for any time spent on Union business away from his regular work, except in such cases where the employee is called upon by the Superintendent to attend at some place for discussion of Union and Company business.

11. Maintenance Men during Suspension of Work

In case of either local or general stoppage of work, either at the expiration of this contract or otherwise, all maintenance men necessary to protect the property of the Company shall not suspend work, except at the option of the Management, but shall fully protect the Company property.

Without limiting in any way the generality of the foregoing, the Union specifically undertakes to ensure that in case of any stoppage of work the necessary men are available so that:—

(*a*) All men required for the generation of steam and electric power, and for all pumping stations necessary for the proper maintenance of the plant shall be available.

(*b*) There shall be no interference with, or interruption in any supply, delivery and handling of coal and other material required to carry out proper maintenance of the plant.

12. Safety First

It is mutually agreed that both parties hereto will co-operate to the fullest possible extent towards the prevention of accidents and the promotion of Safety First Work.

The Company shall continue to make reasonable provision for the safety of its employees at the plant during the hours of their employment.

The Company shall remedy and eliminate wherever possible, any dangerous practices or conditions or defects, which are not in the interests of safety, when brought to their attention by the General Committee.

13. Changes in Equipment

The Company reserves the right to improve the present equipment and processes and to instal new equipment, either as a substitute for, or in addition to present equipment in any part of the plant, and to make whatever adjustments or re-arrangements in working force it may consider necessary or justified as a result thereof.

The Company agrees to give every consideration to placing any man displaced by such action on other work, when possible.

14. Holidays

The following days and no others are mutually recognized as holidays: New Year's Day, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day.

On these days there shall be no regular production of work, except in cases of continuing operations.

15. Checkoff

(*a*) The Company agrees to make deductions for the Union Dues in accordance with the provisions of the Trade Union Act of Nova Scotia Legislature, 1937.

(*b*) Deductions for Union Dues shall be made every two weeks.

(*c*) Deductions shall be made upon presentation by the employee to the Company of a card signed by him in the presence of a witness, who will also sign, authorizing the Company to make such deduction.

(*d*) Payment of the amount due each two weeks to the Union shall be made by cheque payable to Lodge No. 1231 of the A. A. of I. S. & T. W. of North America.

(*e*) The Union shall furnish the Company with a book containing the names and check numbers of the employees who are members of the Union and who have submitted signed cards authorizing the Company to deduct Union Dues from their earnings. The Union shall show opposite each name the amount to be deducted according to the employee's authorization card.

(*f*) Once an employee has submitted a signed card authorizing the Company to deduct Union Dues from his pay, the Company will continue to make such deductions until such time as the employee notifies the Company in writing, and duly witnessed, to discontinue making such deductions.

16. Confidential Employees

In accordance with provisions of Section 3 of the Trade Union Act of Nova Scotia, 1937, it is mutually agreed and understood that no official, officer, foreman, assistant foreman, supervisor in charge of any class of labour, salaried employee, or persons employed in any confidential capacity shall be a member of the Union.

It is agreed that a man shall be classed as a confidential employee, who:—

(*a*) Reports on work, conduct, or hours or work of other employees.

(*b*) Certifies to the Company the hours worked by other employees, and who assists in making up pay-rolls and distributing pay envelopes to the men.

(*c*) Acts as an agent, intermediary, or representative of the Company in dealings of the Company with some employees.

(*d*) Has access to information which is not available on request to the public or other employees.

(*e*) Certifies to the Company particulars of goods disposed of, or rendered to or by the Company to persons other than employees.

17. Overtime

Time and one half for overtime, Sundays and statutory holidays will be paid to employees of all departments, except to the continuous service men or to men supplying for absentees.

Time worked through lunch hour and extra time worked after the usual shift, when such time does not exceed fifteen minutes duration is not to be classed as overtime.

Overtime does not apply to employees of the Company whose earnings include a tonnage or piece-work rate in respect of these tonnage and piece-work rates.

Except as specified above, overtime will be paid if a man stays out beyond his regular shift.

Overtime begins at 12 midnight Saturday and continues until 12 midnight Sunday. On statutory holidays overtime begins at 6.50 o'clock A.M., of the day concerned and continues until 12 midnight of the same day.

18. Emergency Break-Down Call Time

Time worked by men who are called out on a break-down job at night, on Sundays, or statutory holidays shall be classed as overtime and shall be paid at the rate of time and one half.

Should the time actually worked be less than four hours, he shall be paid for at least four hours.

19. Bolt and Nut, Mill and Forge Departments

It is agreed that whereas the normal operating shifts are nine hours day turn and ten hours night turn, there are times, when due to conditions outside the ordinary control of the Company or workmen, it is necessary for a unit, or all of the Bolt and Nut Department, Mill Department, or Forge to operate for a period beyond the usual shut-down time. It is agreed by the Union that all men required to continue such operations will work the necessary extra time. Such extra time shall not be classed as overtime. The Company agreed to see that such extra time shall not exceed fifteen minutes.

20. Military, Naval and Air Service

Any employee who enlists or is called into Military, Naval or Air Service of the British Empire while the British Empire is at war, and who, within ninety days after his honourable discharge from such service registers for employment with the Company, shall, for the sole purpose of determining seniority rights under this contract be deemed to have been in continuous service with the Company during the time that he so engaged in the Military, Naval or Air Service of the British Empire.

21. Expiration of Contract

This contract to remain in affect from and will continue in full force and effect

for a period of one year, and from year to year thereafter until notification to reopen the contract is served by either party hereto thirty days after.

Upon receipt of such notification, the parties hereto agree to meet immediately thereafter with the object of adjusting any matters requiring attention in the present contract, or of making a new contract.

24. Obligations

(*a*) All provisions and terms of this contract are hereby mutually agreed to by and between the Company and all employees of the Company who are members of Lodge No. 1231 of the Amalgamated Association of Iron, Steel and Tin Workers of North America, and signed by the representatives of the parties hereto, who have been duly authorized to execute the same on behalf of the employees of the Company who are members of Lodge No. 1231 of the Amalgamated Association of Iron, Steel and Tin Workers of North America, respectively.

Signed on behalf of the employees of the Company who are members of Lodge No. 1231 of the Amalgamated Association of Iron, Steel and Tin Workers of North America.

.....Regional Director, S.W.O.C.
.....President Lodge, No. 1231.

and on behalf of the Company by

.....
.....

APPENDIX "B"

Terms of Proposed Contract Effective from March 11, 1940

Six days per week of nine and ten hour shifts, day and night respectively, six (6) day turns and five (5) night turns per week.

Contract for period of one year.

A general increase of 7½ per cent on all datal or hourly rates presently in force throughout the entire Plant.

Increase of 7½ per cent on the tonnage and piecework rates in all cases where no datal or hourly rates are included in the datal earnings. For example, in the Forge Department, axle forgers, cutters and turners who are on straight piecework will receive the increase.

In the Bolt and Nut Department, on spikes, for example, which pays a straight piecework rate, the increase will be applicable.

On the Mills the increase will apply to checktime rate only, the tonnage being a bonus. However, the minimum checktime rate will be thirty-seven and one-half cents (37½ cents) per hour, that is, the present thirty-four cent checktime rate will then be the minimum rate of thirty-seven and one half cents (37½ cents) per hour.

In other words, the increase offered is general, and applies to all datal rates and straight piecework rates, and the minimum datal hourly rate will be thirty-seven and one-half cents per hour, except for boys and girls, who will then receive minimum rates of twenty-two and one-half cents (22½ cents) and twenty-seven cents (27 cents) per hour.

Regarding overtime: If a man stays out beyond his regular shift he will get time and one-half on hourly rates.

Regarding emergency break-down call time at night, on Sundays and on holidays, time and one-half will be paid, with a minimum period of four hours. For example, if a man is called out and only works one hour he will be paid on a basis of four hours. If he works over four hours he will be paid time and one-half for the number of hours he actually works.

General Superintendent

The nine and ten hours mentioned in this offer is, in accordance with the recommendation of the Board, to be changed to eight hours.

Minority Report

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between The Trenton Steel Works, Limited, Employer and Its Employees being members of Local 1231, Amalgamated Association of Iron, Steel and Tin Workers of Steel Workers Organizing Committee, Employees.

To The Hon. Norman A. McLarty, K.C.,
Minister of Labour,
Ottawa, Ontario.

While agreeing generally with the Majority Report, I, the nominee of the employees, beg to make this submission, dissenting from the findings contained in that report in so far as they relate to wage increases and expressed as follows: "The majority of the Board recommends that the offer of the Company as made on that date (March last) be accepted." The Board further recommends that a minimum daily rate of $3.20 be fixed, with which I am, however, in agreement, as this raises the hourly rate of pay from the absurd low level of thirty-five (35c.) cents per hour to forty (40c.) cents per hour, an increase, while not yet sufficient, long overdue in this industry.

In arriving at its findings against a general increase over and above the previous offer of the Company, the majority of the Board were impressed with the necessity of leaving in the industry, for its maintenance and improvement, a fair part of the net profits for 1939 of some $87,000, after deducting about $21,000 to cover deficit of previous year, especially as no dividends were being paid nor had any depreciation fund been set aside. For the following considerations, however, and in view of better prospects for the Company, I am of the definite opinion that a general increase of at least 12½ per cent (twelve and a half per cent) could and should have been recommended, and that even greater upward revisions should be made in the prevailing rates for machinists, and that a few well-defined classifications for machinists should be decided upon.

I find that in the vast majority of cases the earnings of the employees of the Trenton Steel Works, Limited, are below those established as sufficient to provide a minimum decent standard of living as determined by

the LABOUR GAZETTE and even below the "Pauper and Poverty" level determined by various research groups in Canada. With that statement neither the majority of the Board nor the Company representatives took exception, and both agreed that greater earnings were desirable, but that such depended upon the ability of the Company to pay more.

By mutual arrangement between the Union and the Company the eight-hour day, three shifts, and the six-day week will be inaugurated. It is my contention that the six-day week will bring advantages to the Company in which the employees should share. As the President of the Company has stated that such advantages will result, there is therefore no contentious point there. I further contend that the eight-hour day will also bring advantages in which the employees should also share. The statement, however, that three shifts of eight hours each would result in increased productivity per man was refuted by the Company, and a statement was presented by the Company in substantiation of that contention. This statement, headed "Gross Tons Produced Per Hour" showed that from 1935 to 1939, when the nine-hour day shift and the ten-hour night shift prevailed there was a loss in the gross tonnage produced per hour when compared to the hourly production from 1930 to 1934, when the ten-hour and twelve and a quarter-hour shifts were being worked, on Mills No. 1, No. 2, and No. 3, respectively, of 10·09 per cent, 7·70 per cent, and 8·00 per cent; while on the plate mill there was an increase of 5·6 per cent, which the Company states was due to the rolling of thick, or heavy plate during the period covered. I find it impossible to believe that a man's efficiency decreases with a decrease in the hours he works. All previous studies bear me out in this. On the other hand, it was not determined that the statement submitted by the Company referred to man-hour production. Presumably it was a general statement of hourly production, which would indicate only the working capacity of the mills and has no relation to the man efficiency per hour. I press this point because I am convinced it had an important bearing on our discussions. On examining the statement of the Company further, I find, however, that in 1939 the gross tonnage produced per hour by all four mills was approximately 4·8, the highest in any year for which figures were presented. Unless the statement presented by the Company referred to man-hour production, it is irrelevant and misleading; therefore I maintain that the advantages accruing to the Company from the inauguration of the three eight-hour shifts per day, and the six-day week, make possible an additional increase of five per cent (5 per cent), at least, to be granted on all rates.

Basing my figures on last year's operations, everything remaining as it is, the pay roll of the Company will be reduced by some 16 per cent (sixteen per cent) owing to the shorter day, or about $94,000. The additional five per cent (5 per cent) would have involved a sum of only about $29,000. There has been no complaint as to the quality of the men, and it would be no feat beyond human ingenuity to increase their efficiency to the slight extent necessary to meet that amount required in the course of a year's operations. A contented body of efficient workers will undoubtedly produce more in a steady week of eight-hour days than a discontented body of men working a longer day.

The insistence of the Company on the adoption of the six-day week naturally leads one to assume that operations requiring a lengthening of the work week are expected. On the other hand, it is also expected that this plant will be used to provide materials for war requirements; one such order has already been received. The prospects of the Company, therefore, are such as would warrant a greater increase in wages. Especially in view of the fact that, assuming war orders are placed with it on a "cost plus" basis, a pro rata proportion of its present costs will be provided for, such as its yearly rental of $30,000, insurance, taxes, and maintenance charges, which form part of its operating costs.

Furthermore, the Trenton Steel Plant is a necessary and essential and component part of the whole corporate undertaking producing steel, coal, and shipbuilding in Nova Scotia. It produces materials needed by its associate companies, and provides an outlet for the products of its associates. It should not be compelled to stand or fall on its own feet, for it is an integral part of the whole corporate group, and adequate wages should be paid even though the profits of the whole group were thereby slightly reduced. The corporation as a whole (Dominion Steel and Coal Corporation, and its subsidiaries) showed a good profit, paid dividends, and provided for depreciation and reserves last year.

A deplorable differentiation exists between wages paid in the Sydney plant and those in the Trenton plant, which is the cause of much discontent, especially as there is little difference in the cost of living in the two districts at present. Prior to new agreements being arrived at, the basic rate in Trenton is thirty-five cents (35 cents) per hour, compared to forty-three and a half cents (43½ cents) per hour in Sydney. The recommendation of the Board will only partially lessen

that difference. Among the skilled mechanics the difference in rates is unfortunately not only greater, but the number of classifications in Trenton covering fewer men is out of all proportion. The comparative rates per hour are as follows:

Sydney	Cents	Trenton	Cents
Skilled mechanics	1st class—69½ to 71½.....	15 machinists	54
" "	2nd class—65 to 67	7 "	52
" "	3rd class—60 to 62	1 "	45
Improvers.	55	1 "	43

Comparable to improvers in Sydney is a small number of operators in Trenton, among whom seven different rates prevail, ranging from thirty-five cents (35 cents) per hour to fifty-two cents (52 cents) per hour. With the continuing demand for skilled and semi-skilled mechanics required for war materials, this situation will eventually right itself by these men accepting positions elsewhere. I feel it would not be too great a burden on the Company, to obviate the necessity for them to move out of the community, to revise those rates immediately. The comparatively small number involved, and the future prospects for the Company requiring their services there, would indicate the reasonableness of this suggestion.

Further to the majority comment that no dividends had been paid, nor depreciation provided for, it should be borne in mind that the Trenton Steel Company, Limited, is owned by the Nova Scotia Steel and Coal Company, Limited, the common shares of this latter being owned, with slight exception, by the Dominion Steel and Coal Corporation. And provision has been made as stated in the majority report for the payment of interest on the bonds of the Nova Scotia Steel and Coal Company, Limited, from the lease of the Wabana Ore deposits. I do not question the propriety of this arrangement, not having studied the reorganization plan sufficiently to arrive at an intelligent decision on the matter. But I would venture to add that some part of the revenue from Wabana might be diverted to the Trenton Steel plant in order to provide it with the working capital in which it is claimed it stands in dire need, to such an extent that only some $44,000 of the total net profit of $108,000 could be used for an equally or greater need for increases in the employees' earnings. In concluding, nevertheless, I am prepared to accept the situation, basing my contention that an adequate increase in all rates could be made from increasing productivity as a result of the shorter day and six-day week, and because of the brighter future prospects of the Company.

All of which is respectfully submitted:

(Sgd.) Drummond Wren,
Member.

Report of Board in Dispute between the Quebec Power Company and Its Operators, Linemen and Patrolmen

The Board of Conciliation and Investigation established to deal with a dispute between the Quebec Power Company, at Quebec City, and its operators, linemen and patrolmen, reported to the Minister of Labour on August 10 that all matters in dispute had been amicably adjusted and an agreement duly signed by the parties concerned.

The chairman of the board was Mr. Wilfrid Edge, K.C., Protonotary of the Superior Court, Quebec. The other members were Messrs. Joseph Matte and Wilbrod Bherer, both of Quebec, nominees of the employees and company, respectively.

Two matters were in dispute. The employees desired (1) deletion of part of a clause in the existing agreement relating to overtime, and (2) modification of the working hours of patrolmen.

Although Section 2 of the 1939 agreement stated that all hours worked in excess of the regular working hours would be paid for at time and a half, it also provided that when work had to be extended one hour on work days or on Saturday afternoons, any man willing to work at his ordinary hourly rate would be free to do so. The union representatives maintained that the latter provision was contrary to the principle that all supplementary work performed outside the regularly established hours should be paid for at the rate of time and one-half. They also maintained that one of the principles of international unionism was payment of wages on an hourly basis and not on a monthly basis as then prevailed.

Under the new agreement reached before the board, the employees will be paid on an hourly basis, with time and one-half for all overtime. In drawing up the hourly rates consideration was given to the average loss of work due to illness, weather conditions, etc., in order that the men's average yearly earnings would not be affected by changing from a monthly to an hourly basis of payment.

In regard to the patrolmen's request for a reduction in their working hours, the board suggested to the company that this might be accomplished without increasing the number of employees of this class, if the working hours were re-arranged so as to increase the number of free or off days. A schedule was accordingly drawn up whereby, in reducing their hours to an average of 52 per week, patrolmen will secure a greater number of free hours, and each patrolman on duty from 1 a.m. to 9 a.m. on Sunday will have Monday off, and will thus be free from 9 a.m. Sunday to 9 a.m. Tuesday.

Following is the text of the agreement.

TEXT OF AGREEMENT

Agreement entered into between Quebec Power Company and its employees, Members of Local Union B-1106 of the International Brotherhood of Electrical Workers.

GENERAL

Committee

Article 1

Should an employee covered by this agreement believe he has been unjustly dealt with, or, that any of the provisions of this agreement have been violated, the Committee shall take the case to the Foreman, and if a settlement cannot be reached without unwarranted delay, they shall make application to the Superintendent to have investigation, which will be held within 48 hours after such application. If the results still be unsatisfactory, the Committee shall have the right to appeal to the General Superintendent and then to the General Manager, and the conference will be granted without unnecessary delay. In the event of the Committee being dissatisfied with the General Manager's decision, the matter may be referred to a Board of Arbitration as provided by Law.

If a stenographic report of investigation is taken, the Committee shall be furnished a copy.

If it is found that an employee has been unjustly discharged, or dealt with, such employee shall be reinstalled with full pay for all time lost.

All conferences between the Company's officials and the Committee to be held by appointment during regular working hours, without loss in time to the Committee man.

No discrimination of any kind will be made by the Company, or officials thereof, against employees who are the complainers in cases taken by the Committee, or serving on Committee representing employees covered by these rules.

Extra Work

Article 2

All hours worked in excess of the regular working hours, shall be paid for at the rate of time and a half.

Men attending First Aid and Safety meetings outside of their regular working hours shall be paid at regular rate but for not less than one hour.

The Superintendent should see that overtime work is divided with as much justice as possible between the properly qualified men. A report of such shall be made to the secretary every three months. If men, except patrolmen or operators on shift, are called to work on Sundays, New Year's Day, Epiphany, Good Friday, Ascension, St-Jean Baptiste Day, Dominion Day, Labour Day, All Saints' Day, Immaculate Conception, Christmas, they shall be paid at the rate of time and one-half. Should any of these holidays fall on a Sunday, this clause will apply on the day on which the holiday is observed.

Calls and Emergency Work

Article 3

Men called from home to work, outside of working hours, will receive a minimum of three hours' pay.

Men sent away from their regular place of work for temporary work elsewhere, shall receive exact time, starting from the moment they are called and, while they are on their way or waiting for cars, and, until they arrive at their destination, suitable meals and lodging when necessary will be provided by the Company.

Preference Jobs

Article 4

Seniority and efficiency shall be considered when it becomes necessary to reduce the working staff or to give promotions and also when men are taken on again after a lay-off. The Superintendent shall be the sole judge of efficiency; however he agrees to discuss any of the above matters with a special committee before any decision is taken.

Article 5

Men who are discharged, or resign, shall be furnished a certificate from the Superintendent, as soon as possible, mentioning thereon length of service and classification. Employees leaving the service shall receive their salary in full within 24 hours.

Article 6

Employees will be paid during working hours, semi-monthly on the tenth and twenty-fifth of each month. Should pay-day fall on a Sunday or holiday, they will be paid on the preceding day.

When the Management issues bulletins for the information of employees, they will be posted at least twenty-four (24) hours in advance in time of event.

HOURS OF WORK

Article 7

Linemen, Groundmen and labourers.

Nine (9) hours shall constitute a day's work, and fifty (50) hours shall constitute a week's work, to be as follows: from 7 A.M. to 12 noon, from 1 P.M. to 5 P.M. Saturday from 7 A.M. to 12 noon. When the foreman decides it is necessary to work some minutes after noon to complete some job, work shall start the same number of minutes after 1 P.M.

Operators.

Eight (8) hours shall constitute a day's work and forty-eight (48) hours shall constitute a week's work, to be worked as follows: 12 M.N. to 8 A.M., 8 A.M. to 4 P.M. and 4 P.M. to 12 M.N.

Patrolmen.

Patrolmen shall work an average of 52 hours per week as per the schedule submitted to the Committee.

Truck-Drivers.

Ten (10) hours shall constitute a day's work, and fifty-nine (59) hours shall constitute a week's work, to be worked as follows: 7 A.M. to 12 noon, 1 P.M. to 6 P.M., excepting Saturdays when day's work shall finish at 5 P.M.

Maintenance Men.

Eight (8) hours shall constitute a day's work, and forty-four (44) hours shall constitute a week's work, to be worked as follows: 8 A.M. to 12 noon, 1 P.M. to 5 P.M., excepting Saturdays when work shall finish at 12 noon.

RATES OF PAY

Article 8

The salaries will be according to the list of salaries submitted to the Committee. Men with their complete training will have the following salaries:

	Per hour
A.C. Operators No. 2 Queen St..	$0 63½
Maintenance men..	0 73
Patrolmen..	0 59½
A.C. Operators No. 1 Queen St..	0 60
1st Class Linemen..	0 59½
D.C. Operators No. 1 Queen St..	0 57½
2nd Class Linemen..	0 55½
Chauffeurs..	0 47
Ground Men..	0 50
Laborers: Line Dept. and Maintenance.. ..	0 45

Article 9

Should any unforeseen case come up during the year or should the Superintendent wish to make any change of the above rules with regard to any one employee or should any employee wish to take exception to a particular clause, the matter will be settled between a special permanent Committee of the Union and the Superintendent.

Article 10

Effective August 1, 1940, the preceding rules and rates of wages, will remain in force and effect until December 31, 1940 and then on from year to year, unless a written notice of thirty days be given by one or the other party to this agreement before the termination of each yearly period.

Quebec, July 31, 1940.

For the Local Union No. B-1106 L.B. of E.W.:
Signed Rene Michaud,
President.
Signed J. A. Bernier,
Secretary.

For the Quebec Power Co.
Signed Rene Dupuis,
Asst. General Superintendent.
Signed Jean Saint-Jacques,
Superintendent, Power Div.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1940

THE following table shows the number of disputes, workers involved and time loss for August, 1940, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time lost in man working days
*Aug., 1940.....	18	6,712	15,953
*July, 1940.....	15	7,191	18,612
Aug., 1939.....	18	11,823	32,298

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The figures as to strikes and lockouts recorded for August show some decreases from those for July. The four strikes mentioned in the LABOUR GAZETTE as occurring in July but for which particulars had not been received so that they could be included in the record were of a minor nature and caused little time loss, one only extending into August. Information as to these is given in the following paragraphs. Most of the time loss during August was due to eight strikes of coal miners in Nova Scotia, involving over 5,000 miners for very short periods. The only other dispute of importance was a strike of embroiderers in Montreal, P.Q., which was unterminated at the end of the month. In July most of the time loss was due to a strike of salmon fishermen in British Columbia and to seven strikes of coal miners in Nova Scotia. In August, 1939, eighty per cent of the time loss was due to eleven strikes of coal miners in Nova Scotia for very short periods.

Two disputes, involving twenty-eight employees, were carried over from July, (including a strike of fishermen at Port Dover, Ont., reported to the Department too late for inclusion in the August issue of the LABOUR GAZETTE). Sixteen disputes commenced during August. Of these eighteen disputes, sixteen were terminated during the month. Nine resulted in favour of the employers and one in favour of the workers involved. Compromise settlements were reached in three cases and the results of three disputes were recorded as indefinite. At the end of the month, therefore, there were two strikes or lockouts re-

corded as in progress, namely: hotel chambermaids, Montreal, P.Q., and women's clothing factory workers, embroiderers, etc., Montreal, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. No such disputes are listed for August. The strike involving fur factory workers employed by one firm in Toronto, Ont., commencing October 17, 1939, and carried in the above paragraph for some months, was called off by the union during August and has consequently been removed from the list.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1940*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to August, 1940				
FISHING, ETC.—				
Fishermen, Port Dover, Ont.	1	15	150	Commenced July 30, 1940; for recognition of union and for restrictions in fishing; terminated Aug. 10, 1940; conciliation, provincial; in favour of employer.
SERVICE—				
Business and Personal—				
Hotel chambermaids, Montreal, P.Q.	1	13	300	Commenced July 19, 1940; for increased wages; unterminated.
(b) Strikes and Lockouts commencing during August, 1940				
FISHING, ETC.—				
Fishermen, Port Dover, Ont.	-	90	90	Commenced Aug. 6; in sympathy with fishermen on strike July 30; terminated Aug. 6; return of workers; in favour of employer.
MINING, ETC.—				
Coal miners, Florence, N.S.	1	700	1,400	Commenced Aug. 2; for extra pay for alleged deficient place; terminated Aug. 3; return of workers pending investigation; in favour of employer.
Coal miners, Florence, N.S.	1	700	4,200	Commenced Aug. 5; against suspension of worker pending investigation of accident; terminated Aug. 10; negotiations; in favour of employer.
Coal miners, Springhill, N.S.	1	200	200	Commenced Aug. 7; for extra wages for alleged deficient place; terminated Aug. 7; return of workers pending negotiations; in favour of employer.
Coal miners, Sydney Mines, N.S.	1	850	2,500	Commenced Aug. 9; alleged shortage in coal credited; terminated Aug. 14; return of workers; in favour of employer.
Coal miners, Springhill, N.S.	2	1,400	1,400	Commenced Aug. 13; against working with reduced staff; terminated Aug. 13; return of workers; in favour of employer.
Coal miners, Florence, N.S.	1	700	1,400	Commenced Aug. 13; against suspension of worker causing accident (strike Aug. 5); terminated Aug. 14; return of workers; in favour of employer.
Coal miners, Sydney Mines, N.S.	1	900	1,350	Commenced Aug. 20; against suspension of worker; terminated Aug. 21; return of workers; in favour of employer.
Coal miners, Springhill, N.S.	1	200	200	Commenced Aug. 28; against suspension of miner; terminated Aug. 28; negotiations; compromise; miner reinstated pending inquiry.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1940*—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(*b*) Strikes and Lockouts commencing during August, 1940—*Concluded*				
MANUFACTURING—				
Textiles, Clothing, etc.—				
Woollen mill workers, Renfrew, Ont.	1	104	18	Commenced Aug. 8; for increase in wages and closed union shop; terminated Aug. 8; return of workers pending negotiations; indefinite.
Woollen mill workers, Almonte, Ont.	1	105	210	Commenced Aug. 12; for increased wages; terminated Aug. 13; conciliation, federal; compromise.
Woollen mill workers, Campbellford, Ont.	1	65	195	Commenced Aug. 13; for increased wages; terminated Aug. 15; conciliation, federal; compromise.
Women's clothing factory workers, embroiderers, etc., Montreal, P.Q.	25	500	2,000	Commenced Aug. 28; for renewal of agreement with increased wage rates; unterminated.
Metal Products—				
Iron foundry workers (moulders), Toronto, Ont.	1	10	40	Commenced Aug. 13; for increased wages; terminated Aug. 16; conciliation, federal; indefinite.
CONSTRUCTION—				
Other—				
Truck drivers, Summerside District, P.E.I.	1	40	60	Commenced Aug. 14; for increased wages; terminated Aug. 15; return of workers pending negotiations; indefinite.
Truck drivers, Sydney District, N.S.	1	120	240	Commenced Aug. 20; against employment of workers from outside districts; terminated Aug. 21; negotiations; in favour of workers.

* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A "tie-up" in fishing by one hundred gillnet fishermen on the Fraser River from June 24 to June 29 has been definitely reported. The fishermen held out for six cents per pound for red spring salmon and secured this rate. This dispute was referred to in the LABOUR GAZETTE for August on page 787 in connection with a dispute involving other classes of fishermen.

A two-day strike of 45 truck drivers near Glace Bay, N.S., on July 24 was not reported in time for inclusion in the record in the August issue of the LABOUR GAZETTE. The men secured an increase of 25 cents per ton. A protest against the employment of five trucks from outside the locality was dropped as the employers held there was a shortage of local trucks.

A one-day strike of 200 coal miners occurred at Glace Bay, N.S., on July 30, against the employment of certain men reported to be aliens. Work was resumed next day, the aliens not being employed pending inquiry.

A strike of thirty truck drivers for four hours occurred on July 31 at Fingal, Ont., the men demanding an increase in wages of ten cents per hour. An increase of five cents was secured.

A strike of thirty-five labourers on the installation of a drain for the town of Picton, Ont., occurred on July 22 to secure an increase in wages from 25 cents per hour to 35 cents. Work was resumed on July 24, the rate being raised to 30 cents.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to August

FISHERMEN, PORT DOVER, ONT.—A number of fishermen working for one fish company on a share basis ceased work on July 30 as a result of the failure of the company to recognize the union and to restrict the fishing of whitefish, there being a surplus on the market depressing the price. The employer

held that this was a marketing problem and could be better dealt with by the company. The workers were reported to be members of a local of the Canadian Fishermen's Union being organized in Port Dover. The strikers were partly replaced by other workers. As a result of conciliation by an officer of the Ontario Department of Labour work was resumed on August 11. All employees were to be reinstated and men hired during the strike retained.

A one day sympathetic strike of fishermen working for other companies and independent boat owners occurred on August 6.

Disputes Commencing During August

COAL MINERS, SYDNEY MINES, N.S.—Thirty-five loaders ceased work on August 9 claiming that they had not been credited with the full amount of coal loaded. On August 12 the other miners, approximately 800, did not work Operations were resumed on August 15 when a mistake in the miners' tally was discovered, a further check up to be made.

WOOLLEN MILL WORKERS, RENFREW, ONT.—Employees in several departments of one mill ceased work on August 8 to secure an increase in wages and to enforce a demand that certain employees should join a local independent union previously organized. After one and one-half hours work was resumed pending negotiations. Later a conciliation officer of the Department of Labour dealt with the dispute and the management made certain proposals. These were not accepted by the employees and the dispute was referred to a Board under the Industrial Disputes Investigation Act.

WOOLLEN MILL WORKERS, ALMONTE, ONT.—A number of employees in one mill ceased work on August 12 demanding a ten per cent increase in wages. A conciliation officer of the Dominion Department of Labour was called in and pointed out that the strike was illegal as a dispute in an establishment working on a war contract must be referred to a Board under the Industrial Disputes Investigation Act, as provided by an Order in Council under authority of the War Measures Act (LABOUR GAZETTE, November, 1939, page 1087). Work was, therefore, resumed on August 14 and negotiations, participated in by the conciliation officer, resulted in an increase in wages of five per cent with provision for future increases according to changes in the cost of living.

WOOLLEN MILL WORKERS, CAMPBELLFORD, ONT.—A number of spinners and weavers ceased work on August 13 demanding a fifteen per cent increase in wages for some workers and ten per cent for others. A conciliation officer of the Dominion Department of Labour was called in on August 15 and the employees agreed to resume work next day. Working conditions were discussed and a number of changes were agreed upon. It was arranged that there would be further negotiations as to a wage increase, the dispute to be referred to a Board under the Industrial Dispute Investigation Act if not settled by negotiations. Work was resumed by the spinners on August 16 and by the weavers on August 19.

IRON FOUNDRY WORKERS (MOULDERS), TORONTO, ONT.—Ten of the moulders in one establishment ceased work on August 13, their demand for an increase of fifteen per cent in piece-work rates of wages having been refused. A conciliation officer of the Dominion Department of Labour was consulted and at a meeting with the management and representatives of the moulders it was arranged that work would be resumed on August 17 and that negotiations with the management would be carried on as to wages, hours and working conditions. Any matters not so settled are to be referred to a Board under the Industrial Disputes Investigation Act. Later a five per cent increase in piece rates was made, with certain adjustments.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month bringing down to date that given in the March, 1940, issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1939. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes in-

volving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the Labour Gazette, page 760.

The number of disputes which began during July was 40 and 2 were unterminated at the end of June, making a total of 42 disputes in progress during July. The number of workers involved was 11,700 and the resultant time loss 33,000 man working days.

Of the 40 disputes which began during July 7 arose out of demands for increased wages and 13 were over other wage questions; 8 were over questions regarding the employment of particular classes or persons; 9 arose out of questions respecting working conditions; and 3 were over other questions. During July final settlements were reached in the case of 39 disputes, of which 7 were settled in favour of workers, 23 in favour of employers and 9 resulted in compromise settlements. In 2 other disputes work was resumed pending negotiations.

Belgium

During the year 1939, 68 strikes and no lockouts occurred. The number of workers involved was 42,598 and the time loss in man working days was 157,242. The principal disputes were in the mining industry, 96 per cent of the total number of strikers involved being in this industry.

The Netherlands

In 1939, the number of disputes was 88, involving 6,050 workers and resulting in a time loss of 81,700 man working days.

Sweden

The number of disputes during the year 1938 was 85, involving 28,951 workers, with a time loss of 1,284,000 man working days.

United States

Preliminary estimates for June, 1940, which as the Bureau of Labour Statistics points out are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 170 strikes as having begun during the month, which with 125 unterminated at the end of May, made a total of 295 in progress during the month. The number of workers involved in these disputes was approximately 58,000 with a resultant time loss of 400,000 man working days. The comparable figures for the previous month, which have been partially revised but are not final show that there were 310 strikes in progress involving about 70,000 workers, with a resultant time loss of about 650,000 man working days.

Immigration to Canada January-June, 1940

A statistical bulletin issued by the Immigration Branch of the Department of Mines and Resources, indicates the effect of the war on immigration to Canada during the first six months of 1940.

During the six months' period ending June 30, 1940, a total of 4,604 persons entered the Dominion compared with 9,193 entering during the same period a year ago, a comparative decrease of 49·9 per cent. Decreases were recorded in all classifications with the exception of that of the United States in which there was an increase of 7·4 per cent in the number of Americans entering the Dominion, 2,707 in the period of 1940 reviewed compared with 2,520 in the same period of 1939. There were 1,153 persons who entered Canada from the British Isles, a decrease of 33·8 per cent when compared with the 1,742 from the British Isles in the same period of 1939. Northern European races only accounted for 170 persons compared with 1,345 in 1939, a decrease of 87·4 per cent. "Other races" accounted for 574, a decrease of 84·0 per cent compared with the 3,586 so classified in 1939.

Adult males entering Canada during the first six months of 1940 numbered 1,589, adult females 1,837 and children under eighteen made up 1,178 of the total of all immigrants.

Occupationally 248 males, 110 females and 105 children were listed in the farming class. The labouring class comprised 259 males, 22 females and 31 children; mechanics, males 270, females 95 and children 70; trading class, males 255, females 141, children 84; mining class, males 19, females 3 and no children; female domestic servants eighteen years and over numbered 212, and under eighteen years 33; "other classes", males 538, females 1,254 and children 855.

The largest number of immigrants (1,755) were destined for Ontario; 1,017 were going to Quebec; 646 to British Columbia; 515 to Nova Scotia; 223 to Alberta; 161 to New Brunswick; 154 to Manitoba; 116 to Saskatchewan; 16 to Prince Edward Island; and one to the Northwest Territories.

LABOUR AND THE WAR

Summary of Labour Day Message Broadcast by the Prime Minister of Canada

IN a broadcast message to the people of Canada on the eve of Labour Day, September 1, the Prime Minister, Right Honourable W. L. Mackenzie King, reviewed the present intensified struggle for the survival of free citizenship and its implications for humanity. Since he had been invited to give a national message from two prominent sources—first from a responsible official in the trade union movement and a few days later from the Director of Public information—the Prime Minister met both requests in an address entitled "Labour and The War" in which he summarized the facts after one year of war and related them "to the world situation as we know it to-day, and to the alternatives which the future may hold in store."

Prefacing his address by a reference to his deep interests in the problems of Labour, the Prime Minister drew the parallel between Labour and Humanity thus:

> "From my early years, I have been deeply interested in the problems of Labour. One reason, I believe, is that Labour's main concern along the path of life has been a continuous struggle against adversity and poverty. Labour, too, represents so overwhelming a proportion of mankind, that it is almost synonymous with Humanity itself.
>
> "The plain picture of the ordinary man, working with the strength of his arm, and the skill of his hand, to feed, to clothe and to shelter his fellows, has always seemed to me to represent Humanity in one of the noblest of its moods. To improve conditions of Labour is to better the human lot on this earth. That, I suppose, is the motive which most of us have closest to our heart when the enthusiasm of young manhood, and the realization of the duties of citizenship, begin to mould our conscience and our conduct. It is one of the tragedies of life that, amid the complexities of the struggle for existence, the enthusiasm and the realization are so often lost. To my mind, the measure of human greatness is the degree to which we continue to hold to the end of our days, an enthusiasm for human betterment."

From this premise, the Prime Minister emphasized particularly the relation of the war to Labour. He etched the dark background of the year just ended—"one of the blackest years in human history"—and declared that "to-day the nations of the British Commonwealth alone champion in their full strength, the rights of free men."

Significance of Labour Day

Speaking of the anniversary and significance of Labour Day, the Prime Minister pointed out that Labour in Canada celebrates in "complete freedom a day, which, by Act of Parliament, has been set apart to honour the place which Labour has gained and holds in our national life. It is deeply significant that such a celebration is possible at the end of a year of total war in Europe."

He proceeded to indicate the status of Labour in Canada, "its dignity and its freedom", in the light of both a historical and geographical background. Tracing the respective contributions of people of British and French stock that went into the founding of a new freedom on this continent, and the subsequent contributions of the "adventurous and the oppressed from every country in Europe who came amongst us seeking a new homeland where life and human personality were held as sacred things", the Prime Minister noted that "time and space have worked for Canada."

Lighthouse of Democracy

Defining democracy in terms of freedom on this Canadian scene, he said:

> "To me, democracy means that state of organized society which recognizes the right of its members to equality of opportunity. It means the power of the many, in increasing measure, to develop in complete freedom their latent strength and talent. It means the freedom of the many to enjoy, under the protection of those laws which they themselves have made, an adequate and just measure of the fruits of their own labours.
>
> "Every Labour Day is a lighthouse of democracy. As its rays revolve, we see beneath them the freedom and the well-being which we have achieved. As its light flashes to-night, we catch a glimpse of the land of our dreams. We can see the Canada we have longed for and worked for, a land in which men and women, regardless of race, creed or class, can live their lives without fear. For we have cherished the realities of freedom which are also its ideals; the right to think, the

right to speak, the right to organize, the right to work, the right to worship.

"We believe in the right of men to enjoy the fruits of their honest labour. We believe in the sanctity of humanity, and in man's progressive capacity to take upon himself more of the attributes of Divinity. However much we have failed in what we have done, nevertheless, in our innermost hearts, I believe, we have given a value immeasurable and eternal to the humblest of human lives."

Europe's Midnight Hour

Continuing, the Prime Minister traced the extinction of democracy on the continent of Europe within the space of a single year until "Europe had reached its midnight hour." Emphasizing the grim reality of the present situation the Prime Minister declared:

"Whether Labour Day in Canada a year hence will witness the spirit-dawn of a Europe free, or the night of Naziism casting its gloom in deepening shadows over this North American continent, will depend upon the strength, the will, and the untiring work, not of one democracy, but of all the democracies that have survived. In their combined effort, no force can be greater than the truth in Labour's heart and the strength of Labour's arm.

"If we lack the vision to see the peril, and the strength to meet it, we, on this North American continent, like the nations of Europe, may come to disaster in one of two ways. This continent might be dominated through actual invasion and conquest. On the other hand, if we fail to carry on the struggle in Europe until tyranny is destroyed, disaster will follow no less surely even though not one Nazi soldier were to land upon our shores.

"The triumph of the Nazis in Europe would involve, for the peoples of this continent, the substitution of fear for freedom, and of economic domination for social progress. It would spell the doom of democracy in the new world."

The Prime Minister then analyzed the added strength of the Nazi menace due to the conquest of Europe and the acquisition of vital supplies and equipment. Recognition of these facts and the growing menace to the common interests of the British Empire and the United States had accelerated measures for common defence, and the Prime Minister reviewed the steps which had recently been taken in reciprocal defence arrangements.

The Alternatives

He then proceeded to outline the economic and political consequences of failure to free Europe and the certain impact of these consequences upon our way of life:

"Unless the enemy is defeated and the enslaved countries of Europe restored to freedom, there will be no prospect of improving or even of maintaining the standards of Canadian life which Canadian energy and Canadian skill have won, no hope of enlarging the opportunities for the happiness of our own or succeeding generations. Free labour will have to compete with slave labour. Men who have hitherto had the right to choose where they would work, and at what they would work, will find themselves in hopeless competition with conscript labour, automatic, soulless, driven by the merciless lash of a ruthless state.

"Moreover failure to free the peoples of Europe from their present thraldom, will mean confining within narrowing limits the areas in which the democracies, should they survive, can hope to develop intercourse in trade or friendship. Many of the markets in which the workmen and the producers of the North American continent have sold their goods will certainly disappear. Overseas we will be forced to compete with men who know no standards, and with states that will sacrifice every standard. We, in North America, will be subjected to competition from totalitarian economies. In a vain effort to maintain our standards, we will be driven to trade almost exclusively with ourselves. As a last impelling alternative, slowly, certainly and inexorable, we too will become conscripts in the regimentation of the state, and the hewers of wood and the drawers of water for the new economic masters of the world.

"To Labour, these facts have spoken and will speak with emphasis and conviction. Labour knows the stake in the struggle between dictatorship and democracy. Labour knows what it will lose in the defeat of democracy. It understands the difference between rule by force by those who seek a monopoly of power, and government by consent for the common good. It knows the difference between men who despise equality, and seek privilege, possessions and power, and those who believe in the brotherhood of man and the Fatherhood of God."

Labour the Ally of the Fighting Forces

In conclusion the Prime Minister told of Labour's contribution to and position in the battle for freedom as follows:

"In war, no work, no effort, can compare with the sacrifice of the soldier, the sailor and the airman. Their sacrifice is uppermost in the thoughts of this nation; it will live

in its memories. But Canadians will remember too the debt they owe to Labour. In Canada, Labour has extended its hours, surrendered its holidays, and in its determination to increase and advance production, has taught the young and the inexperienced the intricacies of complicated trades. It will be the duty of the people of Canada, realizing these things now, to remember them in the hour of victory.

"In the deeds of the men who on land, on sea and in the air, offer their lives to save us, Labour is the partner and the ally. Hundreds of skilful hands, unerring eyes and strong arms helped to create the Canadian planes in which, on Friday last, our own Canadian fighter squadron made the skies of the British Isles vivid with the swift adventure of their skill and courage. How proud Labour must feel to have worked for such men! Thus it is that with Labour rests the power to shorten the duration of war and, thereby to save multitudes of human lives.

"Every workman knows that every bolt, every piece of steel, every bullet, every machine part fashioned in Canada is a work for victory. Every workman knows that lacking the machines of war, the bravest men in the world will avail nothing.

"My fellow citizens: A distinguished British journalist who recently visited us, said that he found Canada at war with Hitler and at peace with herself. We are at war, and we shall remain united in will and purpose. But we can only remain at peace with ourselves if shirking no effort, withholding no wealth, and sparing no sacrifice, we prove ourselves worthy of our two great brotherhoods—the brotherhood of the brave who fight for us, and the brotherhood of Labour that works for their victory."

NATIONAL WAR SERVICES REGULATIONS

Provisions Concerning Calling Out of Industrial and Seasonal Employees For Military Training

IN accordance with the provisions of the National Resources Mobilization Act, the Department of National War Services (LABOUR GAZETTE, July, pp. 629-30) has issued its first regulations (governing the calling out of classes for military training) following the taking of the National Registration on August 19-21.

Subject to certain exceptions, the regulations provide that:

"Every male British subject who is or who has been at any time subsequent to the first day of September, 1939, ordinarily resident in Canada shall, while he is of the ages of twenty-one years to forty-five years inclusive and who was on the fifteenth day of the July, 1940, unmarried or a widower without child or children, be liable during the continuation of the existing war to undergo and perform military training, for such period or periods and at such place or places as may, from time to time, be fixed or determined by proclamation and pursuant to these regulations: Provided that men who prior to being notified to report for military training, shall have attained the age of forty-six years, shall not be liable to be called out."

It is also provided that men who are liable to be called out shall be classified in separate yearly age classes of twenty-one years to forty-five years inclusive.

Exemptions

The regulations provide that the following persons shall be excepted from being called out:

(*a*) Judges of Superior, District or County Courts of Justice;
(*b*) Members of the Clergy or Religious Orders;
(*c*) Regular Clergymen or Ministers of religious denominations;
(*d*) Members of the Naval, Military or Air Forces of Canada on Active Service and Cadets entered at the Royal Military College of Canada;
(*e*) Permanently employed members of the Royal Canadian Mounted Police and of Provincial Police Forces;
(*f*) Permanently employed members of Police Forces and Fire Brigades of any incorporated city;
(*g*) Permanently employed wardens and officers of all penitentiaries, prisons and lunatic asylums, or mental hospitals.

The regulations detail the procedure to be followed in the calling up of the age classes, and also set forth the powers and functions of National War Services Boards and Divisional Registrars.

Employers and Employees

The sections of the regulations specifically concerning employers and employees are as follows:—

SEASONAL EMPLOYEES

14. (1) Each Divisional Registrar shall deliver to the Board in his Administrative Division copies of all registration cards in his possession upon which it is stated that the men registered are engaged in farming, fishing, lumbering, trapping or other seasonal occupation.

(2) In the case of men engaged in farming, fishing, lumbering, trapping or other seasonal occupation, the Board may make advancement orders or postponement orders as seems best in the public interest: Provided however that every man in an age class called out for training in the twelve months period shall, notwithstanding any postponement order, be called out for training during some one of the training periods held during the said twelve months period.

(3) The Minister may furnish to the Board a list of classes of occupations deemed to be seasonal and may from time to time add to or remove from such list any class of occupation, and the Minister may indicate the period during which it is deemed inadvisable to require to report for training men engaged in such occupation and the Board shall be governed by the Minister's directions in this respect. In respect of other classes of seasonal occupation the Board shall exercise its discretion as to the periods during which men employed therein shall not be required to report for training.

Employees of Manufacturers and Others

15. (1) As soon as practicable, prior to the first period of military training, the number of men in the age classes likely to be called out for military training during the twelve months period, shall be estimated and the Minister shall furnish such information to each Divisional Registrar. If so requested, the Divisional Registrar shall furnish such information to any manufacturer, financial institution, public service corporation or other employer including the Dominion Government, the Provincial Governments and the Municipal Corporations (hereinafter called the "employer") making the request. Within two weeks of the receipt of the copy of such estimate, but not thereafter, an employer may formulate a plan to enable employees liable to military training to be called out during the said twelve months period in a manner which will least inconvenience the carrying on of the business or undertaking of the employer.

(2) Within two weeks of the receipt of the information mentioned in the next preceding subsection, if he so desires, the employer may forward his plan to the Divisional Registrar and the employer or his representative may attend before the Board of the Administrative Division in which the men affected are employed, at such place and on such date as may be fixed by the Board; notice of the time and place of hearing shall be given to the employer by the Divisional Registrar.

(3) On the hearing aforesaid, which shall be in camera, representations may be made by or on behalf of the employer as well as by the representative of the Department of National Defence but no person shall be entitled to be represented by counsel, advocate or solicitor.

(4) After hearing the representations aforesaid, the Board shall determine whether any such plan is in its opinion requisite or desirable in the public interest and, if so, whether the plan as submitted or as altered or modified by the Board should be approved, and the Board may approve any such plan as submitted or amended and for the purpose of giving effect to the plan so approved may order the postponement or the advancement of the military training of the employees of such employer and the decision of the Board shall be final: Provided however that every employee of such employer of an age class to be called out for training in the said twelve months period shall be required to report for training during some one of the training periods to be held during the said twelve months period.

(5) After a plan has been approved by the Board as provided in this section, the Divisional Registrar shall thereafter be governed thereby and by orders of the Board relative to the calling out of men for training to whom the plan applies.

Employers' Liability

20. It shall be the duty of the employer of any person called out for military training to reinstate such employee at the termination of the period of training in his occupation, and under conditions not less favourable to the employee than those which would have applied to him had he not been called out for training; and an employer who, without just or reasonable cause, fails to comply with this regulation, shall be guilty of an offence against this regulation and liable, on summary conviction, to imprisonment not exceeding six months or to a fine not exceeding five hundred dollars and not less than one hundred dollars or to both such imprisonment and such fine; in addition, the Court may order such employer to pay to the employee a sum not exceeding an amount equal to five week's remuneration at the rate prevailing at the time the employee was called out for training: Provided, however, that the employer aforesaid shall not be convicted if he proves that the person formerly employed did not within one week after the termination of his military training apply for reinstatement, or that, having been offered reinstatement, such person failed without reasonable excuse to present himself for employment.

9305—3

Minimum Age for Industrial Employment in New Jersey

A basic minimum age of 16 has been established for employment in New Jersey. New Jersey is the sixteenth State to fix this minimum. A new school attendance law raises the compulsory school attendance age from 14 to 16 and a new child labour law prohibits the employment of any child under 16 in a factory at any time or in any occupation during school hours. Children 14 and 15 are permitted to be employed outside school hours provided the employment is not in a factory or in any other prohibited place of employment. No child under 12 may be employed on a farm except by his parents. No girl under 18 and no boy under 14 may engage in street trades except boys over 12 as newspaper carriers in residential districts.

Employment certificates are required for all persons up to 18 years of age except in agriculture and street trades where special permits are required up to 16 years of age. No person under 18, with certain exceptions, may be employed for more than eight hours in a day or 48 hours in a week or for more than six days a week and no such person may be employed at night. In certain specified occupations and in any occupations declared hazardous by the State Commissioner of Labour, the minimum age for employment is 18.

RESULTS OF COST OF LIVING INQUIRY FOR COAL MINERS IN ALBERTA AND BRITISH COLUMBIA

First and Second Reports of Britnell Commission to Coal Administrator

BY Order in Council P.C. 1802 dated May 4, 1940, a Commission was created under the Inquiries Act from time to time to inquire into and determine the amounts, if any, to be paid by way of a cost of living bonus to the employees of the coal mine operators of the Provinces of Alberta and British Columbia in accordance with certain supplementary agreements entered into between the coal mine operators of the Provinces of Alberta and British Columbia and the United Mine Workers of America, District 18.

The members of the Commission so constituted are:—Professor George E. Britnell of the University of Saskatchewan, Chairman; Clement Stubbs, named by the operators; and Garfield Graham named by the Union.

This Commission had its origin in discussions initiated by the Union with the operators in January, 1940, on a proposal that a joint application be made to the Dominion Government to appoint a Cost of Living Commission similar to the Commission which functioned in the same area (except Vancouver Island) under the late W. H. Armstrong, director of coal operations during the years 1917-1919. Mr. J. McG. Stewart, Coal Administrator under the Wartime Prices and Trade Board was at that time in Western Canada, and he was asked to participate in these discussions.

The objective of the plan as it developed was to devise a formula which would contribute to the maintenance of industrial peace and uninterrupted operation of the coal mines for the duration of the war by guaranteeing to the workers protection against the effects of any significant rise in the cost of living without at the same time initiating a "vicious spiral" of rising prices, rising wages, and rising costs which in turn lead back to rising prices. The formula arrived at and incorporated in an agreement between the Union and the operators was briefly as follows:—

(*a*) The existing wage structure to be continued for the duration of the war and one year thereafter.

(*b*) A Cost of Living Commission of three members to be appointed; one nominated by the Union, one by the operators and a Chairman appointed by the Governor in Council.

(*c*) The Commission to draw up a budget for a reasonable minimum standard of living for an average family and at intervals of four months to ascertain the cost of this budget by an investigation of actual prices prevailing in the principal coal mining areas of Alberta and British Columbia.

(*d*) The budget to exclude rent, fuel, light and water since these services are normally supplied by the coal mine operators.

(*e*) In calculating the cost of the budget increases in prices resulting from new or increased Federal taxes imposed since the outbreak of war to be deducted, i.e., the workers agreed to accept the financial sacrifices imposed by "war taxation."

(*f*) The base date for the cost of the budget to be March 31, 1938.*

(*g*) Cost of living bonus to be paid only if the increase in the cost of the budget since the date of the previous change in the bonus is 5 per cent or more.

(*h*) When the cost of the budget exceeds the base by more than 5 per cent a cost of living bonus calculated in cents per day to be paid to each worker, and the same bonus to be paid to all workers whatever their wage rates may be.

(*i*) If, after having risen, the cost of the budget falls, the bonus to be revised downward but in no case will the basic wage structure be affected.

(*j*) The Commission to report to the Minister of Labour through the Coal Administrator and the Coal Administrator to determine the amounts of price increases held to be due to Federal war taxation.

The Dominion Government implemented its part in these arrangements by appointing the Commission already referred to by Order in Council on May 4, 1940. The Commission held its first meeting on May 10 and made its first report covering the cost of the budget as of March 31, 1938 and March 31, 1940 on August 22. This report was unanimous.

The first report has been the most arduous and difficult aspect of the Commission's work. It was necessary to agree upon the items entering into the family budget and the proper quantities of each, to set up a system of price reports from nearly 200 storekeepers in 43 separate communities, to discover the actual prices which prevailed on March 31, 1938 and to secure accurate prices for March 31, 1940. These difficult tasks were accomplished, the items were selected, the prices secured, the results averaged out and the first report made on August 22.

* The base date is established at March 31, 1938, because it is the date on which the present agreement was negotiated.

Briefly the results of the first report are as follows:—The costs of the weekly family budget for a man, wife and three children were

	Mar. 31 1938	Mar. 31 1940
Food	$ 8 96	$ 9 20
Clothing	2 74	2 94
Furnishings, etc.	30	32
Total	$12 00	$12 46

The increase from $12 to $12.46 is 3·9 per cent and since it is less than 5 per cent no cost of living bonus was payable for the period April 1, to August 31, 1940.

On August 30, 1940, the Commission made its second report, which was also unanimous, covering the cost of the budget on August 1, 1940. This report showed a further slight increase as follows:—

	August 1 1940
Food	$ 9 19
Clothing	3 02
Furnishings, etc.	33
Total	$12 54

This indicates an increase of 54 cents or 4·5 per cent over the base date and being less than 5 per cent no cost of living bonus will be payable during the period September 1 to December 31, 1940.

The texts of the first and second reports follow:—

First Report of Commission

520 Lougheed Building,
Calgary, Alberta,
August 22, 1940.

J. McGregor Stewart, Esq.,
Coal Administrator,
The Wartime Prices and Trade Board,
Ottawa, Canada.

Dear Sir:

1. Acting under the authority and instructions contained in Order in Council P.C. 1802, dated May 4, 1940, and a Commission issued to the undersigned on May 4, 1940, under the Inquiries Act, Revised Statutes of Canada, 1927, Chapter 99, empowering them, from time to time, to inquire into and determine the amounts, if any, to be paid by way of a cost-of-living bonus to the employees of the Coal Mining Operators of the Provinces of Alberta and British Columbia, and requiring the said Commission to transmit its reports to the Coal Administrator, we beg to submit herewith for your consideration a report upon the changes in the cost of living in the coal-mining areas of Alberta and British Columbia as between March 31, 1938, and March 31, 1940.

2. The Commission prepared what it considers a fair budget covering the necessaries of life for a family of five in the coal-mining areas of Alberta and British Columbia, excluding from this budget, however, rent, fuel, light and water, as set forth in the Supplementary Agreements (1940) between the United Mine Workers of America, District 18, and the Coal Operators of Alberta and British Columbia.

3. The Commission found that, inasmuch as the information on retail prices available at the Dominion Bureau of Statistics did not cover all of the coal-mining communities of Alberta and British Columbia, it would be required to collect such information directly from retail merchants in such mining communities. Accordingly, the Commission requested Local Union Secretaries of the United Mine Workers of America, and the Coal Operators of District 18, to furnish lists of all retail merchants and milk distributors serving their communities. The lists submitted by Local Union Secretaries and Coal Operators were supplemented by a list of retail merchants recently compiled by the Weights and Measures Branch of the Dominion Government and supplied to the Commission by the Dominion Bureau of Statistics.

4. The Commission was of the opinion that more information on retail prices could be secured in less time and with less expense by preparing forms on which the retail merchant could fill in his selling prices at the required dates, swearing to the accuracy of such prices by completion of a Statutory Declaration covering them, than by holding sittings of the Commission at various places for the purpose of obtaining evidence similar in kind.

5. It was apparent from the outset that the Commission would experience formidable difficulties in securing accurate information on retail prices as at March 31, 1938, required for the establishment of a base whereby subsequent increases or decreases in the cost of living might be measured. A large number of retail merchants do not keep any records of selling prices and many who do might well be expected to shrink from the labour involved in unearthing the selling prices of a wide range of commodities from records more than two years old. In view of this situation the Commission decided that a personal visit to the mining communities of Alberta and British Columbia, for the purpose of enlisting the full co-operation of such retail merchants as might have price records, was vital to the success of the scheme. Beginning June 10 the Commission succeeded in interviewing 212 of the 220 retail merchants (or

their managers or bookkeepers) on its mailing list in the following 43 cities, towns, villages and hamlets:—

(1) Crow's Nest Pass, C.P.R.:
Bellevue; Blairmore; Hillcrest; Coleman; Michel; Natal; Fernie;
(2) Drumheller Valley and Carbon:
Drumheller; East Coulee; Rosedale; Wayne; Willow Creek; Aerial; Midlandvale; Nacmine; Newcastle; Carbon;
(3) Coal Branch, C.N.R.:
Mountain Park; Luscar; Cadomin; Leyland; Mercoal; Coalspur; Robb; Foothills;
(4) Edmonton Field and Hinton:
Edmonton; Beverly; Clover Bar; Carbondale; Hinton;
(5) Lethbridge, C.P.R.:
Lethbridge; Shaughnessy;
(6) Brazeau Branch, C.N.R.:
Saunders; Alexo; Nordegg;
(7) Canmore-Calgary:
Calgary; Canmore;
(8) Vancouver Island:
Nanaimo; Ladysmith; South Wellington; Cumberland; Bevan; Union Bay.

The visits of the Commission to the coal-mining communities of Alberta and British Columbia, in addition to achieving their primary purpose, also provided the Commission with a valuable body of information on retail establishments and local conditions in every area.

6. The Commission succeeded in making arrangements with the Dominion Bureau of Statistics to compile, from copies of the price reports of retail merchants supplied by the Commission, the average price of each commodity appearing in the Commission's family budget. Before sending copies of the reports to Ottawa, the Commission carefully checked the price report of each merchant and in a majority of cases found it necessary to request further information or explanation. Copies of the reports made by 156 retail merchants and 33 milk distributors, were forwarded to the Dominion Bureau of Statistics to be used in determining the average prices of the necessaries of life in District 18 as at March 31, 1938, and March 31, 1940. The reports of 58 merchants and 2 milk distributors were discarded for one or more of the following reasons:

(i) unreliable nature of the reports;
(ii) doubtful nature of the business;
(iii) non-patronage by miners;
(iv) small size of the establishment;
(v) narrow range of stock carried;

The names of 6 merchants whose price reports arrived too late for consideration in connection with price averages for March 31, 1938, and March 31, 1940, were retained on the mailing list of the Commission, a final decision on their reports being postponed until the reports to be used in the revision of September 1, 1940, were considered. An analysis by areas of price reports used in determining price averages for March 31, 1938, and March 31, 1940, follows:

Area	Number of Price Quotations March 31, 1938 Meat	Groceries	Clothing	March 31, 1940 Meat	Groceries	Clothing
(1) Crow's Nest Pass, C.P.R.	14	19	15	19	25	16
(2) Drumheller Valley & Carbon	14	22	13	16	25	14
(3) Coal Branch, C.N.R.	3	5	4	5	6	5
(4) Edmonton Field and Hinton	8	11	7	12	14	8
(5) Lethbridge, C.P.R.	5	5	7	6	7	7
(6) Brazeau Branch, C.N.R.	3	3	2	3	3	3
(7) Calgary-Canmore	5	6	9	8	7	9
(8) Vancouver Island	6	15	10	11	18	12
Total	58	86	67	80	105	74

7. The Commission decided that in compiling and determining price averages, the membership of the United Mine Workers of America, in the various coal mining areas of District 18, should be used to provide a general basis for weighting. In accordance with this principle the following weights were given to the various coal-mining areas:

Area	Per Cent
(1) Crow's Nest Pass, C.P.R.	24
(2) Drumheller Valley & Carbon	24
(3) Coal Branch, C.N.R.	12
(4) Edmonton Field and Hinton	6
(5) Lethbridge, C.P.R.	6
(6) Brazeau Branch, C.N.R.	4
(7) Calgary-Canmore	4
(8) Vancouver Island	20
Total	100

8. In calculating changes in the cost of living between March 31, 1938, and March 31, 1940, increases resulting from war taxation, as determined by the Coal Administrator, have been deducted from the budget totals for March 31, 1940. A comparative statement of the cost per week of food, clothing, furnishings, etc., with such war taxation deducted, follows:

Classification	Mar. 31, 1938	Mar. 31, 1940
Food	$ 8.9609	$ 9.1997
Clothing	2.745	2.945
Furnishings, etc.	.2958	.32
Total	$12.0017	$12.4647

The Commission's budget showing commodities, allowances, unit prices, and costs as at March 31, 1938, and March 31, 1940, is attached to this report.

9. The total weekly cost of the Commission's budget of the necessaries of life, has been found to be $12 as at March 31, 1938, and $12.46 as at March 31, 1940, indicating an increase in the cost of the necessaries of life amounting to 46 cents, or 3·9 per cent over the period. As the Supplementary Agreements (1940) between the United Mine Workers of America, District 18, and the Coal Operators of Alberta and British Columbia, provide "that bonuses should be paid only if the increase in the cost of living since the date of the previous change has reached five per cent or more," the Commission finds that no cost-of-living bonus is payable for the period April 1, 1940, to August 31, 1940.

All of which is respectfully submitted,

G. E. Britnell,
Chairman.
Garfield Graham,
Commissioner.
C. Stubbs,
Commissioner.

(Note.—With the first report there was an appendix which detailed the weekly cost of a family budget in District 18. Since there was a more complete comparative statement with the second report, this latter appendix is published in full on pages 922-925).

time to time, to inquire into and determine the amounts, if any, to be paid by way of a cost-of-living bonus to the employees of the Coal Mining Operators of the Provinces of Alberta and British Columbia, and requiring the said Commission to transmit its reports to the Coal Administrator, we beg to submit herewith for your consideration a report upon the changes in the cost of living in the coal-mining areas of Alberta and British Columbia over the period March 31, 1938 to August 1, 1940.

2. Reports on retail prices as at August 1, 1940, supported in each case by a Statutory Declaration, were secured from every retail merchant and every milk distributor on the mailing list of the Commission. Copies of the price reports made by 159 retail merchants and 29 milk distributors were forwarded to the Dominion Bureau of Statistics to be used in determining the average prices of the necessaries of life as at August 1, 1940. The August reports of 3 merchants whose former price reports arrived too late for consideration in determining price averages for March 31, 1938, and March 31, 1940, were discarded as unreliable. The reports of 2 milk distributors were discarded because they were duplications and 2 other milk distributors had temporarily suspended operations. An analysis by areas of price reports used in determining price averages for March 31, 1938; March 31, 1940; and August 1, 1940, follows:

	Number of Price Quotations								
	March 31, 1938			March 31, 1940			August 1, 1940		
Area	Meat	Groceries	Clothing	Meat	Groceries	Clothing	Meat	Groceries	Clothing

Second Report of Commission

520 Lougheed Building,
Calgary, Alberta,
August 30, 1940.

J. McGregor Stewart, Esq.,
Coal Administrator,
The Wartime Prices and Trade Board,
Ottawa, Canada.

Dear Sir:

1. Acting under the authority and instructions contained in Order in Council P.C. 1802, dated May 4, 1940, and a Commission issued to the undersigned on May 4, 1940, under the Inquiries Act, Revised Statutes of Canada, 1927, Chapter 99, empowering them, from

3. In calculating changes in the cost of living over the period March 31, 1938, to August 1, 1940, the following increases resulting from war taxation, as determined by the Coal Administrator, have been deducted from the average price quotations of the enumerated commodities as at the specified dates:

Commodity	Mar. 31, 1940 Per lb.	Aug. 1, 1940 Per lb.
Tea	5.40	7.40
Coffee	12.85	14.00
Canned fish	1.28	1.28
Smoked meats	1.745	1.745

No deductions for price increases resulting from the 10 per cent exchange tax imposed

as from June 25, 1940, have been made for any item (except coffee) appearing in the Commission's budget of the necessaries of life, since estimates of the burden of the exchange tax have not been available to the Commission.

4. A comparative statement of the costs per week of food, clothing, furnishings, etc., as at March 31, 1938; March 31, 1940; and August 1, 1940, with war taxation on tea, coffee, canned fish and smoked meats deducted, follows:

Classification	March 31, 1938	March 31, 1940	August 1, 1940
Food	$ 8.9609	$ 9.1997	$ 9.1899
Clothing	2.745	2.945	3.0204
Furnishings, etc.	.2958	.32	.3269
Total	$12.0017	$12.4647	$12.5372

The Commission's budget showing commodities, allowances, unit prices, and costs as at March 31, 1938, March 31, 1940, and August 1, 1940, is attached to this report.

5. The total weekly cost of the Commission's budget of the necessaries of life, which was $12 at March 31, 1938, has been found to be $12.54 as at August 1, 1940, indicating an increase in the cost of the necessaries of life amounting to 54 cents, or 4·5 per cent over the period. As the Supplementary Agreements (1940) betwen the United Mine Workers of America, District 18, and the Coal Operators of Alberta and British Columbia, provide "that bonuses should be paid only if the increase in the cost of living since the date of the previous change has reached five per cent or more," the Commission finds that no cost-of-living bonus is payable for the period September 1, 1940, to December 31, 1940.

All of which is respectfully sumbitted,

G. E. Britnell,
Chairman.

Garfield Graham,
Commissioner.

C. Stubbs,
Commissioner.

Appendix Re Family Budget, District 18

Comparative Statement of the weekly cost of a Family Budget of Staple Foods on the basis of average prices obtained from retail merchants serving coal mining communities in District Eighteen as at March 31, 1938; March 31, 1940; and August 1, 1940.

Commodity	Budget Allowance Per Week		Average Price (Per Unit) Mar. 31, 1938	Mar. 31, 1940	Aug. 1, 1940	Comparative Cost (Miner's Budget) Mar. 31, 1838	Mar. 31, 1940	Aug. 1, 1940

Comparative Statement of the weekly cost of a Family Budget of Clothing on the basis of average prices obtained from retail merchants serving coal mining communities in District Eighteen as at March 31, 1938; March 31, 1940; and August 1, 1940.

Summary of Annual Clothing Budget

Men's	$ 51.25	$ 56.23	$ 57.99
Women's	41.08	43.71	44.309
Boys'	20.10	21.60	22.531
Girls'	17.36	18.38	18.905
Infants'	8.03	8.30	8.30
Piece goods	4.63	4.92	5.025
Total	$142.72	$153.14	$157.06

EXPLANATORY NOTES TO MINER'S FAMILY BUDGET, DISTRICT 18

1. Food

General Note.—In framing the food budget substantial increases over Dominion Bureau of Statistics survey figures (after these had been adjusted for a family of five) were made in the budgetary allowances of the heavier foods: allowances of Meat, Eggs, Bread and Potatoes were increased a full 10 per cent in each case and allowances of Milk, Butter and Sugar, by 5 per cent. As compensation for the exclusion of any wide range of fresh fruit and vegetables from the budget (owing to the difficulty of securing adequate price data and the seasonal fluctuations in both consumption and prices of such fresh fruits and vegetables), the allowances of Dried Fruits, Oranges and Onions were increased 10 per cent and the allowances of Canned Vegetables, Canned Fruits, Jams, etc., were increased 25 per cent.

1. Milk allowance to include cream.
2. Butter, basis creamery, but allowance to include dairy and peanut.
3. Cheese, basis Canadian, but allowance to include all cheese.
4. Eggs, basis fresh, but allowance to include packed, etc.
5. Meat allowance to include poultry.
6. Halibut allowance to include all fresh and frozen fish.
7. Finnan Haddie allowance to include all cured fish.
8. Canned Salmon allowance to include all canned fish.
9. Lard and Shortening allowances to include all lard substitutes except butter.
10. Macaroni allowance to include tapioca.
11. Corn Flakes allowance to include all breakfast cereals, except Rolled Oats.
12. Sugar, granualated, allowance to include yellow sugar.
13. Tea and Coffee allowances jointly to include cocoa.
14. Prune allowance to include all other dried fruits except raisins and currants.
15. Orange allowance to include lemons.
16. Jam, strawberry, allowance to include all jams.
17. Corn Syrup allowance to include all syrups.
18. Canned Peaches allowance to include all canned fruits.

2. Clothing

General Note.—In framing the clothing budget an attempt has been made to compensate for the exclusion of a number of smaller articles upon which it would be difficult to secure adequate price data by slightly increased allowances for the wider range of articles upon which adequate price data is obtainable. Cotton, Celanese, Rayon and Woollen piece goods materials are included to lend some flexibility to and also to round out women's and children's allowances.

1. Men's Overcoat, winter, allowance to include light overcoat where worn.
2. Men's Shoes, street, allowance to include light shoes and slippers.
3. Men's Boots, work, allowance to include gum rubber boots where worn.
4. Men's Glove allowances to include work, dress, wool and cotton gloves.
5. Women's Dress, street, allowance to include evening or other dresses.
6. Women's Shoe and Oxford allowances to include light shoes and slippers.
7. Boy's Windbreaker allowance to include overcoat where worn.
8. Boy's Shoe allowance to include all kinds of shoes worn.
9. Girl's Shoe allowance to include all kinds of shoes worn.
10. Infant's Dress and Playsuit allowances to include linen and wool suits, rompers, etc.
11. Infant's Shoe allowance to include all types worn.
12. Cotton thread allowance to include linen, wool, silk floss for mending, needls, pins, etc.

3. Furnishings, Etc.

1. Sheet and blanket allowances to include pillows, pillowslips, comforters, etc.
2. Soap allowance to include all soap required for laundry and other purposes, soap flakes, laundry starch, lye, bluing materials, etc.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

New Minimum Wage Regulations in Quebec, and New Brunswick—Working Conditions on Defence Projects in Quebec—Saskatchewan Factories Act Extended—Regulation of Electrical Workers in Quebec and Prince Edward Island.

NEW minimum wage regulations include one in Quebec for the glass industry and one in both Quebec and New Brunswick for certain lumber workers. A Quebec order in council deals with hours of labour on defence projects and a resolution of the Minimum Wage Commission suspends in war industries the provision for a weekly rest.

In Saskatchewan the application of the Factories Act has been extended to new classes of establishments.

In Ontario several occupational diseases have been added to those for which compensation is paid under the Workmen's Compensation Act.

In Quebec the rules governing electrical workers were revised and Prince Edward Island laid down regulations under the new Electrical Inspection Act.

Alberta Workmen's Compensation Act

The regulation concerning the super-assessment levied on an employer with a high accident rate was clarified by an amendment gazetted on July 31. The super-assessment, payable when the amount chargeable to the employer's account in the Accident Fund in any calendar year exceeds the ordinary assessment by more than five per cent, may not be more than either one-third of the ordinary assessment for that year or 10 per cent of the accumulated excess of disbursements over assessment in the employer's account. The regulation formerly stated that the alternative 10 per cent was "of the accumulated excess of disbursements over receipts." (LABOUR GAZETTE, 1939, p. 57.)

New Brunswick Labour and Industrial Relations Act, 1938

Under this statute, which incorporates the former Fair Wage Act, the Fair Wage Board has power to regulate wages and hours. Most of the orders of the Board have applied only to one or two plants and have not been published.

Orders 16 and 17 issued in 1938 fixed a minimum wage of 45 cents an hour for workers engaged in loading pulpwood on vessels in certain counties of the province. Order 17A made on August 16, 1940, and retrospective to July 27, extends the application of the 45-cent minimum to persons employed in handling lumber including sawn lumber, pulpwood, pit-props and similar products on the dock, wharf or at the ship's side and within reach of the ship's tackle. The order applies to the counties of Kent and Westmorland.

Ontario Workmen's Compensation Act

By order in council of August 16 the following are declared to be industrial diseases for which compensation is to be paid: poisoning by nitro- and amido-derivatives of benzene, phenol and their homologues, (trinitrotoluene, dinitrophenol, anilin and others), or the sequelae; poisoning by chlorinated hydrocarbons (carbon tetrachloride, trichlorethylene, tetrachlorethane, trichlornaphthalene and others) or the sequelae; inflammation, ulceration or malignant disease of the skin or other tissues due to exposure to X-rays, radium, or other radioactive substances; cadmium poisoning.

Prince Edward Island Electrical Inspection Act, 1940

Regulations approved under this Act on August 1, 1940, require all electrical installations on the Island to be in accordance with the latest edition of the Canadian Electrical Code, Part I.

The regulations require contractors, journeymen and apprentices to obtain licences from an inspector appointed under the Act before engaging in any work. Any person employed in electrical work for at least four years under competent supervision may apply for a journeyman's licence but the licence is to be granted only after an examination of the applicant's qualifications to install, repair and renew electrical installations and as to his knowledge of the provisions of the Canadian Electrical Code. An apprentice's licence may be granted to any person wishing to engage in electrical work under the supervision of a licensed journeyman, if the inspector is satisfied that he is reasonably competent for the work and if the applicant is recommended by a licensed contractor or journeyman. The inspector has power to suspend or cancel the licence of any contractor, journeyman or apprentice. All licences must be renewed annually.

Provision is made for a Special Electrician's Licence for electricians engaged as motion

picture operators, engineers in railway, telephone or telegraph construction and maintenance, power plant operators and mechanics, radio transmitting station operators and mechanics, resident engineers or engineers in charge of such public institutions as colleges, hospitals and hotels and operators of cranes, winches and other machinery or equipment operated by electricity which the inspector may consider to be dangerous to the operator, workman or the public.

Quebec Electricians and Electrical Installations Act

Effective July 1 all the regulations under this Act were revised. Some sections have been simplified but the new regulations are generally similar to those described in the Labour Gazette, 1939, p. 909, the more important amendments being noted below.

There is no longer provision for a board of six advisers which was set up in addition to the board of examiners to consider problems and complaints.

The classes of licence required for electrical workers are set out in the Labour Gazette, 1939, p. 909. Except for licence "D" issued to operators of cinematographic equipment of 16 mm. used for religious, vocational or educational purposes for which a certificate of competency only is required, the "C" "D" and "E" licences are issued on examination, the minimum required for passing being 60 per cent. If a journeyman electrician applies for an "A", "A-2", "B" or "B-2" licence he must undergo another examination and obtain 80 per cent for the "A" and "B" licence for contractors and companies, respectively, or 70 per cent for the "A-2" and "B-2" if he has not obtained that when the original "C" licence was issued.

The Act requires four years' apprenticeship before a man can qualify as a journeyman electrician and the regulations stipulate, as before, that a motion picture operator's licence may only be granted after one year's apprenticeship. An amendment in these regulations which was gazetted on August 3 stipulates that within three months from the expiration of the four years' apprenticeship, an apprentice must appear before a board of examiners. For failure to comply with this provision, the apprentice is liable to have the book containing the record of his service cancelled, and the apprentice and the employer are each liable for the penalty provided in the Act if the apprentice continues at work.

Quebec Fair Wage Act

Order 38 gazetted on August 10 provides that all orders of the Fair Wage Board in force on June 22, 1940, are to be considered as orders of the Minimum Wage Commission which has succeeded the Board.

Order 4.—A rule of interpretation gazetted on July 27 provides that when employees are allowed a rest pause with complete freedom during regular working hours and a record is made of the time off, payment need not be made for these periods.

A resolution of the Minimum Wage Commission gazetted on August 17 suspended for three months from June 1 for establishments engaged in war contracts the provision for a weekly rest of 24 hours which is allowed workers under Order 4 with an alternative arrangement in some cases. A further suspension until January 1, 1941, was ordered by a resolution gazetted on September 7.

A work-week of 54 hours is declared for persons, excluding mechanics, employed in automobile service stations. Thereafter, overtime rates are payable.

A rule of interpretation is repealed which prohibited employers changing, without a permit, the inscription numbers of their employees in the registers they are required to keep of persons employed by them, their hours, wages, etc. The rule also required employers, if requested, to furnish the Fair Wage Board with the names and addresses of contractors giving out work to be done at home.

The resolution first adopted on January 31, 1940, permitting work up to 55 hours in a week without overtime pay up to August 1, 1940, in the meat packing, rubber, biscuit, chocolate, flour-milling, corset and concrete pipe as well as narrow fabric industries has been renewed to apply until January 1, 1941, or until decided otherwise by the Commission. This action was taken in order to allow time for the drawing up of special orders for these industries.

Assessment on Employers.—Employees of stock-brokers known as "customers' men" are to be considered, according to a resolution of July 27, as having controllable hours and their wages up to $200 a month each are subject to the levy on payrolls to meet the cost of administering the Act.

Rules of interpretation gazetted on August 10 provide that the levy of one-third of one per cent of wages is payable by school corporations only from July 1, 1940. In the case of drivers, if the employee furnishes his own conveyance the levy is due on only 30 per cent of the amount paid to cover wages and hiring of conveyance in the case of motor vehicles and 50 per cent in the case of a carter.

Glass Industry.—Order 37 regulates conditions in establishments manufacturing glass

containers. It came into force when it was gazetted on July 13 except with respect to the Dominion Glass Company to which its application is delayed for 30 days.

For most classes of workers the minimum rates apply to an eight-hour day and 48-hour week and overtime beyond these hours is to be paid at one and one-third times the rate actually paid for regular hours whether that be the minimum or a higher rate.

To calculate the overtime rate for employees paid by the piece or bonus the total amount earned is divided by the number of hours worked including overtime, the result being then increased by one-third. The special overtime rate is not payable for extra work done by shift workers at the request of or made necessary by the negligence of other shift workers working on the same shift.

The minimum rates for production workers range from 30 cents an hour for general employees in the blowing room under 21 to 65 cents for blowing machine operators. For "factory service employees" the lowest hourly rate is 35 cents for employees not otherwise classified. Clay moulders receive 60 cents an hour. These rates are based on an eight-hour day and a 48-hour week. In the mould and machine shops 65 cents an hour must be paid for lathe and bench work, 50 cents for other machine work for an 8½-hour day or a 48-hour week. The rate for operations not otherwise classified is 40 cents and the hours are eight and 48. In warehouse and shipping departments the minimum for women is 25 cents an hour for an eight-hour day and a 48-hour week at work not otherwise classified. The rates rise to 35 cents for checking and 40 cents for crate making and saw operating.

For office work, the rate for beginners, other than office and messenger boys who are paid a minimum of $1.25 a day or $7 a week, is $1.50 a day or $8.25 a week during the first year and rises to $2.25 a day and $12.25 a week for the second year, at the end of which the ordinary minimum of $2.75 a day or $15 a week must be paid. The daily rates are payable even if less than the regular number of hours are worked in a day. The minimum hourly rate for overtime to office employees is to be determined by dividing the weekly rate by 48.

Salesmen must be paid at least $4 a day or $20 a week. Persons in positions of authority or of a supervisory nature, when engaged at a fixed rate, must be paid at least $30 a week. The monthly minimum for cooks is $60. For none of these occupations does the rate apply to a stated number of hours.

Except for those of the first class who must be paid $200 a month, stationary engineers are to be paid at a minimum hourly rate of 60 cents, 50 cents or 45 cents for classes 2, 3 and 4, respectively for a nine-hour day and 54-hour week. For firemen who work the same hours the rate is 35 cents. Tank teasers and those operating gas producers have a minimum hourly rate of 50 cents for an eight-hour day and 48-hour week.

Watchmen whose regular day is 12 hours and week is 60 must be paid 35 cents an hour. The minimum daily rate for charwomen is $1.25.

The learner's minimum to start with is 20 cents an hour, at the end of the first year, 30 cents, after two years, 40 cents, the full minimum of 50 cents being payable at the end of three years.

Drivers must be paid at least 40 cents an hour for a 48-hour week, their helpers 30 cents. Auto truck repairers are entitled to 50 cents an hour.

Where on February 1, 1940, higher hourly rates were paid than those provided in the order they may not be reduced without permission from the Board.

The general provisions require the employer to keep records of the names and addresses of employees, the type of work in which each is engaged, the regular daily and weekly hours where the order fixes rates with reference to hours, overtime rates and total wages paid. When employees are paid in cash, on the pay envelope is to be written the name of the employee, the number of regular and overtime hours worked with the rate for each and the total amount paid. The envelope is to be initialled by the person who makes up the pay. The Minimum Wage Board may investigate complaints submitted to it in writing and take measures to remedy grievances.

Extension of Certain Orders.—Three orders in effect in Montreal and district have been renewed. The order governing employees in taverns (LABOUR GAZETTE, 1939, p. 157) is to be continued for a further 12 months from July 21; maintenance men in public buildings are to be governed by the present order (LABOUR GAZETTE, 1938, p. 1099) until August 31, 1941, and the order dealing with stationary enginemen (LABOUR GAZETTE, 1938, p. 624) is renewed for six months from July 15.

Quebec Forest Operations Act

In the LABOUR GAZETTE for July was summarized an Order in Council fixing wages and other working conditions for men employed in cutting spruce and balsam, the woods principally used in the manufacture of cellulose pastes and paper. Another order gazetted on August 24 fixes conditions for men employed in the cutting of firewood and in the

production of saw-logs of pine, cedar, hardwood and also of spruce and balsam where the latter are not used for the manufacture of cellulose paste.

The latter order applies for the season 1940-41 and the minimum wage fixed for the highest paid class of workers shows an increase of $10 a month over the minimum fixed for the season 1939-40 (Labour Gazette, 1939, p. 1233).

Except on piece-work or in the cutting of firewood, workmen employed in felling, peeling, squaring, piling, hauling, loading and unloading of wood are to be paid, in addition to board and lodging, minimum rates varying from $35 to $50 for a calendar month of 26 days. Not more than 20 per cent of the workmen may be paid at the $35 rate which applies to inexperienced workers, those of 60 years of age or workmen handicapped from some other cause. Every operator or contractor must employ sufficient of these classes to make up 10 per cent of his working force. A maximum of 40 per cent of the workers have a minimum of $40 a month, 20 per cent a minimum of $45 a month, 10 per cent $50 a month and another 10 per cent $55 a month.

Piece-workers are entitled to a minimum net wage of $35 or $58 according to their average production per day. The $35 rate applies to 120 cubic feet of logs from 6 to 10 feet long up to 180 cubic feet of logs 16 feet long. The $58 rate applies to 200 cubic feet of logs from 6 to 10 feet up to 280 cubic feet of logs 16 feet. For production of logs more than 6 feet long in excess of the fixed daily averages at least one cent per cubic foot is to be paid. These rates cover the piling of the logs in the cutting areas and the making of roads out to the main hauling road. In no case may the men be permitted to carry logs themselves. For piece-work in preparing firewood or charcoal wood and for piling it in the cutting areas a minimum of $2 per cord for 4 foot wood must be paid, $1.50 for 26-inch wood, $1.20 for 24-inch wood and 90c. for 18-inch wood. In every lumber camp where work is done by the piece not more than 20 per cent of the workers employed in woods operations may be paid by the month and 15 per cent of the piece-workers to begin with must be learners. A "learner" is defined as any worker who produces 1·3 or less cords of firewood in a day or cuts saw logs up to the quantity to which the $35 monthly rate applies.

In the case of small lumber camps where the annual cut does not exceed 200,000 cubic feet or 2,400 cords of firewood, the Minister of Lands and Forests may require the proportion of learners and handicapped workers to be increased up to 30 per cent of the number of workmen. In such small camps the Minister is empowered to reduce the stumpage dues to an amount considered adequate to ensure the payment of the wages fixed to workmen.

Artisans such as carpenters, joiners, blacksmiths, saw-filers, dynamiters and mechanics who are employed as such throughout their engagement are entitled to a minimum of $60 a month. Lumber workers who for 16 days or less are employed at any of these trades may not claim more than $52 and handymen and guards have a minimum of $55 and $52 respectively. Minimum rates for stablemen are $55, for truck and tractor drivers, $60, and for teamsters $55. The latter are to be given an extra allowance of $17 a month for horse and harness and $20 when they also furnish vehicle. Ordinary labour employed on the construction of roads or of camps or in clearing brush must be paid at least $48 per month of 26 working days.

Monthly contracts and piece-work contracts may not be interchanged except with the consent of both the employer and the employee.

Other provisions of the order relating to board and lodging, prohibition of deduction from wages for medical service and the prices of goods sold to workers are similar to those in the order for workers on spruce and balsam. As in that order, too, the minimum rates for work on saw logs apply to a 60-hour week except in the case of cooks, chore boys, stablemen, watchmen, portageurs and teamsters. For work in excess of 60 hours time and one-quarter must be paid and for unavoidable work on Sunday time and a half.

Workers must be provided with a copy of their contracts of employment and a copy of the order governing wages must be posted up in each camp.

Quebec Limitation of Hours Act

By an order in council gazetted August 31 and effective from that date earlier orders in council of June 14, 1933 (Labour Gazette, 1933, p. 703) and June 3, 1936, (Labour Gazette, 1936, p. 609) and their amendments are declared not to apply until further notice to any construction works designated as defence projects which are undertaken by the Dominion Government directly or by contract. The effect of this order in council is to remove the maximum of eight hours a day and 48 a week for the building trades in the Quebec and Eastern Townships Division of the province and in the Montreal division the maximum eight-hour day for skilled workers and nine-hour day for unskilled in so far as defence projects are concerned.

Saskatchewan Coal Mining Industry Act

The regulations approved on August 14, 1935, and amended from time to time have been in part consolidated and revised. They become effective on September 1. The consolidation covers all the existing orders made under the statute, except the regulations of April 16 and May 22, 1940, establishing minimum wages for coal miners (LABOUR GAZETTE, June, 1940, p. 563). Only slight changes have been made in the regulations of 1935 as amended.

Saskatchewan Factories Act

The following were added to the schedule of establishments under this Act by a proclamation gazetted on July 31: bottle and can washing factories, cheese factories, creameries, junk yards or premises, salvage works, cereal factories, flour and feed mills, soft drink factories, woodsawing and chopping works, hide and fur shops.

LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1939

Annual Report of Provincial Department of Labour

THE British Columbia Department of Labour, in its twenty-second annual report covering the administrative activities of the department during 1939, gives further evidence of the gradual climb back to more prosperous conditions prevailing in the Province at the peak of its industrial expansion. The report also states that the slight decrease recorded in the report for the year 1938 has been overcome and the industrial pay-rolls for the Province during 1939 were at the highest point since 1930.

While the pay-rolls in some sections of industry have receded, the pay-rolls in the majority of the industrial groups have expanded, and the aggregate shows a general increase of more than $7,500,000 over the figure for 1938. The numbers afforded employment during the year reviewed by the report remain about the same as in 1938, while the average weekly wage of industrial workers has increased to a point approximating that of 1929.

Industrial Statistics, Pay-rolls, Etc.—The total number of firms reporting in time for tabulation in the tables of the report was 4,829, as compared with 4,895 in 1938, a decrease of 66.

For the 4,829 firms reporting, a summary of the pay-rolls reveals a total of $126,311,023. As this figure covers only the industrial pay-rolls, it should not, the report declares, be considered as the total pay-roll of the Province, and must be further augmented by the following, yielding an accumulative total of $165,683,460, an increase of $7,657,085 over 1938: Pay-roll of 4,829 firms making returns to Department of Labour, $126,311,023; returns received too late to be included in above summary, $518,700; employees in occupations included in Department's inquiry, not sending in returns (estimated pay-roll), $1,350,000; transcontinental railways (ascertained pay-roll), $12,503,737; pay-rolls of additional services not included in the industrial survey—viz., Governmental workers, wholesale and retail firms, delivery, auto transportation, ocean services, miscellaneous—estimated pay-roll, $25,000,000; total, 165,683,460.

Concurrent with the increase in the total pay-roll the percentage of the total payable to wage-earners increased from 77·10 per cent in 1938 to 77·32 in 1939. Officers, superintendents and managers received 10·82 per cent of the total pay-roll while clerks, stenographers and salesmen received 11·86 of the total pay-roll.

In an analysis of the pay-roll statistics for 1939, nineteen of the twenty-five industrial classifications indicate increases and six show decreases. Of those registering increases, the lumber industries headed the list with an increase of $2,262,230 in total pay-roll followed by pulp and paper with $611,417, and public utilities with $466,183; coal-mining increased by $348,178; wood (N.E.S.) with an addition of $282,885; ship-building up $273,377; printing and publishing showed an additional $251,661; food products up $227,343; Coast shipping, $210,155; miscellaneous trades, $184,889; metal trades, $65,644; house-furnishings, $61,487; garment-making, $47,041; explosives and chemicals, $41,076; laundries, cleaning and dyeing, $14,365; paint-manufacture, $11,668; leather and fur goods, $6,630; jewellery-manufacture, $3,759; cigar and tobacco manufacturing, $2,069.

The decreases include the following, headed by contracting with a decrease of $768,172; metal-mining with a loss of $396,485; smelting,

down $309,813; oil-refining, $44,832; breweries, $38,849; builders' materials, $980.

Weekly Wage Rates.—The figures in the accompanying table were taken from the report and show the average weekly wage in 1932, 1938 and 1939 by industrial classifications.

AVERAGE FULL WEEK'S WAGES IN EACH INDUSTRY (ADULT MALES ONLY)

Industry	1932	1938	1939
	$ cts.	$ cts.	$ cts.
Breweries	25 65	27 42	27 98
Builders' materials	21 95	22 82	23 23
Cigar and tobacco manufacturing	14 28	13 00	19 75
Coal-mining	28 04	28 20	29 39
Coast shipping	26 50	32 93	29 35
Contracting	24 78	25 81	26 12
Explosives and chemicals	23 34	24 20	25 75
Food products, manufacture of	21 88	23 70	23 23
Garment-making	24 07	23 15	24 25
House-furnishing	20 05	20 80	22 53
Jewellery, manufacture of	23 40	38 95	39 23
Laundries, cleaning and dyeing	23 26	23 33	23 19
Manufacturing leather and fur goods	21 62	22 23	21 19
Lumber industries	18 73	26 59	27 14
Metal trades	24 24	25 09	25 38
Metal-mining	25 50	30 48	30 86
Miscellaneous trades and industries	22 78	23 46	23 91
Oil-refining	29 34	28 68	28 97
Paint-manufacturing	25 00	22 78	22 69
Printing and publishing	37 05	34 19	34 34
Pulp and paper manufacturing	24 63	26 36	26 54
Ship-building	26 17	28 76	28 55
Smelting	22 98	24 80	25 57
Street railways, gas, water, power, telephones, etc.	28 89	27 78	28 63
Manufacturing of wood (n.e.s.)	20 61	22 68	23 22

It will be observed from the foregoing that the average weekly wage per adult employee increased by ·56 cents in breweries; ·41 cents in builders' materials; $6.75 in cigar and tobacco manufacturing; $1.19 in coal mining; ·31 cents in contracting; $1.55 in explosives and chemicals; $1.10 in garment-making; $1.73 in house-furnishings; ·28 cents in jewellery manufacturing; ·55 cents in lumber industries; ·29 cents in metal trades; ·38 cents in metal-mining; ·45 cents in miscellaneous trades and industries; ·29 cents in oil-refining; ·15 cents in printing and publishing; ·18 cents in pulp and paper manufacturing; ·77 cents in smelting; ·85 cents in street-railways, gas, water, power, telephones, etc.; and ·54 cents in manufacturing of wood (n.e.s.).

Of the six classifications reporting, the largest decrease was that of $3.58 in coast shipping, $1.04 in manufacturing leather and fur goods; ·47 cents in the manufacturing of food products; ·14 cents in laundries, cleaning and dyeing; ·21 cents in shipbuilding and ·09 cents in paint manufacturing.

Statistics indicating the number of wage-earners in each wage classification are given in the following table:

CLASSIFIED WEEKLY WAGE-RATES (WAGE-EARNERS ONLY)

For week of Employment of Greatest Number	Males		Females		Apprentices
	21 Yrs. and over	Under 21 Yrs.	18 Yrs. and over	Under 18 Yrs.	
Under $6	254	116	260	91	74
$6.00 to $6.99	82	82	109	66	47
7.00 to 7.99	114	115	162	44	71
8.00 to 8.99	179	174	206	82	81

50.00 and over	1,705	.....	1	.....	.....
Totals	95,505	3,823	11,967	774	1,032

Apprenticeship.—The report of the Director of Apprenticeship shows that 908 apprenticeship contracts were in force as at December 31, 1939, and a total of 211 apprenticeships have now been completed since the Act came into force.

The Director's report states that "in connection with the war, His Majesty's armed forces and wartime industries have made a distinct demand for young men who have completed their apprenticeship terms; a de-31, 1939, and a total of 211 apprenticeships regulations until 1936, we have been unable to meet."

Employment Service.—Dealing with the activities of the Employment Service, the General Superintendent in his report records a further increase in applications and reapplications there being 345,369 in 1939 compared with 308,347 in 1938 and 198,775 in 1937. Employers' orders dropped to 46,195 as against 48,511 in the previous year. Placements also declined again from 48,441 in 1938 to 46,107 in 1939. There were no transfers made by the Employment Service outside of the province and 153 were made within the province.

The Superintendent's report also refers to the work of the Handicap Section and the Women's Section of the Employment Service, the importation of labour, youth training pro-

gram and the "work test" scheme in Vancouver.

Unemployment Relief.—A substantial improvement in the relief situation for the calendar year 1939 is reported by the Administrator of Unemployment Relief for the Province.

The largest number of employables and dependents receiving material aid during 1939 was in February when 69,560 received aid compared with the peak month of March, 1938, when assistance was granted to 70,799. The all-time peak was in March, 1933, when 128,858 were assisted. The lowest number assisted in any one month in 1939 was 36,603 in October, as compared with the low month of September, 1938 at 51,677. These figures would indicate that there were 15,000 more individuals on a self-supporting basis than in the previous year.

Trade Schools Regulation Act.—Pointing out that the Trade Schools Regulation Act has now been in force for three years, the report states that during the intervening period since the inception of the Act practically all of the abuses hitherto existing in the sale of trade education have been eliminated.

The report states that tuition in a large number of trades may now be purchased without fear of exploitation and at reasonable rates, and cautions prospective purchasers of tuition to give careful thought to the type of school or course best suited to their own needs, to make sure that the school is registered under the provisions of the Act, and to make themselvs conversant with the regulations under which tuition can be sold before enrolling or signing any form of contract.

The Trade Schools Regulation Act provides for the compulsory registration of any school or place, or any course of study carried on by correspondence, teaching or purporting to teach the skill and knowledge requisite for or intended for use in any industrial or commercial occupation, calling or vocation.

Factory Inspection.—During 1939, a total of 2,140 inspections and reinspections of factories was made by the Factories Inspection Branch. The report of this Branch also contains a general review of measures taken by industry in the Province towards the prevention of industrial accidents, improvement of employees' welfare, inspection of elevators, holiday and overtime permits, and industrial "home-work."

The report refers to four prosecutions made under the Factories Act, convictions being registered in all cases.

Labour Disputes and Conciliation.—The second annual report of the Industrial Conciliation and Arbitration Branch states that there were four industrial disputes in British Columbia during 1939, the lowest number ever recorded. The number of employees affected was also slightly lower than in 1938 and constitutes the least number of workers losing time in the past nine years. Eight hundred and twenty-two workers were involved in strikes and 13,803 man-days work was lost, an increase in time loss over the figure of 8,236 man-days in 1938. Eleven strikes were reported in 1938.

Report of Board of Industrial Relations

Contained in the main report is the sixth annual report of the Board of Industrial Relations in which details are given concerning the operation of the Hours of Work Act and the Male and Female Minimum Wage Acts.

Male and Female Minimum Wage Acts.—During 1939 statistical forms were received from 4,702 employers of women and girls, 443 more employers than in 1938. The returns thus received covered some 27,489 women workers, an increase of 757 employees reported on the pay-rolls compared with 1938.

According to summary statistics given in the report, the average weekly wage for women, 18 years of age or over, declined from $15.74 to $15.58 while the average weekly wage of younger female employees decreased from $9.80 to $9.61 for the year reviewed. Average hours worked per week also declined from 42·42 hours in 1938 to 42·24 hours in 1939. Minimum wage orders under the Act permit of a 48-hour week.

Decreasing slightly from the 1938 high, the percentage of employees included in the returns who were receiving wages in excess of the legal minimum stood at 52·25 per cent for 1939, as against 53·41 per cent for the previous year. The group receiving the actual legal minimum likewise declined fractionally with a corresponding increase in the remaining percentage of those receiving less than the rates fixed for experienced employees. This group comprises those younger and less skilled girls for whom lower rates are fixed, and those who are working part time and are thus unable to earn a sum equal to the weekly rate set for full-time employees.

Inspections and Collections.—During the year under review, personal investigations by the Board's inspection staff reached a total of 14,592. A a result the sum of $10,350.19 was paid to 534 women and girl employees by 305 firms through adjustments in accordance with the Female Minimum Wage Act.

Under the Male Minimum Wage Act, 859 men and boys received adjustments on account

of arrears of wages amounting to $35,148.05 paid by 430 firms.

In addition to these amounts paid over to employees by way of adjustment, arrears of wages totalling $2,727.56 were ordered by the Courts following convictions of employers for violation of Orders.

Therefore a total sum of $48,225.80 was distributed to employees by way of arrears of wages due to them by their respective employers, tangible evidence of the protection afforded workers employed under the various Orders of the Board.

Under the Female Minimum Wage Act there were 43 prosecutions during 1939, 34 of which resulted in conviction, 7 were dismissed and 2 were withdrawn. Under the Male Minimum Wage Act there were 51 prosecutions 40 of which resulted in convictions, 5 being dismissed and 6 withdrawn.

Under the Hours of Work Act there were 118 prosecutions during 1939, 114 convictions being registered, 3 dismissed, and 1 withdrawn, There were 14 prosecutions laid under the terms of the Semi-Monthly Payment of Wages Act, 12 resulted in convictions, and 2 were dismissed. Under the Department of Labour Act there were 2 cases, one conviction being registered and one case being withdrawn. Violations of the Factories Act resulted in 4 prosecutions and 4 convictions.

PRODUCERS' AND CONSUMERS' CO-OPERATION IN CANADA IN 1939

Annual Report of National Executive of Co-operative Union of Canada

AS an indication of the current position and progress of producers' and consumers' co-operation in Canada, the LABOUR GAZETTE in recent years (LABOUR GAZETTE, September, 1939, page 912, December, 1938, page 1356, etc.) has reviewed the annual report of the National Executive of the Co-operative Union of Canada.

In accordance with its practice in recent years, the annual report of the National Executive contains a review of statistics of affiliated societies for 1939, reflecting the position and operations of retail co-operative societies, co-operative buying clubs, wholesale societies, and other organizations connected with the Co-operative Union, which responded to the Union's request for statistical data for the year 1939.

Retail Societies.—Forty-eight retail societies operating stores or warehouses reported statistics for 1939 compared with 47 for the previous year and 45 for 1937.

The aggregate sales for 1939 of 47 of the retail societies as reported to the Co-operative Union (one society operating a store jointly with another, and sales in one case only being reported) amounted to $5,556,156.03. Twenty-eight societies and one buying club reported an increase in sales during 1939 amounting to $453,381.18 compared with thirty and one buying club and a total sales increase of $699,577.72 in 1938. Sixteen retail societies compared with ten for the previous year reported reduced sales of $136,934.04. There was consequently a net increase in sales of retail societies of $316,477.14. Sales of the two buying clubs amounted to $11,089.60 compared with $8,083.63 in 1938.

The forty-eight retail societies reported a combined membership of 20,019 or 2,591 more than was reported by retail societies for 1938. Share capital of the forty-eight retail societies amounted to $601,413.52, loan capital $259,721.91—the combined investment in share and loan capital being $861,135.43, a decrease of $25,535.01 compared with the figures for 1938. The net surplus of retail societies for 1939 was $257,236.55, a decrease of $7,131.38.

Purchase Dividends of Retail Societies.—The total amount of purchase dividends declared in 1939 by retail societies was $172,488.45 compared with $199,201.36 declared in 1938. The purchase dividends of the two buying clubs reporting totalled $627.35.

Dairy and Wholesale Societies.—Three dairy societies reported total sales amounting to $1,287,122.08 in 1939 compared with sales of $1,422,505.18 in 1938. Two of these dairy societies sell to consumers and one to the retail dairy trade.

Sales Volume of Retail and Dairy Societies and Buying Clubs.—The total sales volume of the distributive trades during 1939 amounted to $6,854,367.71 an apparent decrease of $57,027.71. The report points out however, that this apparent decrease is eliminated when consideration is given to the fact that there was a change in the financial year of one of the large creameries from a fifteen months' basis to a twelve months' period. On this basis there is actually an increase in sales of distributive societies of approximately $31,000 apart from the trade volume of unreported societies.

The aggregate sales of the three provincial wholesale societies affiliated with the Union —Alberta, Saskatchewan and Manitoba— amounted to $2,686,069.44 made up as follows: Alberta, $573,288.61, an increase of $214,869.93; Manitoba, $615,000, an increase of $134,000; and Saskatchewan, $1,497,780.83, an increase of $465,693.42. The Alberta Co-operative Wholesale Society reported a net surplus of $15,527.73, while those of Manitoba and Saskatchewan made $36,280.92 and $60,329.19 respectively.

Consumers' Co-operative Refinery, Regina.—The Consumers' Co-operative Refineries Ltd. of Regina reported a sales turnover of $979,942.23, an increase of $347,555.94 and a net profit of $113,353.66. Purchase dividends of $147,865 were declared on the business transacted in 1939. For statistical purposes the sales of this organization are regarded by the Union in its report as of a wholesale character. Adding therefore its sales to those of the wholesale societies, the same are increased to $3,666,011.67.

Total Sales.—The total distributive trades (wholesale and retail) sales volume in 1939 was $9,233,257.30. By including the sales of the dairy societies, the distributive business of Canadian Livestock Co-operative (Maritimes) amounting to $469,336.98 and the room and board accommodation provided by Campus Co-operative Residence Toronto, amounting to $4,012.70, a total distributive trade sales volume of $10,993,720.06 results.

This volume is exclusive of the turnover of two large grain marketing associations—the Manitoba Pool Elevators Ltd., and Saskatchewan Co-operative Wheat Producers Ltd.—and marketing transactions of Saskatchewan Co-operative Livestock Porducers Ltd., amounting in all to $3,187,714.67 and Canadian Livestock Co-operative (Maritimes) $420,399.26.

The total of sales of all types of co-operative societies affiliated with the Co-operative Union in 1939 is given in the report as amounting to $14,181,443.73 compared with total sales in 1938 of $14,013,232.45.

Membership, Share Capital, Etc.—During 1939 all types of Co-operative Societies affiliated with the Union reported a total membership of 164,449; share capital amounting to $1,072,005.68; loan capital $264,463.57; value of stock in trade, $1,713,382.73, other assets $38,497,171.55 and reserve funds amounting to $1,024,576.63.

The total amount of purchase dividends declared by all societies in 1939 was $415,118.80 and net surpluses aggregated $553,087.74.

Employment, Salaries and Wages in Co-operatives.—In 1939 co-operative societies affiliated with the Union afforded employment to 2,718 persons to whom $2,058,414.61 was paid in salaries and wages.

Canadian Co-operative Congress

The Canadian Co-operative Union held its annual Congress in Winnipeg early in July at which the report from which the foregoing statistics were taken was presented by W. C. Good, president and George Keen, general secretary. Among the many resolutions adopted by the Congress was one pledging its support to the full extent of its capacity to the war effort of the Government of Canada and the British Commonwealth of Nations. Another resolution passed by the Congress requested the Dominion Government to prepare and issue a publication to guide consumers with respect to the purity, quality and relative values of foodstuffs and household goods.

"Canadians In aud Out of Work"

Published recently, *Canadians In and Out of Work,* is the title of a book by Leonard C. Marsh, Director of Social Research, McGill University. The book, which is No. 9 in the McGill Social Research Series, makes a survey of economic classes and their relation to the labour market, bringing together all available contemporary statistics concerning the Canadian working force, employed and unemployed, with a view to furnishing a basic social perspective.

In a foreword to the work, Mr. Marsh declares that: "The occupational make-up of the population is not merely an inventory of a country's manpower; it is one of the primary settings of its social problems. Conditions of living and working, the impact of economic instability, political and social reactions of the most diverse kinds are different at different income-levels. A balanced appraisal of social problems, and a balanced national welfare policy, must both take account of the relative weights of the socio-economic strata of the nation."

Commenting on the fact that the study was planned before the outbreak of the second world war, Mr. Marsh states: "The development of the war economy in Canada will effect radical transformations in the occupational structure, apart altogether from the immense dislocations and repercussions from the appalling scale which the European conflict has already assumed. The year 1939 marks the end of an era, and it seems best to accept this as the boundary of the present study. (It is surely proper also that the references to Scandinavia in the last chapter, which were penned before April, 1940, should be retained unchanged.) What the impact of the war will be on all classes in Canada, nobody can foretell with any confidence. It is certain only that the effects will be more potent and far-reachnig than those of 1914-18, and that the tasks of peace which will remain will be even more formidable and more insistent than they were in 1919-1938. It should not be unhelpful to have on record the nature of Canadian society as it was during this interval of disturbed but still hopeful peace." The price of the volume is $3 and may be obtained from the Social Research Office, McGill University.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, JULY, 1940

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on August 1 was 12,214, the employees on their pay-rolls numbering 1,252,934 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for July was 1,974 having an aggregate membership of 260,248 persons, 6·4 per cent of whom were without employment on August 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of August, 1940, as Reported by Employees

There was continued expansion in industrial employment at the beginning of August, according to statements tabulated by the Dominion Bureau of Statistics from 12,214 firms, whose payrolls aggregated 1,252,934 persons, as compared with 1,221,316 at July 1. This increase of 31,618, or 2·6 per cent has rarely been exceeded at midsummer in any of the thirteen years since 1920 in which the trend at August 1 has been upward, and was substantially larger than the small gain which has been the average change from July to August in the period, 1921-1939.

Based on the 1926 average employment of the reporting firms at 100, the crude index rose from 124·7 in the preceding month, to an all-time high of 127·9 at August 1, 1940; the previous maximum for any month in the years for which statistics are available was the similar figure of 127·8 at August 1, 1929. The latest index was 8·9 per cent higher than that of 117·5 recorded at August 1 of last summer. Since the reported increase in employment at the date under review exceeded the average at midsummer in preceding years of the record, the seasonally-adjusted index also advanced, rising from 122·3 at July 1, to 124·4 at the beginning of August, 1940.

Industrially and geographically, there were widespread gains in employment at the beginning of August. For the seventh consecutive month, manufacturing showed general expansion, resulting in the establishment of a new all-time high index of 134·4. This figure was 19·1 per cent higher than the August, 1939, index of 112·8, and was 10·5 per cent above the previous midsummer maximum of 121·6 at August 1 in 1929. Practically all branches of manufacturing shared in the upward movement indicated at the beginning of August; the gains in iron and steel, non-ferrous metals, lumber, textiles, foods, pulp and paper and leather were most pronounced. In addition to the increases in personnel reported by factories, there was also an extension of working hours in a number of establishments.

Among the non-manufacturing industries, logging and retail trade showed seasonal curtailment, while mining, communications, transportation, construction and maintenance and services reported improvement. The additions to the staffs in transportation, construction and services were above the average for August 1 in the experience of the years since 1920.

An analysis by industries is given in greater detail, following the text dealing with the situation in the provinces and the leading cities.

As already stated, the unadjusted employment index, calculated on the 1926 average as 100, stood at 127·9 at the beginning of August, 1940, compared with 124·7 at July 1, while at August 1 in recent years, the crude indexes have been as follows:—1939, 117·5; 1938, 112·1; 1937, 120·0; 1936, 105·6; 1935, 101·1; 1934, 99·9; 1933, 87·1; 1932, 86·3; 1931, 105·2; 1930, 118·8; 1929, 127·8; 1928, 119·3 and 1927, 110·5.

For August 1, 1939, 11,843 firms had reported an aggregate payroll of 1,144,685 persons, compared with 1,127,863 in the preceding month. Improvement had then been noted in manufacturing, and in certain non-manufacturing industries.

Employment in Financial Institutions

For some months, statistics of employment have been collected from banks, trust companies and stock market operators. For August 1, 406 firms and branches in these lines of business reported staffs aggregating 33,746 persons, compared with 33,742 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, service and trade industries brings the total number of employees included in the August 1 survey of employment to 1,286,680 in 12,620 establishments, and slightly lowers the index of 127·9 in the industries above enumerated, to 127·4; when the statistics of the co-operating financial organizations were included in the general figures for July 1, the index was lowered from 124·7 to 124·2. The August 1, 1939, index had stood at 117·5 without the figures from financial institutions, and at 117·2 when they were included.

Employment by Economic Areas

Improvement was reported in each of the provinces. The largest numbers added to the payrolls were in Quebec, Ontario and British Columbia. Except in Prince Edward Island and Saskatchewan, industrial activity generally was greater than at August 1, 1939. In the Maritime Provinces as a unit, employment was at a higher level than at midsummer in any year since 1930, except 1937; in the Prairie Area, the favourable comparison goes back to 1931, and in British Columbia, to 1929. Employment in Quebec and Ontario was brisker than in any other summer in the twenty years for which statistics are available. In Ontario, indeed, the August 1 index was the highest recorded in any month in the years since 1920.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY PROVINCES AND ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Aug. 1, 1927	110·5	113·2	109·8	109·2	114·0	110·0

July 1	124·7	124·0	126·6	129·6	112·4	114·8
Aug. 1	127·9	124·5	130·6	132·8	114·9	119·0
Relative weight of Employment by Provinces and Economic Areas as at Aug. 1, 1940	100·0	7·4	29·9	42·3	12·0	8·4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Maritime Provinces—Statements were tabulated from 863 firms in the Maritime Provinces employing 92,527 persons, 343 more than in the preceding month; each of the provinces in this area showed moderate improvement. On the whole, manufacturing, transportation and services reported increased activity, while the tendency was downward in logging, coal-mining and highway construction and maintenance, the seasonal losses in bush-work being most pronounced. Within the manufacturing group, there were gains in the lumber, textile and iron and steel divisions; the greatest expansion was in the last-named. Vegetable food factories, on the other hand, were slacker. The general index, at 124·5, was nearly nine points higher than at the same date in 1939, when a contraction had been indicated; the index for the Maritimes as a unit was lower than at August 1, 1937, but was higher than at midsummer in any other year since 1930.

The 839 employers in the Maritime Provinces whose returns were included in the survey for August 1, 1939, had reported 85,329 workers, as compared with 85,556 in the preceding month.

Quebec.—Further marked improvement was shown in Quebec, according to returns from 3,062 establishments with 374,294 employees, as against 362,825 at July 1. The level of industrial activity was higher than at August 1, 1939, when gains on a smaller scale had been noted; the index then stood at 126·4 as compared with 130·6 at the latest date. Logging, mining and retail trade recorded lowered employment at the beginning of August, the losses to some extent being seasonal. On the other hand, manufacturing generally gained, the advances in leather, lumber, food, pulp and paper, textile, chemical, clay, glass and stone and non-ferrous metal plants being most extensive. Transportation, hotels and restaurants and construction and maintenance also afforded more employment; the increase in building was greatest.

For August 1 of last year, 2,935 employers had reported 360,469 workers, as compared with 353,549 in the preceding month.

Ontario.—Industrial employment in Ontario continued to expand, the 5,286 co-operating firms having enlarged their personnel by 12,895 men and women, to 530,341 at August 1. The average change at midsummer in the years since 1920 has been a small decline, so that the advance at the latest date is contra-seasonal. Pronounced additions to staffs were reported in manufacturing, transportation and construction, together with smaller gains in mining, communications and hotels and restaurants. Within the manufacturing division, there were marked increases in food, textile, iron and steel and non-ferrous metals; the trend was also upward in leather, lumber, pulp and paper, rubber, clay, glass and stone, electrical apparatus and other groups. On the

other hand, there were seasonal losses in logging and retail trade.

Employment at August 1, 1939, had shown a moderate decline from the preceding month, and the index number then was many points lower, standing at 114·2, as compared with 132·8 at the latest date. The returns tabulated for the beginning of August of last year numbered 5,173, the reported staffs had aggregated 453,709.

Prairie Provinces.—Further improvement was indicated in this area; the 1,718 establishments furnishing data had 150,325 workers, as compared with 147,125 at the beginning of July. Alberta recorded the greatest expansion. There were gains in the Prairie Provinces in services, mining, manufacturing and building and highway construction, those in the construction division being most extensive. Within the factory group, the largest

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	†Relative Weight	Aug. 1, 1940	July 1, 1940	Aug. 1, 1939

† The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

increases were in lumber, food and textile plants, while there was a slackening in iron and steel works. Railway operation, railway construction and maintenance and retail trade also released some employees. The general index of employment was several points higher than at August 1 of last year, standing at 114·9, compared with 109·4 at the same date in 1939, when a total of 1,669 firms had reported 142,555 persons in their employ, compared with 135,596 at July 1, 1939.

British Columbia.—The tendency in British Columbia at August 1 was decidedly favourable, continuing the upward movement in evidence since February 1. Manufacturing and transportation showed considerably heightened activity, and there were also gains in mining, communications, trade, construction and services. Logging was rather quieter, but the losses were much smaller than usual in the experience of the last few years. Within the manufacturing division, the greatest gains were in food, lumber, pulp and paper and iron and steel. Returns were compiled from 1,285 firms employing 105,454 men and women, 3,718 more than in the preceding month. A larger increase had been indicated at the beginning of August of last year, when the index stood at 117·0, compared with 119·0 at the latest date. The 1,227 employers co-operating at August 1, 1939, had reported 102,623 workers on their payrolls.

Index numbers by economic areas are given in Table 1.

Employment by Cities

Employment increased in each of the eight cities for which statistics are segregated: Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver all reported an upward movement. The percentage gains ranged from 0·5 per cent in Montreal to 4·1 per cent in Windsor and 5·9 per cent in Quebec, while the persons taken on by the co-operating firms were most numerous in Toronto, Vancouver and Quebec. Industrial activity generally in the eight centres was at a higher level than at the beginning of August in 1939, or in any other of the last nine or ten summers; in Toronto and Vancouver, indeed, the latest indexes were at the maximum for August in the years for which statistics are available.

Montreal.—Employment in Montreal showed its sixth successive increase, the 1,787 co-operating firms reporting a combined payroll of 178,933 men and women at August 1, as compared with 177,960 at July 1. Construction and maintenance and trade showed contractions, while manufacturing and transportation were brisker. Within the former, iron and steel works were seasonally dull, but gains were recorded in leather, textile, food, beverage, tobacco, clay, glass and stone, electrical apparatus, non-ferrous metal and other plants. A decrease had been indicated at August 1, 1939, by the 1,707 establishments furnishing data whose employees had aggregated 166,710; the index was then over seven points lower than at the date under review, when it was higher than in any other August of the record except that in 1929.

Quebec.—Large additions to staffs were reported in Quebec City, mainly in construction, services and manufacturing. In the last-named, leather, chemical and iron and steel works showed most improvement. Statements were received from 216 concerns having 18,749 persons on their payrolls, compared with 17,697 in the preceding month. Information received for August 1 of last summer from 213 employers of 17,795 workers had indicated a moderate falling off in employment from the preceding month, and the index was then eight points lower than at the latest date.

Toronto.—There was a further expansion in industrial activity in Toronto, according to data from 1,811 firms employing 161,156 persons, or 3,809 more than at the beginning of July. The gain was largely contra-seasonal, curtailment having been noted at August 1 in fifteen of the eighteen preceding years for which statistics for that city are available. As a result of the important increases in staffs recently reported, employment at the beginning of August was at its maximum for any month in the period, 1922-1939. Manufacturing showed substantial improvement as compared with July 1, 1940, most divisions contributing to the gain, which, however, was especially pronounced in textile, non-ferrous metal and iron and steel plants. Trade was affected by midsummer dullness, and transportation also released some help, while construction afforded more employment. For August 1, 1939, 1,756 concerns had reported a combined working force of 139,451 men and women, a loss of 1,141 from July 1 of last summer. The index then, at 108·6, was many points lower than that of 124·4 at the beginning of August in the present year.

Ottawa.—Employment in Ottawa advanced, 281 persons being added to the staffs of the 236 co-operating employers, who had 17,111 workers at August 1. There were general gains in manufacturing, particularly in pulp and paper and iron and steel, while trade and construction were quieter. A decline had been noted at the beginning of August, when a generally lower level of employment had been reflected in the information furnished by 230 establishments, whose payrolls had included 14,925 employees.

Hamilton.—Further improvement was shown in Hamilton, where 333 firms reported 41,389 men and women on their paylists, as against 40,540 in their last return. Manufacturing operations considerably increased, mainly in the iron and steel divisions, while food factories were somewhat slacker. Employment was more active than in any other month since the end of 1929. A reduction had been recorded by the 329 employers co-operating at August 1, whose staffs had aggregated 33,234; the index was then 102·1, compared with 126·8 at the date under review.

Windsor.—The trend of employment in Windsor was upward, the gain being contra-seasonal. Statistics were received from 195 firms employing 20,631 workers, or 811 more than at July 1. Beverage and some other classes showed rather less activity, while automobile and other iron and steel works afforded more employment, and construction was also brisker. A decrease from the preceding month had been indicated at August 1, 1939, and the index then was considerably lower than at the date under review; a payroll of 15,500 men and women was reported by the 197 employers furnishing information at midsummer of last year.

Winnipeg.—Further improvement was recorded in Winnipeg, according to 538 firms who had 45,005 employees, as compared with 44,342 at the beginning of July. An upward movement was noted in manufacturing, (mainly in the textile, food and iron and steel divisions), and transportation and construction were also somewhat busier. A large gain had been indicated at the same date of last year, when 524 establishments had reported 42,078 workers. Activity was then slightly lower than at the date under review, when it was higher than in any other month since the end of 1930.

Vancouver.—In Vancouver, manufacturing, transportation, construction, services and trade afforded more employment; the largest gains were in manufacturing and within that group, in the food and iron and steel products. Returns were compiled from 557 employers with 43,175 persons on their staffs, as compared with 41,683 in the preceding month. A much smaller gain had been indicated at August 1, 1939, by the 520 co-operating firms, whose payrolls aggregated 38,403; the index number then, at 115·1, was decidedly below that of 127·3 at the latest date. This was the highest figure recorded in any month in the period for which statistics are available.

Employment in Industries

Manufacturing.—Heightened activity was indicated in manufacturing establishments, 6,724 of which reported 691,231 operatives on their payrolls, as compared with 670,172 at July 1; this was an increase of 21,059 employees, or 3·1 per cent. Based on the 1926 average as 100, the crude index of employment advanced to a new, all-time maximum of 134·4 at August 1; in the preceding month, the figure had been 130·3, (then the highest to date), while at August 1, 1939, the index was 112·8. The latest figure was higher by 19·1 per cent than at midsummer of last year, and was 10·5 per cent above the August 1, 1929, index of 121·6, the previous maximum for that date in the years since 1920. In some cases, an extension of working hours was also reported, mainly in response to war needs.

On the average, employment in manufacturing at August 1 in the period, 1921-1939, showed practically no change from July 1, declines in eight of these years just about offsetting the increases recorded in the remaining eleven Augusts. After correction for seasonal movement, the index at the latest date therefore advanced, rising from 127·7 at July 1, 1940, to 131·4 at the beginning of August.

The following shows the unadjusted index numbers at August 1 in recent years: 1940, 134·4; 1939, 112·8; 1938, 110·0; 1937, 118·1; 1936, 104·9; 1935, 99·8; 1934, 94·2; 1933, 85·2; 1932, 82·6; 1931, 94·7; 1930, 110·2; 1929, 121·6; 1928, 115·2 and 1927, 107·0. (The 1926 average is taken as 100 in calculating these indexes.)

Improvement was indicated at the date under review in practically all industrial groups, the expansion in the leather, lumber, animal and vegetable food, pulp and paper, textile, chemical, clay, glass and stone, electrical apparatus, iron and steel and non-ferrous metal divisions being particularly pronounced; central electric stations were also decidedly busier. The gain in iron and steel, which was contra-seasonal, provided work for over 5,500 additional workers, and following the uninterrupted increases reported since the opening of the year, resulted in a greater volume of employment in these industries than in any other month for which statistics are available, with the exception of three months in the early part of 1929. The upward movement in textiles was also contrary to the usual trend of midsummer in the years since 1920.

For August 1, 1939, returns had been compiled from 6,460 manufacturers with 577,746 employees; in the preceding month, they had 570,430 persons on their payrolls.

Edible Animal Products.—Dairies, meat-packing and fish-canning factories registered gains, but the increases in the group as a whole were not equal to those recorded at

August 1, 1939, when the index was rather higher than at midsummer of this year. Statistics were received from 344 firms employing 30,726 workers at August 1, 1940, as compared with 29,762 in the preceding month. The trend in the animal foods division at August 1 in other years for which data are available has frequently though not invariably been upward.

Leather and Products.—Marked recovery was indicated in employment in the leather group, 1,227 persons being added to the staffs of the 339 co-operating manufacturers, who employed 23,804 at August 1. Much of the betterment occurred in shoe factories in Quebec and Ontario. A somewhat smaller gain had been reported by the firms making returns for the same date a year ago, but the index of employment was then over two points lower.

Lumber and Products.—Rough and dressed lumber mills were decidedly busier, and there were moderate increases in furniture and some other wood-using industries. The lumber manufacturing division as a whole registered its fourth consecutive advance since March; the payrolls of the 996 establishments furnishing data aggregated 57,573 operatives, as against 55,586 in their last report. There was expansion in all five economic areas, that in British Columbia being most pronounced. Activity in the group as a whole was higher than at August 1, 1939, or any other month since June, 1930.

Plant Products, Edible.—Important additions to staffs were registered in fruit and vegetable canneries, while the chocolate and confectionery division was also busier; 557 vegetable food manufacturers reported 41,434 workers, or 2,432 more than at the beginning of July. The increase took place mainly in Quebec and Ontario. Employment was brisker than at August 1, 1939, when a somewhat smaller advance had been indicated.

Pulp and Paper Products.—Pulp and paper mills reported considerably heightened activity, and there was also an upward movement in paper products and in printing and publishing. Statistics were received from 718 manufacturers whose payrolls were increased by 1,168 employees to 74,839 at August 1. The increases in Quebec, Ontario and British Columbia were substantial. A slight gain, on the whole, had been noted in the corresponding month last summer, and the index then was lower, standing at 110·5, as compared with 120·5 at August 1, 1940.

Rubber Products.—There was an increase in employment in rubber works, 53 of which had 13,857 persons on their payrolls, compared with 13,519 at July 1. Most of the improvement was in Ontario. The tendency had been unfavourable at the beginning of August of a year ago, when the level of employment was rather lower.

Textile Products.—The production of cotton, woollen, silk, headwear and garments and personal furnishings showed an expansion, which in some divisions was contra-seasonal. The 1,243 co-operating textile manufacturers employed 123,564 men and women, as compared with 121,478 at July 1. Most of the gain was in Quebec and Ontario. A moderate increase, on the whole, had been noted at the beginning of August, 1939, and the index then stood at 115·8, compared with 142·1 at the date under review; this was the highest figure recorded at midsummer in any of the twenty years for which statistics are available.

Tobacco.—Data were received from 47 establishments in this industry, whose staffs aggregated 8,525 at August 1, an increase or 270 over their July 1 figures. Employment at the same date last year was in rather less volume than at the date under review, the improvement then recorded having been on a smaller scale.

Beverages.—The trend was favourable in the beverage industries at the beginning of August, according to statistics from 148 manufacturers employing 10,060 men and women, compared with 9,899 in the month before. The index was slightly higher than at August 1, 1939, when a somewhat larger gain had been recorded.

Chemicals and Allied Products.—For the seventh consecutive month, activity increased in chemical plants, 603 persons having been added since July 1 to the forces of the 325 co-operating plants; they reported 24,265 employees. The index was decidedly higher than at August 1 in 1939, or any other month for which information is available.

Clay, Glass and Stone Products.—An advance was recorded in the building material industries, according to 221 employers with 12,760 workers, or 629 more than in their last report. Employment was brisker than in any other month since the middle of 1931.

Electric Light and Power.—Improvement was noted in electric light and power plants, 103 of which reported 18,296 employees, compared with 17,725 at July 1. The index number at the date under review was between five and six points higher than at August 1, 1939, when a similar increase had been indicated.

Electrical Apparatus.—Activity in electrical apparatus factories showed a further important

gain; at the beginning of August, 129 of these provided work for 21,311 employees, or 615 more than in the preceding month. Employment was brisker than at August 1 of last year, or of any other summer for which data have been compiled.

Iron and Steel Products.—Land vehicle and wire works reported reductions, while improvement was shown in other branches of the iron and steel group; the expansion in the aeroplane, shipbuilding, crude, rolled and forged, machinery, hardware, structural iron and steel, foundry and machine shop divisions was particularly marked. A combined labour force of 173,340 persons was indicated by the 955 co-operating manufacturers, who had 167,796 at July 1. The increase was contra-seasonal in character, and continuing the uninterrupted gains indicated since January 1, resulted in a higher level of employment in the iron and steel industries than in any other month for which statistics are available, with the exception of three months in the early part of 1929. Firms in Ontario recorded the largest advances, but the movement was favourable in all provinces except Saskatchewan. A decline, on the whole, had been noted at the beginning of August in 1939, when the index was forty points lower than the latest figure of 132·2.

Non-ferrous Metal Products.—There were continued advances in this group, according to the 206 firms furnishing data, who employed 32,001 workers at August 1, compared with 29,748 in the preceding month. Most of the gain occurred in the base metal divisions, notably in aluminum production. Employment was in much greater volume than at August 1 of a year ago, the index being, in fact, higher than in any other month of the record.

Mineral Products.—Statistics tabulated from 101 manufacturers of mineral products showed that they employed 14,006 men and women, or 223 more than in their last report. The index was higher than at the same date in 1939, when the movement had also been upward.

Logging

Seasonal dullness affected the logging industry, while the fire hazard in British Columbia also caused the closing of some camps. The percentage reduction was below the average for August, and the number laid off was considerably smaller than at August 1 in either 1939 or 1938. Statements were tabulated from 382 firms employing 33,148 men, or 2,718 fewer than in the preceding month. The index stood at 112·2, as compared with 73·5 at the beginning of August of last year; exceeded by that recorded at August 1, 1937, the latest figure was otherwise the highest for midsummer in the years since 1920.

Mining

Coal.—There was an increase of 420 in the staffs of the 104 operators furnishing returns, bringing them to 23,982 at August 1, 1940. Curtailment was indicated in the Maritime coal fields, while gains were reported in Alberta. Improvement had also been registered at the same date of last year, when the index was nearly four points lower.

Metallic Ores.—A falling-off was recorded in metallic ore mines, in which the index stood at 351·6, compared with 352·9 at the beginning of August of last year; while employment in many branches of this division continued extremely active, there was a slackening in certain prospecting and development operations. Returns were received from 210 firms with 43,805 men, as compared with 43,947 in their last report. On the whole, the changes in the various provinces were slight.

Non-Metallic Minerals (Other than Coal.)—Heightened activity was noted in this division, in which 103 employers reported 10,576 persons on their payrolls at the beginning of August, a figure higher by 144 than at July 1, 1940. Employment was in greater volume than in the same month last summer, when a small gain had also been shown.

Communications

There was an increase in the personnel of telephone and telegraph companies at August 1; the communication companies co-operating with the Dominion Bureau of Statistics had 24,292 employees, as against 23,885 in the preceding month. The number engaged in this group was rather larger than at August 1 of a year ago; the movement then had also been upward.

Transportation

Street Railway and Cartage.—Continued gains were registered in local transportation, according to data received from 312 employers with 31,589 workers, as against 31,308 at July 1. Improvement had also been recorded at August 1, 1939, but the index then was below its level at the time of writing.

Steam Railway Operation.—The trend of employment in steam railway operation was generally favourable, the largest gains being in Quebec and Ontario; the 102 companies and divisional superintendents furnishing data throughout the Dominion had 65,965 employees, compared with 65,287 in their last report. A slight reduction had been indicated

at the same date in 1939, and the index then was nearly eight points lower than that of 82·7 at the latest date.

Shipping and Stevedoring.—Statements were tabulated from 123 companies in this group, employing 17,990 workers, or 459 more than at July 1, 1940. The largest increases were in the Maritime Provinces and British Columbia, while there was a falling-off in Ontario. A decline, on the whole, had been noted at the beginning of August a year ago, when employment in shipping was not quite so active.

Construction and Maintenance

Building.—Considerable increases were again reported in building construction, 891 contractors adding 7,587 persons to their staffs, which brought them to 41,972 at the beginning of August. There were general advances, of which the largest were in Quebec and Ontario. Employment was brisker than in the same month of 1939, or than in any other month since the late autumn of 1931.

Highway.—The number engaged on highway construction and maintenance increased in all provinces except Nova Scotia and British Columbia, the expansion in Quebec, Ontario and Alberta being most pronounced. Data were received from 425 employers with 62,417 men on their payrolls, as compared with 58,649 at the beginning of July. A much larger advance had been noted at August 1, 1939, and employment on road work was then in decidedly greater volume.

Railway.—Moderate curtailment, on the whole, was recorded in this group at August 1, 1940, when 29 companies and divisional superintendents reported that they had 34,233 workers on their staffs, compared with 34,458 in the preceding month. Gains were shown in New Brunswick, Quebec and Ontario, while there were losses in the Western Provinces. The index number was over nine points higher than at the beginning of August of a year ago, although slight improvement had then been noted.

Services

The trend of employment was upward in hotels and restaurants as the tourist season progressed, and laundries and dry-cleaning establishments were also rather busier; 600 firms in the service group employed 34,367 persons, compared with 32,995 at the beginning of July. Less extensive improvement had been recorded at August 1, 1939, and the level of employment was then lower.

Trade

Retail stores showed a seasonal falling-off in employment, while wholesale houses were more active, according to 2,123 trading establishments which employed 137,367 men and women, as compared with 138,839 at July 1. Quebec and Ontario reported most of the decline in the trade group as a whole. Seasonal losses had also occurred at the beginning of August last year, when the index was several points lower than at the date under review.

Tables

Index numbers of employment by economic areas, and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the Close of July, 1940

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Further increases in the volume of work available to local trade union members were evident at the close of July, unemployment standing at 6·4 per cent, as compared with a percentage of 7·6 in June. Reporting for the month under review were 1,974 labour organizations, combining a total of 260,248 members, 16,638 of whom were without employment on the last day of the month. Improvement in considerably greater measure was apparent from July, 1939, when 11·1 per cent of idleness was registered. Geographically and industrially the labour trend was largely in a more favourable direction from June, Alberta, British Columbia and Quebec unions showing gains in work afforded of between 2 and 3 per cent, and New Brunswick, Ontario, Nova Scotia and Saskatchewan unions expansion of lesser degree. Manitoba members alone indicated a tendency toward retarded activity though the variation from June was practically negligible. Every province con-

tributed to the total advancement noted during July from the corresponding month of last year. In this comparison New Brunswick, Quebec, Ontario and Alberta unions reflected appreciable betterment in the situation during the period under review and more moderate increases were recorded by Nova Scotia and British Columbia locals. In Saskatchewan and Manitoba the improvement noted was rather slight.

The records of unemployment affecting local trade union members in the largest city in each province with the exception of Prince Edward Island are compiled separately each month. Activity for Vancouver members showed a noteworthy rise during July from the preceding month and lesser gains were evident among Halifax, Montreal and Edmonton locals. Saint John and Regina unions indicated slight advances in work afforded from June, and in Toronto the tendency was but nominally upward. The percentage of inactivity for Winnipeg members remained identical with that of June. In contrasting with the returns for July last year Halifax members were decidedly busier during the month under review, and in Saint John, Montreal and Toronto the employment situation was substantially improved. Fair-sized gains in activity were reflected by Vancouver members, and heightened employment on a smaller scale was indicated from Edmonton, Regina and Winnipeg.

Accompanying this article is a chart which represents the unemployment trend for local trade union members by months from January, 1934, to date. The curve which has shown a progressively downward movement since the close of February continued in this favourable trend throughout July and at the close of the month rested at a level considerably below that of July a year ago, an evidence of a markedly better situation during the month under review.

Workers in the manufacturing industries were more actively engaged during July than in either the preceding month of July, 1939, the increases in the latter comparison being quite impressive. This was apparent from the reports compiled from 596 local unions with a membership total of 105,020 persons.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Of these, 7,279 or 6·9 per cent were without employment on the last day of the month in comparison with percentages of 8·5 in June and 12·5 in July, 1939. The marked employment recovery reflected in garment establishments in Quebec from June was a large factor in the better situation apparent in the manufacturing industries as a whole. This improvement was, however, in part offset by the pronounced curtailment evident among hat, cap and glove workers in both Quebec and Ontario. Glass workers and electric current employees showed noteworthy gains in work afforded, but their combined membership was rather small, hence scarcely affected the situation in the manufacturing industries. Cigar and tobacco, fur and rubber workers reported adequate work for all their members during July as compared with a moderate

percentage of unemployment in June, and among papermakers, iron and steel, and wood workers the tendency was in a slightly more favourable direction. In addition to the contractions in employment among hat, cap and glove workers mentioned above, recessions of much lesser degree were manifest by general labourers, and the situation declined very slightly for bakers and confectioners, leather workers, printing tradesmen, textile and carpet and brewery workers, meat cutters and butchers, and metal polishers. Jewellery workers maintained the same level of unemployment as in June. Compared with the returns for July, 1939, large scale expansion viewed from a percentage basis was manifest by glass, hat, cap and glove, and wood workers, and metal polishers during the period under survey. The iron and steel trades which embraced well over a third of the total membership in the manufacturing industries showed considerably more active conditions than in July last year, as did also garment workers. The gains in employment recorded by leather, textile and carpet, and jewellery workers, and papermakers were, however, of more moderate proportions, and the situation improved slightly for printing tradesmen, cigar and tobacco, and fur workers, bakers and confectioners, and general labourers. An unchanged percentage of idleness was manifest by brewery workers, while rubber workers were all reported actively engaged as in July a year ago. Electric current employees reflected a moderate percentage of inactivity during July compared with a fully engaged situation in the corresponding month of last year, and among meat cutters and butchers there was a very slight drop in available work.

The 55 unions of coal miners from which reports were received at the close of July involving a membership of 21,212 persons indicated 1,978 unemployed members, a percentage of 9·3 in comparison with percentages of 9·9 at the end of June and 14·9 in July, 1939. The more active conditions evident in the Alberta coal mines were entirely responsible for the better situation noted in coal mining as a whole from June. British Columbia miners were rather slack compared with a fully employed situation in June, while in Nova Scotia and New Brunswick there was a slight tendency toward retarded activity. Nova Scotia, Alberta and British Columbia miners all participated in the more favourable employment movement manifest from July last year, the improvement, as in the previous comparison, being predominant in Alberta. In New Brunswick the trend was but nominally adverse.

The building and construction trades during July extended the period of uninterrupted expansion which has characterized the situation since the close of February, the 229 local unions forwarding reports with an aggregate of 27,299 members showing that 3,245, or a percentage of 11·9, were idle at the end of the month as contrasted with 13·5 per cent of inactivity in June. More extensive gains in employment were apparent from July last year when 24·7 per cent of unemployed members was reported. Steam shovelmen and granite and stonecutters who, however, formed but a small share of the total group membership reporting were much busier during July this year than in June, while increases in employment of lesser magnitude, viewed from a percentage basis, although involving a considerable number of workers, were indicated by bricklayers, masons and plasterers. Improvement on a rather small scale was manifest by plumbers and steamfitters, tile layers, lathers and roofers, electrical workers, and hod carriers and building labourers, and the trend for bridge and structural iron workers and painters, decorators and paperhangers was but factionally upward. Carpenters and joiners alone showed some slowing up in activity though the change from June was rather small. Large scale expansion from

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

July last year was recorded by bricklayers, masons and plasterers, carpenters and joiners, painters, decorators and paperhangers, plumbers and steamfitters, hod carriers and building labourers, steam shovelmen, and bridge and structural iron workers, and the improvement registered by electrical workers was of noteworthy proportions. Granite and stonecutters and tile layers, lathers and roofers, however, suffered rather marked losses in employment.

Activity in the transportation industries was maintained in much the same volume during July as in June though the tendency was favourable, the reports compiled from 825 local unions with 71,327 members showing that 2,213 were idle on the last day of the month, a percentage of 3·1 contrasted with 3·3 per cent of unemployment in June. The steam railway division, which embraced nearly 80 per cent of the entire group membership reported, and street and electric railway employees showed a rise in work afforded of less than one per cent from June. Navigation workers and teamsters and chauffeurs, on the other hand, indicated but a slight tendency toward reduced activity. All groups participated in the more favourable movement noted from July last year when 5·8 per cent of idleness was recorded in the transportation industries as a whole. In this comparison navigation workers reflected a much better situation during the month under review, and among steam railway employees and teamsters and chauffeurs the improvement recorded was of moderate degree. Gains of minor importance were registered by street and electric railway employees.

Reports were received for July from 4 unions of retail shop clerks, involving a membership of 1,835 persons, only 0·2 per cent of whom were idle at the close of the month compared with 0·4 per cent of inactivity in June. No change in the situation was apparent from July last year.

Heightened activity on a small scale was evident among civic employees during July from the previous month as manifest by the reports received from 80 associations with 9,255 members. Of these, 125 or 1·4 per cent were unemployed on the last day of the month in contrast with a percentage of 2·3 in June. A less favourable trend was noted from July last year though the change was very slight, unemployment for that month standing at only 0·8 per cent.

The 144 locals in the miscellaneous group of trades from which reports were compiled at the close of July, comprising a membership of 10,797 persons showed that 389 or a percentage of 3·6 were out of work as compared with 4·0 per cent of idleness in June. Theatre and stage employees reported gains in activity of nearly 3 per cent from June, while among hotel and restaurant employees, barbers, stationary engineers and firemen, and unclassified workers the improvement apparent was fractional. Contrasted with the returns in the miscellaneous group of trades for July last year when 6·3 per cent of the members reported were without employment, stationary engineers and firemen registered the most noteworthy increase in work afforded during the month under review, and moderate advances were indicated by theatre and stage employees. Among hotel and restaurant employees, barbers and unclassified workers, the employment tendency was also favourable though the variations were of lesser degree.

Fishermen reported much greater activity during July than in June according to the reports compiled from 6 associations covering a membership of 2,853 persons. Of these 105, or a percentage of 3·7, were idle at the close of the month, compared with 27·7 per cent of unemployment in June. In July last year only 1·6 per cent of inactivity was recorded.

Lumber workers and loggers, with 6 local unions reporting a total of 2,747 members at the end of July, indicated that 478 were without employment, a percentage of 17·4 contrasted with percentages of 20·3 in June and 14·6 in July, 1939.

Table I shows by provinces the percentage of members who were on an average unemployed, each year, from 1929 to 1939 inclusive, and also the percentages of unemployment for July of each year from 1929 to 1938 inclusive, and for each month from July, 1939, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

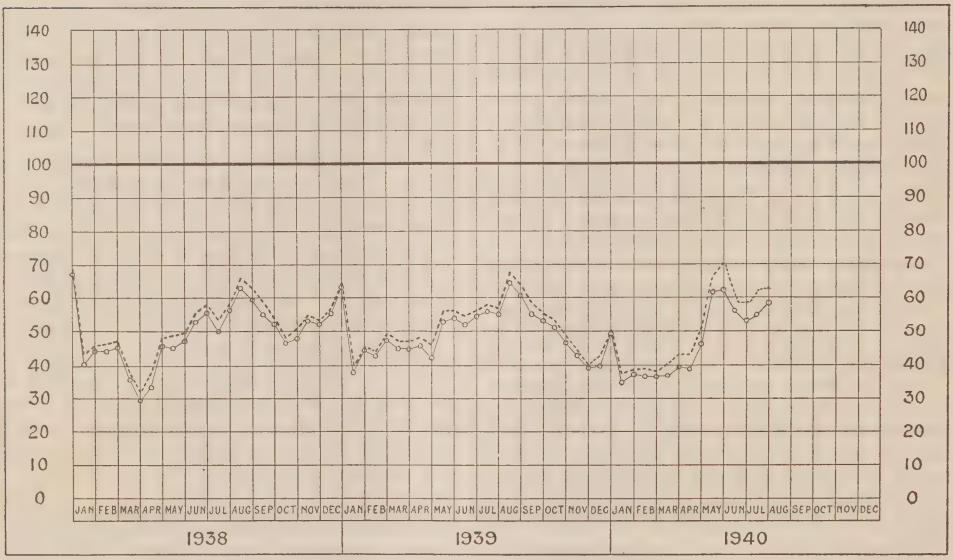
(3) Employment Office Reports for July, 1940

The volume of business transacted by the offices of the Employment Service of Canada during the month of July, 1940, as indicated by the average daily placements effected, showed gains of 15 per cent and 36 per cent, respectively, over that of the previous period, as well as that of the corresponding month last year. All industrial divisions, except logging, services and trade, in which no marked losses took place, recorded gains over the preceding month; the highest being in construction and maintenance and farming. In comparison with July a year ago, the only group to report reduced placement was farming and although this loss was fairly substantial, it was much more than coun-

teracted by increases in all remaining industries; the most outstanding being those in construction and maintenance, manufacturing, services and transportation.

The accompanying chart shows the trend of employment since January, 1938, as represented by the ratio of vacancies notified, and of placements affected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. In viewing the trend of the curves of vacancies and placements in relation to applications, an upward trend was manifested by both curves during the first half of the month, while during the latter half, the level of vacancies remained stationary and that of placements rose nearly 3 points, with the result that each curve at the close of the period under review had attained a level several points above that recorded on the 31st of July a year ago. The ratio of vacancies to each 100 applications was 61·7 throughout the month, in contrast with ratios of 57·9 and 57·0 during the corresponding periods of 1939. The ratios of placements to each 100 applications during the periods under review were 56·1 and 58·9, as compared with 55·8 and 55·0, respectively, during the corresponding month of last year.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1940, was 1,872 as compared with a daily average of 1,327 during the corresponding month a year ago, and with 1,629 recorded daily in June, 1940.



The average number of applications for employment received daily by the offices of the Service during the month under review was 3,034, in comparison with 2,311 in July, 1939. Applications for work during the preceding month of 1940 averaged 2,800 daily.

The average number of placements made daily by the offices of the Service during July, 1940, was 1,745, of which 1,250 were in regular employment and 495 in work of one week's duration or less, as compared with a total daily average of 1,521 during the preceding month. Placements in July a year ago averaged 1,281 daily, consisting of 888 in regular and 393 in casual employment.

During the month of July, 1940, the offices of the Service referred 46,800 persons to vacancies and affected a total of 45,352 placements. Of these, the placements in regular employment were 32,489, of which 26,402 were of men and 6,087 of women, while placements in casual work totalled 12,863. The number of vacancies reported by employers was 34,919 for men and 13,739 for women, a total of 48,658, with applications for work numbering 78,864, of which 58,419 were from men and 20,445 from women. Reports for June, 1940, showed 39,078 positions available, 67,188

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

applications made and 36,482 placements effected, while in July, 1939, there were recorded 33,151 vacancies, 57,754 applications for work and 32,002 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1930, to date:—

Year	Placements		
	Regular	Casual	Totals
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940 (7 months)	145,895	81,327	227,222

Nova Scotia

During July, vacancies reported to Employment Offices in Nova Scotia called for over 2 per cent more workers than in the preceding month and nearly 113 per cent more than during the corresponding month of last year. There was an increase of nearly 1 per cent in placements when compared with June and of nearly 107 per cent in comparison with July, 1939. The increase in placements over July of last year was due to a substantial gain in construction and maintenance and a somewhat smaller advance in services. Manufacturing and trade also showed improvement, but there was a decline in logging. Placements by industrial divisions included manufacturing 122; logging 42; farming 55; construction and maintenance 1,213; trade 44, and services 887, of which 714 were of household workers. There were 1,265 men and 190 women placed in regular employment.

New Brunswick

The demand for workers, as indicated by orders received at Employment Offices in New Brunswick during July was over 14 per cent less than in the preceding month, but nearly 32 per cent above the corresponding month of last year. There was a decrease of nearly 10 per cent in placements when compared with June, but an increase of nearly 32 per cent in comparison with July, 1939. Placements were higher in construction and maintenance, services, manufacturing and trade than during July of last year and accounted for the increase for the province as a whole. Under these comparisons the only decline of importance was in logging. Industrial divisions in which most of the placements were effected during the month were manufacturing 64; logging 73; construction and maintenance 609; trade 66 and services 642, of which 498 were of household workers. During the month 511 men and 83 women were placed in regular employment.

Quebec

Orders received at Employment Offices in the Province of Quebec during July called for nearly 15 per cent more workers than in the preceding month and nearly 75 per cent more than during the corresponding month of last year. There was an increase also in placements of over 18 per cent when compared with June and of nearly 74 per cent in comparison with July, 1939. All industrial divisions except mining, in which a small loss was reported, participated in the increase in placements over July of last year, the most important gains being in logging, services, manufacturing, transportation and construction and maintenance. Placements by industrial divisions included manufacturing 1,000; logging 1,901; farming 295; transportation 619; construction and maintenance 3,002 and services 3,748, of which 3,263 were of household workers. Placements in regular employment numbered 6,000 of men and 2,095 of women.

Ontario

There was an increase of nearly 40 per cent in the number of positions offered through Employment Offices in Ontario during July when compared with the preceding month and of over 77 per cent in comparison with the corresponding month of last year. Placements also were nearly 38 per cent higher than in June and over 66 per cent more than in July, 1939. All industrial divisions participated in the increase in placements over July of last year, the most important gains being in construction and maintenance, manufacturing and services, with improvement of smaller proportions in transportation, trade and mining. Placements by industrial divisions included manufacturing 2,273; logging 340; farming 2,752; mining 211; transportation 338; construction and maintenance 9,917; trade 362 and services 3,958, of which 2,290 were of household workers. There were 12,928 men and 2,115 women placed in regular employment.

Manitoba

Positions offered through Employment Offices in Manitoba during July called for nearly 28 per cent more workers than in the preceding month, but nearly 32 per cent fewer than during the corresponding month of last year. There was an increase of nearly

24 per cent in placements when compared with June, but a decrease of nearly 31 per cent in comparison with July, 1939. The decline in placements from July of last year was due to decreases in farming and construction and maintenance. Of the changes in all other groups, a gain in services and a loss in logging were the most important. Industrial divisions in which most of the placements were effected during the month were manufacturing 60; logging 78; farming 1,244; construction and maintenance 746 and services 796, of which 612 were of household workers. There were 1,985 men and 319 women placed in regular employment.

SASKATCHEWAN

Orders received at Employment Offices in Saskatchewan during July called for nearly 64 per cent more workers than in the preceding month, but nearly 7 per cent fewer than during the corresponding month of last year. There was an increase in placements of nearly 58 per cent when compared with June, but a decrease of over 5 per cent in comparison with July, 1939. Farm placements were considerably fewer than in July of last year and accounted for the decline for the province as a whole under this comparison. The reduction in this group was partly offset by gains in construction and maintenance, services and transportation. Placements by industrial divisions included farming 462; transportation 99; construction and maintenance 414 and services 920, of which 527 were of household workers. Placements in regular employment numbered 887 of men and 439 of women.

ALBERTA

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during July, were nearly 15 per cent better than in the preceding month and nearly 9 per cent in excess of July, 1939. There was an increase also in placements of nearly 11 per cent when compared with June and over 6 per cent in comparison with July, 1939. The most important change in placements from July of last year, by industrial groups, was a gain in construction and maintenance, but manufacturing also showed improvement. These increases were partly offset by declines in farming and logging. Placements by industrial divisions included manufacturing 104; logging 133; farming 644; construction and maintenance 495 and services 630, of which 491 were of household workers. During the month 1,201 men and 405 women were placed in regular employment.

BRITISH COLUMBIA

There was an increase of nearly 10 per cent in the number of positions offered through Employment Offices in British Columbia during July when compared with the preceding month and of 17 per cent in comparison with the corresponding month of last year. Placements were 10 per cent higher than in June and nearly 16 per cent above July, 1939. Placements in services, manufacturing and construction and maintenance were considerably higher than during July of last year, but there was a large decrease in logging. A moderate increase in transportation was offset by a decline in farm placements. Placements by industrial divisions included manufacturing 372; logging 229; farming 221; transportation 99; construction and maintenance 1,407 and services 1,107, of which 650 were of household workers. There were 1,625 men and 441 women placed in regular employment during the month.

Movement of Labour

During the month of July, 1940, the offices of the Employment Service of Canada made 32,489 placements in regular employment, 19,432 of which were of persons for whom the employment found was outside the immediate district of the offices at which they were registered. Of the latter, 375 were granted the Employment Service reduced transportation rate, 295 going to centres within the same province as the despatching office and 80 to other provinces. The reduced transportation rate which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

Persons benefiting by the Employment Service reduced transportation rate in Quebec during July were 45 in number, 9 of whom were bound for provincial points and 36 for centres outside the province. Provincially the movement was of bush workers, the Rouyn office being responsible for the despatch of 7 to Val d'Or and the Thetford Mines office of 2 to Chicoutimi. Of the interprovincial trans-

* 104 Placements effected by offices now closed.

fers 28 were of carpenters proceeding from Rouyn to Barrie and 8 were of bushmen conveyed from Hull to Pembroke. Ontario offices during July granted 230 reduced rate certificates, all to provincial centres. The Port Arthur office was instrumental in the despatch of 79 building construction workers, 66 bushmen, 4 mine workers, 3 cookees and one hotel cook to situations within the same zone. To the Port Arthur zone in addition, 6 bushmen journeyed from Timmins. From Fort William 5 bushmen and one labourer and from Sudbury 4 bushmen were sent to employment within their respective zones. The North Bay zone received 56 building construction workers from Toronto and one hotel cook from Ottawa. The Hamilton office despatched two steel examiners to Ottawa, the Windsor office one riveter to Barrie and the Pembroke office one powder man to Hamilton. The movement of labour in Manitoba during July originated at Winnipeg, from which centre 7 persons were transferred within the province and 41 to points outside. Provincially the transfers were within the Winnipeg zone and included 4 farm hands, 2 lumber workers and one bushman. The Port Arthur zone was the destination of all workers journeying outside the province among whom were 16 bush workers, 11 ship builders, 9 mine workers, two cooks, one tool maker one store clerk and one machinist. Business transacted by Alberta offices during July involved the issue of 46 reduced rate certificates, 44 provincial and 2 interprovincial. The latter were granted at Calgary to farm hands travelling to Victoria. The transfers within the province effected by the Edmonton office included 2 carpenters going to Lethbridge, one carpenter to Medicine Hat, one farm hand to Drumheller and 19 miners, 5 bushmen, 5 cooks, 4 farm hands, 4 labourers and one cafe worker to situations within the territory administered by the Edmonton office. From Calgary 2 farm hands were transported to employment within the same zone. In British Columbia during July the Vancouver office was responsible for the labour movement which represented the transfer of 5 workers within the province and one outside. Provincially one miner was conveyed to Kamloops and 2 miners, one hotel porter and one store clerk to employment at centres in the Vancouver zone. The one person transferred outside the province was a glazier destined to Regina.

Of the 375 workers who were carried at the Employment Service reduced rate during July 105 travelled over the Canadian National Railways, 235 over the Canadian Pacific Railway, 34 over the Temiskaming and Northern Ontario Railway and one over the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During July, 1940

The July report of building permits compiled by the Dominion Bureau of Statistics, includes returns from 162 of the 203 municipalities in Canada which have systems for issuing such permits and of this number 151 reported detailed operation. The remaining 11 advised that no permits had been issued during the month of July while 41 municipalities had failed to report at the close of August 10.

The total value of permits reported as issued in the month of July is $10,497,006. Revised values for the month of June include returns from 190 municipalities and aggregate $9,769,503. Reports were received from 50 of the original 58 municipalities and show a value of $7,874,638 for the last month. The corresponding revised value for June includes 56 returns and is $7,355,671, while the June 1939 value was $6,584,125.

The total value of permits issued by all municipalities during the seven elapsed months of the current year is $57,798,471. The value for the 58 municipalities for the same period is $42,247,633, while their corresponding value in 1939 was $33,647,625.

During the month of July new construction of all types amounted to 77·5 per cent of the total value, while the percentage of new residential construction was 39·2.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF AUGUST, 1940

Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of August, 1940, was reported by the Superintendents of the Employment Service to be as follows:—

Harvesting of grain and threshing kept farmers busy in the Maritime Provinces; all crops, however, were much in need of rain, particularly orchards, where the apple crop was estimated to be only 60 per cent of that of last year. Fair weather enabled fishermen to secure a good catch of staple sea foods, especially cod, haddock and mackerel. Many men were at work in logging camps, although fires had done serious damage to standing timber and the abnormally low water in the Saint John River had greatly impeded the progress of lumber crews, who were clearing an estimated 13,000 cords of pulpwood from river banks and bars. Coal mines in the New Glasgow area operated six days per week, with the exception of one colliery, which was idle, while those in Cape Breton and vicinity worked five and six days. Manufacturing concerns continued to run full time with complete staffs. Canning plants were preparing to open and foundries and machine shops were working to capacity. Work on National Defence projects continued, also highway construction. Passenger and freight traffic was heavy and trade was steady. The demand for maids and charwomen also remained firm.

There was a normal demand for farm hands in the Province of Quebec and logging operations continued at an active pace, the chief centres of activity being Chicoutimi, Hull, Matane and Val d'Or. Nearly all manufacturing concerns were working full time, particularly paper mills, sash and door factories, metallurgical plants and iron, steel, textile and leather establishments. Building increased perceptibly from day to day as dams, hutments for military camps, airports and numerous large buildings were being constructed. New roads and the upkeep of those already in existence also provided employment for thousands of unskilled workers. Transportation was active and trade satisfactory. Hiring of experienced domestic help was handicapped by the fact that suitable applicants preferred work in munition factories, or other war industries, to that of household service.

The farming situation had eased somewhat throughout Ontario, due in part to the recent rains, which had brought threshing and outside work to a standstill and partly to the large number of tobacco workers released from employment, because of heavy damage to this crop through frost, many of these men, however, were not experienced in dairy farming. Storms also had done considerable harm to orchards, reducing some of the fruit yield from 40 to 80 per cent. While little demand existed for bushmen, many operators were preparing for an early start, with wages on the whole somewhat higher than last year's and with prospects good for a considerable volume of production. Mining was quiet, except at Timmins, where numerous requests had been received for various classes of miners. Manufacturing remained very steady. Skilled workers in iron and steel, such as first class tool and die makers, millwrights and machinists, were greatly in demand, as well as experienced textile operators. Firms engaged in war orders also had increased their staffs and were exceptionally busy. Building construction was very active, especially in those centres where National Defence projects were under way, and alterations and repairs to private property added to the increased activity. Highway construction was gradually diminishing and work in this line now consisted chiefly of repairs and maintenance. Movement of freight by lake and rail continued heavy and trade, both wholesale and retail, was good. The domestic situation in household service was growing more acute, as fewer experienced houseworkers were registering, the majority of applicants desiring factory or clerical work. Casual openings for women, however, were increasing with the return of householders to their homes after the summer vacation.

A considerable drop in farm placements was evident in the Prairie Provinces as heavy rains had delayed threshing in some sections, while in others the number of combines used effected a reduction in harvest hands usually required. In Alberta, where harvesting was in full swing, the labour situation was well in hand, with all necessary help available. Logging was dull. Mining was very quiet in Manitoba, but fair in Alberta, where a few miners were returning to former jobs. Manufacturing remained unchanged. Building construction was active, although various projected buildings for the Department of National Defence were being held up for lack of material. Highway construction also continued. Trade was fair. A shortage of female help existed for household service, both city and country, but applications for factory work at Winnipeg had more than doubled in recent weeks.

Vacancies existed in British Columbia for farm help, which could not be filled, owing to lack of suitable applicants. Fruit picking had started and tomato canneries were working overtime. There was practically no movement of labour to logging camps, but sawmills continued to work night and day and were experiencing difficulty in replacing skilled men capable of handling planers' edgers' and experienced shippers' jobs. Shipments of export lumber to the eastern seaboard had broken previous records since March of this year, approximately 125,000,000 board feet of lumber having been sent by rail. Mining, both coal and placer, was moderately active. Fishing was very poor, a number of seiners and trollers at Prince Rupert having returned to port. Construction was progressing favourably. Shipyards and waterfronts also were busy. Trade was fair and the call for workers in the women's division steady, although, as elsewhere, capable household help was scarce.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, August, 1940, summarized the employment situation as follows:—

After showing substantial reductions month by month since January last, the numbers of unemployed persons registered at Employment Exchanges in Great Britain increased by over 60,000 between June 17 and July 15. The increase occurred among women, temporarily unemployed men and juveniles; there was a reduction in the number of men registered as wholly unemployed. The total registered at July 15, 1940, was over 420,000 less than the figure for July 10, 1939.

As compared with July 10, 1939, the number unemployed at July 15, 1940 in Great Britain was 429,158 lower.

In Great Britain and Northern Ireland there was a total of 898,676 persons either wholly unemployed (736,017) or temporarily stopped (162,659), an increase in the number of unemployed of 64,462 compared with the figures at June 17, 1940.

The increase in the numbers unemployed since June 17 occurred mainly in coal mining, where there were temporary stoppages in a few areas, and in the textile, clothing, boot and shoe, leather and furniture industries. On the other hand, there was a further reduction in the numbers unemployed in building and public works contracting and in the distributive trades.

The number of insured persons, aged 16 and over, recorded as unemployed in Great Britain and Northern Ireland at July 15, 1940, represented 5·6 per cent of the total number of insured persons, aged 16-64, at July, 1939, as compared with 5·2 at June 17, 1940; at July 10, 1939, the percentage unemployed was 8·7. For persons within the general scheme the corresponding percentages, were 5·7 at July 15, 1940, 5·3 at June 17, 1940, and 9·0 at July 10, 1939. For persons within the agricultural scheme the percentages were 2·5, 2·3, and 4·0 respectively.

United States

According to an official press release issued on August 23 by Miss Frances Perkins, United States Secretary of Labour, more than 130,000 additional workers found employment in non-agricultural industries between mid-June and mid-July. Miss Perkins stated that the July estimate of 35,600,000 workers in non-agricultural occupations is the maximum reached this year and is about one million greater than in the corresponding month of last year.

The following paragraphs taken from the official report indicate the employment situation in the United States to be as follows:

Employment on private and public building construction continued to rise in July, about 75,000 more workers being employed than in the preceding month. Transportation and public utility companies added 30,000 workers to their staffs, the major portion of which gain was on steam railroads. A net gain of 7,000 workers was reported in the group of mining industries and factories added about 5,000 workers to their pay rolls. Seasonal summer recessions in retail trade activity resulted in net decline of more than 75,000 workers in wholesale and retail trade and a negligible loss was reported in the group of finance, service, and miscellaneous industries.

The gain of 0·1 per cent or about 5,000 workers in manufacturing industries, while not pronounced, was noteworthy in that factory employment usually declines by about 31,000 workers from June to July. This contra-seasonal gain was due in large measure to continued expansion in the war-materials industries. Aircraft firms took on an additional 7,000 workers in July, shipbuilding companies, 4,700, and plants manufacturing engines, 3,100 workers. Machine tool plants added 1,600 workers to their forces, and firms manufacturing aluminum products and ex-

plosives took on nearly 1,000 additional workers.

Other manufacturing industries stimulated directly or indirectly by Government or war orders were iron and steel, with an increase of more than 20,000 employees; woollen and worsted goods, 14,500; shoes, 13,800; men's clothing, 8,600; and cotton goods, 5,800. The approach of peak season operations in the canning industry was reflected in the gain of 29,800 workers, which was less than the usual seasonal expansion. Larger-than-seasonal gains however were reported in slaughtering and meat packing (3,800), radios and phonographs (3,000) and book and job printing (2,700).

While gains in employment were reported in 52 of the 90 manufacturing industries surveyed, the losses in the remaining industries, particularly automobiles and women's clothing, virtually offset the employment increases. In most years these seasonal decreases are so large as to result in a net loss in manufacturing employment. There were more than 90,000 fewer workers employed in the automobile and parts plants in July than in the preceding month, the earlier change-over for models this year resulting in a sharper decline than is customarily experienced.

The increase in factory employment was accompanied by a decline of 1·5 per cent or about $2,900,000 in weekly factory pay rolls. July pay rolls are normally reduced by shutdowns for inventory and repairs and the observance of the July 4 holiday. The current pay-roll decline however is not as great as the expected seasonal reduction of 3·7 per cent or $6,900,000.

Employment in the private building construction industry increased 5·3 per cent from June to July and weekly pay-rolls rose 4·6 per cent. The greater-than-seasonal employment increases registered in each of the previous three months were continued, the current month's gain being substantially larger than the 1·4 per cent increase from June to July, 1939, and the 1·7 per cent average gain of the 1932-1939 period. Employment in July, 1940, was 10·1 per cent above July, 1939, and pay rolls were 13·1 per cent above the level of a year ago. Increases in private construction were general throughout the country, eight of the nine geographic divisions reporting increased employment. In the Mountain States, employment declined slightly, following the marked increases in previous months.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Law require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages Scales of the respective provinces.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935", which came into force on May 1, 1936.

This clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by Federal grant in the form of contribution, subsidy, loan, advance, or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreement with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and

that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage rate of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

As complete lists of the contracts awarded by the Department of Munitions and Supply are being issued weekly through the office of the Director of Public Information, and are being published in the press, this information will not be duplicated here. Particulars of the contracts which have been awarded recently by various other departments of the Government of Canada, however, appear hereunder:—

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

Note: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work, and also specify that the rates of wages set out therein are *minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

Department of Public Works

Fabrication and erection of one ten to fifty ton travelling electrically operated crane for the Dry Dock at Esquimalt, B.C. Name of contractors, Colby Crane and Engineering Co., Ltd., Vancouver, B.C. Date of contract, June 29, 1940. Amount of contract, $168,402. A fair wages schedule was included in the contract for the erection work as follows:—

	Per hour
Blacksmiths	$0 75
Blacksmiths' helpers	0 50
Driver	0 45
Driver, team and wagon	0 85
Electricians	0 75
Engineers on steel erection	1 12½
Labourers	0 45
Machinists	0 75
Machinists' helpers	0 50
Motor truck driver	0 50
Motor truck driver and truck	1 50
Plumbers and steamfitters	0 90
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Painters	0 65
Structural steel workers	1 12½
Stationary firemen	0 50
Welders and burners on steel erection	1 12½
Watchman	0 45

Construction of a new barracks building for the Department of National Defence at Comox Split, Comox, B.C. Name of contractors, Messrs. Williams, Trerise & Williams, Ltd., Victoria, B.C. Date of contract, July 20, 1940. Amount of contract, $27,984. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 75
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 65
Gas. or electric	0 50
Drivers	0 45
Driver, horse and cart	0 55
Driver, team and wagon	0 75

	Per hour
Electricians (inside wiremen)	0 75
Labourers	0 45
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Plumbers' and steamfitters' helpers	0 45
Roofers shingles (wood, asbestos)	0 75
Sheet metal workers	0 65
Watchman	0 40

Alterations and additions to Receiving Stores Building No. 109 at H.M.C. Dockyard, Esquimalt, B.C. Name of contractors, Messrs. Smith Bros. & Wilson, Ltd., Vancouver, B.C. Date of contract, July 29, 1940. Amount of contract, $63,700 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 80
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gas. or electric	0 55
Drivers	0 45
Drivers, horse and cart	0 60
Drivers, team and wagon	0 85
Electricians (inside wiremen)	0 75
Elevator constructors	1 04
Elevator constructors' helpers	0 73
Engineers operating steam:	
Single drum	0 70
Double drums	0 90
Engineers on steel erection	1 12½
Engineers, crane (steam, gas. or elec.)	0 75
Firemen, stationary	0 50
Hoist operators—tower (gas. or elec.)	0 60
Labourers	0 45
Lathers (metal)	0 75
Motor truck drivers	0 50
Motor truck driver and truck	1 50
Ornamental iron workers	0 75
Painters and glaziers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 90
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Rodman—reinforcing steel	0 55
Roofers, felt and gravel: patent: composition	0 50
Roofers, sheet metal	0 75
Sheet metal workers	0 75
Stonecutters	0 80
Stonemasons	1 00
Stonemasons' helpers (mixing and tempering mortar)	0 50
Structural steel workers	1 12½
Tile setters (asphalt)	0 75
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Watchman	0 45
Welders and burners on steel erection	1 12½
Waxers and polishers (floor)	0 50

Department of Transport

Development of an aerodrome at Holsom, Alta. Name of contractors, General Construction Co., Ltd., Vancouver, B.C. Date of contract, July 6, 1940. Amount of contract, $110,287.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 55
Asphalt tampers, smoothers, spreaders	0 45
Blacksmiths	0 60
Blacksmiths' helpers	0 42½
Concrete mixer operators:	
Gas	0 45
Steam	0 65
Drivers	0 40
Drivers, horse and cart	0 50
Driver, team and wagon	0 65
Labourers	0 40
Motor truck drivers	0 40
Motor truck driver and truck	1 40
Road grader operators (gas.)	0 50
Road roller operators, (gas. and steam)	0 70
Shovel operators (gas.)	1 00
Road grader operators (horse drawn)	0 40
Road grader operators (incl. team)	0 70
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Tractor operators	0 45
Watchmen	0 35

Development of an aerodrome at Boharm, Sask. Name of contractors, Western Construction & Lumber Co., Moose Jaw, Sask. Date of contract, July 6, 1940. Amount of contract, $25,525. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 65
Blacksmiths' Helpers	0 45
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Road grader operators (horse drawn)	0 45
Road grader operators (incl. team)	0 80
Road grader operators (gas.)	0 55
Tractor operators	0 60
Watchmen	0 35

Development of an aerodrome at Medicine Hat, Sask. Name of contractor, General Construction Co., Ltd., Vancouver, B.C. Date of contract, July 6, 1940. Amount of contract, $172,960.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 55
Asphalt tampers, smoothers, spreaders	0 45
Blacksmiths	0 60
Blacksmiths' helpers	0 42½
Concrete mixer operators:	
Gas	0 45
Steam	0 65
Drivers	0 40
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Labourers	0 40
Motor truck drivers	0 40

	Per hour
Motor truck driver and truck	1 40
Road grader operators (horse drawn)	0 40
Road grader operators (incl. team)	0 70
Road grader operators (gas.)	0 50
Road roller operators (gas. and steam)	0 70
Shovel operators (gas.)	1 00
Tractor operators	0 45
Watchmen	0 35
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50

Development of an aerodrome at Gananoque, Ont. Name of contractors, Harvey Construction Co., Kingston, Ont. Date of contract, July 6, 1940. Amount of contract, $133,670.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 55
Asphalt tampers, smoothers and spreaders	0 45
Blacksmiths	0 60
Blacksmiths' helpers	0 45
Concrete mixer operators (gas.)	0 50
Cement finishers	0 60
Drivers	0 40
Driver, horse and cart	0 55
Driver team and wagon	0 75
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Road grader operators (horse drawn)	0 45
Road grader operators (incl. team)	0 80
Road grader operators (gas.)	0 50
Road roller operators (gas and steam)	0 65
Shovel operators (gas.)	1 00
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Tractor operators	0 50
Watchmen	0 35

Development of Mount Hope Aerodrome, Hamilton, Ont. Name of contractors, Hadley-McHaffie Construction Co., Ltd., Hamilton, Ont. Date of contract, August 2, 1940. Amount of contract, $209,647.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 60
Asphalt tampers, smoothers, spreaders	0 50
Blacksmiths	0 70
Blacksmiths' helpers	0 55
Concrete mixer operators:	
Gas. or elec.	0 60
Steam	0 67½
Drivers	0 45
Drivers, team and wagon	0 90
Labourers	0 45
Motor truck drivers	0 50
Motor truck drivers and truck	1 50
Road grader operators (horse drawn)	0 50
Road grader operators (incl. team)	0 95
Road grader operators (gas.)	0 55
Road roller operators (gas. and steam)	0 67½
Shovel operators—gas	1 00
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Tractor operators	0 55
Watchmen	0 40

Construction of a concrete apron at Airport, Lethbridge, Alta. Name of contractors, General Construction Co., Ltd., Vancouver, B.C. Date of contract, August 2, 1940. Amount of contract, $7,307.75. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 70
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 70
Gas. or elec.	0 50
Drivers	0 40
Drivers, horse and cart	0 55
Drivers, team and wagon	0 70
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Road grader operators (horse drawn)	0 45
Road grader operators (incl. team)	0 75
Road grader operators (gas.)	0 55
Rodmen—reinforced steel	0 50
Watchmen	0 35

Hydraulic dredging of Port Dalhousie Harbour, Ont. Name of contractors, National Sand and Materials Ltd., Toronto, Ont. Date of contract, July 6, 1940. Amount of contract, $17,600. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 55
Blacksmiths' helpers	0 40
Carpenters and joiners	0 60
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Electricians (inside wiremen)	0 65
Labourers	0 35
Machinists	0 60
Machinists' helpers	0 40
Motor truck drivers	0 40
Motor truck drivers and trucks	1 40
Plumbers and pipefitters	0 65
Pipefitters (surface—temporary work)	0 50

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Manufacturing: Vegetable Foods, etc.

PORT ARTHUR AND FORT WILLIAM, ONTARIO.—TWIN CITY MASTER BAKERS' ASSOCIATION AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL 284 (BAKERS).

Agreement to be in effect from March 1, 1940 to February 28, 1941.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, April, 1939, page 431, with these exceptions:

Female cake-wrappers, cake finishers and salesgirls are not included.

Hours are reduced from 54 to 52 per week, with the weekly wage rates unchanged.

Vacation: after one year's employment employees to be entitled to 52 hours off per annum or one week's vacation with pay at the option of the employer.

PORT ARTHUR AND FORT WILLIAM, ONTARIO.—TWIN CITY MASTER BAKERS' ASSOCIATION AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL 284 (BAKERY SALESMEN).

Agreement to be in effect from March 1, 1940 to February 28, 1941.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1939, page 847, with these exceptions:

Wages: bread salesmen to be paid $15 per week and 7½ per cent commission on retail sales and 3½ per cent commission on wholesale sales, except where route is 80 per cent or more wholesale, when wages will be $15 and 5½ per cent commission on all sales; a minimum of $20 per week for all salesmen. The rates for cake drivers are unchanged.

Vacation: after one year's employment, salesmen to be entitled to 12 half days off or one full week with pay at the option of the employer.

Disputes which cannot be settled between the parties will be referred to arbitration.

Manufacturing: Tobacco and Liquors

TORONTO, ONTARIO.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL 304 (BREWERY WORKERS).

Agreement to be in effect from April 1, 1940 to April 1, 1941, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, November, 1938, page 1291, with these exceptions:

Wages per week: coopers $31.68; truck drivers $27.50; fermenting room and cold storage, brew house, wash house, bottlers operating machines, shippers and receivers $27.28; watchmen $27; other bottlers $25.30; truck drivers' helpers $25. (These are increases of $1.50 to $1.80 per week.)

Vacation: in the previous agreement, only drivers and helpers, shippers and receivers and men in the retail department handling goods were entitled to a vacation (two weeks for those with one year's employment); now all other employees, with one year's employment to receive one week's vacation with pay.

Winnipeg, Manitoba.—A Manufacturer of Malt and the International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 105 (Malt Workers).

Agreement which was to be in effect from April 1, 1939 to March 31, 1940, and thereafter from year to year subject to notice, remains in effect for the year 1940 to 1941.

Only union members to be employed, if available.

Hours: 8 per day, 48 per week.

Overtime: time and one half. In case of any work on one of the four specified holidays, another day off with pay to be granted.

Minimum weekly wage rate: $26.40 for regular employees. Casual labour to be paid 45 cents per hour. A bonus of $1 per week for each week of six consecutive days worked, is to be paid twice yearly.

Vacation: after one year's employment, one week's vacation with pay.

Should a vacancy occur on regular staff, preference to be given to the senior qualified employee.

Disputes are to be settled by arbitration.

Regina, Saskatchewan.—Certain Breweries and the International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 318 (Brewery Workers).

Agreement to be in effect from October 1, 1939 to September 30, 1940, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, April, 1938, page 449, with these exceptions:

Minimum monthly wage rates: first fermenting cellar man $120, operating engineers $125, bottle shop maintenance men $110, truck drivers $100, night watchmen $90. Minimum hourly wage rates; tight barrel coopers 60 cents; brewhouse, cellar and washhouse men, employed two years and over 60 cents; all bottle shop men employed two years and over 57½ cents; men employed more than one year 50 cents; men employed less than one year 45 cents; swing engineers 55 cents; machine shop men 55 cents. Men employed more than one year to receive a minimum wage of $10 per week when employable. Present higher wages of any employee not to be reduced.

Vacation: as under the previous agreement, all men employed two years and over receive two weeks' vacation each year, one week with pay and one week without pay. It is now further provided that all men on monthly wages to receive two weeks' vacation with pay each year.

Victoria, B.C.—A Certain Brewery and the International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 280 (Brewery Workers).

Agreement to be in effect from January 1, 1940 to December 31, 1940, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, November, 1938, page 1292, with these exceptions:

Overtime: time and one half; work on Sundays and holidays (except for engineers and firemen) double time.

Minimum weekly wage rate for a 44 hour week: brewhouse, cellar and washhouse employees $33.07; coopers $33.07; bottlers, machine operators and packers $32.55; extra and permit card help $29.40; truck drivers $33.07; drivers' helpers $32.02. Minimum weekly wages for a 48 hour week: second and third engineers $37.27; first and second firemen $34.65; third and fourth firemen (without papers) $32.02.

One apprentice may be employed in the brewing department, apprenticeship to be for two years, and an apprentice to be paid $22.05 per 44 hour week during first year and $24.15 during second year.

Provision is made for the settlement of disputes by arbitration.

Manufacturing: Animal Products

Winnipeg, Manitoba.—Certain Abattoirs and Cold Storage Plants and their Employees (Members of Butchers and Meat Packers Federal Union No. 97).

Agreements to be in effect from October 15, 1939 to October 15, 1940.

These agreements are similar to those previously in effect and summarized in the Labour Gazette, July, 1939, page 725, with these exceptions:

There are now seven instead of six holidays, for work on which double time is payable.

The minimum wage rate remains at 35 cents per hour, but negotiations may be opened up at any time in regard to wages, during war time.

Manufacturing: Fur, Leather and Miscellaneous Animal Products

Toronto, Ontario.—Certain Manufacturers of Leather Goods (Handbags, Etc.) and the International Ladies' Handbag, Pocketbook and Novelty Workers' Union, Local 8 (Leather Workers).

Agreement to be in effect from August 5, 1940 to July 1, 1942.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, August, 1939, page 849, with these exceptions:

Overtime, including work on seven specified holidays, time and one quarter. Overtime is permitted at all reasonable times during the year; but, except in case of emergency when consent of both parties is given, no overtime permitted "until all help in the trade is employed."

The minimum wage scale is the same except that the rate for all cutters is $27 per week except those employed exclusively on linings for whom the rate is $19.50. It is, however, provided that all workers employed by the firms receive a 7½ per cent increase on their wages prevailing at time the agreement was made. It is further provided that should the cost of living index show a substantial increase

or decrease, either party may re-open the question of the wage scale for revision, on 15 days notice.

Manufacturing: Textiles and Clothing

MONTREAL, P.Q.—THE MONTREAL DRESS MANUFACTURERS GUILD AND OTHER MANUFACTURERS AND THE INTERNATIONAL LADIES GARMENT WORKERS' UNION, LOCAL 205 (CUTTERS) AND LOCAL 262 (DRESSMAKERS).

Agreement to be in effect from April 30, 1940 to April 1, 1942, and thereafter from year to year, subject to notice.

The agreement applies to the manufacture of ladies', misses' and children's dresses, ensembles, uniforms, beach wear, sportswear, blouses, odd and separate skirts, smocks, housecoats, dressing gowns, etc., of any material, but excluding: cloaks and suits, knitted garments where the fabrics and finished products are made in the same establishment, hosiery, lingerie, etc.

Only union members to be employed. Each shop to elect a chairman and a price committee for the settlement with the employers of prices for piece-work and other questions.

Hours: 8 per day, 4 on Saturdays, or 9 per day Mondays to Thursdays, 8 on Fridays, no work on Saturdays, in either case a 44 hour week.

Overtime: not more than two hours overtime permitted in any day, nor more than 8 hours overtime in any week which may only be worked during the first four working days of the week. The first four hours of such overtime may be paid at regular rates of pay and all other overtime to be paid at time and one half.

It is optional for an employer to conduct his factory or any department of it on a weekly rate basis or on a piece-work basis, provided the minimum scale of wages is paid. An employer may not, however, have any one department on both weekly and piece-work basis.

Minimum hourly wage rates: skilled cutters 73¾ cents ($32.50 per week), semi-skilled cutters 53½ cents ($23.50 per week), operators 36½ cents, drapers 34 cents, sample makers 36½ cents, finishers 28½ cents, pressers (male) 54½ cents, pressers (female) 36½ cents, assistant pressers 25 cents, examiners 27½ cents, general hands 25 cents. It is agreed that these minimum rates be increased and that all employees in the above crafts receive increases of 5 per cent from June 3, 1940 and an additional 5 per cent increase (a total increase of 10 per cent) is to be made upon extension of this agreement under the Collective Agreements Act.

In slack times the available work to be divided as equally as possible amongst all the employees thereof.

Apprentices: Any shop employing seven or more skilled and semi-skilled cutters may have one apprentice; apprentice cutters to serve three years and be paid from $7 per week during first six months to $20 after 2½ years. In all other crafts, the number of apprentices may not exceed 15 per cent of the employees in a shop, such apprentices to work two years and to be paid from $7 per week during first six months to $11 during fourth six months.

Provision is made for the settlement of disputes by arbitration.

Manufacturing: Pulp, Paper and Paper Products

BEAUPRÉ, QUEBEC.—STE. ANNE PAPER COMPANY LTD. (ABITIBI COMPANY) AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, LOCAL 253 AND THE INTERNATIONAL BROTHERHOOD OF PULP SULPHITE AND PAPER MILL WORKERS, LOCAL 138.

Agreement to be in effect from May 1, 1940 to May 1, 1941, and thereafter from year to year, subject to notice.

The Company recognizes the above unions as the sole agencies representing the employees for the purpose of collective bargaining and will co-operate to assist in obtaining and retaining members.

Hours: 8 per day, 6 days per week, a 48 hour week.

Overtime: all work between midnight Saturday and midnight Sunday and for the shutdown periods for four holidays to be paid at time and one half; overtime for day workers and for tour workers required to work at other than tour work to be paid at time and one half.

Vacation: employees with at least one year's service to receive one week's vacation with pay if mill has operated 75 per cent of time or over, three days if mill has operated from 50 to 75 per cent of time and no vacation if mill has operated less than 50 per cent in previous year.

An apprentice system to be in effect in the mechanical trades, apprenticeship to be for four years, with wage rates varying from 35 per cent of journeymen's rate in first year to 85 per cent during fourth year.

Any grievances which cannot be settled between the manager and the men will be referred to the General Manager of the Company and the president of the International Union concerned or their representatives, and if they cannot agree it will be referred to arbitration, each party to select one party and the two thus selected to choose a third party, or if they cannot agree on a third party the Minister of Labour wil be asked to appoint him. The decision of this Board to be final and binding.

Hourly wages rates for a few of the classes of labour from the wage schedule: wood room —foremen 73 cents, crane runner 68 cents, transfer points 46 cents, all others 46 cents; groundwood mill—stone sharpeners 81 cents, stock runners 63 cents, grindermen and screen operators 55 cents, magazine loaders 46 cents; sulphite mill—cooks and acid makers 93 cents, cook's helpers 63 cents, blow pits 51 cents, sulphur and limestone handling 46 cents; paper machine room—boss machine tenders $1.77, machine tenders $1.57, back tenders $1.41; third hands $1.08, fourth hands 70 cents, fifth hands 63 cents, sixth hands 52 cents, clothing man $1.01, rewinderman 70 cents, swipers or spare gang 51 cents, beatermen 50 cents; finishing and shipping—foremen 61 and 55 cents, electric truckers 55 cents, coreman 53 cents, others 46 to 52 cents; electrical department—shift electricians and armature winderman 78 cents, electricians 73 cents, helpers 60 cents, substation operators and assistant shift electricians 68 cents; steam plant—tour engineer 81 cents, firemen 66 cents, coal hoistmen 58 cents, others 49 to 54 cents; yard labourers 46 cents; mechanical crew—millwrights 61 to 78 cents, carpenters 68 cents,

painter 69 cents, machinists 78 cents, pipefitters 73 cents, oilers 53 to 61 cents; watchmen 46 cents, special guards 41 cents; control—stock testers 46 cents; paper inspector 58 cents.

Quebec, P.Q.—Anglo-Canadian Pulp and Paper Mills Limited and the Quebec Provincial Council of Paper Mill Unions, the International Brotherhood of Paper Makers (Local 250) and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers, Local 137.

Agreement to be in effect from May 1, 1940, to May 1, 1941, and therafter from year to year, subject to notice.

The Company recognizes the unions as the sole bargaining agencies representing the employees and will co-operate with the unions in assisting in obtaining and retaining members. New employees to become members of the union.

Hours: 8 per day for both day and tour workers. The normal operation of pulp and paper mills to be six per week, with 24 hours shutdown from midnight Saturday to midnight Sunday.

Overtime: time and one half for all overtime for day workers and for all work of both day and tour workers on Sundays and four holidays.

Vacation: all permanent employees and all new employes after one year's service to be given one week's vacation with pay.

Seniority to be considered in laying off men and re-employing them.

A committee of representatives of the two unions to handle grievances with the Company officials. If they are unable to settle a dispute, it will be referred to the general manager of the company and the president of the international union concerned, and later if necessary to arbitration.

Minimum hourly wage rates for certain classes of workers: control—paper testers 60 cents, pulp testers 52 cents; stores—issue clerks 57 cents, electrc truck operator and general helper 49 cents, motor truck operator $37.62 per week; mixing room—meter men 52 cents, beater men and wet machine operators 49 cents; steam plant—heating and ventilating 72 cents, electric boiler operators 62 cents, boiler room helpers 57 cents, ash handlers and acidmen 47 cents; sulphite—cooks 97 cents, stock runners 70 cents, blow pit men 55 cents, chippermen 49 cents, chip screenman 47 cents, wood handlers 45 cents, wet machine operators 49 cents; groundwood—stone sharpener 59 cents, screenmen 57 cents, grindermen 52 cents, wood cleaners 47 cents; wood handling—handy men 49 cents, other classes 45 cents; finishing and shipping—paper inspectors 62 cents, finishers and checkers 52 cents, coremen 49 cents; electrical—shift electricians 89 cents, windermen 77 cents, electrician 71 cents, motormen 62 cents; yard—hoist operators 71 cents, locomotive engineer 70 cents, brakeman 57 cents, labourers 45 cents; paper machines—machine tenders $1.62, back tenders $1.45, third hands $1.10, fourth hands 72 cents, fifth hands 68 cents, sixth hands 52 cents, rewindermen 72 cents, head clothing man $69.39 per week, assistant clothing men 52 cents, cleaners 51 cents; sulphite cutting machine department—cutter operators 60 cents, scale and press operators 49 cents, others 47 cents; mechanical—pump millwright 93 cents, patternmaker 93 cents, sulphite millwright and paper mill millwrights 83 cents, roll grinder 79 cents, first class machinists 75 and 77 cents, bricklayer mason 75 cents, welder 72 cents, pipe-fitters 65, 70 and 72 cents, carpenters 62 and 65 cents; painter 49 to 57 cents.

Barbers, Chicoutimi (amendment).
Hairdressers, Montreal (amendment).

Industrial Standards Acts

The following schedule has recently been made binding by Order in Council and is summarized in a special article below:

Nova Scotia

Plasterers, Halifax.

Saskatchewan

Taxi drivers, North Battleford (correction).

COLLECTIVE AGREEMENTS ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreements Act was assented to June 22, 1940, and was summarized in the Labour Gazette, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act", the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to

have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement and such bylaws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreements Act are noted in the issues beginning August 1940.

Recent proceedings under the Act include the extension of seven new agreements and the amendment of four other agreements, all of which are noted blow. Requests for the extension of new agreements were published in the *Quebec Official Gazette*, as follows: an agreement affecting longshoremen (ocean navigation) in the issue of August 3; agreements affecting elevator constructors, one for western Quebec province and the other eastern Quebec province, in the issue of August 17; an agreement affecting longshoremen (shipliners for ships in ocean navigation) at Montreal and one affecting retail stores and hotels at Magog in the issue of August 24. Requests for the amendment of certain agreements were published in the *Quebec Official Gazette*, as follows: building trades at Montreal and barbers and hairdressers at St. Hyacinthe in the issue of August 3, municipal employees (outside services) at Quebec, garage and service station employees at Quebec, and bakers at Granby, in the issue of August 10; barbers and hairdressers at Chicoutimi, men's and boys' clothing industry in the province of Quebec, the cloak and suit industry, province of Quebec, in the issue of August 17; fur manufacturing (wholesale) at Montreal, and building trades at Montreal in the issue of August 24; barbers and hairdressers at Sherbrooke, in the issue of August 31.

Manufacturing: Vegetable Foods

BAKERS, MONTREAL.—An Order in Council, approved August 27, and published in the *Quebec Official Gazette*, August 31, amends the previous Order in Council (LABOUR GAZETTE, October, 1939, page 1064) by adding a number of bakery firms to the parties to the agreement.

FUR MANUFACTURING (WHOLESALE), MONTREAL.—An Order in Council, approved August 3, and published in the *Quebec Official Gazette*, August 3, makes obligatory the terms of an agreement between the Montreal Furriers Association, the Fur Trimmers Protective Association and the International Fur Workers' Union, locals 66 and 67.

The Order in Council to be in effect from August 3, 1940 to April 30, 1942, and thereafter from year to year, subject to notice.

It applies to all wholesalers and also to those retailers and those doing both wholesale and retail business who have signed the agreement.

The territorial jurisdiction comprises the Island of Montreal and within 50 miles of it, zone I comprising the Island of Montreal and within 10 miles of it and zone II the territory within a radius of 40 miles of zone I.

Hours: 40 per week—for the manufacturers, 8 per day, a 5 day week, for the retailers 7 per day, 5 on Saturdays. From September to December inclusive 4 hours per week extra may be worked at regular rates; for trimmers the months during which these 4 hours per week extra may be worked are June to September inclusive.

Overtime: time and one-half. Overtime is permitted only during the months July to December inclusive (trimmers from June to December inclusive) and shall not exceed 20 weeks in any one establishment nor extend after 9 p.m.

Holidays: employees to be entitled to be paid for seven specified holidays. If they work on any of these days they shall be paid time and one half in addition to the regular day's pay.

Employees classified as "first class" are those working on the more expensive furs such as mink, seal, squirrel, beaver, martens, etc. Employees classified as "second class" are those working on the less expensive furs.

Minimum weekly wage rates: cutter (1st class) $40, cutter (2nd class) $32.50, operators (male, 1st class) $32.50, operators (male, 2nd class) $24, operators (female, 1st class) $23.50, operators (female, 2nd class) $18, finishers (female, 1st class) $21.50, finishers (female, 2nd class) $17, apprentice cutters $24, blockers and trimmers (1st class) $24, blockers (2nd class) $16, trimmers (2nd class) $17, male finishers (1st class) $28, male finishers (2nd class) $24. (These are increases of approximately 10 per cent over the previous minimum rates.) It is provided that employees receiving over the minimum rates should also benefit by the increases in wages.

Apprentices (male and female) to serve two years and to be paid from $7 per week during first six months to $11 during fourth six months and $12.50 thereafter. Male apprentices are limited to one to a factory with less than 15 employees and two in factories with more than 15 employees. The manufacturers may employ as many female apprentices as required but such apprentices may only be between 16 and 20 years of age inclusive.

It is prohibited for employees to take work home.

Fur Manufacturing (Retail), Montreal.—An Order in Council, approved August 3, and published in the *Quebec Official Gazette,* August 3, makes obligatory the terms of an agreement between "La Section de la Fourrure de l'Association des Marchands détaillants du Canada" (the fur section of the association of retail merchants of Canada) and "L'Union nationale du Vétement section de la fourrure" (the national clothing union, fur section).

The Order in Council to be in effect from August 3, 1940 to May 1, 1942, and thereafter for a further two years if no notice of change given by either party. It applies to all retail merchants in the fur trade. It does not apply to the fur trimming and dyeing industry.

The territorial jurisdiction comprises the Island of Montreal and within 50 miles of it.

Hours: 8 per day, a 40 hour week on the Island of Montreal, a 48 hour week outside the Island of Montreal. From September to December, inclusive, however, a 48 hour week allowed throughout the jurisdiction.

Overtime: all overtime and also all work after 6 p.m. to be paid at time and one half. Overtime may only be worked from September to December inclusive and shall not exceed 20 hours per week nor continue after 10 p.m.

Holidays: employees to be paid for seven specified holidays. If they work on any of these days, payment to be at time and one half in addition to the regular wage for such day.

For each operation, the number of employees of Class A to represent at least half of the total number of employees for such operation.

Minimum weekly wage rates for Island of Montreal and towns of 25,000 or over, outside the Island: qualified cutter—class A $40, class B $34; operators (male)—class A $30, class B $24; finishers (male)—class A $28, class B $22; blockers—class A $24, class B $16; operators (female)—class A $24, class B $18; finishers (female)—class A $22, class B $18. (These rates are 5 cents per hour higher than in the previous agreement except for male operators and male finishers whose rates are unchanged.) Minimum wage rates outside the Island of Montreal for towns of less than 25,000 may be 25 per cent less than the above rates. Any branch of an establishment operating within the Island of Montreal does not benefit by this 25 per cent reduction.

Minimum wage rates for apprentices throughout the territorial jurisdiction: apprentices (male or female) from $7 per week during first six months to $14 during fifth six months; apprentices (cutters or trimmers) from $23 during first six months to $28 during sixth six months.

Apprentices are limited, as follows: any employer may have two apprentices; those with five employees, three apprentices; those with ten employees, four apprentices; those with 15 employees, five apprentices, those with 25 employees, six apprentices.

Shoe Manufacturing Industry, Province of Quebec.—An Order in Council, approved August 27, and published in the *Quebec Official Gazette,* August 31, extends the terms of this agreement (Labour Gazette, October, 1937, page 1156, March, 1938, page 335, June, page 691, December, page 1423, July, 1939, page 728 and October, 1939, page 1065) until November 4, 1940.

Working Glove Operators and Blockers, Province of Quebec.—An Order in Council, approved August 27, and published in the *Quebec Official Gazette,* August 31, makes obligatory the terms of an agreement between certain glove manufacturers and La Fédération nationale des gantiers du Canada (the national federation of glove makers of Canada).

The Order in Council applies throughout the province of Quebec, from September 1, 1940 to December 31, 1941.

Hours: 9 per day, 4 on Saturdays, a 49 hour week.

Overtime only with permit from the joint committee, and is to be paid at regular rates.

Home work is prohibited. Employers shall not charge needles to operators.

A scale of piece rates is included in the agreement, the wages for the period of this agreement to be 10 per cent above these rates. In cities and towns with a population of less than 15,000 a reduction of 10 per cent may be made.

One apprentice allowed to each ten operators or fraction thereof, apprentices to serve one year, and to be paid $7 plus 10 per cent during first six months and $9 plus 10 per cent during second six months.

Transportation and Public Utilities: Water Transportation

Longshoremen (Ocean Navigation), Quebec, P.Q.—An Order in Council, approved August 8, and published in the *Quebec Official Gazette,* August 17, makes obligatory the terms of an agreement between certain steam-

ship companies and the Quebec Ship Labourers' Benevolent Society.

The Order in Council applies to longshoremen employed in loading and unloading ocean going vessels in the port of Quebec, and is to be in effect from August 18, 1940 to December 31, 1940, and thereafter from year to year, subject to notice.

Wages for longshoremen: the basic rates of the previous agreement are unchanged, but a war bonus of 7 cents per hour is added, this war bonus under changing war conditions being subject to revision on 60 days' notice. Accordingly the longshoremen receive: 77 cents per hour for work between 7 a.m. and 12 noon and between 1 p.m. and 5 p.m.; for work between 5 p.m. and 7 a.m., time and one half; double time for work during meal hours and on Sundays.

LONGSHOREMEN AND CHECKERS AND COOPERS (OCEAN AND INLAND NAVIGATION) SOREL.—An Order in Council, approved August 27, and published in the *Quebec Official Gazette,* August 31, makes obligatory the terms of an agreement between certain stevedoring firms and Le Syndicat Catholique et National des Débardeurs de Sorel, Inc. (the national Catholic union of longshoremen of Sorel, Inc.).

The Order in Council applies to the loading and unloading of all ships (including the handling of grain) engaged in ocean, inland and coastal navigation, and is to be in effect from August 27, 1940 to January 31, 1941, and thereafter from year to year, subject to notice.

Wages per hour: for loading grain, 60 cents between 7 a.m. and 6 p.m., 70 cents between 7 p.m. and midnight, 80 cents between midnight and 6 a.m. (increases of 10 cents per hour over the previous rates); for unloading grain, the wage rates for the corresponding hours are 50, 53 and 60 cents per hour (increases of 5 cents per hour over the previous rates); for handling dynamite, 70 cents per hour; for all other explosives 60 cents; for general cargo 55 cents (an increase of 5 cents per hour); for loading and unloading railway cars, 45 cents. Foremen to be paid 10 cents per hour extra.

For work during meal hours and thereafter until relieved and for all work on Sundays and five specified holidays, time and one half.

Provision is made for the number of men in gangs and also for payment for waiting time.

Disputes which cannot be settled between the parties will be referred to arbitration.

CHECKERS AND COOPERS (OCEAN NAVIGATION), MONTREAL.—An Order in Council, approved August 27, and published in the *Quebec Official Gazette,* August 31, makes obligatory the terms of an agreement between certain steamship companies and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Locals 233 and 566.

Agreement to be in effect from August 27, 1940 to December 31, 1940, and thereafter from year to year, subject to notice.

The Order in Council applies to all steamship checkers and coopers on ocean going vessels of the harbour of Montreal.

Wages per hour: in addition to the basic rate, a war bonus of 6 cents per hour is to be paid subject to revision on 60 days' notice. Accordingly, the wage rates are: for work between 7 a.m. or 9 a.m. to 12 noon and from 1 p.m. to 6 p.m. checkers 70 cents, coopers 69 cents; for work between 7 p.m. and 11 p.m. and from midnight to 5 a.m., checkers 80 cents, coopers 79 cents. Checkers when employed temporarily as head checkers or in doing office work, stowage or employed as warehousemen to be paid 5 cents per hour extra.

Double time for work during meal hours and for all work on Sundays and three specified holidays.

Service: Public Administration

CIVIC EMPLOYEES, ST. JOSEPH D'ALMA.—An Order in Council, approved August 27, and published in the *Quebec Official Gazette,* August 31, makes obligatory the terms of an agreement between La Corporation municipale de la ville de Saint Joseph d'Alma (the municipal corporation of the town of St. Joseph d'Alma) and Le Syndicat national catholique interprofessionnel de St. Joseph d'Alma (the national Catholic interprofessional union of St. Joseph d'Alma).

The Order in Council applies to salaried employees, and is to be in effect from August 31, 1940 to December 31, 1940, and thereafter from year to year, subject to notice.

Hours may not exceed an average of 10 hours per day in any one month; police officers to work 84 hours per week, those in charge of pumps 56 hours.

Overtime: hourly paid employees required to work after regular hours to be paid at regular hourly rates for such work.

Minimum wage rates: waterworks department —foreman $120 per month, assistant 44 cents per hour; pumps department—watchmen $84 per month; rubbish department—team driver $5 per day, one horse driver $4; police and fire department (6 men)—chief $125 per month, deputy chief $110; officers $75 to $105; works foremen $125; electrical department—chief electrician $115 per month, second electrician 40 cents per hour, meter reader $75 per month.

Vacation: after one year's service, employees paid by the month or week to be given one week's vacation with pay annually; hourly paid employees an annual vacation of one day for each year of service.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, CHICOUTIMI.—An Order in Council, approved August 27, and published in th *Quebec Official Gazette,* August 31, amends the previous Orders in Council for these trades (LABOUR GAZETTE, October, 1937, page 1156 and June, 1939, page 630) by extending the terms of the agreement to November 4, 1940.

HAIRDRESSERS, MONTREAL.—An Order in Council, approved August 27, and published in the *Quebec Official Gazette,* August 31, amends the previous Orders in Council (LABOUR

GAZETTE, August, 1939, page 862, March, 1940, page 284, June, page 610 and August, 1940, page 869) by extending the period of the agreement from September 1, 1940, to February 28, 1941.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the *Quebec Official Gazette*, August 17:

Building trades, Quebec.
Building trades, Montreal.
Police Department, Quebec.
Fire Department, Quebec.
Municipal Employees (outside services), Quebec.
Municipal Employees (permanent), Quebec.

Notices were published in the *Quebec Official Gazette*, August 17 and 31, that authorization was given by Orders in Council for the joint committees to levy assessments on employers and employees, parties to the following agreements:

Building trades, Joliette (amendment).
Building trades, Montreal.
Barbers, Montreal.
Retail trade, Coaticook.
Shoe Manufacturing, Province of Quebec.
Fur Manufacturing, Quebec.
Building trades, St. Hyacinthe.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia and Saskatchewan

IN five provinces—Ontario, Alberta, Nova Scotia, Saskatchewan and New Brunswick—legislation provides that, following a petition from representatives of employers or employees in any industry, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour; in Saskatchewan under the Commissioner of Labour and Public Welfare; in New Brunswick under the Minister of Health and Labour. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, May, 1938, page 501, and June, 1939, page 574; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, June, 1938, page 633, and June, 1939, page 567; Nova Scotia, in June, 1936, page 604, and July, 1939, page 671; Saskatchewan, in the issue of June, 1937, page 635, May, 1938, page 507, and June, 1939, page 581; New Brunswick, in the issue of October, 1939, page 996. Similar legislation is in effect in Part II of the Fair Wages Act of Manitoba for certain industries (LABOUR GAZETTE, May, 1938, page 499, and June, 1939, page 570). Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Nova Scotia

Construction: Buildings and Structures

PLASTERERS, HALIFAX AND DARTMOUTH.—An Order in Council, dated August 6, and published in *The Royal Gazette*, August 7, makes binding the terms of a schedule of wages and hours for the plastering and cement finishing industry in the city of Halifax and the town of Dartmouth, to be in effect from August 17, 1904 to April 30, 1941, and thereafter from year to year, subject to notice.

The schedule does not apply to the finishers of concrete floors or walls.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. In case of shift work, 8 hours' pay for 7 hours' worked.

Overtime: time and one half; work on Sundays and ten specified holidays, double time.

Minimum wage rate for plasterers (from May 1, 1940): 85 ents pour hour (an increase of 10 cents per hour over the previous rate). A special minimum rate may be established by the advisory committee for any handicapped employee.

Saskatchewan

Transportation and Public Utilities: Local Transportation

TAXI DRIVERS, NORTH BATTLEFORD.—A correction in the wording of this schedule was published in *The Saskatchewan Gazette*, August 15. This does not affect the summary of this schedule as published in the LABOUR GAZETTE, August, page 871.

Coal Prices in Canada

Investigations of coal prices by the Wartime Prices and Trade Board have shown substantial increases in costs of imported coal and coke in various parts of Canada since the commencement of the war. Where these price advances reflect increases in cost over which the dealers have no control—such as higher prices at the mine, higher transportation costs, the premium on United Staes funds, the War Exchange Tax—the Board recognizes the right of the dealers to pass on such additions. It is evident, from the inquiries received, that many of those who have complained have not recognized the fact that neither the dealers nor the Board are responsible for these increases in cost; they come within the category of uncontrollable costs.

The premium on United States funds—after some preliminary fluctuations in September, 1939—has been controlled by the Foreign Exchange Control Board at 11 per cent. On domestic sizes of United States anthracite, this amounts to approximately 65 cents per net ton. A corresponding "equalization charge", representing the exchange on the proportion of rail freight payable in United States funds, averages 24 cents per net ton. In addition since June 25, 1940, the War Exchange Tax of 10 per cent of the value for duty has applied on all imports from the U.S.A.; this itself is equivalent to approximately 67 cents per net ton on domestic sizes of anthracite. Hence, dealers' stocks of United States anthracite imported from September to June 24 carried exchange charges not previously applicable of approximately 90 cents per net ton. Imports after June 24, 1940, had to pay in addition the War Exchange Tax, making a total of $1.57 per net ton of new charges since the summer of 1939. Price fluctuations at the mines—seasonal and otherwise—were, of course, superimposed on the exchange items; actually, base prices at the mines increased 30 cents per net ton between December 11, 1939, and July 15, 1940. Thus Unitel States anthracite imported into Canada at present bears a total charge of approximately, $1.87 per ton above the price levels obtaining a year ago.

Importers of British anthracite have benefited by a favourable exchange rate, but against this, prices f.o.b. docks in Great Britain have been increased since last summer by 13 to 15 shillings per gross ton; and ocean freight charges, owing to war risk, insurance, and greater demand for shipping have increased by approximately 3s. 6d. per gross ton at the present pegged rate. The resultant net increase in cost at importers' docks in Canadian ports has ranged from $2 to $3 per net ton over the shipping season. Since the bulk of this coal is re-graded at Canadian stocking points and from 20 to 25 per cent is screened out and sold for industrial use at low prices, the actual increase in costs of the coal as landed must be largely apportioned to the domestic sizes resulting in a proportionately greater increase in costings to these sizes.

Coke manufactured in Canada from United States coals bears increased costs, due to exchange and War Exchange Tax on the coal used, equivalent to from 60 to 70 cents per ton of coke produced. Imported coke is subject to increased costs, due to the same taxes, of approximately $1.30 per net ton.

Additional to all the inescapable higher costs above set forth, increases have also been made in the rates of freight on coal and coke transported on the Great Lakes from United States ports to Canadian destinations. These increases range from 5 to 30 cents per ton.

It will be seen that certain increases in retail prices for coal and coke have been inevitable in so far as Canadian consumers are concerned. Where increases beyond these uncontrollable costs occur, the Board welcomes information about such increases and is prepared to make full investigation.

PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1940

Cost of living, prices of staple articles and index numbers

CHANGES in prices during the month were again slight. The cost per week of a list of certain staple foods, fuel and lighting and rent, entering into a family budget was somewhat higher at the beginning of August due to slight advances in the cost of food and fuel while the Dominion Bureau of Statistics weekly index number of wholesale prices was also at a slightly higher level throughout August than during the previous month.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.74 at the beginning of August as compared with $8.70 for July; $8.16 for August; 1939, $8.81 for August, 1938; $6.67 for March, 1933, the low point in recent years; $11.63 for August, 1929; $10.44 for August, 1922; and $16.92 for June, 1920, the post war peak. Twelve items in the list advanced in cost, seven declined and ten were unchanged. Changes were mostly of a minor character the most important being advances in the cost of eggs, butter, flour and evaporated apples and declines in potatoes, lamb and cheese. Including the cost of fuel and rent with that of foods the total cost was $17.90 at the beginning of August as compared with $17.84 for July. In fuel increases were recorded in the cost of coal and wood while rent was little changed. Comparative figures for the total cost at certain earlier dates are $17.02 for August, 1939; $17.70 for August, 1938; $15.41 for June, 1933, the low point in recent years; $21.90 for August, 1929; $20.88 for August, 1922; and $26.92 for July, 1920, the post war peak.

Wholesale prices continued to show little change from the levels of recent months being, however, slightly higher in August than in June and July. The Dominion Bureau of Statistics weekly index number was 82·7 for the week ended August 30, 82·6 for that ended August 2, 82·2 for that ended July 5 and 81·9 for that ended June 7. The latest figures available on a monthly basis are for July when the index number was 82·4 as compared with 72·4 for August, 1939; 76·0 for August, 1938; 85·6 for August, 1937; 63·5 for February, 1933, the low point during recent years; 98·4 for August, 1929; 97·1 for August, 1922; and 164·3 for May, 1920, the post war peak. In the classification according to chief component materials the Iron Products Group advanced about 2½ per cent. Changes in other groups were fractional there being slight advances in the Animal Products Group, the Wood Products Group, the Non-Ferrous Metals Products Group and in the Chemical Products Group while the Vegetable Products Group was slightly lower and the Textile Products Group was unchanged.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of August of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the Labour Gazette, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in some of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received, and includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the Labour Gazette for February, 1910. The quantities of each commodity included are modifications of those

employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of food tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the list of foods entering into the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Beef prices showed little change in the average during the month. Lamb declined from an average of 32·1 cents per pound in July to 30·7 cents in August, decreases being recorded in most localities. Fresh pork was fractionally higher at 23·1 cents per pound. Higher prices for eggs were reported from most localities fresh grades being up in the average

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended August 30, 1940, monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(*Continued from page 976*)

from 27·4 cents per dozen to 30·2 cents and cooking grades from 22·8 cents per dozen to 24·4 cents. Creamery butter averaged 26·7 cents per pound in August as compared with 26·4 cents in July. Cheese was again slightly lower averaging 23·7 cents in August, 24 cents for July and 26·5 cents for March. Flour averaged fractionally higher at 3·6 cents per pound. Onions averaged 7·1 cents per pound at the beginning of August as compared with 8·4 cents for July. The price of potatoes declined in many cities particularly in Ontario and Quebec. The Dominion average price was $1.96 per hundred pounds at the beginning of August as compared with $2.04 for July. A number of increases were reported in the price of the United States anthracite coal and the average price advanced from $15.52 per ton in July to $15.62 for August. Coke also averaged higher at $12.62 per ton for August as compared with $12.54 for July.

The following are the prices for Welsh coal "cobbles" and "French nut" at the beginning of August, 1940; Halifax $17.50; Charlottetown $16.90; Saint John $16; Quebec $15.50; Three Rivers $16.50; Sherbrooke $16.75; Thetford Mines $17; Montreal $16-$16.50; Ottawa $18; Kingston $17; Belleville $16.50; Peterborough $18.50; Oshawa $17; Toronto $16; St. Catharines $15.75; Hamilton $16 and $15.25; Galt $17; Sudbury $19.75; Cobalt $21; Timmins $21; Winnipeg $20.50.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the July issue of the Labour Gazette. Since these monthly notes are all compiled from British and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the Labour Gazette. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

In most of the continental European countries some measure of control over prices and distribution has been put in force. In some of these countries the publication of price data has been suspended and in other countries direct information is now unobtainable, although information contained in the publications of neutral countries is noted.

Great Britain and Northern Ireland

Cost of Living.—The *Ministry of Labour* index number, on the base July, 1914=100, was 185 at the begininng of August, a decline of one per cent for the month. Food prices declined 2½ per cent, due to lower prices for potatoes, although eggs were higher. Rent was unchanged; clothing was one per cent higher; the fuel and light group was unchanged; the "other items" group was 4 per cent higher due to increased prices for tobacco, etc. As compared with the cost of living at the beginning of September, 1939, the cost of living has increased about 19 per cent.

United States

Wholesale Prices.—The Bureau of Labour Statistics index number, on the base 1926=100, was 77·7 for July, an increase of 0·4 per cent for the month. Small increases in farm products, metals and metal products, building materials, chemicals and drugs and miscellaneous products were nearly counterbalanced by decreases in the hides and leather, textile products, fuel and lighting material products groups.

The *Annalist* index number, on the base 1926=100, was 79·5 for August, a decrease of 0·3 per cent from the July level, due to slight declines in the prices of farm products, textile products, fuels, metals and miscellaneous products; food products increased 1·6 per cent, while building materials and chemicals were unchanged.

Cost of Living.—The index number of the Bureau of Labour Statistics of the cost of living for families of wage earners and lower salaried workers in large cities, on the base 1935-1939=100 was 100·5 at June 15, an increase of 0·7 per cent over the March 15 level. Food prices had risen 2·8 per cent, rent 0·1 per cent, while all other groups showed slight declines.

Shell Manufacturing in Canada

Total orders placed for shells and for the creation of shell manufacturing facilities in Canada now amount to some $57,000,000, according to an announcement made on July 24 by Hon. C. D. Howe, Minister of Munitions and Supply. Of this sum approximately $12,000,000 covers the cost of equipment and extensions to plants in order to create the shell production facilities required.

Six different types of shells are now being manufactured in Canada. With the expanding orders from Great Britain further types of shells will probably be manufactured here shortly.

During the past three months, 48 shell contracts have been placed by the Department for the manufacture of various sizes of high explosive shells and their components. These orders went to 38 firms. Approximately 60 companies are engaged in the manufacture of shells, cases, and their components.

Negotiations have already been completed by the Department which would permit a rapid and immediate increase in the output of shells in Canada should the progress of war demand increasing shell production.

Arrangements have been made with the primary steel producers whereby the major firms in the industry would produce the blanks, that is the small steel billets, which could be distributed for drilling and machining to a wide variety of Canadian firms who have adequate lathe facilities. Thus, the Canadian output of shells could be increased both immediately and substantially.

COMBINES INVESTIGATION ACT

Members of Alleged Combine in the Manufacture and Sale of Paperboard Shipping Containers Convicted and Sentenced

NINETEEN companies and one individual were found guilty of combining to restrain trade in corrugated and fibreboard boxes and related products in contravention of section 498 of the Criminal Code by Mr. Justice Hope of the Supreme Court of Ontario, at Toronto on September 6, 1940. The judgment was delivered in the case of The King v. Container Materials Limited, Badden, et al., a prosecution instituted by the Attorney General of Canada following an investigation under the Combines Investigation Act (LABOUR GAZETTE, April, 1939, et seq.)

J. C. McRuer, K.C., of Toronto, assisted by R. M. Fowler and J. L. McLennan, acted as Crown Counsel in the case. Counsel at the trial appearing for those accused whose headquarters are in the province of Ontario were D. L. McCarthy, K.C., A. G. Slaght, K.C., H. E. Manning, K.C., F. W. Wegenast, K.C., Joseph Singer, K.C., W. J. Tuchtie, J. M. Robb, R. J. Dunn and E. W. Bayly. Of the eighteen manufacturing companies convicted, eleven have their head offices in Ontario, one in Nova Scotia, one in New Brunswick, two in Quebec, two in Manitoba and one in British Columbia. Other members of the alleged combine convicted were Container Materials Limited, of Toronto, an incorporated trade association which was the central organization of the alleged combine, and H. J. Badden of Toronto, who was the president and secretary-treasurer of this association.

The accused were charged with combining, in relation to the manufacture and sale of corrugated and solid fibreboard shipping containers, to unduly prevent or lessen competition, to restrain or injure trade or commerce, to unduly limit facilities for manufacturing and supplying, and to prevent or lessen manufacture and production or unreasonably enhance prices. These offences were alleged to have been committed at the cities of Toronto, Hamilton, London, Peterborough and Waterloo, Ontario; at Montreal, Halifax, Fairville, New Brunswick; Winnipeg, Vancouver and elsewhere in Canada where corrugated and solid fibreboard boxes or shipping containers were offered for sale, during the years from 1931 to 1939. By election of all of the accused, the action was heard by the Court without the intervention of a jury, at a special Assize Sitting at Toronto, commencing April 22. The evidence and argument continued over a total period of thirty-nine days, ending on June 28.

In addition to its importance in respect to the products of this large and growing industry, the judgment now delivered is of marked public value as a review of the legal position of restrictive agreements and monopolistic arrangements in trade and industry and of their effects upon the public. Underlying causes of the unnecessary and unreasonable burdens which tend to be imposed upon other businesses and upon the public by such methods of restraint of trade as price-fixing agreements and arbitrarily enforced restriction of methods of production and distribution are indicated in the course of the comprehensive reasons for judgment. The following paragraphs, reproduced from the reasons for judgment, provide a record of salient features of the Court's conclusions upon the completion of this case.

JUDGMENT OF COURT

"Generalizing, the offences covered by the four counts are all referred to as 'conspiracy in restraint of trade.' Paradoxical as it may appear at first sight, it is clear that the power of combination is based upon individualistic doctrine, for the freedom of the individual involves freedom to combine and men acting in association are, upon this hypothesis, entitled to the same freedom which is allowed to them as individuals. The law relating to combinations, therefore, should hold the balance fairly—between the interests of the individual and the interests of the community, and should discriminate between the legitimate use and the abuse of freedom. In the very able work by Dr. Haslam. 'The Law Relating to Trade Combinations,' the learned writer reviews extensively the law as it is to-day in England and in the various Dominions, including Canada, and in the United States of America. In doing so, he confines himself to a purely legal approach to the question raised and clearly indicates that in his opinion the Courts should not be called upon to adjudicate between conflicting theories of political economy. With this view, I find myself in complete accord, despite the very able argument of Mr. Wegenast, concurred in by other defence counsel, dealing with certain fundamentals of economics with which I may well agree or disagree in theory. As Sir Frederick Pollock once observed shrewdly: 'Our Lady of the Common Law is not a professed economist.' It is well for the Courts to avoid even the suspicion of political bias but rather to leave to the statesmen and the economist, the decision as to what modifications of the law, indeed if any, are in the public interest.

"It was very ably argued by Mr. Wegenast that in passing section 498 of The Criminal Code, our legislators had been even more far sighted than they may have thought and that by using the word 'unduly' there was permitted to the Courts an elasticity of interpretation and application of this section to the changing industrial and commercial circumstances and public policy and that therefore this Court should now take judicial knowledge

of what he claimed to be new factors in our economic structure, illustrated in our own country by such public bodies as the Milk Control Board and other marketing Boards, and in our neighbour to the south by multitudinous bodies set up to regulate production, price and marketing of various commodities under the policy familiarly referred to as 'the N.R.A.'

"Be this as it may, it should be noted that all of these bodies are of legislative creation, and have been the result of deliberate legislative action taken as a matter of public policy, but despite a certain alleged trend in such direction there is, in my opinion, no evidence on which to find any concrete change of policy, nor can I find any indication of legislative action, altering the policy contained in section 498 as amended in 1900 to its present form.

"Mr. Wegenast quoted extensively from certain economic writers in support of his contention, but lacking anything in the way of evidence on this phase of the case, and in view of the fact that economics are not by any means an exact science and that the virtues of this so-called new or modern trend in policy are by no means proven or accepted by all, I do not feel that I am justified in the circumstances of this case, in developing any new jurisprudence based on alleged new or fashionable economic theories, nor can I find anything in the reported judgments subsequent to *Stinson-Reeb Builders Supply Company* v. *The King* (1929) S.C.R. 276, either in Ontario or the other provinces or in the Dominion Courts, which departs in principle from the last named case. Each of such cases would appear to be based upon its own peculiar facts, but the underlying principle of interpretation remains unchanged.

"Mr. McCarthy and Mr. Manning argued that recognition of the suggested change in public policy is revealed by the enactment of section 498A by Parliament as recently as 1935. However, after careful consideration of such section it appears to me that such legislation is quite in the spirit of the policy of the earlier legislation namely section 498 as it has been interpreted by our Courts and is supplemental to the safeguards provided by section 498 for the preservation of that competition in trade to the benefit of which everyone is entitled.

"The application of the Common Law as found in England and relating to offences as here charged, was codified many years ago by the introduction of section 498 into our Criminal Code. This codification was a corollary to the adoption by this country of the economic policy of tariff protection for industry. Quoting from Lord Atkin in the *P. A. T. A. case*, 1931, A.C. 310, and referring to section 498 and the Combines Investigation Act:

> 'It is unfortunately beyond dispute that in a country where a general protective tariff exists persons may be found to take advantage of the protection, and within its walls form combinations that may work to the public disadvantage. It is an elementary point of self-preservation that the legislature which creates the protection should arm the executive with powers of withdrawing or relaxing the protection if abused.'

"Similarly it is noted by Clute, J., in *Wampole* v. *Karn*, 11 *O.L.R.* 619, at 628:

> 'The history of the law shows that it was passed at a time when the law relating to the protection of native industries was being introduced. As an objection to the protective tariff it was argued that combinations might be formed which would destroy competition and so enhance the price; . . . To meet the objection the law against restraint of trade was passed.'

"Possessed as I am therefore of the view that the policy of the law as existent prior to 1935 was then endorsed by Parliament, let me turn to an examination of the law in relation to restraint of trade in Canada."

The Law Regarding Restraint of Trade

"Parliament has, in the Code, defined in moderately precise language the instances which it intended to be regarded as a violation of its economic policy."

"I quote the following extracts from the judgments in *Weidman* v. *Shragge*, as applicable to the facts in this case to which I shall later refer. Chief Justice Sir Charles Fitzpatrick stated at page 3:

> 'In this case, however, we are not called upon to consider in what respect the contract declared upon is affected by the principles of the English law as to restraint of trade, nor are we at liberty to invent or give effect to any new ground of public policy. Our duty is to determine its validity in view of those sections of the Criminal Code relied upon.'

And at page 4:

> 'It is not necessary, I repeat, that the agreement should be in itself fraudulent or otherwise illegal; and all agreements which prevent or lessen competition do not come within the operation of the statute; the mischief aimed at is the undue and abusive lessening of competition which operates to the oppression of individuals or is injurious to the public generally. And it is for the courts to say whether in the circumstances of each particular case the mischief aimed at exists.'

And again at page 4:

> 'Parliament has not sought to regulate the prices of commodities to the consumer, but it is the policy of the law to encourage trade and commerce and Parliament has declared illegal all agreements and combinations entered into for the purpose of limiting the activities of individuals for the promotion of trade; and preventing or lessening unduly that competition which is the life of trade and the only effective regulator of prices is prohibited.'

Again, Duff, J. at page 37, states:

> I have no hesitation in holding that as a rule an agreement having for one of its direct and governing objects the establishment of a virtual monopoly in the trade in an important article of commerce throughout a considerable extent of territory by suppressing competition in that trade, comes under the ban of the enactment.'

And Anglin, J., at page 42, in referring to the difference in meaning between 'unreasonably' and 'unduly' and in referring to 'unduly' stated:

> 'the prime question certainly must be, does it, however advantageous or even necessary for the protection of the business interests of the parties, impose improper, inordinate, excessive, or oppressive restrictions upon that competition the benefit of which is the right of every one?'

"Referring to the *Stinson-Reeb case*, we find Mignault, J., at p. 280, stating:

'It may be emphasized here that the advantage thus obtained by the manufacturers and dealers of the association is not the proper test. What is the true test was laid down by this court in *Weidman* v. *Shragge* as above stated. Injury to the public by the hindering or suppressing of free competition, notwithstanding any advantage which may accrue to the business interests of the members of the combine, is what brings an agreement or a combination under the ban of section 498.'

"Thus, in my opinion, so far as the 1st, 3rd and 4th counts are concerned, it is a matter for the Court to determine on the facts of the case whether there has been that undue restraint which is contemplated by the section."

"Referring to the fourth count under subsection I (*c*), I am of the opinion that the phrase 'to unreasonably enhance the price thereof' must, in view of the earlier decisions, be interpreted in the sense of the enhancement being unreasonable in manner rather than unreasonable in extent."

Intention of the Accused

"Much stress has been laid by the defence on the innocence or lack of evil intent on the part of the accused, and it is claimed that there is no evidence in support of such intent. In fact the defence counsel urged that the fact that the accused sought and obtained legal advice on the matter of the agreement before entering into the same, indicated a definite intention to avoid violating the provisions of The Code. I cannot, however, hold that the seeking or obtaining of such advice whatever the nature of such advice may have been is evidence of lack of *mens rea*."

"Undoubtedly, there must be proved and found intention to combine, conspire, agree or arrange and intention to lessen or prevent or limit as the case may be under the respective clauses of 498. But can it reasonably be held that the intention must be to 'unduly'? The question of 'unduly' is a matter for the Court to determine whether that intention of the accused to combine to lessen and the like would be unduly injurious or oppressive to the public which is entitled to the benefits to be derived from freedom of competition in trade."

Organization of the Combine

"Prior to 1931 there existed amongst the manufacturers of fibre board and corrugated box containers in Canada an Association presumably for the betterment of trade relations and for the development of business in which most of the accused, with others, and including the accused Badden, had been active. This old Association appeared to have operated in a much more desultory manner than the system subsequently brought into being and under review in this case, and also with apparently some discord, but also some satisfaction until sometime subsequent to July 8th, 1931, when it was decided to finally wind up the affairs of the Association. It appears evident that some directing mind or minds, in anticipation of the dissolution of such old Association had already in December, 1930, incorporated a company 'Container Materials Limited' which was, as the evidence unfolds, to become the keystone or control of a new Association."

"By December, 1931, and early in 1932, Container Materials, Limited, whose organization seems to have lain more or less dormant, was actually fully organized and in operation. Badden was elected Secretary-Treasurer and Hardy & Badden were named and reported in the minutes as having undertaken to act as experts under the agreement dated September 1st, 1931. Then as a part of the machinery of the general agreement alleged by the Crown, the manufacturers' and agents' agreements, Exhibits 4 and 5, are of interest. The first is for a definite period of three years from September 1st, 1931, to December 31st, 1934, and a further period to December 31st, 1937, unless terminated by notice six months before December 31st, 1934, which proviso for termination was waived in April, 1934, thus making the agreement in effect covering a period of six years. This agreement also provides for an apportionment of the business of the company in this particular commodity in certain fixed ratio amongst the member companies, thus establishing for each company a quota of the total production. Prices were also agreed upon as was the establishment of a pool tax. It might be here noted that hereinafter I shall refer to Container Materials as the 'company,' the other companies who were shareholders in Container Materials as 'the member companies' and companies which were not shareholders but which did enter into the activities of Container Materials by way of contribution and otherwise as 'associate or collateral companies,' the latter class being for example, Acme, Hendershot and Kraft."

Extent of Control

"Each of the member companies was required to furnish a deposit ranging from a minimum of $2,500 to $10,000 with the company, and the agreement provided that in the event of any dispute, the same would be referred to Messrs. Hardy & Badden as experts, who might award 'damages' against the member company. This euphony was subsequently abandoned in operation as disclosed by the correspondence, and the matter was more practically referred to as 'a fine.' Badden was given the power to impose fines and levy upon deposits, not only to its full amount but also upon all moneys which might be to the credit of the member company with Container Materials, and as was disclosed by the evidence these credits were of very considerable amount, $60,000 or more for one member company alone. Thus there was placed in the hands of Badden a very effective instrument for keeping in line any recalcitrant member—and there is ample evidence of this unreasonable restraint having been exercised against an unwilling member.

"The agreement also provided that the manufacturer, i.e., the member company, could not sell or lease its plant without the consent of the directors of Container Materials, for use in the same business unless the purchaser or lessee joined Container Materials, thus preserving a control not only of the original members, but also over any subsequent purchaser or lessee. The operation of this provision was evidenced subsequently when the accused, Gair Company, merged and took over six of the original member companies. The agreement also provided that its terms and conditions would extend to any similar business directly or indirectly engaged in by the member company or by any of its officials or in which any of such were financially interested, which provision suggests a reaching

out to control the whole of the market of the product in Canada. Then a provision was made that the agents or member companies should make full reports of all sales to the company, with respect to which I shall have further remarks.

"In January, 1931, Badden was elected President and Director of the company. Further recorded activities of the company did not commence till September, 1931. In the meantime, however, preliminary arrangements were on foot as recorded in the agents minute book, Exhibit 18, and in correspondence filed. It is apparent from an examination of Exhibit 18 that the associated companies adopted numerous resolutions affecting prices, deliveries, terms and conditions on orders and contracts, the operation of a pool and the imposition of fines or penalties for contravention of association regulations and whether in conformity with and by authority of these various resolutions as contended by Mr. McCarthy in argument, or in enlargement of them, (which it matters not), Badden as Secretary proceeded from time to time to promulgate rulings exercising all the powers of control over the most minute detail and for the apparent purpose of insuring absolute uniformity not only with respect to prices but over many factors entering into the matter of supply and affecting competition. This condition prevailed throughout thus taking from the manufacturers in question the slightest opportunity of free competition in a myriad of small ways which might commend themselves to any particular accused member company or be applicable to its peculiar situation or needs. Free competition was placed in a straight jacket. It may well be that such straight jacket was self-imposed, as suggested by Mr. McCarthy, by the association as a whole and not at the dictatorial whim of Badden. Even so, it strikes me as going to the very crux of the charge."

". . In fact the microscopic detail over which the company, with Badden as its executive, exercised control was almost beyond belief. For example, no company was permitted to quote on a commodity not listed in the price list without first obtaining from Badden the prices at which the quotation should be made. I do not propose to discuss the minutiæ of the regulations and restrictions. It is to be noted, however, that a uniform price was maintained, that the two Manitoba companies for their particular territory, and the British Columbia company for its territory, set all prices and that all of the other companies were compelled if doing business within such territories, to comply with the prices set by the Manitoba or British Columbia companies respectively.

"It is interesting to note that the company was not satisfied with sales reports alone, but demanded an increasing number of affidavits from first the sales managers, then the representative director from the member company on Container Materials, from the salesman himself or the general manager of the member company, that all sales had been reported and that in effecting them all prices as laid down by the company had been adhered to, and that no discount, or inducement of subterfuge had been resorted to in effecting the sale. The demand for these affidavits seemed to indicate that there was persistent feeling that many of the member companies were finding irksome the restrictions on competition imposed by the regulations, and were seeking to avoid them."

"Without entering into a detailed description of all the provisions of the various agreements which have been filed, and their renewals, but upon consideration of such provisions in the light of the correspondence, minute books, books of accounts and rulings, it is evident that there was built up an efficient and far-reaching central control of all the business of the member companies and the associated companies who submitted to the organization in the most minute detail. The evidence indicates that Container Materials Limited represented that it controlled practically 100 per cent of the industry, and this control extended through its quotas, pool tax, price fixing, restrictions on discounts, restriction on services to customers, type, colour and test of materials used, restrictions on advertising, all of which restrictions were made effective by the imposition of fines and penalties for any infractions thereof. These penalties could be easily imposed by Badden in whom the companies had vested wide powers, and the penalties were readily collectible from the very large accumulation of deposits in the control of Container Materials."

Unreasonableness of Prices

"Then, too, the defence has contended that there is no evidence whatsoever submitted by the Crown to even suggest that the prices charged were in any way unreasonable, based on the circumstances of the industry, the wages paid, and so on, so as to bring the industry as operated under the ban of section 498 (c), that is, to unreasonably enhance the price thereof. It should be noted, as was said by Bond, J., in *The King* v. *Canadian Import Co.,* (1935) 3 D.L.R. 330, at p. 337:

> 'It is unnecessary for the purposes of the present cause to attempt to determine what should be a fair price for coal, even if it were feasible to do so for any particular season, and having regard to the conflict of testimony.'

"The duty to inquire into and regulate prices which may change from day to day need not be imposed on the Court but rather the Court's endeavour should be to seek out the real agreement and to determine whether it interferes with the free course of trade, in short, what was the thing in essence that the defendants were seeking to accomplish, what was the purpose of Container Materials? After a consideration of the evidence herein, it is very clear that restrictions were not by way of price fixing alone, but were restrictions which lessened and prevented competition in various types of service which might be rendered by any individual manufacturer to the public. It is in my opinion quite unnecessary for the Crown to adduce any evidence to show that prices were too high."

Tariff Protection

"As has been stated earlier, this penal enactment has been recognized as complementary to the policy of tariff protection adopted in this country. Very properly, therefore, the Crown has called evidence as to the tariff protection enjoyed by this industry and it is apparent that throughout the period charged in the indictment this industry did enjoy in varying amounts a very substantial tariff duty, varying from a minimum of 25 per cent to almost 50 per cent. Thus we find a condition existing which as has been pointed out in earlier cases in an industry with tariff protection there

exists an organization which has the power of regulating prices throughout the country in such a way that, if desired, competition from others outside of this large organization could be destroyed, thus militating against the benefits to which the public are entitled."

Public Tenders

"The Crown called evidence as to prices quoted by accused companies on request for tenders by the public, one instance of the Provincial Government asking for tenders on boxes in connection with motor car markers and the other of the Stationery Department of the Dominion Government. These two instances may well be taken as an illustration of the system followed. Although in each instance several of the companies now accused were requested to tender on specific boxes, all prices submitted were in exact agreement. It may be only a coincidence but after the investigation was commenced under the Combines Investigation Act when similar quotations were submitted they were likewise precisely the same except those of one company, which were considerably higher. This, in my opinion, well illustrates the impossibility of the public securing in this particular commodity the benefit of any competition whatsoever. This uniformity in price, I think, is well borne out in the evidence as being directly attributable to the common design which existed."

Other Operations

The Court, in the conclusion of the reasons for judgment, deals with the participation of five accused companies who were not shareholders in the incorporated central association; and sets out a number of other special incidents, including instances of opposition of members of the alleged combine to the entry of new manufacturing competitors into the industry, of the joint purchasing of plant machinery to effect the withdrawal of an independent competitor from business, and of substantial payments made to another firm following its entry into and conformity to the rules of the combination. The conviction and sentences follow:

Conviction

"Hence, after a full review of all the evidence herein and giving only such weight to certain of the evidence as I have set out earlier should be ascribed to it, and after a very thorough consideration of the law which is in my opinion applicable to this section and by which I am bound, I have no hesitation in finding that the parties charged herein are guilty of combining with each other and with other individuals and corporations named in the indictment, and that such combination was in restraint of trade both unduly and unreasonably so as to come under the ban of the enactment herein. I have therefore found all of the accused guilty as charged."

Sentences

"Having come to my conclusion on the verdict, and as to what it should be, as I have already indicated, I have experienced very considerable difficulty in arriving at some conclusion as to what the penalty should be. I well recognize that penalties are imposed for the purpose not only of punishment of the particular people involved in any case, but as a deterrent to others who might consider the same type of conduct. I appreciate also that the parties who were concerned in this action—I should say persons probably, because, after all, the companies are only the *alter ego* of various other parties—might, as the Crown has suggested, have been charged possibly along with Mr. Badden, and I recognize that, therefore, it is difficult to deal with companies by way of punishment. If I were to impose too modest a penalty it would mean nothing more than it does to the ordinary individual who pays a dollar for having parked in the wrong place. I recognize also the standing of the parties involved in this, although that should not enter into it, as was said quite definitely in a judgment of the Court of Appeal some time ago in a case in which a member of the profession was involved. It is self-evident that in organizations of this kind people who are involved and active in them are necessarily without any question people of substance and considerable standing otherwise in the community. Therefore, it makes it all the more difficult to arrive at something which is fair and equitable."

". . . Although all the accused are in *pari delicto* yet it appears to me that some were not as actively engaged in the prosecution of the objects of the combination as others. Therefore in the imposing of penalties I make some slight distinctions. I therefore impose the following fines on each of the accused, which will be in the aggregate as against each accused on all four counts and not on each count individually:

Container Materials, Limited	$10,000
H. J. Badden	4,000
Shipping Containers, Limited	10,000
Standard Paper Box, Limited	10,000
Martin-Hewitt Containers, Limited	10,000
Canadian Wirebound Boxes, Limited	10,000
The Corrugated Paper Box Company, Limited	10,000
Gair Company, Canada, Limited	10,000
Hinde and Dauch Paper Company of Canada, Limited	10,000
Hygrade Corrugated Products, Limited	10,000
Hilton Brothers, Limited	10,000
Martin Paper Products, Limited	10,000
Canadian Boxes, Limited	10,000
Maritime Paper Products, Limited	5,000
Wilson Boxes, Limited	5,000
Dominion Corrugated Paper Company, Limited	2,500
Acme Paper Box Company, Limited	10,000
G. W. Hendershot Corrugated Paper Company, Limited	5,000
Kraft Containers, Limited	5,000
Superior Box Company, Limited	5,000

"They may look in the aggregate large. In the circumstances, they are in my opinion very modest and moderate.

"In default of payment of the fine imposed on the individual accused Badden, he shall be imprisoned for a period of six months."

Notice of appeal by the accused from the present judgment was later served by counsel for the accused. The fine imposed on the individual accused Badden was paid on September 6.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Quebec King's Bench Court Upholds Superior Court Judgment Denying Union's Right to Sue

In an unanimous judgment, the Court of King's Bench at Montreal sitting on appeals upheld the decision made by Mr. Justice Surveyer of the Superior Court on April 1, 1939, in which he denied the right of a union to sue under an Act Respecting the Exercise of Certain Rights which appears to make it liable to be sued (Labour Gazette, 1939, p. 544). Mr. Justice Barclay, who agreed with the result, added that, in his opinion, the appellants were in any case not groups of persons as contemplated by the Act but associations of groups of persons and therefore outside its scope. The Appeal Court ordered the whole costs to be paid by the plaintiffs. *International Ladies Garment Workers Union et al vs. Rothman,* Court of King's Bench (Appeal Side), Montreal, May 28, 1940.

Montreal Truck Driver Injured at Work Awarded $4,000 Damages and Costs

Mr. Justice Denis of the Montreal Superior Court on July 18 gave judgment for the plaintiff, a labourer, in the sum of $4,000 and costs in an action for compensation for damages suffered in an accident which occurred during his employment. The damages were awarded "jointly and severally" against the plaintiff's employer and one whose employees gave the directions that led up to the accident.

The man was injured on November 11, 1938. The plaintiff on instructions from his employer, doing business as the City Hall Coal Company, drove his truck to Thetford Mines and brought back to Montreal certain machinery including motors weighing several tons which he was instructed to unload at the premises of the defendant Goldberg.

When he arrived at Goldberg's place of business the latter's employees agreed that the unloading should be done with a crane which was at hand but not in condition for use without preparation. They therefore suggested that with a chain attached to a 10-ton motor in the yard and to the motor on the truck driven by the plaintiff, the plaintiff by driving the truck backwards and forwards should gradually move the motor on the truck nearer the edge so that it could be got to the ground. The plaintiff was uncertain of this method and telephoned his employer explaining the situation. He was told to do whatever Goldberg's employees wanted him to do. The plaintiff then carried out their instructions but the motor fell to the ground and so jolted the truck that the plaintiff was severely injured.

It being agreed that the cause of the accident was the method used to unload the truck, the Court considered that the responsibility for the accident rested on those responsible for the adoption of such means. The defendant employer was held liable because he had not checked up on Goldberg to verify whether he had carried out their agreement that all unloading was to be done with a crane and when the plaintiff notified him that Goldberg wanted to use the chain method he approved. Goldberg was liable for the acts of his employees in adopting an unsafe method and for their negligence in failing to notify the plaintiff to stop at the point of danger. The Court did not allow the defence offered by Goldberg that under a verbal agreement between him and the City Coal Company the latter was to do all loading and unloading and that of the three Goldberg employees who were present only the nightwatchman was on duty and the other two were visiting him. No blame could be laid on the plaintiff who was under the complete domination and control of both defendants and was executing their orders.

It was held that the plaintiff suffered complete loss of earnings for one year and for a much longer period in fact, but the claim was for one year, medical and hospital expenses, pain and suffering and, finally, permanent partial incapacity, all of which amounted to at least $4,000. *Desanto vs. Abramovitch,* Superior Court, Montreal, July 18, 1940.

Saskatchewan Court Affirms Judgment Awarding Farm Worker Damages for Accident

On June 28 the Saskatchewan Court of Appeal dismissed an appeal from a judgment awarding a farm labourer damages for an injury suffered while operating a straw-cutter. (Labour Gazette, 1939, p. 1294.) It was held that there was ample evidence to justify the finding of negligence and to negative the argument of the defence and that the defendant had made it clear that the result of refusal to operate the machine would have meant dismissal. *Mazurkewich v. Bawkowy* (1940) 2 Western Weekly Reports 651.

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME XL] OCTOBER, 1940 [NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THERE was a substantial increase in industrial employment at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 12,247 firms, each with a minimum of 15 employees, representing practically all industries except agriculture, fishing, hunting and highly specialized business operations. The establishments employed 1,289,385 persons, or 36,168 more than in the preceding month; this gain of 2·9 per cent was considerably larger than that reported between August 1 and September 1 in any other year of the record. The index number of employment (based on the average for the calendar year 1926 as 100), stood at 131·6, as compared with 119·6 at September 1, 1939. At the same date in recent years the index was as follows:—1938, 115·1; 1937, 123·2; 1936, 107·1; 1935, 102·7; 1934, 98·8; 1933, 88·5; 1932, 86·0; 1931, 107·1; 1930, 116·6; 1929, 126·8; 1928, 119·1 and 1927, 111·0.

Reflecting the greater-than-average increase in industrial employment at the beginning of September, the seasonally-adjusted index rose from 124·4 at August 1, to 126·5 at the date under review, when it was higher than the seasonally-corrected index for any other month in the nearly twenty years for which information is on record.

Unemployment in Trade Unions.—Reports were compiled by the Department of Labour at the beginning of September from 1,963 local trade unions with a membership total of 256,482 persons. Of these, 13,330 were registered as unemployed, a percentage of 5·2 as compared with percentages of 6·4 at the beginning of August and 10·9 at the beginning of September, 1939.

Employment Office Reports.—The volume of business transacted during August, 1940, by the offices of the Employment Service of Canada, as shown by the average daily placements effected, indicated a gain over July, 1940, and also over August, 1939, farming being the group chiefly responsible for the change shown under the first comparison and manufacturing, services, logging and transportation under the second. Farming, however, showed a fairly pronounced reduction in placements from August a year ago. Vacancies during August this year numbered 55,747, applications for work 80,147, and placements in regular and casual employment 51,368.

Prices.—In wholesale prices the Dominion Bureau of Statistics weekly index number based upon prices in 1926 as 100 was 82·8 for the week ended September 27 as compared with 82·7 for the week ended August 30, and 82·6 for that ended August 2. Comparative figures on a monthly basis for certain dates are 82·7 for August, 1940; 78·2 for September, 1939; 74·5 for September, 1938; 85·0 for September, 1937; 76·4 for September, 1936; 63·5 for February, 1933, the low point in recent years; and 97·8 for September, 1929. In retail prices the new cost of living index number also calculated by the Bureau was 106·4 at the beginning of September as compared with 105·9 for August; 100·8 for September, 1939; 102·1 for September, 1938; 102·3 for September, 1937; 98·7 for September, 1936; and 96·5 for September, 1935.

Business Statistics.—The latest statistics available reflecting industrial conditions in Canada are given in the table on page 994. The index of the physical volume of business in August recorded substantial increases both as compared with the previous month and with August, 1939. In the former comparison the advance was about 5½ per cent and in the latter about 22 per cent. Of the five principal groups of factors the output of electric power was the only one to record a decline in August as compared with July. The index of the volume of construction was 28 per cent higher than in July there being a substantial advance in contracts awarded. The manufacturing group was 7 per cent higher due mainly to the greater volume of products of iron and steel. Mineral production advanced about 4 per cent in the same comparison and somewhat greater activity in the distribution of commodities was also indicated, the figures for

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended September 27, 1940.

(1) Calculated from yields of Ontario bonds. (7) For group figures see articles elsewhere in this issue.

(2) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending September 28, 1940, and corresponding periods.

(6) Sugar production given in periods of four weeks ending September 7, August 10 and July 13, 1940; September 9, August 12, and July 16, 1939. (7) MacLean's Building Review.

(8) Index numbers are adjusted when necessary for seasonal variation. (9) Excluding gold.

(10) Now based on 203 municipalities instead of 58 as formerly.

external trade being higher. Information available for September shows employment, and the value of contracts awarded to be at higher levels both as compared with August, 1939, and September, 1940, while the number of cars of revenue freight was greater than in the previous month but smaller than in September, 1939.

Strikes and Lockouts.—The number of strikes and lockouts recorded for September was 10, involving 2,668 workers and resulting in time loss of 6,053 man working days, as compared with 18 disputes in August, involving 6,712 workers with a time loss of 15,953 days. The two important strikes during September involved artificial silk factory workers at Cornwall, Ont., for one and one-half days; and embroiderers in dress factories in Montreal, P.Q. Eight strikes of coal miners in Nova Scotia accounted for over 5,000 of the workers involved in August and for nearly 80 per cent of the time loss in that month. In September, 1939, there were 17 disputes, involving 8,190 workers with time loss of 17,546 days, due chiefly to strikes of coal miners in Nova Scotia.

Of the ten disputes recorded for September, 1940, nine were recorded as terminated during the month. Three resulted in favour of the employers and one in favour of the workers. In one dispute the strikers were partially successful. Compromise settlements were reached in two cases while the results of two disputes were recorded as indefinite. One strike of approximately 50 workers was shown as unterminated at the end of the month.

These figures do not include strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

New Cost of Living Index Number Established

A statement as to the new official cost of living index number for Canada, based on the data secured in a survey of workingmen's family expenditure in 1938, appears elsewhere in this issue. The index number was constructed by the Dominion Bureau of Statistics in consultation with the Department of Labour and the Wartime Prices and Trade Board.

The new index will reflect changes in the cost of a fixed budget covering retail prices of commodities, services, and shelter costs based upon the expenditure experience of 1,439 urban wage earner families in the twelve months ending September 30, 1938, which averaged $1,453.80. All of the families included in the survey had children and the average number of persons per family was 4·6. The index previously issued by the Dominion Bureau of Statistics was based upon national consumption estimates in 1926, the base period. The index issued by the Department of Labour was weighted according to estimates of workingmen's family expenditure in 1913.

Information as to the new index number of the United States Bureau of Labour Statistics based on a surevy begun in 1934 is also given in another article. Both index numbers are based on average retail prices in the period 1935-1939 inclusive as 100.

Industrial Disputes Investigation Act

During the past month the Department received three reports of Boards of Conciliation and Investigation established under the provisions of the Industrial Disputes Investigation Act.

Two applications were received for the establishment of Boards and three Boards were constituted.

Information concerning these, and other proceedings under the Act will be found in the article commencing on page 1003.

Control of rents by Wartime Prices and Trade Board

On September 24, the Wartime Prices and Trade Board ordered that rents in certain designated areas in Canada be pegged at the levels of January 2, 1940, effective on and after October 1.

At the same time as the Board issued its "standstill" rental order, the Minister of Labour, Hon. Norman A. McLarty, announced that the Governor in Council had approved the Board's appointment as Rentals Administrator of the Honourable William M. Martin, K.C., Judge of the Saskatchewan Court of Appeal. Mr. Frank W. Nicolls, Ottawa, Director of Housing, Department of Finance, has been seconded to the Board to serve as Technical Adviser.

Following the order of September 11 in which the powers of the Wartime Prices and Trade Board were extended to include rent (Labour Gazette, September, 1940, page 889), the Order in Council (P.C. 5003) empowered the Board to fix maximum rentals and to appoint local committees in designated areas for the purpose of investigating and adjudicating upon local complaints and applications respecting housing accommodations or rentals.

The Order regarding rentals is described as a "standstill" in the designated towns and cities, and declares that "for any housing accommodation for which there was a lease in effect on January 2, 1940, the rental charged or demanded shall not exceed that in effect

on that date." For any housing accommodation not leased on that date, but for which there was a lease in effect at some time during 1939, "the rental charged or demanded shall not exceed that payable under the latest lease in 1939." For any other housing accommodation the Rentals Administrator, "of his own motion or on application by either landlord or tenant, may determine the maximum rental."

Under this standstill order all leases are automatically amended and any rent above the maximum paid in advance of October 1 is recoverable by a tenant. No refund, however, will be made for any period prior to October 1.

Housing accommodation covered by this Order includes "any furnished or unfurnished house, apartment, flat, room, or dwelling, designed or used for residential purposes, together with all appurtenances thereto and such heating, lighting, water, garage, and other services, equipment or facilities as are supplied by the lessor."

Areas affected by the standstill order are:—

Nova Scotia.—Dartmouth, including Woodside; Halifax, including Armdale, Buckingham Station, Dutch Settlement, Fairview Station, Falkland, Jollimore, Melville; New Glasgow, including Trenton, Stellarton, Westville; Sydney.

Quebec.—Brownsburg and Thetford Mines.

Ontario.—Allandale, Barrie; Kingston, and Portsmouth; Ottawa, including Eastview, New Edinburgh, Overbrook, Rockcliffe, Westboro, and Woodroffe; Parry Sound, Nobel; Trenton; Windsor.

Manitoba.—Brandon.

British Columbia.—Vancouver, Victoria and Esquimalt.

In issuing the order it was pointed out by the Board persons charging unreasonable or unjust prices for accommodation in localities not as yet designated as controlled areas are open to prosecution under the general regulations of the Board respecting profiteering.

On September 28, the Rentals Administrator, Hon. Wm. M. Martin, K.C., announced that he would begin a series of hearings the following week in areas affected by the rent-pegging order issued by the Board.

On October 3, the Hon. Mr. Martin held hearings in Barrie, Ontario; on October 7, in Parry Sound, Ontario; and on October 10, in Brandon, Manitoba.

Mayors of these municipalities were asked to provide the use of the town hall or court house for the hearings, and it is requested that, where possible, representations from organizations and individuals be put in writing and placed on file with the clerk of the city or town twenty-four hours prior to the opening of the inquiry.

Personnel of Unemployment Insurance Commission

The Prime Minister, Right Honourable W. L. Mackenzie King, announced on September 23 the appointment of the Unemployment Insurance Commission to administer the Unemployment Insurance Act passed at the last session of Parliament (LABOUR GAZETTE, July, page 682, and August, page 757). Dr. Joseph Sirois, of Quebec City, widely known as the chairman of the Royal Commission on Dominion-Provincial Relations has been appointed chairman of the Commission. His two associates on the Commission will be R. J. Tallon, of Ottawa, Secretary-Treasurer of the Trades and Labour Congress of Canada, and Allan Monroe Mitchell, a leading industrialist, of Montreal. Mr. Tallon was selected after consultation with organizations representative of workers. Mr. Mitchell was appointed after similar consultation with organizations representative of employers. Selection of two of the members of the Commission in this manner is provided in the Unemployment Insurance Act.

Dr. Sirois, of the Firm of Sirois, Sirois and Lesage, notaries of Quebec, was a member of the Rowell Commission up to the time that Honourable N. W. Rowell, its Chairman, became ill. Dr. Sirois then took over the duties of Chairman of the Commission, and it was one of that Commission's recommendations that Canada should establish a national system of unemployment insurance. The chairman of the new Commission was born in Quebec on October 2, 1881. He attended Quebec Seminary and Laval University, graduating from the latter institution in 1900. He is a director of a number of financial institutions, etc., in the Province of Quebec and has been associated with other Commissions than that on Dominion-Provincial Relations. He is a Professor and Secretary in the Faculty of Law, Laval University.

The Act provides that the Chairman shall hold office for ten years, and the other two members of the Commission for five years each. All are eligible for reappointment up to the age of seventy.

Mr. R. J. Tallon, appointed on behalf of labour, is a native of Belleville, Ontario, and after serving an apprenticeship as a machinist in the shops of the Grand Trunk Railway at Belleville, entered the employ of the Canadian Pacific Railway and worked as a machinist in the company's shops at Schreiber, Revelstoke and Calgary.

He became Secretary-Treasurer of the Trades and Labour Congress of Canada in 1935 and held that position continuously up to the present time. Between 1926 and 1935 he held the position of Vice-President, and has represented the workpeople of Canada at Geneva at conferences of the International Labour Office on eight occasions. He is Chairman of the Association of General Chairman of the Canadian National Railways; also a member of the Canadian National Railways Pension Board, the Canadian National Railways Safety Council, and the Canadian National Railways Rehabilitation Council. He is now serving a second three-year term as a member of the National Research Council, having been reappointed by the Government last year to that position. He is a member of the Advisory Council to the Director of Youth Training and a member of the National Labour Supply Council.

Mr. Tallon joined the International Association of Machinists in 1905 and was President of the Calgary Trades and Labour Council, 1914-15. He was elected alderman of the City of Calgary in 1915-16-17. In 1916 he became President of District No. 2 of the International Association of Machinists which comprised all railroad machinists in Canada and held that office from 1916 to 1920. He organized and was the first President of Division No. 4 of the Railway Employees' Department of the American Federation of Labour, comprising all the shop craft mechanics of the Canadian railways. He has held that position continuously from the formation of the Division in 1918 until the present time, being elected at its regular conventions.

The third member of the Commission, Mr. Mitchell, appointed on behalf of industry, is a Montreal manufacturer, Chairman of the Robert Mitchell Company, Limited, manufacturers of metal goods. He was born in Montreal on May 7, 1895, a grandson of Robert N. Mitchell who came from Prestonpans, Scotland, to Montreal in 1848, and founded the Robert Mitchell Company in 1851. Mr. Mitchell is prominent in Canadian industry, and is a director of the Canadian Chamber of Commerce and a past chairman of the Montreal Branch and Quebec Division of the Canadian Manufacturers' Association. Mr. Mitchell has been serving since June of this year as a member of the National Labour Supply Council which was established by the Dominion Government to advise in matters concerning labour supply. He resides in Westmount.

Retirement of W. M. Dickson and appointment of Dr. Bryce Stewart as Deputy Minister of Labour

The retirement on superannuation of Mr. W. M. Dickson as Deputy Minister of Labour and the appointment to that post of Dr. Bryce M. Stewart were recently announced, these changes becoming effective on November 1.

For over twenty-five years the retiring deputy has been a prominent officer in the Civil Service of Canada. He graduated from the University of Toronto in 1897 and commenced his public career in February, 1914, as private secretary to the Right Honourable Arthur Meighen then Solicitor General in Sir Robert Borden's government. He served in a like capacity under a succession of Solicitors General—Hon. Hugh Guthrie, Hon. D. D. Mackenzie, and Hon. E. J. McMurray, also with the Right Honourable R. B. Bennett, and Hon. E. L. Patenaude when they held the portfolio of Minister of Justice. Subsequently, he was attached to the Clemency Branch of the Department of Justice, and while here he was chosen, in 1930, by the late Senator Gideon Robertson, then Minister of Labour, to act as his secretary, and he similarly served Senator Robertson's successor, the Hon. W. A. Gordon. In 1934 he was promoted to the post of Deputy Minister of Labour.

During Mr. Dickson's tenure as the administrative head of the department it has had to cope directly with problems of human welfare intensified by the impact of economic depression and war. Accordingly, in re-entering the department, the new Deputy takes over control at a time when the industrial life of the nation is geared to the exigencies of war.

Dr. Stewart has held several important posts both in this country and the United States which were directly associated with the administration of social legislation and policies of industrial relations. In particular he is recognized as an outstanding authority on unemployment insurance—a measure recently adopted by the parliament of Canada.

Graduating from Queen's University in 1911, Dr. Stewart entered the Department of Labour in 1914 as a labour research worker and statistician. In June, 1917 he was promoted to the editorship of the Labour Gazette. The aftermath of the war with its problems of employment then engaged his activities, and he was appointed Director of the Employment Service of Canada in December, 1919—a post which he held until 1922.

From 1922-27, Dr. Stewart was in charge of the administration of the employment exchanges under the employment insurance pro-

gram established by the Amalgamated Clothing Workers of America. In 1927 he became a member of the Industrial Relations Counsellors and from 1930-31 he was a member of President Hoover's emergency council for employment. Since 1930 he has been a member of the state advisory council, New York employment service, and since 1933 has been a member of the Federal Advisory Council, United States Employment Service.

Dr. Stewart has also contributed to modern labour studies and surveys in a series of books and articles, dealing particularly with employment office practice and procedure, labour laws, and unemployment compensation.

In announcing this appointment the Prime Minister expressed gratification on the part of the government in being able to secure Dr. Stewart's services. The Prime Minister also stated that Dr. Stewart was relinquishing a more remunerative post and had accepted the government's invitation because he wished to give what service he could to Canada in wartime.

Quarterly review of activities of Wartime Prices and Trade Board

The principal events relating to the work of the Wartime Prices and Trade Board during the three months ending September 30, 1940, are reviewed in a quarterly statement issued recently.

As these events have, for the most part, been reviewed at the time of their occurrence, it has been considered sufficient to draw attention to the quarterly review which may be obtained on application to the Secretary of the Wartime Prices and Trade Board.

The events reviewed in the latest quarterly statement include the extension of the Wool Administrator's powers, giving him authority to buy, sell, and store wool and to license imports as well as exports of wool (LABOUR GAZETTE, August, 1940, page 805); the setting up of an export licence control system over hides and leather (LABOUR GAZETTE, August, 1940, page 807).

The recent sale in Canada by the Coal Administrator on behalf of the United Kingdom Government of more than 220,000 tons of British "refugee coal" that was in French waters and in danger of falling into the hands of the enemy in June, is detailed in the report; as well as the action of the Board in temporarily fixing the maximum prices of bread and wheat flour pending an investigation of the effects of the wheat processing levy imposed by Parliament (LABOUR GAZETTE, August, 1940, page 756; and September, 1940, page 889).

The extension of the Board's powers to cover rentals and housing accommodation, the appointment of a Rentals Administrator, and the fixing of maximum rentals in certain localities is also referred to in the statement (LABOUR GAZETTE, September, 1940, page 889; and page 995 of this issue).

Copies of a summary of the Board's activities in the period September, 1939, to June, 1940, are also available on application to the Secretary, Wartime Prices and Trade Board, Ottawa.

Minister of Labour appeals to industry to stop "enticement" of skilled workers

In a statement to the Canadian Press on October 3, the Minister of Labour, Hon. Norman A. McLarty, strongly urged that wartime industry cease the practice of "enticing" highly skilled employees from established plants. At the same time, the Minister stated that the Government does not propose to prevent any man bettering himself.

The Minister intimated that Government control in this matter was not contemplated unless the appeal failed, but he added that the situation had been the subject of numerous complaints and if permitted to develop would become "chaotic." Continuing, the Minister stated:

"I have the feeling that labour will be decent about it and go on as it has been doing, co-operating with the Government in the war effort. I don't think that labour wants to see the spiral of wages and living costs rising unreasonably. Labour appreciated the regulations of the Wartime Prices and Trade Board and the rentals administrator and I don't expect labour would object to some control of unbridled competitive bidding for services.

"This thing could grow to ridiculous proportions. The demand for skilled labour in Canada to-day is greater than ever in history. The figure for unemployment in skilled labour ranks, 5·2 per cent, is the lowest on record. It is a big problem to get an adequate supply and the situation is not helped by manufacturers who move it toward chaos by enticing men from their jobs with established employers who have borne the expense of training them.

"I do not suggest that the fact that a man had been trained by a firm gave that firm a lien on his services; it is always open to a man to better himself.

"However, in the United Kingdom under the pressure of war, labour had conceded legislation which prevented a man from switching to another job without permission of the

Ministry of Labour. The same was true in Australia. In Canada it had not come to this point.

"Obviously, if there were no regulation of foodstuffs and rents the cost of living would mount.

"What we are trying to do is not to regulate wages, nominal wages, but to give real wages. If any regulation were applied to labour alone, we might reasonably expect protests but when regulation is applied to the cost of living, we do not expect them."

Conferences on wartime utilization of skilled labour

Conferences on the supply of skilled and semi-skilled men in industry are in progress, according to a recent statement by the Minister of Labour, Hon. Norman A. McLarty who has acted as chairman. At these conferences there have been representations by the various departments concerned in the allocation of man power, viz.—National Defence, Munitions and Supply, National War Services, and the National Labour Supply Council. A decision on this matter of the wartime utilization of skilled labour is expected shortly.

Minister of Labour on importance of children continuing education and technical training

Referring to press reports of decreasing school attendance in some places, the Minister of Labour, Hon. Norman A. McLarty, on October 9, advised parents to consider carefully the importance of a child's education and technical training in preparation for employment in the aftermath of war. The Minister's statement was as follows:

"Press reports that in some places school attendance has fallen off owing to the increase in employment opportunities for boys and girls from 14 to 16 years of age should lead parents and public authorities to give thoughtful consideration to the implication of this situation.

"War needs must come first but every youth who fails now to take advantage of the opportunity to continue his schooling unitl the completion of the high school or technical education course takes a grave risk of becoming unemployed after the war with a poor chance of competing with boys better equipped in education and training.

"Our experience in unemployment during the last few years has shown that high school or technical school graduates and those with even longer training have a better chance of getting and holding jobs.

"With the general increase in employment, fathers and older members of the family should be able to find jobs and it is hoped that no child under 16 years of age in Canada who can profit by school attendance will be found in the labour market. Few, if any, firms will take on apprentices under 16 and blind alley jobs can often be filled by handicapped men.

"We are instituting a system of unemployment insurance but fundamentally the best insurance against unemployment is a trained mind and hands."

Appointment of Oils Administrator under Wartime Prices and Trade Board

The Hon. Norman A. McLarty, Minister of Labour, has announced the appointment of Dr. George Hilton as Oils Administrator under the Wartime Prices and Trade Board.

By Order in Council the Administrator is given power to organize, conserve, and co-ordinate the supply of animal and vegetable oils, whether processed, partly processed, or unprocessed, including marine animal oils, materials containing any such oil, and all vitamin extracts and preparations. Although in the immediate future the Administrator will be concerned chiefly with fish oils, particularly cod liver oil, his authority extends to the buying and selling of all animal and vegetable oils; control of the extracting, processing, and refining; and to fixing, subject to the approval of the Minister, prices and mark-ups. This order also continues the policy originated in April, and extended in June, 1940, of conserving the domestic supply of vitamin oils by permitting exports of fish livers and fish oils only under licence issued by the Board.

Dr. Hilton, who will serve without remuneration, was Veterinary Director General of the Dominion from 1924 to 1938, and represented Canada on League of Nations Committees from 1930 to 1935, retiring from the public service two years ago.

Statistics of relief recipients for August

The grand total of all classes of persons on urban and agricultural relief across Canada in August of this year showed a reduction of 18·3 per cent from July, and 53·7 per cent from August a year ago, according to figures released by the Department of Labour. The grand total for August, as shown by the preliminary results from the registration of all direct relief cases carried out for the Department of Labour by the provinces and municipalities, stood at 372,000. This total represented a decrease of 51·8 per cent from the peak figure of the year which occurred in the month of March; in August, 1939, the decrease from the peak month of

that year was 21·9 per cent, while August, 1938, showed a 27·5 per cent reduction from March, 1938.

Unemployed but fully employable persons on relief in August this year numbered 79,500, a decrease of 21·2 per cent from the revised July total. The figure for August this year showed a decrease of 44·1 per cent from August a year ago, and a decrease of 36·1 per cent from August, 1938. From the peak figure of 172,683 in March of this year, the August total of fully employable persons was down by 54·0 per cent.

A total of 323,000 persons were receiving non-agricultural relief in August, a decrease of 18·0 per cent from the corrected figure for the previous month: August, 1939, had shown an increase of 1·9 per cent from July, 1939. This category includes all totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a decrease of 40·7 per cent from the figure for August, 1939, and a decrease of 31·4 per cent from the figure for August two years ago. In relation to the high month of 1940, the August total on urban relief showed a decrease of 50·2 per cent.

The Dominion total on agricultural relief continued to show a major decline from the year before, following improved crop conditions in 1939 in the Prairie Provinces. A total of 10,500 farmers who, together with their dependents, accounted for a farm population of 49,000, were reported as receiving agricultural relief for subsistence in August; this total indicated a decline of 62·4 per cent from the high month of this year. The Dominion total on agricultural relief in August decreased by 20·1 per cent from the revised July figure, and was 81·0 per cent less than August, 1939, and 82·9 per cent less than in August, 1938. Figures for August for Saskatchewan alone showed decreases of 85·4 per cent and 86·9 per cent from August, 1939, and from August, 1938, respectively: the Saskatchewan total of 32,500 persons on agricultural relief accounted for two-thirds of the Dominion total in August this year.

Coal Inquiry under Combines Investigation Act

An inquiry has been made under the Combines Investigation Act into price-fixing arrangements alleged to exist or to be in process of formation among coal dealers at Fort William and Port Arthur, Ontario. Complaints were received by the Commissioner of the Combines Investigation Act and by the Wartime Prices and Trade Board requesting investigation of a possible agreement among coal dealers to fix common and enhanced selling prices for coal. A report of information obtained by the Coal Administrator of the Wartime Prices and Trade Board was referred by the Board to the Combines Investigation Commissioner, Mr. F. A. McGregor, in connection with the investigation being made under the Combines Investigation Act.

Corrections in the conditions reported and substantial reductions in prices were made following hearings conducted by the Commissioner.

Establishment of Four Divisions in National War Services Department

A press release issued from the Department of National War Services on September 13, announced the organization of four divisions to co-ordinate the objectives for which it was established by legislation. (The Department of National War Services Act was reviewed in the LABOUR GAZETTE for July on page 629, and the first regulations were summarized in the September issue on page 916). The functions of these four divisions were described as follows:

(*a*) *Division of Human Resources.*—It shall be the duty of this Division in conjunction with the Bureau of Statistics to tabulate and compile the information secured as a result of the recent National Registration in Canada and, in conjunction with the Department of Labour, to study and report upon the available supplies of labour in Canada and to study and report upon the demands and needs of industry for labour and in a systematic way to aid in directing those seeking employment to employment by employers and toward training facilities which may be available.

(*b*) *Division of Material Resources.*—To conduct such surveys as are necessary to the mobilization of the material resources of the Nation, to aid and direct the development thereof, to aid in the co-ordination of the productive efforts of the industries of the Nation, to aid in the production, maintenance and distribution of the food supplies necessary to the successful prosecution of the war, to study the future industrial development of the Nation and to assist with information necessary to the proper location of industries so that the economy of Canada may be more evenly balanced and, generally, to do all these things and such further and other things as the Minister may direct in and towards the support of Canada's war effort.

(*c*) *Division of Voluntary Services.*—To administer the War Charities Act, to co-ordinate, organize and utilize the voluntary effort of the Canadian people, to organize and assist organizations engaged in supporting the war effort of the nation and to do such further and other things as may be delegated to the said Division by the Minister of the said Department.

(*d*) *Division of Publicity.*—To direct the activities of the Bureau of Public Information and to cary out such other duties as may be from time to time delegated to it by the Minister.

Conference on industrial relations at Queen's University

The 5th Annual Industrial Relations Conference of the Industrial Relations Section of the School of Commerce and Administration of Queen's University was held at Kingston from September 18 to 20.

Representatives were in attendance at the conference from: The Canadian Chamber of Commerce, Montreal; the Ontario Division of the Canadian Manufacturers Association; the Industrial Relations Counselors, Inc., New York; the Montreal Personnel Association; the Ontario Mining Association; the Personnel Association of Toronto; the Protestant Employment Bureau, Montreal; and from sixty-five employing companies. In addition, the following Government departments sent representatives: The federal Department of Labour; the Ontario Department of Labour; the National Labour Supply Council; and the Inspector General's Department (British Supplies). Dalhousie University was also represented.

Following an official welcome by Dr. W. E. McNeill, Vice-Principal and Treasurer of Queen's University, the opening session, under the chairmanship of Mr. A. M. Reid, General Employment and Safety Supervisor, Bell Telephone Company, discussed "The Present and Future Labour Supply", the chief speaker being Mr. Humphrey Mitchell, Secretary of the National Labour Supply Council.

"Foreman Training" was the subject of the next session of the Conference, presided over by Mr. K. D. Macaulay, Assistant Controller, Sun Life Assurance Company. The chief speaker on this subject was Mr. E. G. Hildebrand, Assistant Vice-President in charge of employee relations of the Bell Telephone Company, Montreal.

Dr. Bryce M. Stewart, Director of Research, Industrial Relations Counselors, Inc., New York City, was the main speaker at a session featuring "Trends in Social Security Plans." Presiding at this discussion was Mr. K. A. Burgess, Safety Engineer, Canadian Kodak Company.

"The Unemployment Insurance Act, 1940" was the topic under discussion at an evening session under the chairmanship of Mr. J. B. White, Director of Personnel, Aluminimum Company of Canada, Limited. Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, Ottawa, was the principal speaker. In the ensuing discussion, Mr. Eric Stangroom and Mr. A. A. Heaps of the Department of Labour, Ottawa, answered a number of questions regarding this legislation.

The concluding session was devoted to a discussion of "Payroll Deductions", the speakers being Mr. W. R. Laughlen, Supervisor of Personnel, Massey-Harris Company, Toronto, and Mr. J. S. Willis, Educational Director, Canada Packers Limited, Toronto. This session of the conference was under the chairmanship of Mr. F. R. Clarke, Manager, Protestant Employment Bureau, Montreal.

Wartime employment regulations in Australian defence industries

The New South Wales Industrial Gazette for July, received recently, contains employment regulations made by the Governor-General of the Commonwealth of Australia under the National Security Act 1939-1940.

Cited as the National Security (Employment) Regulations, these provide that if it becomes apparent to the Minister of State for Munitions "that the production of munitions of war or supplies required for the efficient prosecution of the war is likely to be seriously prejudiced by reason of a shortage of persons skilled in any particular trade, he may make such arrangements as he considers necessary for the training of a sufficient number of persons in that trade or in any branch of that trade, and for the employment of persons so trained in connection with the production of munitions of war or supplies."

It is also provided that the training and employment of any person in accordance with the regulations shall be lawful "notwithstanding anything contained in any enactment other than the National Security Act, 1939-1940, or in any instrument (including any award, determination or agreement) having effect by virtue of any such agreement."

The regulations also stipulate that "an employer shall not engage any employee to whom the regulation applies unless he produces—

(*a*) A document signed by the employer by whom he was last employed stating that he has consented to the termination of that employment or

(*b*) A written permit issued by the Director of Labour, Department of Munitions, or by a person authorized by him to issue such permits."

This requirement is applied to trades listed in the first schedule to the Regulations as follows: electrical fitter, electrical mechanic, forger, and/or faggator, instrument maker, machinist (engineering—first class), toolmaker, tradesman (gun manufacturer) and tradesman (fitter and/or turner).

The Regulations also establish the maximum and minimum marginal rates of pay to be paid to workmen designated in the schedule, it

being provided that an employer engaged in the production of munitions or in the manufacture of machinery necessary to their production "shall not offer or pay to any employee who is directly engaged in such manufacture and is included in any of the classes in the first column of the second schedule to these Regulations, a higher or lower marginal rate of pay (exclusive of hourly hiring or shift allowances) than the rate specified in the second column of that schedule opposite the designation of the employee."

It is also provided that any workman in the designated classes who was receiving a wage higher than that provided in the schedule, shall not be reduced by reason of the Regulation.

Enrolment for defence occupations in U.S. vocational schools

Further evidence of the progress being made in the training of skilled workers for the defense industries in the vocational schools of the United States is contained in a statement issued recently by the Federal Security Agency of the United States Office of Education.

According to the statement, United States vocational schools in 472 cities had enrolled 107,757 persons for defence training during July and August, 43 states and the District of Columbia having organized 2,836 training courses since July 1.

Courses supplementary to employment have enrolled 36,336 persons in 222 cities. Four hundred and fifty cities have conducted pre-employment refresher courses for 71,421 persons. More than half of those who had completed short courses of training by August 31 have already been placed in employment.

Trainees for supplementary courses in vocational schools may apply directly to the vocational schools and are frequently selected on the basis of endorsements of their employers or their trade unions. Trainees for pre-employment refresher courses are selected from registers of public employment offices. Where possible, by co-operative agreement with the Work Projects Administration, approximately 50 per cent of the trainees in each pre-employment course are selected from WPA rolls.

Other references to the development of these vocational training activities in the United States and to the United States National Defense Advisory Commission are to be found in the LABOUR GAZETTE for September, page 894, and in the August issue, page 761.

The Economic Welfare of Canadian Employees

The Industrial Relations Section, School of Commerce and Administration, Queen's University, Kingston, Ontario, has recently published a bulletin (No. 4) entitled *The Economic Welfare of Canadian Employees.*

The report deals with a study made of occupations, earnings, hours and other working conditions during the period 1913-1937. As stated in the preface to the work, the years 1913 to 1939 witnessed great changes in the Canadian economy, the most striking of which were the rapid growth in the productive capacity of industry as a whole, the relative decline of agriculture, and the increasing importance of manufacturing, metal mining and pulp and paper production. This extensive transformation of the industrial structure was accompanied by significant changes in the size and compositon of the population, in the occupational distribution of the gainfully employed, in the proportions of gainfully occupied who were self-employed and who were employed by others, and in the proportions who were engaged on a salary and who were engaged on a wage basis. Chapters I and II of the study outline these changes.

The primary purpose of the study is to discover what happened to the economic welfare of Canadian employees during the years 1913 to 1937. Such a study includes data on earnings, hours and working conditions. Most attention has necessarily been directed to earnings, since they can be readily measured. A rising money wage, it is pointed out, is not necessarily a sign of an improved position. Increasing "commodity wages" constitute a better criterion, but if these are accompanied by losses of greater significance, conclusions drawn therefrom are of little value. Hours of labour, the speed or tension under which work is performed, other working conditions and security of employment must all be taken into account. A knowledge of the trends of these factors is essential to those concerned with industrial relations policies, the report states.

The work is divided into seven main sections dealing with economic conditions; the employed population; wage rates and annual earnings; wage legislation; hours of labour; working conditions; summary and conclusion.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

REPORTS were submitted to the Minister of Labour during the past month by three Boards of Conciliation and Investigation dealing with disputes between (1) the John Inglis Company, Ltd., and its boilermakers, iron ship builders, welders, machine hands and helpers, (2) Canadian Vickers, Ltd., and the boilermakers, welders and boilermakers' helpers employed in its boiler shop in Montreal, and (3) Collingwood Shipyards, Ltd., and its boilermakers, machinists, blacksmiths and plumbers. The main features of these reports are presented in the following pages.

Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation were received in the Department of Labour recently as follows:—

(1) From employees of the Heat Treat Department of McKinnon Industries, Ltd., a subsidiary of General Motors. Twenty-four employees are stated to be directly affected by the dispute and fifty indirectly. The dispute arose over a difference of opinion regarding the payment of time and one-half for overtime work performed on "continuous furnace operations", the employees claiming that they are entitled to payment at the overtime rate for any work performed by them on any Saturday after 12 o'clock noon, or on Sunday, regardless of whether or not that day is, or is not, part of the regular 6-day shift on which such employee is employed. The company, on the other hand, contends that where work is performed on Saturday, or on Sunday, in respect to these continuous furnace operations as part of the regular 6-day shift, no overtime rate is payable unless the work on Saturday, or Sunday, or part of it, brings the total work week above 48 hours. In accordance with the provisions of the contract this dispute had been referred by the parties to an arbitrator, who found against the employees' contention. The employees rejected the arbitrator's award and applied for a Board of Conciliation and Investigation. The employees' representative was informed by telegram on September 27 that if the employees still insisted upon rejecting the arbitrator's award the Minister on being so advised would be prepared to establish a board. On Saturday, September 28, the employees declined to work after 12 o'clock noon unless they received time and a half for Saturday afternoon and Sunday. The company then refused to re-employ them when they reported for work on Monday, September 30. An officer of the Department held several conferences with the parties concerned, but the employees decided to remain firm regarding their original demand and he was unable to effect a settlement.

The strike was terminated on October 3 as a result of the personal intervention of the Minister of Labour, who thereupon established a board and appointed Mr. Joseph Bench, of St. Catharines, Ont., a member thereof on the employees' recommendation.

(2) From machinists, fitters, millwrights, helpers, improvers, labourers, etc., employed by Canadian Vickers, Ltd., in its Industrial Engineering Department. The employees' demand for an increase of ten cents per hour over prevailing wage rates is stated to be the cause of the dispute, 205 workmen being directly affected. A board was established by the Minister of Labour on September 30, and members thereof were appointed as follows: Mr. Walter S. Johnson, K.C., chairman, nominated jointly by the other two members; Mr. D. A. Paterson, nominated by the company; and Mr. Joe Wall, nominated by the men. All three members are residents of Montreal.

Other Boards Established and Appointments Made

A Board of Conciliation and Investigation was established by the Minister of Labour on September 9 to deal with a dispute between the Montreal Tramway Co. and its bus chauffeurs, members of Division 210, Canadian Brotherhood of Railway Employees and other Transport Workers (Labour Gazette, July, 1940, p. 635). The personnel of the board is as follows: Hon. Mr. Justice J. G. Gillanders, of Toronto, Ont., chairman, appointed on the joint recommendation of the other board members; Mr. F. C. Dobell, of Montreal, P.Q., appointed on the company's recommendation; and Mr. J. L. Cohen, K.C., of Toronto, appointed on the employees' recommendation.

On September 30 the Minister established a board to enquire into differences between the Atlantic Sugar Refineries, Ltd., of Saint John, N.B., and its employees, members of the Atlantic Sugar Workers' Union, and on the employees' nomination appointed Rev. Arthur J. Burns, of Saint John, N.B., a member thereof. An application for a board in this case had been received from the employees during August (Labour Gazette, September, 1940, p. 895).

The chairmanship of the board established to deal with differences between the Howard Smith Paper Mills, Ltd., and employees in its Beauharnois Division, members of Local 225, International Brotherhood of Paper Makers, was filled on September 17 by the appointment of the Hon. Paul Mercier, Chief Justice of the Circuit Court of the District of Montreal. This appointment was made by the Minister in the absence of a joint recommendation from the other board members, Messrs. Paul Dufresne and J. A. McClelland, nominees of the company and employees respectively.

Board Cancelled

An agreement respecting wages and working conditions was reached during the third week of September between officials of M. J. O'Brien, Ltd., owner and operator of the Renfrew Woollen Mills, and representatives of the employees in the Renfrew Branch of the Renfrew Woollen Mills. The Board of Conciliation and Investigation which had been established to deal with a dispute between these parties (LABOUR GAZETTE, September, 1940, p. 895) accordingly did not function.

Applications Withdrawn

Trackmen employed by the Winnipeg Electric Company notified the Minister of Labour on September 28 that they desired to withdraw the application for a board which they had submitted in connection with the promotion of a junior man instead of a senior man to the position of truck driver (LABOUR GAZETTE, September, 1940, p. 895). Following receipt of the application in this case an officer of the Department had conferred with the representatives of the employees in regard to their grievance, and with the Manager of the company, and during negotiations between the parties which ensued an understanding was reached as to the course to be followed in the future when such vacancies occur. The employees involved in this dispute are members of the Trackmen's Unit of the One Big Union.

An application for a board arising out of the dismissal of an employee by the Canadian Broadcasting Corporation was also withdrawn during September. This application had been made by employees of the Canadian Broadcasting Corporation who are members of the Association of Technical Employees (LABOUR GAZETTE, August, 1940, p. 762). The matter in dispute was amicably arranged through discussions between the General Manager of the Corporation and a representative of the union.

Board's Recommendations Adopted

An agreement covering hours of labour, wage rates and working conditions in the Sydney steel division of the Dominion Steel and Coal Corporation, Ltd., was signed on September 4 by officials of the company and of the Steel Workers' Organizing Committee. This disposes of the dispute which had been referred to a Board of Conciliation and Investigation under the chairmanship of the Honourable Mr. Justice Lucien Cannon. The agreement is based on the board's findings which appeared in the July issue of the LABOUR GAZETTE, at page 662. Before the agreement was consummated the board was reconvened for the purpose of clarifying two of its recommendations, as well as dealing with one of the questions in the original submission to the board which it was understood had been settled by direct negotiations during the board's proceedings, but which was found to be still in dispute. In connection with this question, which concerned recognition of the Steel Workers' Organizing Committee as the exclusive bargaining agency, the board held sittings in Sydney and all interested parties were heard. The board reported that in accordance with the facts disclosed "the S.W.O.C. has the collective bargaining power for all the employees of the plant who are members of the Union, since they represent the majority choice of the employees eligible for membership in the said Trade Union."

Canadian Vickers, Ltd., and employees in its aircraft division, members of Lodge 712, International Association of Machinists, have accepted the recommendations of the recent Board of Conciliation and Investigation in regard to their wage scale (LABOUR GAZETTE, August, 1940, p. 763), and an agreement has been signed.

Report of Board in Dispute between the John Inglis Company, Limited, and Its Boiler Makers, Iron Shipbuilders, Welders, Machine Hands and Helpers

The Board of Conciliation and Investigation established on the application of the above named employees of the John Inglis Company, Limited, members of Local 637, International Brotherhood of Boiler Makers, Iron Shipbuilders and Helpers of America, submitted its findings to the Minister of Labour during August.

The members of the board were: His Honour G. F. Mahon, a Judge of the County Court of the County of Essex in the Province of Ontario, chairman; Mr. Edgar William Sin-

field, of the City of Toronto, Ontario, nominated by the employees; and Mr. Fred J. Neale, also of Toronto, Ontario, nominated by the company.

The report of the board is signed by the chairman and Mr. Sinfield and contains recommendations as to settlement of the dispute. Mr. Neale dissented from the board's findings and submitted a minority report.

The matters in dispute were three in number, as follows:—

First: Recognition by the company of the union's exclusive right to represent the boiler makers, machine hands and helpers employed by the company in its commercial boiler-making department, with respect to the scale of wages, minimum hours of work and allowance for overtime work, and, generally speaking, shop conditions and all matters arising in dispute between an employee and the company.

Second: Determination of the minimum hours of work in any one week under the general wage scale, and before allowance for overtime work commences, to be 44 hours, instead of 48 hours under which the company had of late been operating.

Third: The fixing of a minimum wage scale.

As to recognition of the union, the report contains the following comments:—

"The representative of the Company points out that the Company has altogether in its Commercial and Ordnance Departments in the neighbourhood of 2,000 employees (and the Board observes from factory construction in process by the Company that this may mean 4,000 to 5,000 in employment within a few months) and that among the employees are members of many trade unions; that were this boiler makers' claim to be recognized, there was a strong probability that other tradesmen would ask for similar rights, with the result that, working as it is principally on war orders, and (in the Commercial Division) on sub-contracts on orders for boilers, etc., from a shipbuilder's firm which has direct contracts with the Ordnance Department of the Government for war purposes and agreements with various departments to speed up production, it could not take the risk which might follow of delays and holdup in the work while matters were being adjusted by many trade unions, which would be more likely to occur than under the present basis of operation—outside of any union recognition.

"The Company's representatives point out that there has been organized by the employees what is known as the "Employees' Mutual Benefit Association," its declared objects under Article II thereof being as follows:—

> It shall have as its objects the promotion of good fellowship among the employees of the John Inglis Co., Ltd., and the development of welfare benefits and recreational facilities. In addition it will work in co-operation with the Company management in establishing and maintaining an equitable Employee-Employer relationship.

"Article VIII S. S. (*b*) provides as follows:—

> Each of the established departmental divisions shall individually nominate and elect by ballot its Plant Council representative.

"And under Article IX S. S. (*d*) it is provided as follows:—

> Council must investigate any complaint or condition that may be brought to their attention. If the Council is not able to effect an amicable settlement they are to refer the matter to the Executive Committee for further consideration.

"Now the Company contends that through this Society any employee may make any complaint and have it investigated and dealt with.

"The Company's representative points out that many of the large manufacturing companies have a similar institution and deal with employees' complaints through this medium.

"The Union representatives on the other hand say that this means of having objections reach the employer and having them dealt with is inadequate and defective; that the complaint or objection if it does reach the Executive of the Company may lack for forceful presentation, and accurate presentation, and may lack action in following up. And they say that, even though the representative chosen may be a Union man, there is danger that he may come to regard his employer's views as paramount and consent to courses that are inimical to the best interest of labour, both organized and unorganized. They are content that such a Benefit Society should function with respect to welfare benefits and recreational facilities, but they cannot accept this provision as an adequate means of getting their claims and troubles to the Executives of the Company. They regard it as a means of elbowing trades unions out of the shops. Also, that the Union rules prevent them from sitting in with the non-union men to discuss complaints, etc., with the Company.

"The Chairman of the Board personally feels that these objections are well taken and that in all probability no trouble would ensue were the Union to be recognized by the Company. However, he feels he cannot see far enough in the future as to what might happen to hamper the Company in its speedy manufacture of war supplies, and, due to the war emergency, would therefore not recommend adoption of the Union's request for recogni-

tion by the Company and the Union's exclusive right to speak and act for the boiler makers, etc. At this juncture despatch in the production of war materials is paramount and all signals should be set for straight ahead.

"The other subscribing member of the Board (Mr. Sinfield) does not by signing this report indicate that he has in any way recognized that the Union is not the proper body to represent the boiler makers, but steps aside from pressing the point at this juncture in the hope that by so doing it will lead to an adjustment of the other claims as to working hours and wage scale and proper allowance for overtime work."

In regard to the second item, the minimum hours of work before overtime payment shall commence, the company insisted on a 48-hour week; the union on one of 44 hours. The chairman and Mr. Sinfield state that there is no doubt in their minds, and they so find, "that 44 hours per week was the minimum hours per week before overtime rate of pay commenced in the latter part of May, 1940, and work without overtime allowance was placed at 48 hours." They add, "There was of course, no written agreement in force between the Employees and the Company, but 44 hours was the minimum time not only in this plant but all over the city in plants engaged in working on boilers." The report continues: "The representatives of the company claim the 48-hour week should be continued as tenders for contracts were based on that length of work week, that they are in a competitive business and their competitors would be given an unfair advantage, in some instances at least". The chairman suggested as a compromise, and to give the company an opportunity of completing any work which it had on hand based on a 48-hour minimum week, that the work be continued on this basis until the first day of January, 1941, and that from and after that date the 44-hour week minimum should prevail. To this, it is stated, the employees' nominee on the board consented "in a spirit of compromise due to the war emergency".

On the subject of the wage scale the board remarks as follows:

"Your Board feels that for a number of years past due to the depression that the trade of Boiler Makers in so far as wages and minimum hours of work are concerned has got into an unsatisfactory state, and that something should be done to make more definite the rate of wages and to fix a minimum for hours of work per week. It is not enough for the Company to say: 'We are paying as high, or a little higher, wages than any other company' (and it is difficult for the Board to say, with certainty, that such is the case for the reason that the Boiler Makers, as far as wages and minimum hours of work are concerned, have been in a state of disorganization and that the demand for their services has only recently begun, and that to base this rate of wages on whatever is the highest now paid might be very unfair to them). So, when in making suggestions, as the Chairman has, of certain increases, the fact that they amount to any particular percentage increase over the former rate is no evidence that this increase is unjustifiable. Percentage references are sometimes most misleading; what this Board is seeking to do is to place the wages of the trade on a fair basis having regard to all facts irrespective of what other trades are receiving—and we recommend the adoption of the wage scale hereinafter set forth.

"This should not affect the pay-roll of the Company very materially when it is considered that there are some 40 odd Boiler Makers in the Commercial Division. There are about 150 employees in the Boiler Shop who are not Journeyman Boiler Makers whose wages would be affected by this report, but even so the labourers affected are but about 200 in a plant of 2,000 employees".

The board accordingly made its recommendations "in the belief that recognized basic rates of wages for the trade were to become established".

Following are the board's recommendations:—

"1. That for the reasons hereinbefore given, principally due to the war emergency, the request for recognition of the union with the exclusive right to represent the trade in all matters of dispute be not granted.

"2. That from and after the first day of January, 1941, the minimum hours of wages per week at the standard rate of pay be 44 hours, made up as follows: five days of the week with eight hours minimum and four hours on Saturday.

"Time and one-half to be paid for all hours of work performed over 8 hours in any one day and time and one-half for all hours worked or put in in excess of 44 hours. Time and one-half for work done on a Sunday.

"That up to the first day of January, 1941, the present scale of minimum hours obtains.

"3. That the scale of wages to be paid employees in the boiler plant be as follows:

Journeymen Boiler Makers (which term includes Lay-out men, Fitters, Flangers, Caulkers, Riveters, Welders and Roll Operators), a minimum of..	77c per hour

Machine Operators on Boiler Shop work, a minimum of.	67c per hour
Trained Helpers such as Buckers, Heaters and Crane Operators.. .	60c per hour
Helpers..	55c per hour

"These last do not include the men who sweep up and do such work, but refer more to men who are an aid to other workmen in the operation of the shop.

"It is recommended that this wage scale commence on the first day of August, 1940, and continue during the life of the recommended term.

"The board recommends that this arrangement be for one year from the first day of August, 1940.

"It is further recommended that an apprenticeship system be established to provide also an opportunity for young men to be employed that they may become useful helpers—the first two months of service at 30 or 35 cents an hour and after that at 45 cents an hour."

Minority Report

Mr. Neale, the board member nominated by the company, in his minority report mentions that the employees had been working 44 hours per week up to the time the Minister of Munitions and Supply on May 22, 1940, urged a speeding up of munitions manufacturing. At that time, he states, the schedule was altered to a 48-hour week. He also says "from evidence adduced before the board it appeared that a 48-hour week had also been established by competitive companies manufacturing boilers in the City of Toronto and surrounding district". In his opinion the recommendation for a 44-hour week is contrary to instructions issued by the Departments of Labour and of Munitions and Supply.

With respect to the wage scale Mr. Neale remarks that "as adduced in evidence before the board, the company has at all times set up a wage scale as high as or higher than the wage scales of its competitors" and that from an Exhibit placed in evidence before the board "it appears that the wage scale of the Inglis Company ranged up to 20 per cent higher than the wage scales of its competitors, and was considerably in excess of the minimum rates prescribed by the Department of Labour and the Department of Munitions and Supply". Mr. Neale is of the opinion that "a rate increase such as suggested in the majority report would tend to disorganize and dissatisfy employees in other divisions of the Company's plant who are performing work requiring comparable skill. The adoption of the recommended rates would certainly affect not only the Inglis Company but industry in general".

Report of Board in Dispute between Canadian Vickers, Ltd., and its Boiler Makers

The findings of the Board of Conciliation and Investigation established to deal with differences between Canadian Vickers, Ltd., and the boiler makers, welders and boiler makers' helpers employed in its boiler shop in Montreal, were received by the Minister of Labour on September 16.

The report of the board is signed by the chairman, the Honourable Mr. Justice M. B. Archibald, of the Supreme Court of Nova Scotia, and the board member nominated by the employees, Mr. J. A. McClelland, of Valois, P.Q. Mr. D. A. Paterson, of Montreal, the member of the board appointed on the company's nomination, presented a minority report.

The employees affected by the dispute, 150 in number, are members of the International Brotherhood of Boiler Makers, Iron Ship Builders, Welders and Helpers of America. Through their representatives, it is stated in the board's report, the employees "submitted a written brief in support of their demands for an agreement with the company respecting classification of the employees' working conditions, and minimum rates of pay. The company submitted a written brief in reply. Both written submissions were discussed at length in the presence of the board; subsequently, the representatives of the parties concerned met together and reached an agreement respecting working conditions and classification of employees. They were unable, however, to reach any agreement respecting minimum rates of pay". A copy of the agreement concerning working conditions and classification of employees is annexed to the report of the board, as Schedule "A". The classification of employees appears in Clause 7, and is in the order agreed upon by the parties as to their skill and importance in the work of the company. It remained, therefore, for the board to complete Clause 7 of Schedule "A", and on this subject the board's report reads as follows:—

"In arriving at a conclusion as to minimum rates of pay, we considered not only the representations and arguments made by the representatives of the parties concerned, but also the minimum rates of pay appearing in the

Minimum Wage Schedules applicable to the District of Montreal, as published by the Department of Labour, Canada, as well as the minimum rates of pay being received by Machinists in the Aircraft Division of Canadian Vickers, Limited. We kept in mind, also, the fact that heretofore the employees received time and one-quarter while employed on the night shift, and that, pursuant to Clause 1 of Schedule "A", the bonus for working on a night shift has been reduced to 5 cents per hour.

"We further kept in mind that in the classification of employees agreed upon by the parties, the following classifications are qualified Journeymen, viz.: Layer Out, Leading Hands, Flange Turners, Boiler Makers, Blacksmiths, Fitters, Caulkers, Riveters, Bending-Rolls Operators, and Welders, Class I. From the information before us, we are of opinion, also, that the classification designated as "Helpers" in Schedule "A" comprises employees who are required to perform work of greater skill and importance than employees so designated in the Company's Machine Shop. Having given to all these matters careful consideration, we are of opinion, and recommend, that Clause 7 of Schedule "A" should be completed to read as follows:—

"7. Minimum Rates of Pay:	Cents per hour
Layer Out	80
Leading Hands	80
Flange Turners	75
Boiler Makers	75
Blacksmiths	75
Fitters	75
Caulkers	75
Riveters	75
Bending-Rolls Operators	75
Welders, Class I	75
Welders, Class II	70
Burners	70
Drillers	63
Holders On	63
Heaters	63
Machine Operators	58
Cranemen	58
Slingers	58
Reamers and Counter Sinkers	58
Helpers	47
Apprentices, 1st year	25
2nd year	35
3rd year	45
4th year	55
5th year	65

"Schedule "A" does not indicate the date on and from which it is to be effective. The application for this Board was made on the 21st day of June, 1940. Having regard, therefore, to the length of time that has elapsed, we are of opinion and recommend that Schedule "A", completed in manner hereinbefore stated, be effective as and from the 15th day of August, 1940."

Minority Report

Mr. Paterson, in a minority report, dissents from the findings of his two colleagues in the matter of wages. His report contains the following statements:—

"Within the district of Montreal there are two companies engaged in the manufacture of marine boilers, the product of the employees concerned in the present dispute. One is Canadian Vickers, Limited, the employer in the present reference, and the Dominion Bridge Co., of Lachine. In passing, it is significant that the smaller industrial concern—Canadian Vickers, Limited—is the employer picked by the Brotherhood for correction, in spite of the fact that the wage rates of the offending company are very considerably higher for comparative work than those of 'Bridge.'

"The policy of the management of Canadian Vickers, Limited, has been very favourable to labour in the matter of wage rates. Every effort has been made to keep wages up—even to increase them, as will be shown by the figures given below—despite paucity of contracts and the keenest competition.

"Hereunder will be found a comparative statement of the wage rates in effect in the plants of the Dominion Bridge Company and of Canadian Vickers, Limited, in the several classifications of employment affected, namely:

Dom. Bridge Co. Ltd. Rates	Trade	Can. Vickers, Ltd. Rates
50	Slingers	45-55
55	Holders-on (Buckers-up)	52-60
40-50	Heaters	50-53
64-76	Welders	65-70-75
50	Elec. Crane	50-58
80-85	Layers-out	60-95
55	Drillers	53-60-75
66 (1)	Hydraulic Flangers	60-95
60 (3)	" "	.....
60	Punch, Shear, Planers	.....
61	Gas Torch Cutters	.....
64	Plate Rollers	60-95
60	Hand Flanging	.....
70-75	Fitters and Assemblers	60-95
45-51	Helpers	40-50
40-50	Gen. Helpers	.....
65	Riveters	65-70
45	Reamers	55

"Without much effort, it will be ascertained from the foregoing tabulation that Canadian Vickers, Limited, is already paying higher wage rates than its principal competitors. Yet the International Brotherhood seriously proposes that it widen the gap still further, and the Majority Report endorses that proposal, although, of course, to a modified extent. Canadian Vickers, Limited, is anxious to remain in business, to serve its customers and to provide employment to its workmen, but is unable to understand how that can be accomplished if, in addition to present rates exceeding those of its competitor, it is to be required to in-

crease still further the disparity in wage rates for comparative work paid by the two companies.

"It is explained that 40 per cent of the work being executed by Vickers at the present time is for private owners, the 60 per cent being Government contracts. The 40 per cent was secured in face of the keenest competition, but it is feared that all such private competitive work will, in future, be lost to Vickers, as there can be no expectation of successful tendering for such work on the basis of wage rate increases as proposed by the Brotherhood or recommended in the Majority Report, while the principal competitor remains unaffected thereby. The competitor referred to is already operating on a favourable differential which it is proposed to increase to the detriment of Vickers.

"Therein, Sir, lies the weakness of an award, such as the Majority Report proposes, in all cases where more than one company is competing for the business offered. It penalises the company brought before the Board of Conciliation, but leaves its competitors untouched because, on private contracts, there is no legal federal machinery to control their practices.

"From the foregoing it will be realized that the undersigned is not impressed with the present method of settling these industrial disputes. He considers a finding by a Board of Conciliation under the Industrial Disputes Investigation Act quite futile, unless all employers similarly engaged in a given district are likewise bound by its edict. That is not so in the present instance, and, in the absence of the necessary authority to make them generally binding, such awards must continue to give dissatisfaction and to work undoubted hardship upon the individual employer concerned.

"It is mentioned that the rates recommended in the Majority Report are arrived at by comparison with rates in other units of the Vickers plant, *not* by comparison with rates in other shops similarly engaged, which *should* constitute the true and logical basis of comparison. However desirable it may be to have established uniform rates of pay in all units of a given plant, practically it is infeasible, as there must always remain varying degrees of skill and importance attaching to each operation, the value of which can be appraised by experts only. The Dominion Bridge Company claims that its rates are 'fair and just,' and its management is expert. Who then shall say, directly or by implication, that its rates are 'unjust'? And who, with less reason, shall claim that the higher rates paid by Vickers on comparative operations are 'unfair'?"

Report of Board in Dispute between the Collingwood Shipyards, Ltd., and its Boiler Makers, Machinists, Blacksmiths, and Plumbers

The Minister of Labour received during September the findings of the Board of Conciliation and Investigation which enquired into a dispute between the Collingwood Shipyards, Ltd., and various classes of the employees being members of Local 343, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America; Local 632, International Association of Machinists; Local 559, International Brotherhod of Blacksmiths' Dropforgers and Helpers; and Local 468, United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada.

The report of the board, dated September 17, is signed by the chairman, the Honourable Mr. Justice W. F. Carroll, of the Supreme Court of Nova Scotia, and the company's nominee, Mr. F. Curzon Dobell, of Montreal, P.Q. Mr. J. A. McClelland, of Valois, P.Q., the member nominated by the employees, dissented from the recommendations of the other two members in certain respects and submitted a minority report

The findings and recommendations of the board, as set forth in the report signed by the chairman and Mr. Dobell, read as follows:—

"The dispute arose out of the refusal of the Company to execute an agreement tendered to it for signature by the officers of the trades unions on July 13, 1940, or to negotiate towards the execution of an agreement or otherwise settle the matter by conciliation. The Board will deal first with the express refusal of the Company to execute the agreement and subsequently with those clauses of the proposed agreement which involved changes or innovations. Investigation disclosed that the four organizations listed in the caption quoted above numbered in their membership considerably less than a majority of the Company's employees and that several trades which were employed in substantial numbers were not represented at all. The Board regrets that the Company did not enter into negotiations, which might have resulted in settlement, but concluded that the Company was entitled to refuse to enter into the proposed contract with the trade bodies which made application for its constitution, particularly in view of the fact that the representatives of these bodies stated that it was their object to secure the ameliorations in wages and work-

ing conditions sought by the draft agreement for their own members only and that they held no brief for the non-union employees, who constitute the great majority of the Company's establishment. Mr. Wolvin, the President of the Company, while declining to negotiate the proposed agreement, pledged himself that, if the Board's report should recommend any of the ameliorations in wages or working conditions sought by the applicants and if that report should be accepted by the Company, such ameliorations would be shared by all employees alike and would be extended as well to those classes of trades which were not included in the reference to this Board as to those represented by the applicants for its constitution.

"After the public sessions of the Board its members discussed between themselves the various clauses of the draft agreement relating to working condition and wage rates. After due consideration the Board has prepared two schedules which are attached hereto entitled 'A' and 'B' and covering respectively working conditions and wages at the plant of the Collingwood Shipyards, Limited. It is unnecessary for the Board to refer in detail to the reasons which actuated it in recommending the various working conditions except with regard to certain matters which were dealt with at length in the briefs of the parties and were discussed in detail at the public sessions. In addition to wage rates these matters are working hours, overtime and holidays and are dealt with below. The Board recommends that the working conditions set out in Schedule 'A' should be accepted and followed by the parties for the same period of time as the minimum wage scale in Schedule 'B', i.e., for one year or for the duration of the War as explained below under the title 'Minimum Wage Rates.'

"Working Hours and Overtime and Holidays.—These two subjects can most conveniently be treated together. It appears that the business of this Company, and of other shipyards at the present time, falls into two categories, viz., Government or construction work and casual repair work. The Company has treated the two categories differently, paying basic wages for Government work up to 48 hours per week and thereafter time and one-half, with time and one-half on Sundays and Holidays, and paying basic wages for repair work up to 9 hours per day, and thereafter time and one-half, with time and one-half on Sundays and Holidays. It appeared that for a short time prior to July 31, 1940, the Company may have been prepared to pay, although it was not called upon to pay, double time on Sundays and Holidays.

"The agreement proposed to the Company by the applicant trades unions provided for a 44 hour week, with time and one-half for overtime and double time pay on Sundays and Holidays, and this was presumably intended to apply to both Government and repair work. In so far as concerns Government work, i.e., the construction and equipment of vessels for the prosecution of the War now being waged against the bitterest enemies of organized labour, the Board feels sure that the applicants for its constitution will be the first to agree with it that nothing should be permitted to check or slack our national effort and that the employees in the Collingwood Shipyards, Limited, in common with those in other plants performing the same service, should expedite in every way the construction, equipment and delivery of naval vessels for which their employers have contracted, or for which they may during the continuance of hostilities contract. The Board therefore recommends that the practice in this Shipyard should coincide with that in other yards engaged on Government work and that, in this type of work, the standard week should be of 48 hours, with time and one-half thereafter and on Sundays and Holidays.

"Repair work must be treated differently. Government work, involving equipment of vessels over a period of months or even years, ensures steady employment for all concerned for an extended time, whereas repair work is casual and is also a type of service which must be rendered immediately and without interruption. The Board was given to understand that, when a repair job enters the yard, time is of the essence and that accordingly the Company's practice has been to allocate the men on a daily, rather than a weekly, basis and allow time and one-half after 9 hours per day and on Sundays and Holidays. This seems to be eminently fair and reasonable, and moreover in the best interests of Canada and her shipping industry, and the Board accordingly recommends that the existing custom in this regard should be continued.

"Minimum Wage Rates.—After carefully examining the documents submitted, the Board reports that in its opinion some increase in wages should be granted. In view of the fact that the employees have enjoyed a 31 per cent increase during the last year the Board is not disposed to recommend in full the further increases of 47 per cent requested. In the Board's opinion an additional increase of about 10 per cent is justified by the circumstances and by comparison with other shipyards. The Board therefore recommends that the minimum rates of wage should be altered from those now obtaining to those set forth in

Schedule 'B' hereto attached. It will be noticed that this Schedule, in addition to increasing the basic wage rates, also provides for the introduction of classifications of 'improved helpers' enjoying wages in excess of those earned by helpers although not as high as those of the fully experienced artisans.

"The Board further recommends that these rates should be made effective from the date upon which their acceptance by the employees is signified to the Company. As to the time during which this minimum wage scale should govern, the Board recommends a period of at least one year, and thereafter until cancelled by either party on 30 days' notice to the other. In addition the Board, considering the desirability, or even necessity, of stabilizing for the duration of the War every industry engaged on Government contracts, further recommends that, if the employees will not only accept the suggested scale but will also agree that that scale shall remain in effect during the continuance of the present War, thereafter until the completion of any contracts entered into by the Company previous to the suspension of hostilities and thereafter until cancelled by either party on 30 days' notice, the employees should receive, and the Company should pay them, an additional bonus or allowance, if, as and when from time to time increased costs of living warrant it. In the Board's opinion this bonus or allowance should consist of a sum of two cents per hour worked by each man on account of each multiple of five per cent by which the costs of living in Canada may rise above those of September 1, 1940. It is recognized that the employees should be protected against the possibility of increase in living costs, which they stated that they apprehend will occur during the War. Without in any way subscribing in principle to the view that wages should fluctuate up and down merely because of variations in the cost of living, it is felt that some assurance should be given to the employees of this Company, if they agree to accept the Board's wage recommendations for the duration of the War, that they may look forward to receiving consideration, not by increase in wage rates, but by bonus or allowance, if their expressed apprehensions as to living costs should be justified by future events during that period. The Board suggests that a comparison should be made at the end of every four months commencing January 1, 1941 (hereafter referred to as 'Check Dates') between the figure known as All Items Index in the statement entitled 'Changes in the Cost of Living in Canada' published by the Department of Labour of Canada in the Labour Gazette and the corresponding figure for September, 1940, and that, whenever at any such Check Date the figure exceeds that for September, 1940, by at least five per cent thereof, each employee should receive during the four months following such Check Date a sum of two cents for each hour worked with respect to each full multiple of five per cent by which the figure at such Check date exceeds the figure for September, 1940. To illustrate:—an All Items Index number on January 1, 1940, exceeding that for September, 1940, by twelve per cent of the latter, would involve the payment of a bonus or allowance of four cents per hour to each employee during the first four months of the year 1941; similarly, a figure on May 1, 1941, exceeding that for September, 1940, by only eight per cent of the latter would in turn reduce the bonus or allowance to two cents per hour for the four months from May 1 to August 31, 1941; and so on. The basic wage rates should remain constant and the bonus or allowance should fluctuate in accordance with what, on the best evidence obtainable, appears from time to time to be a reasonable proportion of the lessened purchasing power of the employees' wages. The flat bonus or allowance of two cents per man per hour is intended to provide all wage-earners with equal indemnity against increased costs of living, without regard to their respective rates of wage, and is therefore, in the opinion of the Board, preferable to a percentage increase, which would result in the various classes of employees being differently treated.

"It would of course be a part of the Board's recommendation that its acceptance by the Company, and its acceptance by the employees either for one year or for the duration of the War, would import their respective undertakings, that during the period in question there should be no lock-out on the one hand, nor any strike on the other."

SCHEDULE "A"

Working Conditions

1. There shall be no discrimination against any employee by reason of his belonging to a Labour or Trades Union or to any similar organization.

2. Employees shall have the right to post, in conspicuous places on the company's property designated by the superintendent, notices of meetings of employees and such other notices as may be approved by the superintendent.

3. The principle of seniority, subject to ability to perform the work required, shall govern when forces are reduced. When employees are furloughed due to lack of work, they will, subject as aforesaid, be given preference of employment in other departments if additional men are required.

4. If any employee considers that he has a legitimate cause of grievance or complaint he shall be entitled, in his negotiations with the company's representatives, to the assistance of

his shop committee, or, if he has none, to the assistance of one or two other employees selected by him. If such grievance or complaint is not settled to mutual satisfaction within ten days, either party shall have the right to refer it to the Minister of Labour, whose decision shall be final and binding.

5. When employees are called to work after the close of their regular working hours they shall receive not less than 4 hours pay for the call unless they be notified to return to work before leaving the premises.

6. In case of disagreement over the interpretation of this agreement or other causes, there shall be no cessation of work until the matter has been decided in accordance with clause 4 above.

7. Employees going on trial trips shall be allowed time from pier to pier at their regular shop rates, with bed and meals.

8. Any employee laid off, discharged or quitting of his own volition shall receive all wages due him and personal property within 24 hours of the termination of his employment.

9. When an employee is required in an emergency to fill the place of another employee receiving a higher rate of pay, he shall receive the higher rate during the time he is required to fill the vacancy.

10. All staging that employees may be required to work upon must be constructed in a safe and proper manner.

11. All toilet and wash-rooms shall be kept in a sanitary condition.

12. A suitable first-aid equipment shall be available during working hours.

13. Forty-eight hours per calendar week, without limitation of hours per day, shall constitute a week's work for each employee engaged upon government contract work. Time and one-half shall be paid for any excess over 48 hours in any week and for work on Sundays and holidays.

14. Nine hours per day shall constitute a day's work for each employee engaged on repair work. Time and one-half shall be paid for any excess over 9 hours in any day and for work on Sundays and holidays.

15. When employees on any shift are required to change from one shift to another and work two shifts or part of two shifts in any 24 hours they shall receive time and one-quarter. No employee shall be required to lay off in order to equalize time.

16. All employees shall be paid every two weeks on the employer's time.

17. Time and a quarter shall be paid for all dirty work such as tarring and personal contact in handling creosoting material, working in oil or acid tanks, or tanks on boats carrying oil, or acid, and such tanks shall be cleaned and steamed according to government regulations, and men working in excessive heat when boilers are under pressure.

SCHEDULE "B"

Labourer	35	40		
Apprentice			20/30	20/30

NOTE.—The Company may establish classifications of improved helpers for the various trades. Improved helpers will be paid not less than four cents per hour over the helpers' rates shown above.

Minority Report

While Mr. McClelland agrees with some of the board's findings in respect to working conditions, he cannot agree, he states in his minority report, with the opinions expressed by the board "on a few important and outstanding questions." On these questions his report reads as follows:—

"First, the provision by which time and one-half is recommended for work performed on Sundays and public holidays instead of double time, as proposed by the men employed in the shipyard and upon whose application this Board was granted. The provision for payment of double time for Sundays and public holidays is fairly general throughout the Dominion, it having been established by agreement and usage in the various industries. I shall not attempt to go into a detailed explanation of the reasons for this practice further than to say that the extra time payment is a penalty placed there with the object to discourage Sunday work (except under emergency conditions), thereby contributing to the general health of the workers, and reducing the turnover in personnel which so often has brought about, over a period of time, an almost complete dislocation of organized or maximum productive effort.

"In the matter of the number of working hours per week I find myself in agreement with the majority report. The men would, doubtless, have agreed to the forty-eight (48) hour week had they been given an opportunity to discuss the proposed agreement by the management. The payment of overtime is the point upon which I disagree with the majority report. It is a common and generally recognized practice to pay overtime for all time worked in excess of the regular working hours in any one day and to interfere with this practice is, in my opinion, unwarranted unless mutually agreed upon by the management and the workers.

"Further, in respect to working hours. Should it be found necessary by management to put a night shift in operation, the hours governing should be arranged between management and the men's committee to best suit local conditions—and the practice of paying men assigned to night shift time and one-quarter is one that should be adhered to.

"The question of hourly wage rate is one upon which I disagree with the majority report. The report recommends an increase of 10 per cent; such a recommendation would have been acceptable had the original wage rate, upon which it is based, been a reasonable living wage, but, unfortunately, the rates paid at the Collingwood Shipyard are at a very low level and require a much higher percentage increase to bring them more in line with wages paid skilled mechanics in the various classes of labour in similar and other industries.

"The information contained in the statement issued to the Board by the men's representatives indicated that the top rates paid to mechanics in the Shipyard now under consideration are less than the rate paid street cleaners in one of our Canadian cities, less than one hundred miles away, and less than that paid helpers in the skilled trades in certain named industries. I am not entirely in agreement with the rates requested by the men's representatives at this time and have offered, as a compromise, certain rates for the various classifications which did not find favour with the majority of the Board. Notwithstanding that, however, the arguments put forward by the men, and supported by comparative rates, justified, in my opinion, an increase in wages far in excess of that recommended in the majority report.

"Attached hereto is copy of proposed agreement which, in many respects, conforms to the suggestions made in the majority report. This proposed agreement should, if accepted by management and the men, remove causes for friction and contribute largely to continued and increased production."

AGREEMENT PROPOSED BY MR. McCLELLAND

Between:

Collingwood Shipyard Limited and Lodge No. 343, International Brotherhood of Boiler Makers, Iron Shipbuilders and Helpers; Lodge 632, International Association of Machinists; Lodge No. 559, International Brotherhood of Blacksmiths, Drop Forgers and Helpers, and Lodge No. 468, United Association of Journeymen Plumbers and Steamfitters of United States and Canada.

This Agreement shall be effective as from day of , 1940, and shall continue in full force and effect, and from year to year thereafter. Should either party to this Agreement desire any changes, written notice shall be submitted thirty days prior to the anniversary date of this Agreement.

The purpose of the Agreement is to establish and maintain harmonious relations between the management and its employees, to stabilize conditions of employment and to ensure the smooth and efficient operation of the plant without interruption.

1. *Working Hours:* Regular working hours shall be as follows:

Monday to Friday inclusive, Day Shift, 7.30 a.m. to 12 noon; 1 p.m. to 5 p.m.

Saturdays, 7.30 a.m. to 12 noon.

Monday to Friday inclusive, Night Shift, 7.30 p.m. to 12 midnight; 1 a.m. to 6 a.m.

Should any changes be desired in the starting and quitting time of the night shift, same shall be arranged between the Committee and the Management.

2. *Overtime:* (*a*) All overtime work in excess of the regular working hours on any one shift as above specified, shall be paid for at the rate of time and one-half.

(*b*) All work performed on Sundays and the following holidays: New Year's Day, Good Friday, 24th of May, Dominion Day, Labour Day, Thanksgiving and Christmas Day, shall be paid for at the rate of double time. Should any of these holidays fall on a Sunday, the day observed by the Federal Government shall constitute the overtime period.

3. No discrimination shall be practised against the duly elected Shop Committee. For the purpose of carrying out the provisions of this Agreement the Company will deal only with the duly elected Shop Committee, said Committee to constitute the sole bargaining agency covering the employees of the various departments, as long as they represent a majority of the employees of each department covered by this Agreement. No employee shall be discriminated against nor jeopardized in seniority standing nor suffer any loss of employment because of the activity with the meetings of the Committee, so long as such meetings or activities are not carried out during working hours.

(*b*) There shall be no discrimination against any employee by reason of his belonging to a Labour or Trades Union or to any similar organization.

4. When employees on any shift are required to change from one shift to another and work two shifts or part of two shifts in any 24 hours they shall receive overtime rates. No employee shall be required to lay off in order to equalize time.

5. When an employee is required in an emergency to fill the place of another employee receiving a higher rate of pay he shall receive the higher rate during the time he is required to fill the vacancy.

6. Nine hours per day shall constitute a day's work for each employee engaged on repair work. Time and one-half shall be paid for any excess over 9 hours in any day.

7. *Seniority:* (*a*) Seniority of the employees covered by this Agreement shall be established after sixty days' continuous employment, and shall date from the time of entering the service. When reduction of forces becomes necessary, senior employees shall be given the preference of remaining at work, subject to ability to perform work required.

(*b*) In case of any hardship or injustice arising out of a reduction of forces, the Company agrees to discuss each case on its merits, with the Shop Committee.

8. (*a*) The settlement of all minor disputes or grievances arising out of the application of this Agreement, shall be negotiated between the Management and the Shop Committee who are employees of the Company during regular working hours.

(*b*) In the event of a deadlock over the carrying out of the terms of this Agreement or the interpretation of any of its clauses, the matter in question shall be submitted to the Dominion Minister of Labour, who may set up a Conciliation Committee upon which the Company and the Shop Committee shall be represented. The decision of the Conciliation Committee shall be binding upon both parties to the Agreement.

9. *Rates for Calls:* When employees are called to work after the close of their regular working hours they shall receive not less than 4 hours' pay for the call unless they be notified to return to work before leaving the premises.

10. *Trial Trips:* Employees going on Trial Trips shall be allowed time from pier to pier at their regular shop rate, with bed and meals, and no man shall be requested to work more than 12 hours in each 24 hours.

11. *Leading Hands:* Leading Hands are those who while working themselves also direct and supervise the work of others.

12. *Payment on Leaving Service:* Any employee laid off, discharged or quitting of his own volition shall receive all wages due him and personal property within 24 hours of the termination of his employment.

13. *Payment of Wages*: All employees covered by this agreement shall be paid weekly in cash on the employer's time.

14. *Extraordinary Work*: Time and a quarter shall be paid for all dirty work such as tarring and personal contact in handling creosoting material, working in bilges, working in oil or acid tanks, or tanks on boats carrying oil, or acid, and such tanks shall be cleaned and steamed according to government regulations, and men working in excessive heat when boilers are under pressure.

15. All staging that employees may be required to work upon must be constructed in a safe and proper manner.

16. Employees shall have the right to post, in conspicuous places on the Company's property designated by the superintendent, notices of meetings of employees and such other notices as may be approved by the superintendent.

17. All toilet and wash rooms shall be kept in a sanitary condition.

18. A suitable first-aid equipment shall be available during working hours.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM JULY 1, 1940, to SEPTEMBER 30, 1940

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the Province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period July 1, 1940, to September 30, 1940. (An article covering the period April 1, 1940, to June 30, 1940, appeared in the Labour Gazette, July, 1940, page 668.)

Grain Elevator Employees, Kingston, Ont. —In the July issue of the Labour Gazette (page 671) a reference was made to a dispute between the Kingston Elevator Company (Canada Steamship Lines, Limited), Kingston, Ont., and miscellaneous groups of hourly and monthly rated employees, including shovellers, deckmen, sweepers, etc. An application for the establishment of a Board of Conciliation and Investigation had been made, but at the close of June it appeared that a direct settlement might be found through the conciliation service of the Department. On July 30th a conference with representatives of the two parties and officials of the Department of Labour took place at which all phases of the dispute were discussed. It was then agreed that efforts toward a settlement would continue between the two parties and if this was not reached in due course the applicants would renew their request for Board procedure.

Factory Workers, Vancouver, B.C.—The July, 1940, issue of the Labour Gazette, at page 671, contained a reference to a dispute between the Pacific Bolt Manufacturing Company, Limited, Vancouver, and its employees, members of the Vancouver Metal Workers' Union (Canadian Congress of Labour), engaged in the manufacture of rivets, bolts, nuts, etc. The cause of the dispute was stated to be the request of the men for increased wages, changed working conditions and union recognition. The matter was brought to the attention of the Department and a conciliation officer maintained close contact with both parties. It developed that the plant had only recently been taken over by the present Management and the Company was quite prepared to make some concessions. Certain wage increases were granted but they did not meet fully the demands of the men and negotiations continued. Late in August, when a satisfactory settlement had not been reached the departmental officer submitted a compromise scale of wages, and this proposal was accepted by both parties. An agreement, effective as from August 29th, was concluded between the Company and a committee of its own employees. Approximately 40 men were stated to be affected.

Coal Miners, Stellarton, N.S.—On July 17, 1940, a strike of miners occurred at one mine of the Acadia Coal Company, Stellarton, N.S., to enforce the demand of certain miners that their pay should be made up to the minimum of $3.45 a day, their piece-rate earnings having been below that amount. On the 19th a sympathetic strike occurred in three other mines of the Company. The miners alleged that the working places were "deficient". Work was resumed on July 22nd pending investigation. A conciliation officer of the Department arrived at New Glasgow on the 21st and the same evening conferred with the District President and District Board Member of the United Mine Workers of America, and the following day conferences were arranged between the miners' representatives and officials of the Company in which the conciliation officer participated. It became clear that the dispute was largely the result of misunderstandings and on the suggestion of the Departmental officer the Company conceded the claims of the miners without prejudice. The miners, stated to number approximately 1,100, are members of Local No. 4481, District 26, United Mine Workers of America.

Mine & Smelter Employees, Trail, B.C.—In July, 1940, the attention of the Department was directed to a dispute between the Consolidated Mining and Smelting Company of

Canada, Limited, Trail, B.C., and its employees at that point and as well at Kimberley and Chapman Camp, B.C. Negotiations for a wage increase had been under way for some time. An offer made by the Company was voted on and accepted by the employees at Kimberley and Chapman Camp but rejected by the employees at Trail. Late in August the Workmen's Co-Operative Committee, representing the workers, made enquiries as to Board procedure under the Industrial Disputes Investigation Act. Shortly thereafter a conciliation officer of the Department visited Trail and held several conferences with each of the parties to the dispute and as well addressed a number of meetings of the employees. At this time the employees' committee at Trail agreed to recommend that the Company's offer be accepted. A further vote of this particular group on the question of Board procedure was taken and this indicated the large majority to be opposed to strike action. Negotiations were again resumed between the Company and employees for the acceptance of the original proposal and subsequently an agreement was reached. Approximately 6,000 employees were affected.

Woollen Mill Workers, Renfrew, Ont.—On August 10, 1940, a conciliation officer of the Department of Labour visited Renfrew to participate in a meeting being held between the Management of the Renfrew Woollen Mills and its employees to discuss the question of increased wages. The previous June an agreement had been concluded between the Company and its employees which provided, among other things, a wage increase of 10 per cent and a proviso that thirty days' notice was to be given by either party desiring a change in conditions. On July 25th, however, the employees requested a further 20 per cent wage increase, stating that the cost of living made this necessary, and August 12th was set as the dead-line. It was pointed out to the workers that the Company anticipated commencing operations on war orders within the next day or two and that under the provisions of an Order in Council extending the Industrial Disputes Investigation Act to all war contracts a strike would be illegal without first having the dispute referred to a Board of Conciliation and Investigation. Subsequently a Board application was submitted by the employees, but following further direct conferences the dispute was terminated and Board procedure was accordingly unnecessary. Approximately 200 employees were affected in this instance.

Wood Workers, Mattawa, Ont.—Early in August a dispute between the Guelph Cask, Veneer and Plywood Company, Limited, Mattawa, Ont., and its employees, members of Local No. 2759, International Brotherhood of Carpenters and Joiners, was dealt with and a settlement reached. The employees had requested wage increases and shorter working hours, which the Company contended it was unable to concede at that time. A joint conference between officials of the Company and a committee representing the employees was arranged by the conciliator of the Department, who also participated, and as a result an amicable understanding was reached. Approximately 80 men are employed in this plant.

Woollen Mill Workers, Almonte, Ont.—On August 12, 1940, employees of the Rosamond Woollen Mills, Almonte, Ont., presented to the Management a petition demanding a 10 per cent wage increase and stated that unless a favourable answer was received within a few hours a strike would occur. Upon receipt of this petition the Management called a meeting of representatives from all departments and informed them that they were unable to grant higher wages at that time. Thereupon approximately 105 workers out of the total force of 218 ceased work. A conciliation officer of the Department visited Almonte the following day and conferred with both parties. He informed the strikers that as the firm was engaged on war contracts strike action was illegal until the dispute had been referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The employees agreed to resume work the following day with the understanding that the Management would at once open negotiations looking to increased wages. Accordingly work was resumed on August 14 and the negotiations, participated in by the conciliation officer, resulted in a 5 per cent wage increase with provision being made for future increases according to changes in the cost of living.

Moulders, Toronto, Ont.—On August 13, 1940, moulders employed by the Toronto Hardware Manufacturing Company, Limited, Toronto, Ont., ceased work in an effort to enforce their demand for a 15 per cent wage increase. A conciliator of the Department of Labour dealt with the matter, and at a joint conference held on the 16th the men agreed to resume work the following morning with negotiations respecting wages to be continued. These negotiations resulted in a direct settlement between the parties affected, the employees securing adjustments in wage rates and other concessions. Twenty-five moulders were stated to be affected, ten of whom ceased work.

Woollen Mill Workers, Campbellford, Ont.—On August 13, 1940, approximately 65

employees of the Campbellford Cloth Company, Limited, Campbellford, Ont., ceased work when the Company declined to meet their demand for substantial wage increases. A conciliation officer of the Department of Labour visited Campbellford on the 15th and held a joint conference with the parties affected. During this meeting officials of the Company agreed to remedy a number of grievances but the question of wages was left in abeyance. The employees consented to return to work and to appoint a committee which would negotiate with the Management respecting wages. It was further understood that if a satisfactory adjustment of the question was not secured in this manner work would continue and application be made for the establishment of a Board of Conciliation and Investigation. The spinners resumed work on August 16, the weavers returning when yarn became available on the 19th. As no further word has been received it is assumed that a settlement has been reached.

Aircraft Factory Workers, Vancouver, B.C.—In May, 1940, a dispute arose between the Boeing Aircraft of Canada, Limited, and its employees, members of Aeronautical Lodge No. 756, International Association of Machinists, Vancouver, B.C., in regard to wages and conditions of employment. For a period it appeared that the Department would be confronted with an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, but as a consequence of conferences brought about through a conciliation officer of this Department the dispute was adjusted and a signed agreement became effective the latter part of August.

Seamen, Vancouver, B.C.—Late in the afternoon of August 26, 1940, the Department of Labour was notified that the crew of the SS. *Rosebank*, members of the Canadian Seafarers' Association, had decided to leave the ship which was due to sail at 7 p.m. the same day. It was stated that the Company had failed to give consideration to a number of grievances. An officer of the Conciliation Service of the Department pointed out to the men's representative that the contemplated action would be contrary to the provisions of the Industrial Disputes Investigation Act, and the crew decided to remain with the ship and submit their demands in writing. Upon the arrival of the ship in port again a short time later conferences were held between officials of the employing company, the Kingsley Navigation Company, Limited, and representatives of the employees. As a result certain grievances were eliminated, but the question of wages remained unsettled at the close of the month. The non-certificated crew of the *Rosebank* numbered 16, and any agreement reached would also be applicable to the members of the crew of the SS. *Kingsley*, also numbering 16.

Moulders, etc., Vancouver, B.C.—A dispute respecting wages and the question of union recognition existing between moulders, members of Local No. 1, Moulders and Foundry Workers' Union (affiliated with the Canadian Congress of Labour) and certain employers in the City of Vancouver, being members of the Metal Trades Section of the Canadian Manufacturers' Association, has received the attention of departmental officers during the past several weeks. The employers refused to negotiate either individually or jointly with the union but were prepared to discuss any grievances with their own employees. The men, on the other hand, for a considerable time insisted upon union representation. Subsequently, on August 24th, when efforts of the conciliator to bring the parties together had not been successful, the workers submitted an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The conciliator made further efforts to arrange a conference between the disputants and finally, on September 9th, a meeting was held under his chairmanship at which the employers and a committee of the employees were present. At this conference proposals and counter-proposals were put forward but no settlement resulted. Negotiations continued, and when no basis of settlement was reached the departmental officers submitted draft proposals which were accepted by both parties. An agreement, effective October 1, was signed.

Sheet Metal Workers, Toronto, Ont.—Late in August the attention of the Department was directed to a dispute between Sheet Metal contractors in the Toronto area and sheet metal workers, members of Local No. 30, International Association of Sheet Metal Workers. The dispute related to the workers' request for an hourly rate of $1, the rate then in effect being 92½ cents. The contractors had offered 97½ cents, which the workers rejected, and strike action had been threatened. A conciliation officer of the Department conferred with the Secretary of the Builders' Exchange and Construction Association, who was representing the employers, and with officials of the Union, and on September 3rd a joint meeting of the parties involved took place, at which the conciliation officer was present. After considerable discussion the employers agreed to meet the demands of the men, and the existing agreement was amended accordingly. About 20 shops and approximately 200 employees were stated to be affected.

Labourers, Crane Gangs, etc., North Vancouver, B.C.—Early in September the Department of Labour was asked to intervene in a dispute between the Canada Creosoting Company, Limited, North Vancouver, B.C., and its employees, members of the Creosote Workers Industrial Union. Early in the summer the employees had received a wage increase of 5 cents an hour but this was not considered satisfactory and the men were demanding a further 5-cent increase and union recognition. A deadlock had been reached in the negotiations and strike action threatened. A conciliation officer of the Department discussed the situation with officials of the Company and the union executive. As a result the union agreed to make further efforts to reach a settlement and to delay their request for Board procedure under the Industrial Disputes Investigation Act, which had been contemplated, and the Company agreed to give consideration to wage adjustments. At the close of September the dispute had not been terminated. Normally about 20 men are employed at this plant but as a result of war contracts this number had been increased to about 275.

Salt Mine Workers, Malagash, N.S.—On September 19th an officer of the conciliation service of the federal Department of Labour visited Malagash, N.S., to make an investigation as to the ability of the Malagash Salt Company, Limited, to implement certain recommendations of a Board of Conciliation and Investigation which had dealt with a dispute involving this Company and its employees a few months previously. At the time of his visit a dispute existed regarding the actual time the miners should be at work under an 8-hour day agreement. An officer of the Provincial Department of Mines had made a recommendation which at first was not acceptable to the miners' committee but the federal officer urged that the recommendation be given a trial for a period of 30 days, and his suggestion was accepted. The miners are members of United Salt Mine Workers Local Industrial Union No. 323 (C.I.O.). Approximately 100 workers are employed at the mine but only the underground men, stated to number about 50, were concerned in the dispute as to hours.

Trackmen, etc., Winnipeg, Man.—On September 6, 1940, an application was received for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with differences between the Winnipeg Electric Company and certain of its employees being members of the Trackmen's Unit, One Big Union. The applicants alleged that a junior man rather than a senior man had been promoted to a position of truck driver. A conciliation officer of the Department visited Winnipeg and conferred with a committee of the employees and as well with the Manager of the Company. As a result of the conferences a better understanding was reached as to the course which should be followed in future when such vacancies occur, and as a consequence the Board application was withdrawn. One hundred and fourteen employees were stated to be involved in this application.

Rayon Mill Workers, Cornwall, Ont.—Following a strike at the plant of Courtauld's (Canada) Limited, Cornwall, Ont., on September 26th a conciliation officer of the Department, upon the joint request of the Company and the union concerned, visited Cornwall on the 27th to assist in bringing about a settlement. The strike had occurred when the Company refused to discuss with the union committee an alleged assault by a workman upon a boy employed in the mill. After the incident occurred the Company suspended the workman for 3½ days but the union took the stand that the offence warranted the man's dismissal. The conciliator conferred with the Management and a committee of the employees and it was agreed that work would be resumed that night pending negotiations. At the end of September the matter had not been settled and negotiations were continuing, in which the departmental officer participated. The employees are members of the Rayon Section of Textile Workers Federal Union No. 3. It was stated that approximately 1,600 workers were involved.

Aircraft Factory Workers, Fort William, Ont.—Towards the end of September a dispute arose between the Canadian Car and Foundry Company, Limited, Fort William, Ont., and its employees, members of Aircraft Lodge No. 719, International Association of Machinists, in regard to wages and conditions which should obtain in the future, the existing agreement expiring within a few days. Through an exchange of correspondence as to the basis of negotiations a deadlock had been reached and no conferences had either taken place or were contemplated. A conciliation officer of the Department visited Fort William on September 27th and conferred separately with the President of the Local Union and with officials of the Company. Through his efforts the deadlock was broken and arrangements were made for negotiations to begin immediately. Conferences were carried on for several days and resulted in a settlement which, in the main, renewed the former agreement with certain improvements. Approximately 1,600 employes were involved in this dispute.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

REPORTS have been received of three cases heard recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the Labour Gazette, May, 1940, page 437, and in previous issues, and the seventh report of the proceedings of the Board covering the period from October 1, 1936, to September 30, 1939, was recently issued as Bulletin No. 14 in the Industrial Relations Series published by the Department of Labour.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war of 1914-18. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following Railway Brotherhoods: The Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 486—Canadian National Railways (Central Region) and the Brotherhood of Locomotive Engineers.—This case, heard by the Board at Montreal on September 10, 1940, dealt with the claim of a Toronto engineer to exercise his seniority rights and make a further choice of runs. The claimant, prior to the fall change of time card in 1939, was assigned to the Toronto-Kitchener way freight "singling the road" daily except Sunday, a distance of sixty-two miles. With the fall change of time card, this engineer was again the successful applicant for the run and was reassigned. Owing to a subsequent rearrangement of way freight service, the engineer's run was changed to operate between Toronto and Brantford, a distance of 89 miles. A still further rearrangement resulted in the engineer's run being changed to the Toronto to Guelph run a distance of 49 miles. On being advised of this later change the engineer requested that he be allowed to make a further choice of runs claiming this to be in accordance with the current schedule for locomotive engineers. His request was denied.

The employees contended that the locomotive engineer should have been permitted to make another choice of runs in accordance with the terms of the relevant clause of the schedule and also that the engineer should be allowed payment of any difference in the earnings of the run on which he was compelled to remain as against the earnings of the run to which he was entitled under the rule.

The railway stated that the employees' claim was not justified and should be denied, and did not subscribe "to the apparent contention of the employees that the General Committee of the Brotherhood of Locomotive Engineers is authorized to interpret the rules in the schedule on behalf of the management."

Representatives of both parties to the dispute appeared before the Board and submitted oral statements. The decision of the Board sustained the claim of the employees.

Case No. 487—Canadian National Railways (Central Region) and the Order of Railroad Telegraphers.—In this case, a despatcher in the Hornepayne Division claimed the payment of wages and expenses while familiarizing himself with the territory on which he was to despatch trains.

The employees contended that as the despatcher concerned was prepared to go to work on his arrival at Hornepayne and was prevented from doing so by the Railways, until he had learned the territory over which he was to despatch trains, such action constituted a part of his transfer and he should therefore be paid for loss of schedule wages, three days, and expenses incurred.

The Railways contended that it was essential that the despatcher familiarize himself with the physical characteristics of the territory from a train despatcher's viewpoint in order to qualify for the position of "swing" despatcher at Hornepayne.

Representatives of the Railways and the employees appeared before the Board and submitted oral statements. The decision of the Board sustained the claim of the employees.

Case No. 488—The Canadian National Railways (Western Region) and the Order of Railroad Telegraphers.—This case, first heard by the Board on October 10, 1939, and finally disposed of by a decision rendered on September 10, 1940, dealt with a controversy respecting the appointment of the Agent at Kelowna, B.C.

The position of Agent at Kelowna, B.C., was filled by an applicant who was placed second in point of seniority of those applying for the opening.

The employees contended that the person who was senior in point of service of those applying for the position should receive the appointment and be compensated for loss of remuneration due to not being assigned when applications for the position closed. This contention, the employees claimed, was supported by the provisions of Article 2 of their Agreement.

The Railways claimed that the position was awarded to the second senior applicant, as it was not considered that the senior applicant had sufficient merit and ability to warrant his appointment, based on his record with the Company.

Both parties to the dispute appeared before the Board and presented written and oral argument in support of their respective contentions.

The Board in denying the claim of the employees stated: "Under all the circumstances in the opinion of the Board the application of the principle of seniority as provided for by the Agreement has not been violated, and the Board is not in a position to say that the judgment of the Railway officers in deciding as between 'merit and ability' of the two senior applicants was not justified."

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1940

THE following table shows the number of disputes, workers involved and time loss for September, 1940, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time lost in man working days
*Sept., 1940	10	2,668	6,053
*Aug., 1940	18	6,712	15,953
Sept., 1939	17	8,190	17,546

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Substantial decreases appear in the number of disputes occurring during September as well as in the number of workers involved and in the time loss, as compared with the figures for August when strikes of coal miners in Nova Scotia accounted for 5,000 of the workers involved and nearly eighty per cent of the time loss. The only important disputes during September involved artificial silk factory workers at Cornwall, Ont., for one and one-half days, and also embroiderers in dress factories in Montreal during the first week, the dispute having commenced on August 27. In September, 1939, most of the time loss was due to strikes of coal miners in Nova Scotia.

Two disputes, involving 319 employees, were carried over from August and eight disputes commenced during September. Of these ten disputes, nine were terminated during the month. Three resulted in favour of the employers and one in favour of the workers involved. One was partially successful. Compromise settlements were reached in two cases and the results of two disputes were recorded as indefinite. At the end of the month, therefore, there was only one strike or lockout recorded as in progress, namely: loggers, Port Alberni, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to two disputes of this nature, namely: hotel chambermaids, Montreal, P.Q., one employer, July 19, 1940, to September 15, 1940; and plasterers, etc., Toronto, Ont., one employer, September 16, 1940, to September 17, 1940.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employee being involved.

A minor dispute involving 11 coal trimmers, unloading a vessel at Midland, Ont., on August 26, was not reported in time for inclusion in the September issue of the LABOUR GAZETTE.

The men requested an increase in wages from 40 cents per hour to 50 cents, the rate in Toronto. Work was resumed after half an hour pending further negotiations. The rate was later increased to 45 cents. The men were reported to be members of a Midland local affiliated with the Toronto Coal Drivers' Local of the International Teamsters' Union.

A two day strike of eight cloak and suit workers in Toronto, Ont., on August 7 was reported in the union journal for October. The strikers demanded a union agreement, involving an increase in wages, with the International Ladies' Garment Workers' Union. Work was resumed on August 9 with a ten per cent increase in wages, a union agreement to be signed for the next season.

A one day stoppage by thirty-five truck drivers hauling gravel for an airport near Kensington, P.E.I., which occurred on August 15, was reported too late for inclusion in the September issue of the Labour Gazette. The men requested an increase in the rate per ton and work was resumed pending negotiations.

A one day strike of twelve cloak and suit workers in Montreal on August 29 was not reported in time for inclusion in the Labour Gazette for September. The employees were members of the International Ladies' Garment Workers' Union and demanded a union agreement with an increase in wages. A strike of embroiderers in this union had occurred on the previous day. A union agreement was secured with an increase in wages of $2.00 per week.

The three disputes following were reported too late to be included in the tables and statistical record for September.

A brief strike involving fifty truck drivers hauling material to an airport near Cap de la Madeline, P.Q., occurred on September 16. The men demanded an increase in rates of pay per yard. Some of the drivers resumed work the same day without an increase and the others, after attempting to picket the job, resumed work later.

A strike of taxicab drivers employed by one firm in Toronto, Ont., occurred on September 23, the employer having refused to sign a union agreement which had been signed by nearly all of the companies at the end of August. At the end of the month a settlement had not been reported.

Fifty-four employees in one department of an automobile parts plant at St. Catharines, Ont., refused to work Saturday afternoon, September 28, unless paid at punitive overtime rates, and were refused employment on the following Monday, a lockout then being alleged. An application for a Board of Conciliation and Investigation having been made on September 11, the dispute is outlined elsewhere in this issue. It is reported that work was resumed on October 4.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to September

Women's Clothing Factory Workers (Embroiderers), Montreal, P.Q.—Twenty-two factories were involved in a strike of 306 embroiderers on August 28 to secure the renewal of the agreement with the International Ladies' Garment Workers' Union, with a twenty per cent increase in wage rates. Negotiations resulted in the renewal of the agreement with a ten per cent increase in wages and work was resumed on September 11.

Hotel Chambermaids, Montreal, P.Q.—A number of chambermaids in one hotel, members of the Hotel and Restaurant Workers' International Union, ceased work on July 19, claiming that the wages paid after deductions for board and lodging were not in accordance with the provincial minimum wage order, and that the management should settle this with the union. The provincial authorities investigated and the management paid to the Board the amounts due. From time to time those on strike had been replaced. The union had reported 27 still on strike at the end of September, one having secured work elsewhere. Employment conditions being no longer affected the strike is included in the list of such disputes carried elsewhere in this article.

Disputes Commencing During September

Loggers (Fallers and Buckers), Port Alberni, B.C.—Fifty employees ceased work on September 24 when their demand for an increase in piece rates was not conceded. The strikers were not organized but the International Woodworkers Association advised its members not to take the places of the strikers. No settlement had been reported at the end of the month.

Salt Mine Workers, Malagash, N.S.—Employees ceased work on September 16 regarding the eight hour day, claiming that the eight hours should be from the time they entered the mine until they left, while the management proposed eight hours at the working places. A Board of Conciliation and Investigation under the Industrial Disputes Investigation Act had recommended the adoption of the eight hour day as soon as practicable (Labour Gazette, December, 1939, p. 1215). Conciliation by the Department in connection with other recommendations of the Board is outlined elsewhere in this issue. Work was

resumed on September 17 pending further inquiry by a provincial mine inspector.

Packers and Cookers (Canning Factory), Belleville, Ont.—A number of men ceased work on September 22 when their demand for an increase in wages from 25 cents per hour to 30 cents was refused. It was reported that they were immediately dismissed and the plant continued in operation.

Artificial Silk Factory Workers, Cornwall, Ont.—This dispute is referred to in the article on conciliation in this issue.

Plasterers, Etc., Toronto, Ont.—The plasterers on one job ceased work on Septem-

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1940*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to September, 1940				
Manufacturing—				
Textiles, Clothing, etc.—				
Women's clothing factory workers, embroiderers, etc., Montreal, P.Q.	22	306	2,142	Commenced Aug. 28, 1940; for renewal of agreement with provision for increased wage rates; terminated Sept. 10, 1940; negotiations; compromise.
Service—				
Business and Personal—				
Hotel chambermaids, Montreal, P.Q.	1	13	150	Commenced July 19, 1940; for adjustment of wages and charges for board; employment conditions no longer affected by Sept. 15, 1940; replacement; partially successful.
(b) Strikes and Lockouts commencing during September, 1940				
Logging—				
Loggers (fallers and buckers), Port Alberni, B.C.	1	50	300	Commenced Sept. 24; for increased wages; piece rates; unterminated.
Mining, etc.—				
Coal miners, New Waterford, N.S.	1	75	150	Commenced Sept. 12; against changes in working conditions involving two men; terminated Sept. 14; return of workers pending negitiations; indefinite.
Salt mine workers, Malagash, N.S.	1	53	53	Commenced Sept. 16; *re* application of 8 hour day; terminated Sept. 16; negotiations; compromise.
Manufacturing—				
Vegetable Foods—				
Packers and cookers, canning factory, Belleville, Ont.	1	25	25	Commenced Sept. 22; for increased wages; terminated Sept. 22; replacement; in favour of employer.
Textiles, Clothing, etc.—				
Artificial silk factory workers, Cornwall, Ont.	1	1,600	2,500	Commenced Sept. 26; for discharge of worker; terminated Sept. 27; conciliation, federal; work resumed pending negotiations; indefinite.
Construction—				
Buildings and Structures—				
Plasterers, etc., Toronto, Ont.	1	20	20	Alleged lockout; commenced Sept. 16; against violation of union wages and working conditions; employment conditions no longer affected by Sept. 16; replacement; in favour of employer.
Service—				
Business and Personal—				
Beverage dispensers, Toronto, Ont.	78	500	700	Commenced Sept. 2; for renewal of agreement with increased wage rates; terminated Sept. 3; conciliation, provincial; in favour of workers.
Kitchen maids, etc., hospital, Toronto, Ont.	1	26	13	Commenced Sept. 23; for increased wages and improved working conditions; terminated Sept. 23; replacement; in favour of employer.

* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

ber 16, stating that the sub-contractor was not observing union conditions, and were joined by the plasterers' helpers. The main contractor took over the work but the plasterers refused to work under the foremen placed in charge. Non-union plasterers and helpers were then engaged and the lathers refused to work with these. All were reported to have been replaced in a short time. The unions of plasterers, plasterers' helpers and lathers declared a lockout to be in effect. The dispute has been added to the list, carried elsewhere in this article, of strikes and lockouts where employment conditions are no longer affected but which the unions concerned have not yet declared terminated.

Beverage Dispensers, Toronto, Ont.—Tapmen and beverage room waiters in seventy-eight hotels ceased work on September 2 at 10 a.m., the proprietors having refused to renew the agreements with the Beverage Dispensers' Local of the Hotel and Restaurant Employees' International Alliance and Bartenders' International League with an increase in wages of $3 per week of fifty-one hours. A small number of the employers were reported to have signed the agreement before the strike. As a result of conciliation by the Ontario Department of Labour, fifty-two of the proprietors signed the agreement in the afternoon of September 2 and the remainder by four o'clock on the next day.

Hospital Kitchen Maids, Etc., Toronto, Ont.—A number of kitchen maids and floor girls in one hospital ceased work on September 23 when their request for a $5 per month increase in wages, and a full day per week off instead of one-half day, was refused. They were paid $25 per month with meals. Some of them were replaced in a few hours and the remainder by the next morning.

(*Note.—At the time of going to press, essential information required to prepare the article Strikes and Lockouts in Great Britain and Other Countries, had not been received. In order to preserve the continuity of the record this information will be included in the next issue of the* Labour Gazette.)

The United States Public Health Service recently issued a bulletin (No. 250) entitled *Pneumoconiosis Among Mica and Pegmatite Workers.* The bulletin reports one of a series of studies of the health hazards of the dusty trades and of the means of protecting the health of workers. Copies of this bulletin may be obtained by applying to the United States Superintendent of Documents, Washington, D.C. The price per copy is 15 cents.

1940 Edition of the Canada Year Book

The publication of the 1940 edition of the *Canada Year Book,* published by authorization of the Hon. James A. MacKinnon, Minister of Trade and Commerce, is announced by the Dominion Bureau of Statistics.

The Canada Year Book is the official statistical annual of the country and contains a thoroughly up-to-date account of the natural resources of the Dominion and their development, the history of the country ,its institutions, its demography, the different branches of production, trade, transportation, finance, education, etc.—in brief, a comprehensive study within the limits of a single volume of the social and economic conditions of the Dominion. This new edition has been thoroughly revised throughout and includes in all its chapters the latest information available up to the date of going to press.

The 1940 Canada Year Book extends to over 1,200 pages, dealing with all phases of the national life and more especially with those susceptible of statistical measurement. A statistical summary of the progress of Canada is included in the introductory matter. This gives a picture in figures of the remarkable progress which the country has made since the first census of the Dominion was taken in 1871, sixty-nine years ago.

Persons requiring the Year Book may obtain it from the King's Printer, Ottawa, as long as the supply lasts, at the price of $1.50, which covers merely the cost of paper, printing, and binding. By a special concession, a limited number of paper-bound copies have been set aside for ministers of religion, bona fide students and school teachers, who may obtain copies at the nominal price of 50 cents each.

Accidents reported to the Workmen's Compensation Board of Ontario during September numbered 7,707, as compared with 7,902 during August, and 5,395 during September a year ago. Total benefits awarded during September amounted to $560,584.17, of which $448,250.21 was for compensation and $112,333.96 for medical aid.

This year's record to date shows a total of 56,907 accidents reported, as compared with 42,946 during the same period last year, and total benefits of $5,267,454.79 as compared with $4,505,375.32 during the corresponding period of 1939.

Commenting on the increase in accidents this year as compared with the prior year, the Industrial Accident Prevention Associations of Ontario pointed out that it should be borne in mind that there are many more men employed, quite a percentage of whom are working on new operations, and the tendency, under pressure of war demands, to increase the hours of work, increases the proneness to accident.

SEASONAL INDUSTRIES AND MILITARY TRAINING

Summary of Survey Determining Occupations Considered as Seasonal and Recommendations Regarding Calling of Recruits

IN order to effect the calling up of man power for military training with a minimum dislocation of war industry, a survey has been completed recently of the occupations which in Canada are considered as seasonal in character in each of the thirteen districts which have been designated for registration by the Department of National War Services. The Committee which studied and reported on the problem comprised Mr. W. M. Dickson, Deputy Minister of Labour, chairman; Dr. G. S. H. Barton, Deputy Minister of Agriculture; Mr. D. H. Sutherland (for the Deputy Minister of Fisheries); Mr. C. W. Jackson (for the Deputy Minister of Mines and Resources); Mr. E. G. Carty (for the Deputy Minister of Transport); and Mr. H. R. MacMillan, Timber Controller.

In reporting to the Hon. Mr. Justice T. C. Davis, Associate Deputy Minister of National War Services, the Committee designated as "seasonal" the following industries: Agriculture, fishing, logging, trapping, shipping, and construction. These industries were adjudged seasonal because they showed a 25 per cent, or greater, spread between maximum and minimum employment throughout the year. Possessed of a thorough knowledge of the high-low periods of activity in these industries it was considered possible for the Department of National War Services to so time its call on the men engaged in such seasonal industries that no serious disruption of their work should occur.

The Committee presented its report in two parts, the first section being general in its treatment of the subject with recommendations concerning each seasonal industry. In the second part the relevant information for the seasonal industries, both primary and secondary, are detailed for each province in tabular form. The Committee reported it would have been better satisfied could it have found it possible to have detailed its findings on a basis of registration districts instead of by provinces, "but the information available did not permit of this." It pointed out, however, that the registration districts "correspond in the main with the provincial boundaries and in the case of Ontario and Quebec, where four and two districts exist respectively, the main variations which occur in employment do not occur as between registration districts but as between the northern part and the southern part of the provinces themselves and these variations it has been possible to indicate."

The chief observations and recommendations of the Committee respecting the seasonal industries in relation to periods of recruitment are contained in the following extracts from Part 1 of the report:

Agriculture

This industry divides naturally into three chief divisions, namely:—

1. Mixed farming,
2. Wheat raising, and
3. Grazing,

with a fourth comprising special crops, horticulture and other special activities. All four of these are followed in British Columbia; one, two and three in the Prairie Provinces; and one and four in Ontario, Quebec and the Maritime Provinces. All four are seasonal and your Committee decided that it would be possible to deal with the industry as a whole.

While there are variations as between different provinces as to the peak periods of employment, your committee feels that a common formula can be found to fit this industry generally and suggests that the training of those employed on farms be confined to the months November to March, inclusive, each year, and that in respect to the period when training is to be performed due regard be had to the particular class of farming or agriculture concerned.

Fishing

The Department of Fisheries supplied the Committee with a statement showing the seasonal employment of Canadian fishermen by provinces. In doing so it was pointed out that the Department is responsible for fisheries administration only in the Maritime Provinces, the Magdalen Islands and British Columbia. Consequently, the information given for other provinces of Canada is subject to confirmation, and it is suggested that the division registrars confer with the provincial authorities who have to do with fisheries administration. (These are enumerated, and also attached to the report was an appendix dealing with seasonal employment of fisheries in the Maritime Provinces, the Magdalen Islands and British Columbia as supplied by the Department of Fisheries.)

Logging

This is an industry which is carried on in every province of Canada except Prince Edward Island and which over the greater

portion of Canada is definitely seasonal. Generally, in that portion of this country east of the Cascade Mountains such is the case. Particularly in Eastern Canada conditions are such that the cutting and handling of logs can be carried on most economically during fall and winter months and, practically, one might blanket this industry in all the provinces from the Atlantic to the Cascade Mountains under an embargo against calling up men therefrom during the months of November to April, inclusive....In some provinces this industry opens as early as the month of August or September and continues until March, April or May of the following year. In the provinces of Nova Scotia, New Brunswick and Quebec, while this industry might properly be exempted during the months of September to May, inclusive, still in the two former of these provinces the peak months are November to May, inclusive, and in the latter, November to March. Likewise in the three Prairie Provinces, while the season of active operations might be considered to commence in September and continue to April, still the peak months are found to be December to April. In Ontario the season of real activity is from December to March, while in the three Prairie Provinces and that portion of British Columbia lying east of the Cascade Mountains the season of greatest activity extends from September to April with the peak of employment during the months of December to April.

Over one-third of the lumber production—by volume—is west of the Cascade Mountains in British Columbia. Activity is continuous throughout the year in this region, with the exception of short breaks of between two to four weeks if the snowfall is too heavy to permit operations in winter, and similarly with the exception of short breaks of the same period depending upon the fire season in mid-summer...

Trapping

Those engaged in this industry are on their own and there are no employment figures available. The Dominion Government is interested in the industry only to the extent of protecting its wards, the Indians, in their activities therein. The seasons of activity in the industry are regulated within the provinces by provincial legislation and regulations. There will, consequently, be variations as between provinces as to periods of activity; still your Committee considers that the season of activity can generally be stated to be confined to the months of November to March, inclusive. However, it is suggested that the district registrar obtain accurate information herein from the provincial authorities.

11441—3½

Shipping

In an analysis of the transportation industry the Committee considered it under the following divisions: Air, railway (steam and electric); highway (motor); and water. On the basis of at least a 25 per cent variation between maximum and minimum employment during the year it was found that the only seasonal branch of this industry is water transportation (shipping). Dealing with shipping the Committee reported:

"Inland water transportation extends from May 1 to November 30. Coasting water transportation—St. Lawrence River and Great Lakes—extends from May 1 to November 30. Ocean water transportation—St. Lawrence River and Great Lakes—extends from May 1 to November 30. Ocean transportation—Maritime Provinces and British Columbia—is non-seasonal; employment at the ports of Halifax and Saint John, however, while extending throughout the year has had a peak period from December 1 to April 30.

"Your Committee recommends that the registrars should be advised by the Minister of War Services that it is deemed inadvisable to require men employed in water transportation to report for military training during the periods shown above or some other shorter period due to local climatic conditions, which latter might be left to the discretion of the registrars."

Mining

In dealing with mining, the Committee considered metallic mining to be non-seasonal, while coal mining was found to be seasonal only in the provinces of Alberta and Saskatchewan.

The Relative Toxicity of Lead and Some of its Common Compounds is the title of a bulletin (No. 253) issued recently by the United States Public Health Service. The report records the results of an inquiry regarding the relative toxicity of lead and various commonly encountered lead compounds. It was found that the toxic effect of lead compounds was more evident on inhalation than when administered either by mouth or by intraperitoneal injection and emphasizes the importance of this type of exposure in dusty trades employing lead. Lead carbonate, lead monoxide and lead sulphate were shown by the investigation to be more toxic by mouth than lead or the remaining lead compounds; while lead carbonate and lead monoxide were more toxic following inhalation than the other compounds studied.

Copies of this bulletin may be obtained on application to the United States Superintendent of Documents, Washington, D.C. The price per copy is 25 cents.

TRADES AND LABOUR CONGRESS OF CANADA

Proceedings of Annual Convention—Resolutions on Status of Departments Affecting Labour, Defence of Canada Regulations, Collective Bargaining, etc.

WITH a rather smaller attendance than usual, due to the distance to be travelled from the eastern industrial centres, the fifty-sixth annual convention of the Trades and Labour Congress of Canada was held in Vancouver, B.C., September 23-27, 1940.

The formal opening was presided over by Mr. E. A. Jamieson, president, Vancouver-New Westminster and District Trades and Labour Council, who welcomed the delegates on behalf of the affiliated membership in the city. The attention of the delegates was drawn to the coincidence that the Congress had also met in Vancouver during the second year of the World War.

Lieutenant Governor Eric W. Hamber in addressing the delegates was quite emphatic in his declaration that "win the war" was the first consideration and that "whatever differences there may be between capital and labour should be mutually settled until Nazism has been wiped off the earth." He reminded the delegates that in Germany, labour organizations would not be permitted to exist, and contended that success could only come through sacrifice and effort and that "the effort of organized labour will play a very important part in the way to final victory".

After welcoming the delegates to British Columbia, Hon. George S. Pearson, Provincial Minister of Labour stated that the "Trades and Labour Congress of Canada was in the vanguard in securing better labour conditions for its members for the past fifty years and that a majority of labour legislation can be largely attributed to the T. & L. C." The Labour Minister praised the Congress for its leadership and stated that some employers in British Columbia were opposed to organized labour through fear of bad leadership. It was the speaker's contention that individuals should not be permitted to profit in the name of patriotism and stated "we do not want to see labour being taken advantage of during this period of stress".

Mr. Fred E. Harrison, Western Representative of the Department of Labour, read the following message from Hon. Norman A. McLarty:

"I greatly appreciate your consenting to attend the Fifty-sixth Convention of the Trades and Labour Congress, which will meet at Vancouver on the 23rd instant and following days, and in so doing represent me and the Department.

"It is a keen disappointment to me that I find it quite impossible by reason of pressure of work to be present and there make contact with many of the leaders of labour whom I have not yet had the pleasure of meeting, as well as renewing contact with those whom I have already had the good fortune and pleasure of meeting.

"I should greatly appreciate it if you would on my behalf express to the members assembled my keen disappointment in not being able to join with them at this time. Would you also express to them my sincere hope that their conference may be a most successful one and that their deliberations may result to the lasting benefit of the organization as well as to the country generally."

Mr. Harrison expressed appreciation for the co-operation received from the representatives of international organizations.

President's Address

Speaking over a national net-work of Canadian radio stations, President Tom Moore acknowledged the welcome of Lieutenant Governor Hamber and other speakers and sent greetings to "our colleagues overseas". In referring to the present conflict he stated that "total war clearly shows that it is not fought on the military front alone but also on the home front." Mr. Moore contended that the home front had two aspects, first, to keep the wheels of industry turning and the output of munitions flowing, second, to guard against disintegration. Discontent, he stated, "provides fertile fields for subversive activities to flourish. It is our duty to see that trade unions are not used as a medium or front for these subversive activities and to prevent discontent arising." That many of labours' objectives must be postponed were conceded but as yet it was not necessary to march backward. It was pointed out that some progress was still possible as shown by the passage by the Federal Parliament of the Unemployment Insurance Act.

The policy of the Congress was defined by the president as follows:

(1) To maintain faith in our democratic way of life and support at all times constituted authority;

(2) Keep our ranks clear of subversive elements and those who might seek to use a trade union card to carry out their nefarious plans;

(3) To stand firm against unwarranted surrender of those things to which we are justly entitled;

(4) To so shape our policies that when victory is won we shall be prepared to play our part in the reconstruction period and the establishment of a just and permanent peace;

(5) At all times to be loyal to ourselves, our principles and above all to this country of which we are proud to be citizens.

Death of Fraternal Delegate

The president informed the delegates that word had been received of the drowning of Mr. W. Golightly, president of the Northumberland Miners' Union, who was en route to attend the convention of the Trades and Labour Congress of Canada as fraternal delegate from the British Trades Union Congress. Mr. Golightly was among the victims of a torpedoed evacuee ship. A minute's silence was observed by the convention.

Organizations Represented

The report of the Credential Committee showed that certificates had been received from 305 delegates, classified as follows: Forty-eight international and national organizations; 2 represented provincial federations; 27 represented trades and labour councils; 20 represented system divisions of telegraphers and provincial associations; 207 represented local branch unions, and 1 fraternal delegate representing the American Federation of Labor.

Secretary-Treasurer a Member of Unemployment Insurance Commission

The announcement was made that Mr. R. J. Tallon, secretary-treasurer of the Congress and president of Division 4, Railway Employees Department of the American Federation of Labor for the past twenty-two years, had been appointed a member of the Unemployment Insurance Commission, representing organized labour. The president also commended the government for their selection of Dr. Joseph Sirois as chairman, which indicated a desire to have "the administration of the Act carried out in the best way possible." A message was read from Hon. Norman A. McLarty, Minister of Labour, thanking Mr. Tallon for accepting a position on the Unemployment Insurance Commission and extending best wishes.

Address of A. F. of L. Fraternal Delegate

In addressing the convention Mr. Claude P. O'Reilly of Seattle, fraternal delegate of the American Federation of Labor declared "that the present condition of world affairs is a challenge to the far-sighted leadership of Anglo-Saxon America." He stated that "the clouds of war are hanging almost as darkly over the United States as over the Dominion of Canada. We are threatened by the same enemies as you are and we are waiting without fear, for the day that may call us to meet them." Mr. O'Reilly told the delegates that "the workingman of the United States will never permit the workingman of Canada to be enslaved by Hitler, by Stalin, by the Emperor of Japan or by any other man or group of men." In referring to the defence program being carried out jointly by the United States and Canada, the speaker was of the opinion that a vital part of any such defence program is the highway to Alaska, which would run across part of Canada.

Endorsation of Invitation to I.L.O.

Mr. Adolf Staal, Netherlands member of the International Labour Office, addressed the delegates and praised the action of the Government in allowing certain Geneva officials to come to Canada to continue their activities. He stated that "the Government recognized the great services that the I.L.O. have accomplished and will accomplish after victory is won." Describing the trade union movement in countries over-run by the Germans, the I.L.O. official said: "In Czecho-Slovakia and Poland there is no trade union movement any more. In Norway, the trade union movement is intact—so the Germans say—but it is under the supervision of the German Reich.

"Sweden still has freedom, but of a kind that it would be very imprudent to say something which would not be in harmony with the authority around her."

Mr. Staal told the delegates that the main principle of the trade union movement should be "that every worker who is willing to work should have the right to work."

Following Mr. Staal's address, the convention unanimously adopted a resolution wholeheartedly indorsing the action of the government "in inviting the International Labour Office to establish an office in Canada" and assured the organization of "its complete and wholehearted support in continuing its essential activities in maintaining the mechanism of international collaboration between workers, employers and governments, which will be indispensable in the work of reconstruction when peace has been re-established."

Report of Executive Council

The report of the executive council indicated it had given "full support to such Government measures as are designed to bring about defeat of the enemies of liberty and freedom and maintain the internal security of the Dominion.

"At the same time, every opportunity has been taken" the report declared "to secure the adoption of policies necessary for the maintenance of that measure of protection to which workers are entitled, either in times of war or peace, and on which action could be taken without retarding or endangering Canada's war activities."

In dealing with the "Defence of Canada Regulations" the executive pointed out that "in all countries at war it has been found necessary to sacrifice personal liberty to some degree as the price to be paid for national security." Continuing, the executive stated that "the denial of these long cherished liberties is held to be essential to enable the government authorities to act with promptitude and secrecy," but at the same time, the officers felt that there was "need for appeal or review procedure so as to safeguard, as far as may be possible, against error and unnecessary injury either to individuals or to associations."

The report stated that "the officers of the Congress had sought assurances that no action taken has been because of membership in a trade union or the carrying out of legitimate trade union duties. So far we have failed to find any evidence of this having been done and it would be contrary to labour's principles to claim that any person should receive preferential treatment in the application either of the Defence of Canada Regulations or of any law of Canada merely because he is a member of a trade union or any other group or class of society."

The executive claimed that the utmost it can do, "if any such case should arise, is to guard against the power given to government authorities by the Defence of Canada Regulations being, either wilfully or in error, misused for the purpose of suppressing or hindering lawful trade union activities."

The report reviewed the executive council's activities of the year, its conferences with the governments and the operations of provincial committees and federations.

It was the contention of the executive officers that "labour must, while continuing to put forth every effort to ensure victory, be prepared to play its full part in the establishment of a just and permanent peace."

Report of the Secretary-Treasurer

Mr. R. J. Tallon, the secretary-treasurer of the Congress, presented the financial statement for the period September 1, 1939, to July 31, 1940, which, with the balance from the previous year, showed total receipts of $48,229.60, with expenses amounting to $23,005.36, leaving a balance of $26,224.24. Included in the above figures are the receipts and expenditures for the headquarters building in Ottawa.

The membership was reported at 132,702, but the secretary-treasurer reminded the delegates that this number represented only those for whom per capita tax was paid and did not include those who, while still active members of affiliated organizations, are relieved, because of unemployment or other causes, from payment of their regular contributions.

The Audit Committee reported finding the financial statement of the secretary-treasurer correct and their recommendation of approval was adopted.

Post-War Aims

The following six principles for the establishment of a permanent peace after the cessation of hostilities were submitted to the Trades and Labour Congress by Mr. John Bruce, chairman of a special sub-committee dealing with post-war reconstruction:

1. No dictated peace.
2. Recognition of the rights of all nations, great or small, of whatever colour or creed, to live and develop their own characteristic civilization.
3. Complete abandonment of aggression and use of armed force as an instrument of policy.
4. Recognition of the rights of national racial and religious minorities.
5. Acceptance of the principle that international anarchy is incompatible with peace. Recognition of an international authority superior to individual states.
6. Abandonment of imperialism and acceptance of the principle that in the government of colonies where self-government can not be conceded, the interests of the natives must be paramount.

"A lasting peace to be satisfactory should not be dictated by victors but should be consummated by agreement between all nations of the world without humiliation or revenge," the chairman stated.

The report was referred to the executive for further study.

Resolutions Adopted

A total of 143 resolutions were presented to and considered by the delegates. The following is a brief summary of the resolutions adopted and a résumé of the argument presented concerning some of the more important ones.

Department of Labour's Authority

Several resolutions were submitted to the convention criticizing the alleged dual and conflicting authority of separate departments of government in matters affecting labour. One of the resolutions charged that the Board of Munitions and Supply was assuming "authority to set wages and abrogate working conditions agreed to in conference between employers and organized workmen" and by going so far "as to delay and interfere in the application of awards by conciliation boards unanimously accepted by employers and workmen." It was further charged "this interference by the Board is creating an ever growing discontent and distrust in the minds of workmen and a questioning of the good faith of the government as expressed in Order in Council P.C. 2685." The subject,

matter in these resolutions caused a lengthy discussion in which criticism of the Board of Munitions and Supply was voiced by a number of delegates.

The convention by a unanimous vote instructed the incoming executive "to immediately take up this matter with the government and demand that dual and conflicting authority of separate departments of government in matters affecting labour be abolished and that the single authority of the Department of Labour in all such matters be restored."

Defence of Canada Regulations

Under this heading twelve resolutions were submitted from various organizations criticizing the arrest of certain trade unionists under the Defence of Canada Regulations.

The chairman of the Committee on Officers Reports, to whom the resolutions were submitted for report, stated that the resolutions were all based primarily on "the suspicion that active trade unionists are being railroaded on trumped-up charges under the Defence of Canada Regulations."

"This Congress even in normal times cannot act on mere suspicion," the chairman stated.

The Committee emphasized the fact that Congress sought no special exemption from Defence Regulations and recommended that the resolutions should be deemed as covered by the executive council's report.

This report declared that the executive had failed to find any evidence of prosecution by the government because of membership in a trade union or the carrying out of legitimate trade union duties.

Although a number of delegates supported the twelve resolutions the committee's recommendation was adopted.

Dominion Legislation Right of Organization

In connection with the "right to organize" and "collective bargaining" a resolution was submitted drawing attention to the protection provided to the Canadian wage earners in their right to organize during the last war and stated that "the government of the day assumed considerable authority in compelling collective bargaining on the part of the obstinate employers." The resolution declared that following the war and up until just recently no concern in this matter was shown "although proper protection for the wage earners in this respect for all participating countries was an early declaration of the Geneva Labour Convention of the League of Nations." The resolution further stated "the recent amendments to the Criminal Code provide only for penalties for interference in a wage earner's right to join or remain a member of labour, and it does not outlaw company unions or make collective bargaining compulsory by law."

The Congress was asked to "declare itself in favour of Dominion legislation similar to that contained in the Wagner Labor Act in the United States, which gives full protection to the wage earners their right to join labour unions, definitely outlaws company unions and makes collective bargaining compulsory with the bona fide labour union that a majority of the workers involved select and provide for a permanent authoritative tribunal to administer this Act, and if it is contended by the Dominion Government that they do not have the authority under the British North America Act to adopt said legislation, then they be requested to secure the necessary amendments to same;" the executive council was instructed to prepare a specimen Act, containing the desirable features of the Wagner Labor Act in so far as they can be made applicable to provincial legislation, to be offered as a guide to respective legislative committees or federations.

The resolution was adopted by the convention.

Other Resolutions Adopted

Among other resolutions adopted were the following:

Asking the provincial governments to advertise all highway contracts and that the same rates of pay as advertised by the Dominion Government be made on all highway work undertaken by provincial governments.

Protesting against profiteering in war contracts and on the necessities of life and asking that the burden of financing the war be placed where it rightly belongs, on the shoulders of those best able to bear it.

Co-operation by all trades and labour councils and local unions with the commission (Wartime Prices and Trade Board) so as to prevent unwarranted increases in rents and commodities.

Organizing and training of fire-fighitng auxiliaries in all industrial centres of Canada.

Expressing satisfaction in the government's action in producing essential war materials through government owned companies and urging extension of this policy, and where private industry is employed, the strictest control be exercised by the government to prevent profiteering.

Opposing the practice of prison labour competing with organized labour.

Seeking legislation to compel every employer to give annual holidays with pay to all employees who have been more than twelve months in his service.

Advocating working hours should not be increased in industries without mutual consent.

Requesting the Federal Government to maintain the eight-hour day in war industries in three shifts where necessary and that the government recommend to heads of war industries to co-operate with organized labour for the protection of the workers involved.

Closing of barber shops before the hour of 7 p.m., except on one specified half-holiday per week, on a properly presented petition.

Stopping further infringements of the Lord's Day Act in industries not directly related to war production.

Requesting the federal authorities to observe conditions as incorporated in collective union labour agreements when placing contracts for war supplies.

Assisting masters and mates on the Great Lakes and St. Lawrence River to obtain seasons' contracts.

Raising of wages sufficiently adequate for civic employees to live upon.

Compulsory registration of all barbers in the Province of Ontario at a fee necessary to cover such legislation.

Adopting of legislation to prevent manufacturers and contractors, especially in the needle trades having all or part of work done in private homes.

Institution of the recommendations of the Turgeon Commission which are in the interests of the textile workers in Canada.

Requesting the Federal Government to have a clause inserted in all contracts stating the union must be recognized and bargain with the union and representatives of the men's own choice.

Sponsoring and supporting by the various governments of all forms of recognized sports and entertainment.

Increasing government appropriations for maternal and child welfare.

Urging the Federal Government to take the necessary steps to insure a proper distribution and use of food stuffs in Canada.

Equipping all motor coaches with the most modern type of sanders.

Having properly qualified engineers on duty at all times in power plants.

Prevailing upon the Federal Government to speed up action under the Industrial Disputes Investigation Act.

Hearing in court of evidence from both sides before injunctions are served upon trade union officials.

Curtailing operations on the Great Lakes, connecting rivers and canals of foreign ships and controlling conditions under which they operate.

Petitioning the Dominion Government to accept full responsibility for the adequate maintenance of the employable unemployed.

Completion of the Jasper-Blue River highway during 1941.

That all wage earners receiving not over $3,000 should be eligible for unemployment insurance.

Re-affirming former stand and policy of the Congress in regard to membership, which consistently opposed all forms of discrimination on account of race, colour, creed or nationality of anyone.

Demanding that natural resources, such as nickel, radium, copper, etc., should be a government monopoly and exported only on government permit.

Retaining, on the government payroll after hostilities cease until they are given steady employment by Canadian industries, all of men serving in His Majesty's Forces.

Urging same allowances in pay and for families for non-permanent training periods as allowed the regular military forces.

Co-operating with the government in any plan to render substantial assistance to the young and aged people or the families of organized labour evacuated to Canada to enable them to become worthy citizens of this or the Homeland as conditions and their desires permit.

Payment of old age pensions to workers reaching retirement age, irrespective of any support that his or her children might be able to give.

Considering silicosis an occupational disease in all industries.

Inclusion of street railway and motor coach employees and restaurant employees under the scope of the Workmen's Compensation Act.

Placing representatives of the international trade union movement on all administrative boards and commissions where the interests of labour are affected, but rejecting a request for the appointment of a labour member to Canada's wartime Cabinet.

Election of Officers

The election of officers resulted as follows: President, Tom Moore, 172 McLaren St., Ottawa; Vice-presidents, P. R. Bengough, Vancouver, J. A. Whitebone, Saint John, E. W. Sinfield, Toronto; Secretary-treasurer, Arthur D'Aoust, 172 McLaren St., Ottawa.

Provincial Executive Committees: Nova Scotia—Members to be selected later.

Ontario—R. J. Heslop (chairman), Toronto; Robert Barnett, Ottawa; J. Gavin, Toronto; J. F. Cauley, Hamilton.

Manitoba—Fred Keeley (chairman), Winnipeg; R. G. Anderson, Winnipeg; Sam Herbst, Winnipeg; Robert Hewitt, Winnipeg.

Saskatchewan—A. Mose (chairman), Moose Jaw; H. D. Davis, Prince Albert; W. J. Smith, Saskatoon; P. Haffner, Regina.

British Columbia—J. Ross (chairman), C. E. Herrett, Vancouver; H. L. Hanson, Powell River; E. F. Fox, Victoria.

(The provinces of Alberta, New Brunnswick and Quebec having provincial federations chartered by the Congress, the executive officers carry on the legislative work of these provinces.)

Fraternal delegate to the American Federation of Labor, E. A. Jamieson, president, Vancouver-New Westminster and District Trades and Labour Council.

The selection of a fraternal delegate to the British Trades Union Congress was left in the hands of the executive.

Calgary was chosen convention city for 1941.

CANADIAN CONGRESS OF LABOUR

Summary of Convention Proceedings—Constitution of All-Canadian Congress of Labour Revised

THE tenth regular convention of the All-Canadian Congress of Labour was held at Toronto, Ont., on September 9-12, at which 265 delegates were present, representing seventeen central organizations, four national labour councils and a number of directly chartered local unions.

In the absence of Hon. Norman A. McLarty, Federal Minister of Labour, Mr. E. N. Compton, Department of Labour representative in Toronto, addressed the delegates. He congratulated them on the number present and also on their pledge to co-operate fully with the Government in the prosecution of the war. A telegram from Mr. McLarty in which he expressed sincere regret that urgent matters which demanded his presence at Ottawa at the moment made it impossible for him to be present was read by Mr. Compton to the convention.

A telegram was read from Mr. W. M. Dickson, Deputy Minister of Labour, expressing regret on being unable to attend the convention and wishing the Congress a successful meeting.

Owing to the enlarged representation occasioned by the affiliation of the organizations comprising the Canadian Committee of Industrial Organizations, President Mosher asked the credential committee to present its report. The committee, in its preliminary report, gave the names of 219 delegates and recommended that they be seated. Objection was raised on the grounds that the executive board of the All-Canadian Congress of Labour could not admit members of international organizations without the membership of the Congress first deciding upon such affiliation. The chairman ruled that as the Canadian Committee of Industrial Organizations had autonomy within Canada, they were eligible for membership. The report of the committee was adopted.

Address of the President

In opening his address the president referred briefly to the establishment of the All-Canadian Congress of Labour and to the Congress of Industrial Organizations. Mention was made of the expulsion by the Trades and Labour Congress of Canada of the membership of Canadian locals affiliated with the C.I.O., and it was President Mosher's contention that in the normal course of events these locals would have established, for legislative purposes, a central body in Canada somewhat similar to the Trades and Labour Congress. The delegates were informed that to facilitate the Canadian locals taking whatever action they deemed best, the international industrial unions granted them complete autonomy in so far as legislative matters were concerned. The president reviewed the steps leading up to the affiliation of these bodies with the Congress necessitating the changing of the constitution to provide for the establishment of a new Congress.

The Congress and the War

In reviewing the progress of the war, President Mosher stated that "as Canadian workers and Canadian citizens, we believe that the primary consideration which should be in our minds at this time is the winning of the war." The speaker contended "that the greatest service which we can render to Canada is to organize the largest possible number of workers in the shortest possible time, and to obtain for them adequate representation in the councils of the nation, both in peace and war." It was further contended "that the Government would be well advised to use its authority under the War Measures Act to enforce the labour policy which it has laid down by Order in Council."

In closing his remarks, President Mosher made a strong plea for national unity, not only among the workers but among the population generally.

Executive Board Report

The report of the executive named the organizations which had affiliated with or were chartered by the Congress since the last convention. It also reviewed the steps leading up to formation of a provisional committee of six members, three from the Congress and three from the Canadian Committee of Industrial Organizations, to complete negotiations and draw up a new draft constitution. After careful study the draft constitution had been approved by the Executive Board and they urged the delegates to give their approval.

The action of the government in establishing the National Labour Supply Council was appreciated by the board but it was of the opinion "that the function and authority of this Council should be widely extended, in order that all industrial activities may be co-ordinated in such a manner as to utilize the human and material resources of the nation most effectively for the prosecution of the war and the maintenance of a high standard of living for the people of Canada."

In the opinion of the board the Unemployment Insurance Act, 1940, is another important gain for the workers. The Government was commended for the passing of Order in Council 2685, outlining a policy respecting the relationship of employers and workers during the war.

New Constitution Adopted

Preamble

The aims and objects of the new Congress, as outlined in the preamble to the constitution, are as follows:

Whereas the workers of Canada are entitled to freedom of organization, full rights of collective bargaining, and economic security for themselves and their dependents;

And whereas, for the attainment of these objectives, effective organization of the workers is essential in both the economic and legislative fields;

And whereas division of the forces of the workers and ineffective forms of organization retard their efforts to accomplish their purposes;

And whereas all Canadian workers, organized into unions of their own choice, Local, National or International, should be afforded the fullest opportunity to unite for their common benefit, so that by their full participation and co-operation in one central body the economic and social welfare of the workers of Canada may be secured and protected:

Be it therefore resolved that we, in convention assembled, establish for the benefit of all Canadian workers a central labour body to be known as The Canadian Congress of Labour.

Purposes

The purposes of the Congress are set forth in the following sections of the constitution:

Section 1.—The purposes of the Congress shall be to promote the interests of its affiliates and generally to advance the economic and social welfare of the workers of Canada.

Section 2.—It shall seek to accomplish this in the economic field by developing the widest and the most effective organization of the workers, establishing wherever necessary, Organizing Committees for this purpose, and assisting existing unions to organize the unorganized workers in their respective industries. It shall, at all times, promote the principle of organization within an industry. It shall, co-operating with its affiliates, establish special funds and furnish other assistance for the purpose of carrying out the organizing objectives of the Congress.

Section 3.—In the legislative field the Congress shall promote the enactment of suitable legislative measures, Municipal, Provincial or Federal, in furtherance of the purposes of the Congress and of the interests of its affiliates. It shall exert and concentrate its influence in the promotion of its legislative program, or in opposition to any legislation contrary thereto. It shall make appropriate studies of legislation, and of associated matters, bearing upon the purpose and objects of the Congress. It shall take all suitable steps to inform its affiliates and their membership, and also legislators and the public, with regard to its legislative program.

Section 4.—The economic and legislative policies to be advanced by the Congress shall be determined in accordance with the industrial, economic and legislative conditions from time to time prevailing in the Dominion of Canada.

Membership

Membership in the organization was established on the following basis:

Section 1.—Any bona-fide organization of Canadian workers, whether Local, National or International in character, shall be eligible for membership in the Congress.

Section 2.—Any body of ten or more workers, not a part of any National or International union, may be chartered directly by the Congress as a Local union.

Section 3.—Any National union or Locals thereof, the Canadian Locals of any International union, and any union temporarily functioning as an Organizing Committee, or Local branches thereof, may affiliate with the Congress, either directly or through the appropriate executive or other Canadian central body of such National or International union or Organizing Committee.

Provision was also made for the chartering of federations and district councils.

Representation at Conventions

Representation at any Convention of the Congress shall be as follows:

(*a*) Each chartered local union or affiliated Local, and each Local of any union or Organizing Committee affiliated with the Congress, one delegate for each 100 members or less, and one additional delegate for each additional 100 members or major fraction thereof.

(*b*) Each affiliated National Union, or Organizing Committee, two delegates representing the General Executive Board of such union or committee.

(*c*) The central or administrative body in Canada of an International Union whose Locals in Canada are affiliated with the Congress, two delegates.

(*d*) Each District Labour Council chartered by the Congress, two delegates.

(*e*) Each Provincial Federation chartered by the Congress, two delegates.

Revenue

The revenue of the Congress shall be derived from a per capita tax as follows:

(*a*) Local unions directly chartered by the Congress, twenty-five cents per member per month, and fifty cents for each initiation fee, which will cover per capita for the month of initiation.

(*b*) Affiliated National Unions or Locals of any unaffiliated National Unions or affiliated Canadian Locals of any International Unions, or of any affiliated Organizing Committee, two cents per member per month.

Officers, Executive Committee and Executive Council of the Congress

The general office of the Congress will be located in Ottawa.

Section 1.—The officers of the Congress shall consist of a President, a Vice-President, and a Secretary-Treasurer, to be elected at a Regular Convention.

Section 2.—The officers of the Congress and four additional members elected by the Regular Convention shall constitute the Executive Committee of the Congress.

Section 3.—The members of such Executive Committee, together with one representative elected by each National union and by the Canadian Locals of each International union affiliated with the Congress, shall constitute the Executive Council of the Congress.

The proposed amendments to the constitution were adopted.

To Study Fifth Column Activities

To further emphasize its desire to do everything possible to bring the war to a successful conclusion at the earliest possible date and in line with the president's declaration that "as Canadian workers and Canadian citizens, we believe that the primary consideration which should be in our minds at this time is the winning of the war," the convention discussed the possibility of the war effort being retarded by fifth column activities as employed by totalitarian governments. As a result a resolution was unanimously adopted instructing the executive committee to study the various manifestations of fifth column activities employed by totalitarian governments against democracies, and making them known to the workers and people of Canada.

Government Labour Policy Commended

The executive board of the Congress commended the Federal Government for the passing of Order in Council 2685, outlining a policy respecting the relationship of employers and workers during the war. The report declared that "while the expression of government policy is quite inadequate to bring about a change in the attitude of many reactionary employers toward labour organizations, it represents a step in the right direction."

The resolution adopted on this subject urged the "provincial governments to take immediate action against all employers who are reported by labour organizations as having violated Section 502A of the Criminal Code," and called upon "the Dominion Government to use its authority under the War Measures Act to have its labour policy as set forth in Order in Council No. 2685 observed by all employers in their relationship with their workers."

Wartime Policy of Congress

Another resolution adopted by the convention stated that "due to war conditions, the consequent rise in the cost of living, and pressure on the workers to extend hours of labour, and to refrain from seeking wage increases, it is desirable that the Congress should give expression to its views in this connection," and resolved that "the Congress recommend to affiliated and chartered unions the pursuance of a policy designed:

(*a*) to increase basic wage rates in all industries in which prior to September 1, 1939, proper wage rates had not been established, taking into consideration the rise in the cost of living since that time; and in other industries to seek wage-adjustments to compensate the workers for increases in the cost of living, at periodic intervals as may be found necessary.

(*b*) to oppose attempts to lengthen the hours of labour so long as there is available a sufficient number of workers to take care of the requirements of industrial production essential to the war-effort; and to insist that hours of labour be increased only after all competent labour among the unemployed has been absorbed in industry, and there is evidence of a shortage of such labour as is necessary to ensure maximum production in war-industries."

Other Resolutions

The recommendations contained in other resolutions adopted were:

Urging the chartered and affiliated unions of the Congress to refuse membership to persons known to be members of Nazi, Fascist and Communist groups.

Adoption of a positive policy to make effective the government's declaration on the principles and rights of collective bargaining, disciplinary action to be taken against any employer or employers who refuse to comply with such policy.

The establishing of a standing body representative of employers and employees in the coal mining industry to act in conjunction with the government to implement a policy that will assure sufficient of their own home market to provide an annual security to all mine workers of Canada.

Early amendment of the Unemployment Insurance Act to:

(1) bring under its scope all workers now excluded;
(2) remove from the Act provisions which may be detrimental to trade union activity;
(3) provide more equitable rates of benefit and to stabilize the workers' premiums at a level commensurate with their ability to pay.

Amendment to the Defence of Canada Regulations so as to safeguard the basic democratic rights of free speech and association; at the same time disapproving of the internment of trade union officials without the reasons being made public and requesting a prompt review of their cases under conditions which would enable them to put up a proper defence.

Requesting the Government to confine appointments to key position in war production and distribution to "socially minded individuals and whose record indicates that they adhere to democratic principles," and further requesting that organized labour be given adequate representation on all war boards and departments.

Amending the National Defence Tax Act by raising the exemption on single persons to $1,000 and on married persons to $1,500.

Establishment of a federal scheme of social security to provide free medical care and hospitalization and security for workers incapacitated by sickness, accident and old age.

Endorsing a policy of a forty-four hour week for workers in the retail and distributive trades.

Re-organization of the Department of Labour "in order that it may properly serve the interests of the workers of Canada."

Conscription of the capital resources of the nation in the prosecution of the present war.

Establishment in all provinces of free and compulsory education up to the age of eighteen.

Opposition to the practice of refusing employment to men unless furnished with a release from their former employer.

Drawing to attention of the Government the curtailment of the number of jobs through introduction of labour saving machinery and technological improvements without the hours of labour being shortened to take care of the workers released through these causes.

Opposition to the practice of radio stations using recordings rather than employing musicians, and seeking equal opportunity for all musicians in Canada.

Opposing the existence of wage differentials "which impose sub-standard living conditions upon workers and farmers and menace the higher standards of others."

Immediate cancellation of war contracts with firms "discriminating or intimidating their employees because of membership in a labour union."

Establishment of fraternal relations with the British Trades Union Congress and the Congress of Industrial Organizations.

Government recognition of Canadian Congress of Labour as the official voice of Canadian industrial organizations.

Opposing the curtailment of the sale of beer.

Seeking to bring about, in co-operation with the Trades and Labour Congress of Canada, a complete consolidation of Canadian labour.

Demanding that the Federal Government make future shipments to Japan of raw material necessary to the manufacture of arms and munitions a punishable offence.

Opposing all efforts to eliminate or curtail the right to strike for legitimate trade union purposes.

Election of Officers

The officers elected were:

President, A. R. Mosher (Canadian Brotherhood of Railway Employees), Ottawa; vice-president, P. Conroy (United Mine Workers of America), Calgary; secretary-treasurer, N. S. Dowd (Canadian Brotherhood of Railway Employees), 230 Laurier Ave. W., Ottawa.

Executive committee members: Silby Barrett (Canadian Steel Workers Organizing Committee), Toronto; M. M. MacLean (Canadian Brotherhood of Railway Employees), Ottawa; S. Spivak (Amalgamated Clothing Workers of America), Toronto; F. Millard (Canadian Steel Workers Organizing Committee), Toronto, Ont.

Hamilton was selected as the convention city for 1941.

CONFEDERATION OF CATHOLIC WORKERS OF CANADA

Proceedings of Nineteenth Annual Convention—Resolutions Recommending Amendments to Provincial Legislation

THE nineteenth annual convention of the Confederation of Catholic Workers of Canada was held at Victoriaville, September 8-11, 1940, with over 200 official and fraternal delegates in attendance. The general secretary reported that during the year seven new organizations were affiliated directly with the Confederation and that some twenty new syndicates were affiliated through federations, making a total of 239 syndicates and 18 study circles with a membership of 46,341. The new organizations include a federation of glove makers.

In the president's report, reference was made to the resolution adopted last year opposing participation by Canada in any external war but when war was declared shortly afterwards the Confederation, through its Executive Committee, expressed its loyalty and agreed to do its utmost to meet the request of the Government that there should be no stoppage of work on account of strikes in war industries. The president served on the provincial committees for the first and second war loan and the sale of war savings certificates. The president reported, too, that he had been made a member of the National Labour Supply Council. A representative of the Confederation, Mr. J. A. Bouthillette, of Quebec, has been appointed to the Quebec Minimum Wage Commission and Mr. Albert Coté and later Mr. Maurice Doran represented the Confederation on the federal Committee on Industril Hygiene.

The following officers were elected for the ensuing year: General president, Alfred Charpentier, Montreal; 1st vice-president, Emile Tellier, Three Rivers; 2nd vice-president, Osias Filion, Montreal; treasurer, Alphonse Bourdon, Montreal; general secretary, Gerard Picard, Quebec; general almoner pro tempore, Abbe Jean Bertrand, Montreal. The Confederal Bureau, which includes the above officers, has for members also the following directors representing eleven federations affiliated with the C.T.C.C. and eight cities: G. A. Gagnon, Montreal; Joseph Dorion, Quebec; Oliva Cyr, Asbestos; Philippe Lessard, Port Alfred; Alphonse Roberge, Quebec; J. A. Anzalone, Quebec; Honore d'Amours, St. Gregoire de Montmorency; Irenee Rousseau, Victoriaville; P. E. Cabana, Montreal; J. Philippe Hamel, Victoriaville; Ed. Brouillette, Montreal; Rosario Gosselin, Quebec; J. Bte. Delisle, Montreal; Alexis Desforges, Chicoutimi; L. P.

Boily, Jonquiere; Rene Harmegnies, St. Joseph d'Alma; M. E. Cadieux, Sherbrooke; Albert Quinty, Three Rivers; J. Maxime Lavigne, Hull.

Resolutions

Resolutions adopted by the C.T.C.C. advocated a provincial law broadly similar to the American National Labour Relations Act and incorporated in the Professional Syndicates Act; the establishment of a labour court; the compilation of a labour code by the Superior Council of Labour; a provincial housing Act to facilitate the building of workmen's houses, and the abolition of night work in bakeries.

Several resolutions proposed amendments in the Collective Agreements Act, Professional Syndicates Act, and the Workmen's Compensation Act.

Collective Agreements Act

As regards the Collective Agreements Act, two suggested amendments would undo changes made in the last year or two: (1) that the title of the Act should be changed to the Collective Labour Agreements Extension Act, and (2) that in the definition of "association" the words "or possessing civil personality" should be added.

Other changes proposed include the stipulation that in order to be classed as a permanent employee engaged in maintenance work, the worker must have been hired for at least 12 months instead of for six months; giving power to the Lieutenant-Governor in Council to make obligatory the provisions of an agreement relating to the seniority of employees and also to the minimum charge that may be made to the public for certain services specified in the agreement; providing that the joint committee to supervise the carrying out of the agreement must be formed by the signatories to the agreement instead of by the parties to the agreement and striking out the section empowering the Minister to add to the joint committee representatives of the employers and employees who were not signatories.

It was suggested, too, that the Act be amended to permit a joint committee, with the approval of the Lieutenant-Governor in Council, to require employers to keep a register indicating, among other matters, the time during which the workers are at the disposal of the employer. The present Act permits a regulation to oblige the employer to record the exact hour at which work begins and ends each day and also any periods of interruption. Certificates of competency may now be required by a joint committee of all workmen governed by an Order in Council under the Act except clerical and office workers or workers in occupations for which no apprenticeship is necessary. The Confederation proposes that these exceptions be removed.

Two amendments are suggested in connection with the sections relating to freedom of association and collective bargaining: (1) the insertion of a section declaring liable, to a fine of $100 and costs and in default of payment of the fine to imprisonment of two months and for failure to pay the costs, imprisonment for an extra month, any employer who, during a labour dispute, refuses to negotiate with the representatives of a professional syndicate with a view to the conclusion of a collective agreement as provided in the Professional Syndicates Act; (2) the provision that an employee dismissed because he belongs to an association or because he has given information or evidence in connection with an alleged violation of the Act or in order to force him to accept a lower wage, shall be entitled to damages to the equivalent of six months' wages and reinstatement in the job instead of merely to one month's wages.

The Confederation recommended also that the Act should make provision for machinery for compulsory arbitration for the settlement of industrial disputes arising at the expiration of a collective agreement.

Professional Syndicates Act

The Professional Syndicates Act, it was suggested, should be amended to include a fourth section comprising the existing Collective Agreements Act. The C.T.C.C. recommended also that the incorporation of a professional syndicate should be made dependent on the approval of the Minister of Labour after any inquiry he deems desirable. For this purpose, the request for incorporation and any documents accompanying it would be transmitted by the Provincial Secretary to the Minister who would have authority to recommend that the request be not granted if, in his opinion, the association is not a bona fide group.

It was suggested that it be expressly stipulated in the Act that a professional syndicate may name one or more representatives to negotiate with any employer affected by a labour dispute. Other changes proposed in the Act would enable three or more professional syndicates to establish a central council for their district which other syndicates might join with a view to promoting the interests of the workers in local or municipal matters and to form a trades council in a given district to promote the interests of the workers in the trades or industries concerned. A federation having jurisdiction throughout the province could be established by three or more syndicates in the same trade or occupation and

syndicates of the same trade or occupation, central councils, trades councils and federations could establish a general confederation covering the province or the country. According to this recommendation, the Act should make provision for conferring on such central councils, trades councils, etc., legal status in the same manner as the Act provides for professional syndicates. The request for incorporation in the case of such bodies, however, would be supported by a resolution, properly authenticated, adopted by the syndicates or associations concerned and accompanied by a copy of the by-laws. The syndicates constituting a union, council or federation should not be liable for the debts of the larger body. Unions and federations of professional syndicates should be given power to establish special pension and benefit funds for the members of the affiliated bodies.

Other changes proposed would permit a professional syndicate to take, in the name of its members, action to recover wages due under an order of the Minimum Wage Commission and if a joint committee is set up to ensure the application of an agreement made and deposited with the Minister of Labour under the Professional Syndicates Act such joint committee should be made up exclusively of representatives of the parties signing the agreement, the parties having the right to the same number of members. Finally, it was recommended that the clause in the Act stating generally that an agreement may deal with any conditions of labour not prohibited by law should be changed to add that a collective agreement may stipulate the minimum price that may be charged for services to the public.

Workmen's Compensation Act

In connection with the Workmen's Compensation Act, the Confederation approved the principles of the Act for the establishment of an Accident Fund, removal from the courts of cases involving industrial accidents and the maintenance of a Workmen's Compensation Commission unless a labour court was set up. Further, the Confederation considered that the law should be gradually extended to apply to all employers without exception in industry, commerce and agriculture. It was recommended, however, that a medical appeal board of three physicians should be set up, one named by the Government, one by the injured workman and the third on agreement by the other two. A gradual increase in the benefit scale from 66⅔ per cent to 100 per cent of average earnings was advocated as was also a change in the method of calculation so that the benefits should be based on the hourly wage earned at the time of the accident multiplied by 2,400, that is, 300 days of eight hours each. In determining benefits the minimum wage to be used as a basis should be 30 cents an hour. The right to benefit should date from the day of the accident and the first payment should be made as soon as possible and not later than the second week after the injury. In regard to silicosis it was recommended that the word "infectious" be struck out and that all diseases caused by dusts, acids, dyes and humidity in the textile industry be designated as industrial diseases to which the Act applies.

MOTHERS' ALLOWANCES IN BRITISH COLUMBIA, 1939-40

The annual report of the Superintendent of Welfare of British Columbia on the administration of the Mothers' Allowance Act for the fiscal year ending March 31, 1940, indicated that the total expenditure during that period was $810,688.12, an increase over the previous year of $20,586.83, or 2·65 per cent, which is smaller than in any one of the preceding four years.

This lower rate of increase in expenditure, states the report, is accounted for by the much lower rate of increase in case load. From March, 1939, to March, 1940, the case load increased only from 1,751 to 1,762, or ·62 per cent, whereas the previous year had shown an increase of 3·48 per cent. "The lowering rate of increase in both expenditure and case load would appear to be accounted for in two ways. Firstly, the increase due to the broadening of the application of the Act by the amendments passed at the 1936 spring session of the Legislature has now spent itself. Secondly, it would seem that the relatively better economic conditions of the past few years have resulted in less indigence. The small increase which did take place would seem to be accounted for largely by the growth in population.

"No change in the rates of allowance was made during the year. The maximum amounts have been $35 per month for a mother and one child with $7.50 for each additional child under 16 years of age and for an incapacitated husband living at home. While these rates are less than the maximum permitted under the Act it would appear that they are reasonably adequate. The Visitors' reports indicate that the majority of the recipients are able to manage fairly well by following carefully planned budgets and sometimes by supplementing their allowances by occasional work."

RECENT REGULATIONS UNDER PROVINCIAL LABOUR LEGISLATION

Relaxing of Hours Regulations in Alberta and Saskatchewan—Extension of Minimum Wage Order in Saskatchewan—Amendment of Quebec Minimum Wage Order No. 4, Etc.

IN Alberta and Saskatchewan regulations as to hours have been relaxed in so far as they apply to the building of accommodation for troops. The Saskatchewan minimum wage orders for factories and shops and hotels and restaurants have been extended to five other towns and several amendments have been made in Quebec Minimum Wage Order 4. New regulations supersede the Manitoba public health orders applying to labour camps and the Quebec rules governing pressure vessels.

Alberta Hours of Work Act

On September 14, Alberta gazetted an order exempting from restriction as to hours, persons employed on projects to provide accommodation for military troop centres and for troop concentrations in the Red Deer, Camrose and Grande Prairie districts.

Manitoba Public Health Act

All regulations under this Act were consolidated and gazetted on September 14. Those of interest to labour include the conditions to be observed in housing workers in camps. There has been no change in these since they were reviewed in the Labour Gazette, January, 1939, p. 57, except that the provision has been dropped which made the employer responsible for the cost of inspection and enforcement when the Minister took action in cases of non-compliance with the regulations. The regulations for protection against silicosis are as set out in the Labour Gazette, June, 1937, p. 649.

The consolidated regulations also contain provisions for precautions to be taken in fumigating premises, conditions to be observed by employers and workers in the food trades, laundries and offensive trades. There are no substantial changes made in these regulations, but the amendments which have been made from time to time since the last consolidation in 1934 are added.

Quebec Minimum Wage Act

On September 14 there came into effect four new by-laws, an amendment in general Order 4 and a resolution exempting hotels in municipalities of less than 3,000 population from the provisions of Order 4 limiting hours, allowing a weekly rest period and payment for overtime after a fixed number of hours at the rate of time and a half. Another resolution of the Minimum Wage Commission continues to January 1, 1941, the resolution which placed the town of Terrebonne in Zone III instead of in Zone I.

By-law B-1 consolidates the by-law of the same name made by the former Fair Wage Board to provide for a levy on employers of one-third of one per cent of the wages of such of their employees as are governed by an order of the Commission even if the wages are higher than fixed by the orders. The levy is payable on all work done in Quebec whether in a municipality or in unorganized territory. The original by-law B-1 is noted in the Labour Gazette, 1939, p. 677, and amendments have been indicated from time to time.

New by-laws B-2, B-3 and B-4 deal respectively, with the keeping of registers, posting of notices and payment of wages, making similar provisions to those already in general Order 4.

Order 4A amends general Order 4. It repeals certain rules of interpretation and incorporates their terms in Order 4 as well as making some changes, the more important of which are noted below.

Instead of prohibiting a reduction, except with the permission of the Commission, and unless the reduced wage is at least $200, in any wages which were in effect on January 31, 1938, and which were higher than the minimum fixed by the order for the particular occupation, the order now allows employers to reduce such wages without notifying it unless expressly requested to do so but when wages higher than those fixed by the order for any occupation are reduced to less than $200 a month the Commission may, by resolution, after investigation, restore the rate or fix a new one. No agreement may be made not to pay overtime or to pay for it at a lower rate than that fixed by the order, that is, 50 per cent above the highest minimum rate fixed by the order for the occupation.

Caterers who contract with an employer to give board and lodging to the latter's employees in temporary quarters or to maintain the employer's staffhouse must pay their own employees hired by the month, in addition to board and room, as follows: $35 a month for commissary clerks, chief cooks and bakers; assistants to these classes and housekeepers $25 a month, and kitchen helpers, choreboys, waitresses and room maids $20.

The same special rates as before are fixed for workers loading and unloading ships or performing stowage work on them in Rimouski

Teachers required to work less than 20 hours a week must be paid at least 50 cents an hour.

Workmen in stone quarries are added to those whose wages are based on a 54-hour week. Farm implement factories in the less thickly populated areas are now among those having a normal 60-hour week. It also applies, for the summer months, to establishments carding wool but where no spinning is done.

Now in addition to exempting from the application of the order members of the clergy, the order exempts acolytes, altar boys, choristers, chanters, housekeepers and maids working in presbyteries, rectories or parsonages.

Two resolutions of the Commission gazetted on September 21 provide that the normal work-week shall be 48 hours for workers employed, except by municipal corporations, in supplying water for a fixed rate or at varying charges, and 54 hours for workers on fox farms, poultry farms, etc.

Quebec Pressure Vessels Act

New regulations gazetted on September 21 repeal and supersede all regulations relating to refrigerating apparatus. They are more comprehensive than those formerly in effect and are in line with the provision in the Pressure Vessels Act that the Canadian Interprovincial Code, approved by the Canadian Engineering Standards Association, is to serve as a guide as far as possible. With certain exceptions they adopt the code and some of the regulations formerly in effect are also incorporated.

The regulations are not to affect systems already installed until an owner or user has made repairs which the Department of Labour considers important. However, all vessels are to undergo a pressure test and another test approved by the Department at the time they are manufactured before a second-hand or used vessel is re-installed and at any other time when the Chief Inspector considers it necessary. All contractors, owners and users who install, repair or modify refrigerating systems are responsible for notifying the Department so that final inspection may be made when the work is completed.

Saskatchewan Industrial Standards Act

In Saskatchewan, an order gazetted on September 16 provides that the schedules under the Industrial Standards Act covering carpenters, electricians, plumbers and steamfitters and the sheet metal industry at Regina are not to apply to the construction of huts and other buildings for troops.

Saskatchewan Minimum Wage Act

The factory and shop order, No. 7, and Order 8 governing hotels and restaurants both applicable in Estevan and Melville and within a five-mile radius (LABOUR GAZETTE, 1939, p. 1234) have been re-issued and from October 21 they are to apply also to the towns of Canora, Kamsack, Lloydminster, Shaunavon and Wynyard and the area within a five-mile radius of each. The Act was extended to these towns by an order in council gazetted on August 31.

The provisions of Order 7 are practically unchanged. A new provision in Order 8 forbids employment of females between 12.30 a.m. and 5.00 a.m.

WHAT WAR IS DOING TO LABOUR IN EUROPE

By John G. Winant

Director, International Labour Office

As Director of the International Labour Office, Mr. Winant is well qualified not only to record the practical abolition of free Labour in the conquered countries of Europe but also the ruthless suppression of the Labour movement in the totalitarian countries during the period of preparation for military conquest. The following article was written for the Associated Press in the United States and also appeared in the September issue of the Canadian Congress Journal (official publication of the Trades and Labour Congress of Canada).

On September 1, 1939, Hitler in speaking to the Reichstag said: "For six years now I have been working on the building up of German defences. Over 90 milliards have been spent on the building up of those defence forces." Measured under any reasonable exchange rate this would exceed the total gold reserves held in the United States. It was so large a part of the total national income of Germany as to materially lower the living and social standards of that nation or any nation attempting to meet them on a defensive armament basis. It explains the literalness of Goering's blunt demand for bullets instead of butter.

In a peace period only a government organized on force rather than on consent could have accepted the drastic deprivations compelled by this war spending policy. Under these conditions, there was established a combination of the punitive system of the middle ages harnessed to modern machine technology with the individual subject to the will of the dictator. It carried with it a philosophy which openly accepted personal torture and collective terrorism. It swept before it those things that are roughly marked out with the words *liberty and tolerance* and crushed the kinds of organization that have been used as vehicles of progress wherever free peoples have moved forward in support of the general welfare.

Something of these sinister changes are known to us through the news carried in the daily press and the broadcasts that are received over the radio. How many of us, however, recognize the less obvious changes that are taking place in the lives of men and women in Europe to-day? How many realize that the social gains that have been won through years of effort are being ruthlessly swept aside?

It is not only political leadership in conquered democracies that is being liquidated. Labour leaders meet the same fate. Trade unions and employers' organizations, as well as parliaments, have been destroyed. Collective bargaining in conquered territory has ceased to exist. Hour regulations have been completely broken down. Wage rates have been reduced. The cost of living has increased while the standard of living of the masses of working men and women has been progressively lowered.

In attempting to suggest something of what the war has done and is doing to labour in Europe, it is necessary to look back for a moment to the situation that existed before the war. While the aggressor nations were building their war machines, the democratic states worked to maintain the civil liberties of their people and to raise the workers' standard of living.

Much had been accomplished toward the realization of those objectives. A moderate but steady increase in national income and in the volume of wages, a more equal distribution of purchasing power due to social security and public welfare measures—all bear witness to the preoccupations of the democratic countries of continental Europe until war forced change. Until then, little by little, through untiring effort, those countries had erected a social structure protecting the decency and dignity of man. This structure included the limitation of hours of work in industry and commerce, the protection of working women and children, the protection of the health and safety of workers, compensation for industrial accidents and occupational diseases, a system of old age pensions and pensions for widows and orphans of deceased workers, the arbitration of industrial disputes and the determination of labour conditions by collective bargaining.

Through their freely formed unions, the agricultural labourers as well as the industrial and commercial workers had begun to take an active part in the efforts of the government for the improvement of their conditions of employment and the development of production. The stage of development reached by the free labour movement in the democratic countries of Europe immediately preceding the war is indicated by the fact that membership in the International Federation of Trade Unions, the largest international organization of workers, numbered in 1939, 21 million.

This situation has been completely changed by the invader. Either peoples have been put under subjection with no semblance of self-representation in any field, either government or labour, or there has been established a labour front under State control.

There has been complete destruction of the trade union movement in Germany, Austria, and Czechoslovakia and in the conquered democracies. All the achievements of a lifetime of the European workers which had been obtained at a cost of great sacrifice have been wiped out in the course of a few months. All that the free trade union movement has stood for—the right of being heard, the right of consultation, the right to negotiate—has been abolished. These rights of organized labour which found expression in the recognition of the trade union movement as a party with equal rights with the employers' organizations were consecrated by the Constitution of the International Labour Organization established in 1919 to promote social justice.
